(A small superior number designates the particular edition of the work referred to, as KAT², LOT⁴, etc.)
LIFE AND DEATH (Biological).—The characteristic quality, common to plants, animals, and man, which distinguishes them from all other things, is what we call ‘life.’ It cannot be defined in terms of anything else, but what the concept implies may be illustrated; and that is the aim of this article. The word ‘life’ is often used to denote the living creature’s complete sequence of activities and experiences throughout the period during which it is alive; as when we say that an eagle has a very long, busy, and free life. It is also used as a short word for what is almost always going on in connection with living creatures—their acting upon their environment and reacting to it; and it is, of course, quite clear and useful to say that life consists of action and reaction between organism and environment. We must, indeed, be careful never to lose sight of the fact that life is a relation. But what we wish to discern is the characteristic quality of organisms, one term in the relation. It may also be noted that ‘life’ is a distinctively biological concept, and that there is always a risk in transferring it to other fields. No harm is done, perhaps, in speaking of mental, moral, social, and spiritual life; but one may beg important questions in speaking of the life of crystals. By death we mean here the cessation of an organism’s individual life, a fatal disruption of the unity of the organism. There is no confusion in using the same word for the end of the individual as such, and for the apparently irreversible process which leads to the end.

1. General characteristics of living organisms.—Many biologists have sought to sum up the characteristics of living organisms, but no formulation has won general acceptance. This doubtless means that the insignia of life have not yet been discerned either wholly or in their proper perspective. One of the clearest statements is given by Roux (VII Internat. Zoological Congress Boston, Cambridge, U.S.A., 1912, p. 430), who recognizes five ‘elementary functions’: (1) self-dissimilation; (2) self-preservation, including assimilation, growth, movement, etc.; (3) self-multiplication; (4) self-development; and (5) self-regulation in the exercise of all functions, including self-differentiation, self-adjustment, self-adaptation, and, in many organisms, distinctly recognizable psychical functions. The persistent use of the prefix self, on the part of the founder of Entwicklungsmechanik, is very interesting. Praiborn (Experimentelle Zoologie, iv.) arranges ‘the criteria of life’ in three groups—morphological, chemical, and physiological. The morphological characteristic is some measure of differentiation or heterogeneity of structure, which distinguishes even the simplest organism from a crystal. The chemical characteristic is the invariable presence of albuminoid substances in a colloidal state. The physiological characteristic is to be found in growth and in the movement of parts. Another way of stating the general characteristics of organisms will now be expounded—under three heads.

(1) Persistence of complex specific metabolism and of specific organization.—We place in the forefront the fact that the organism is typically in continual flux and yet retains its integrity. Chemical change is the rule of the world, but the
peculiarities in the case of organisms are (a) that many of the changes are very complex, having in part to do with proteins; (b) that they are specific for each kind of creature; and (c) that they are correlated in such a way that they continue and the associated structure persists. Each of these peculiarities requires explanation. (a) Many chemical changes occur in the living organism, and some of them are relatively simple, but the essential changes appear to be concerned with protod or with the breaking down of molecules. These compounds are peculiarly intricate, with a large number of atoms or atom-groups in their molecules; they diffuse very slowly and do not readily pass through membranes; they occur in a colloidal state, although some are crystallizable, e.g. hemoglobin, they are not known in a crystalloid state in the living organism; they are relatively stable bodies, yet they are continually breaking down and being built up again in the living body, partly under the direct influence of ferments or enzymes. The constructive, synthetic, up-building, winds-up processes are summed up in the term 'anabolism'; the disruptive, analytic, down-breaking, running-down processes are summed up in the term 'katabolism', both sets of processes being included in the term 'metabolism', for which we have, unfortunately, no English equivalent like the fine German word Stoffwechsel, 'change of stuff.'

(6) It is a noteworthy fact that each kind of organism, so far as we know, has its specific metabolism, but not this one. This may be illustrated by the difference in the analogous chemical products of related species. There is chemical specificity in the milk of nearly related animals and in the grudgingly related dining. It has become possible of recent years to make absolutely pure, within given limits, of the kind of animal to which a blood-stain is due—e.g., whether horse or ass. The fact that there are people who cannot eat certain kinds of food—e.g., eggs, milk, oysters, crabs—without more or less serious symptoms is an illustration of specificity which is actually individual. It looks as if a man is individual not only to his fingerprint, but to his chemical molecules. We come back to what was said of old: 'All flesh is not the same flesh; but there is one kind of flesh of men, another flesh of beasts, another of fishes, and another of birds' (1 Co 15:45).

(c) In the ordinary chemical changes of the inorganic world, as in the weathering of rocks into soil, one substance changes into another. The same sort of thing goes on in the living body, but the characteristic feature is a balancing of accounts so that the specific activity continues. We lay emphasis on this characteristic since it seems fundamental—the capacity of continuing in spite of change, of continuing, indeed, through change. An organism was not worthy of the name until it showed, for a short time at least, not merely activity, but persistent activity, and not persistent activity alone, but persistence in a steady activity. It is the fundamental maintenance of the specific chemical activity of each cell and of the correlated invisible structure or organization. It is an extraordinary fact that physiology is primarily an activity of the nervous system; it may be restored after the destruction of the nerve-cells and fibres on which the activity previously depended—a fact all the more remarkable since in higher animals there is no regeneration of nerve-cells. But not less important is the manner in which a unicellular organism can spend its substance and yet, as it were, have it, because of the fundamental capacity for self-renewal.

To what has just been said several saving clauses must be added and qualified. (a) The organism is no exception to the law of the conservation of energy. In doing work and even in mere living it expends energy and suffers wear and tear. If it captures more energy and has time for rest and repairs. But its chemical activities are so correlated that it remains for a considerable time a going concern. Fatigue, senescence, and death show that its fundamental capacity for self-maintenance is not perfect. (b) A particular chemical reaction that takes place in an organism may sometimes be repeated in artificial isolation, and, when this can be done, it is plain that there is nothing characteristically vital about it. It is the same in the eagle as in the test-tube. But in the living organism it is a link in a concatenated series which makes for self-repair and continuance. The riddle of life is that of the burning bush—'ne cames consumebatur.' (c) If a living organism were to be minced up quickly, no change of chemical composition would need a little time. But what exhibition would there be of the alleged fundamental characteristic of self-repair? It may be answered that the minced-up organism would be dead, whereas we are dealing at present with living organisms. Or it may be more shrewdly pointed out that the living units of the body are adapted to chemical self-repair in particular conditions—e.g., an environment of other cells, which have been supplied by the organism. But perhaps the most instructive answer is the experimental one, that, if a sponge be minced up and forced through a cloth filter, little drops of the deposit, placed in appropriate vessels, will at once proceed to build themselves up into new sponges. (d) It has to be admitted that the criterion of life to which we are giving prominence is relative. Some organisms very much go for a hundred years, and some for only a hundred days, and some for only a hundred hours—the question rises as to the limit. Among the primitive organisms may there not have been some which lived only for a hundred days, or for a hundred hours, and were, low then would these hypothetical creatures have differed from the pill of potassium which flares itself out, rushing over the surface of the basin of water on which it has been thrown? The answer must be that an organism did not begin to be until alongside of disruptive processes associated with protod substances there were also correlated constructive processes, making for repair and self-maintenance.

(2) Growth, reproduction, and development.— When an inorganic thing is affected by an external influence inducing chemical change, the result is apt to be destructive. It changes into something else—the bar of iron into rust, and the barrel of gunpowder mostly into gas. The organism's response to stimuli—in most cases a more accurate phrasing than 'reactions to external forces'—also involve disruptions, but these are not destructive. As we have seen, they are correlated with self-maintaining processes. Now we can conceive of an organism which is balanced in its account from hour to hour, but never had much margin. There are such organisms which live, to use a homely expression, from hand to mouth. They are viable, going on; and yet at the same time are not productive, are not making a crucial addition to the base of capital. It is plain that organisms could not have gone very far on such dangerous lines. They could not have survived any crisis. There is
obvious advantage, therefore, in storing energy in potential form, and this accumulation of reserves is fundamental to all organisms—especially of plants. As regards income and output of energy, an organism is far and away more efficient than any engine that has yet been invented. The organism can make its income go further and for a longer time, and turn the energy that can be used later on.

J. Joly ("The Abundance of Life," Scient. Proc. Roy. Soc. Dublin, vii. [1891] 55-90) expressed the dynamic contrast long ago when he said that, whereas the transfer of energy into an inanimate material system was attended with effects conducive to dissipation and retardation to further transfer, the transfer of energy into an animate material system is attended with effects retardative of dissipation and conducive to further transfer. This seems to lead on to the criterion of growth. A surplus of income over expenditure is the primal condition of organic growth, and in this respect plants are pre-eminent, since they accumulate such rich reserves (potential energy of chemical substances) and are so very economical in the getting of them. It must not be forgotten that the plant worker that has made it possible for animals to dispense, relatively speaking, with intra-organismal stores. In the art 'growing' it has been pointed out that the growth of living creatures, as contrasted with that of crystals, is at the expense of materials different from those which compose the organism; that it implies active assimilation, not passive accretion; and that it is, in quite a new sense, a regulated process. An organism does not grow like a snowball rolling down a hill. To sum up, the power of sustained metabolism—of balancing accounts with some margin to go on with—makes growth possible.

But growth naturally leads on to multiplication or reproduction. As Haeckel clearly pointed out in his Generelle Morphologie (Berlin, 1866), reproduction is discontinuous growth. It seems impossible to draw any hard-and-fast line between a fragmentation which separates off overgrowths and the more specialized modes of reproduction. We seem to be dealing with a basic organic life when we see the breakage of a protoplasmic mass which has grown too large to be a unity. It was long ago pointed out by Herbert Spencer and others that a living unit would tend to divide when the increase of volume outran—as it soon must if it continues—the increase of surface. In a sphere, for instance, the volume must increase as the cube, and the surface only as the square, of the radius. Thus, if it grew beyond a certain size, a spherical organism would get into serious functional difficulties, the volume of material to be kept alive having increased out of proportion to the surface by which it is kept alive. By division into two units, the disproportionate is counteracted. It has also been suggested that there is a certain normal proportion between the nucleus and the cell-substance or cytoplasm, which is disturbed if the cytoplasm increases beyond a certain limit. A non-nucleated piece of cytoplasm cut off from a large protozoan can move about for a time, but it cannot feed nor grow. There are facts which indicate that the nucleus is a trophic and respiratory centre of the cell. It may be then that the division of a cell is a means of restoring the balance between volume and surface, and not merely of reproduction. The balance may also be restored by the emission of processes from the surface of the cell, as in rhizoid protozoa (Amoebe, Foraminifera, Radiolaria, etc.); or by a multiplication of nuclei, as has been suggested as a theory of the advantage of cell-division, not of the immediate physiological reason for its occurrence. As to this, it has been mooted that a period of growth is followed automatically by a process of 'autolysis,' then 'replication' of energy to sink into unavailable form. It can turn potential energy into useful form in a way that engines cannot do without enormous waste. More than this, the growth process may be brought about by what we may be used later on.

In most cases a cell divides into two precisely similar daughter cells; this is associated with an exceedingly complicated division of the nucleus, which secures that each of the two daughter cells gets a very accurate half of each part of the original nucleus. But the difficulty of the problem is increased by the fact that a cell may also divide into two dissimilar halves, one with and another without one or more of the constituent parts of the original nucleus. In some cases among higher animals the division may be apparently less complicated than in the usual 'indirect' method. The cell contracts in a dumb-bell-like fashion, and the nucleus expands. In the case of organisms there is a fragmentation of the unit. It is probable that the complicated methods of cell-division which are now the rules are the results of a long process of evolution, and that the fundamental characteristic is simply division. It is not case to decide that the power of spontaneous division is one of the most distinctive features of living units.

A consideration of effective activity led us to the idea of self-repair and the accumulation of reserves; this led us to the fact of growth; and this to multiplication, which takes place by division. It is characteristic of organisms to multiply, and, since what is separated off is in many cases a fragment, a group of cells, or a single cell, we are brought face to face with development—the power that a part has of growing and differentiating until it has literally replaced the whole organism; and the expression of the latent possibilities of an imperfect organism in an appropriate environment. It is the making visible of the intrinsically manifoldness of some primordium—a bud, a fragment, a sample, or a germ-cell—and, as it appears to us, it should be thought of as a continuation (under special circumstances and with a special result, namely, a new individual) of the restitution and regrowth which goes on always to make good the body's wear and tear. Every gradation between the two may be illustrated by the phenomena of regeneration, which is exhibited when a lost part is replaced. It is a noteworthy fact that a starfish, which practises autotomy or self-amputation in the spams of capture and finds safety in its reflex device (for it often escapes and can regrow at leisure what it has lost), may have (e.g., Acanthiella guietinghian) habitually multiply in this rather expensive fashion.

Bateson quotes Sir Michael Foster's definition: "A living thing is a vortex of molecular and nucleic changes, and points out that 'the living vortex' differs from all others in the fact that it can divide or multiply without change, though which again matter continually swirls. We may perhaps take the parallel a stage further. A simple vortex, like a smoke ring, if projected in a suitable way will form two rings. If each loop as it is formed could grow and then twist again to form more rings, the same process would be much the same as one of the essential features of living things" (op. cit. p. 46).

It has to be added, as we have seen, that the living
vortex' is the seat of complex and specific chemical changes which are correlated in such a way that the creature lasts. But more has to be added still, even beyond the equation of experience, and variability—The common idea in this grouping is self-expression. (a) Life is a kind of activity, reaching a climax in behaviour, i.e., in an organically determined, coordinated series of acts which may be indefinitely repeated. Behaviour concerns the organism as a whole, as in locomotion, or a considerable part of an organism, and differs from a reflex action in being a concatenation. It has different modes (instinctive, reflex, instinctive behaviour, intelligent behaviour), but there is the common feature of correlation, of purposiveness (not necessarily purposefulness), and, usually, of internal architecture. An ameba appears to go on the hunt, follows another, catches it, loses it, re-captures it, we must say either 'behaviour' or 'magic.' We need not suppose that the ameba knows what it is about, but it is very difficult not to say that its awareness is accompanied by some analogy of 'will.' In the case of instinctive behaviour there is often an extraordinary adher- ence to routine, and this may be itself, but in ninety-nine cases out of a hundred what is done is effective, and the individuality probably finds expression in ways that escape us. (b) The effectiveness which characterizes behaviour of organisms (i.e., of those that show behaviour at all) as we have studied seems to depend on profiting by experience in the individual lifetime, or on the results of successful ancestral experiments, or, usually, on both. It appears to us to be one of the inmost features of life that the organism registers its experiments or the results of its experiences. We must here include under the term 'organism' the germ-cell, which naturally may exist for a long time in the potenita, and may be said to make experiments in internal organization just as much as, in reality far more than, a protozoon which makes experiments in its skin of perception or in its behaviour. As W. K. Clifford said, 'It is the peculiarity of living things not merely that they change under the influence of surrounding circumstances, but that any change which takes place in them is not lost, but retained, and as it were built into the organism to serve as the fountain of all the variations.' (Lectures and Essays, London, 1879, p. 83.)

As Bergson puts it, 'Its past, in its entirety, is prolonged into its present, and abides there, actual and acting.' (Creative Evolution, p. 16.)

As we have seen, from the physiognomic point of view, in discussing the behaviour of the starfish, the precise way each part shall act under the influence of the stimulus is not determined by the past history of that part, but by the stimulus that has acted upon it, by the reactions which it has given, by the results which these reactions have produced (as well as by the present relations of this part to other parts, and by the immediate effects of its present action). We know only so far as we know anything in physiology that the history of an organism does modify it and its actions in ways not yet thoroughly understood, doubtless, yet none the less real. (Behavior of the Starfish, University of California Publications in Zoology, iv. [1907], 177.)

(e) The organism's variability or power of producing some distinctively new changes must, in the present state of science, be taken as 'given.' The only capacity it that we know of is our own power of mental experiment—the secret of the artist, the thinker, the inventor. It may be that 'modifications' wrought on the body by some peculiarity of nurture, environment, or habit are to be distinguished from germinal variations. They are important individually, but they are not those variations which are plainly interpretable as new arrangements of previously expressed ancestral characters, there is no theoretical difficulty. What is that modification, how long, is the origin of something definitely novel, especially when it is reason to believe that it originates brusquely. We can hardly do more at present than assume that the organism is essentially creative. Just as the intact organism, for instance, in the correlation of experiments, so the germ-cell, which is no ordinary cell but an implicit organism, a condensed individuality, may perhaps make experiments in self-expression, which we call variations or mutations. This completes our statement of the general characteristics of organisms.

2. Death.—It is convenient to distinguish, from a biological point of view, three different kinds of death. (1) There is violent death, when some external influence shatters, or dissolves, or beheads the organization. A wound, a sudden change of temperature, or being swallowed by another organism may involve the irrecoverable cessation of bodily life. For many animals in open nature the end seems to be always violent. (2) There is death from disease, when some micro-organism, establishing itself in the body, multiplies exceedingly and produces fatal effects. The intruders cause lesions, or destroy important elements, or produce fatal toxins, and so on. In the wild nature it is life which often, when man effects disarrangements in distribution, so that organisms are exposed to the attack of new microbes. (3) There is natural death, which results from the laws of the development of vital processes. Hard-worked organs, such as the heart, may suffer from the imperfect recuperation of their wear and tear. The highly specialized cells of the elephant, crustacea, and certain protozoa may have in life their power of dividing and therefore of replacement; thus in higher animals there is not after birth any increase in the number of nerve-cells. In various ways there arises within the body an accumulation of physiological arraers which eventually implies physiological insolvency. Especially does the process of reproduction strain the resources of the organism.

In spite of these facts, Weismann's doctrine of the immortality of the protozoon remains acceptable. Not that these unicellular organisms live any charmed life; they are continually being killed off by accidents, and the mortality of them is occasionally used by microbes; but it seems to be the case that in their normal conditions (when waste-products do not accumulate in the surrounding medium and when there is opportunity for conjugation) many of them at least are not subject to natural death in the same degree as higher animals are. Some of them, indeed, may be exempt from natural death altogether. The reasons for this immunity are to be found in the relative simplicity of structure, for unicellular organisms can continuously and completely make good their wear and tear, and in the relatively simple modes of multiplication, which do not involve the nemesis so frequent in higher organisms. Though it is not improbable that very simple multicellular organisms, such as the freshwater hydra, may enjoy some measure of immunity from natural death, there is doubtless general truth in the epigram that, in the course of evolution, natural death was the price paid for a body. The relative immunity of unicellular organisms strongly suggests that natural death is not to be regarded simply as an intrinsic necessity—the fate of all life.

Life was described by Bichat as 'the sum of the functions which resist death,' but this is a one-sided emphasis. For, while it is characteristic of
organisms that they are continually at work in securing the persistence of their specific organization, it is equally characteristic that they spend themselves in securing the continuance of their kind. Instead of seeking to avoid death, to speak metaphorically, they orient themselves as the fly does the fly, facing themselves in producing and providing for the next generation. Their reproductive activities put an end to their self-preservation. Natural death is not to be thought of as the watching the sun down a clock. It is more than an individual physiological problem; it is adjusted in reference to the welfare of the species. As has been noted in art, age, there is good reason for regarding the occurrence of death at a particular time as adaptive. Constitutions which lose their correlation at the end of a year have been selected in certain conditions; constitutions which lose their correlation at the end of ten years have been selected in others. It is certain, as Weismann says, that ‘worn-out individuals are not only valueless to the species, but they are even harmful’ (Essays on Heredity, etc. i. 24). As Goethe put it, ‘Death is Nature’s expert contrivance to get plenty of life’ (‘Aphorisms on Nature’, tr. Huxley, in Nature, i. (1869) 1).

3. Organism and mechanism.—The task of mechanical description is to describe completely and in the simplest manner the motions which take place in nature (Vorlesungen über mathematische Physik, Leipzig, 1876, i. 1). A mechanical description is distinct from such a way of thinking that it enables us to formulate a process as a continuous series of necessarily concatenated mechanical operations like those of an automatic machine or of a volcano. We shall use the term ‘mechanical’ throughout as meaning a matter-and-motion description, and as equivalent to physico-chemical, for chemical and physical descriptions are (ideally at least) reducible to mechanical terms. The question before us is how far mechanical description can be usefully employed in the study of organisms. The question is twofold: (1) how far can we describe characteristically vital events in terms of those which have been called their inorganic aspect. Chemically regarded, living involves a complex of reactions in or associated with the material which we call ‘protoplasm’, and some of these can be reproduced apart from the organism altogether. Some vital processes illustrate J. H. van’t Hoff’s rule of chemical reactions, for they increase in rapidity as the temperature increases. This may serve as an instance of the solidarity of the organism’s chemical processes with those that occur in things in general, but it must be carefully noticed that we cannot assert that the movements of molecules in a living organism are the same as those in an inorganic system. In his posthumously published Prinzipien der Mechanik (Leipzig, 1894) H. Hertz emphasized the need of caution.

It is certainly a justified caution with which we confine the realm of mechanics expressly to inanimate nature and leave the question open how far its laws can be extended beyond. In technical language we would thus say that we maintain that the internal phenomena of animal beings obey the same laws as do the physical laws (expressed by E. T. T. Wentzel, Handbuch der physikalischen Optik, 6th ed. Leipzig, 1912) 354).

It is plain that many physical processes occur in the body which are comparable to those observ-

able in the inorganic domain—processes of diffusion, capillarity, surface-tension, and so on. And, just as the living body illustrates conservation of matter, so is it with the conservation of energy. One mode may change into another mode, but no energy can be produced out of nothing. Careful experiments with a calorimeter show that it is possible to square accounts of the energy-income and energy-expenditure of an organism, the slight discrepancies which are sometimes observed being reasonably explained as due to the inevitable imperfections of instruments and observations. It should be noticed, however, that, according to some physicists, the second Law of thermodynamics does not apply to living creatures. While no fact securely established in regard to organisms has been shown to be inconsistent with the generalizations of chemistry and physics, and while many results of importance, both theoretically and practically, have rewarded the application of chemico-physical methods to living creatures, we believe it to be quite inaccurate to say that mechanical concepts and formula suffice for more than a partial and abstract description of the life of organisms. We shall proceed to test this.

(a) Everyday functions.—As things stand at present, the mechanical description of all the chemical description of any total vital operation, even of everyday functions such as the interchange of gases in the lungs, the passage of digested food from the alimentary canal into the blood-vessels, or the filtering processes that go on in the kidneys.

The co-ordination involved in the discharge of a function and the correlation of one function with another are characteristic physiological facts which are not made clearer when the chemistry or physics of an artificially isolated corner is worked out. Even in such a familiar occurrence as a response to a stimulus, there is in reality an experimental system, and the question is how far the process can be understood as one of physical and chemical reaction... in the case of physiological stimulus and response or real quantitative relation can be traced between the supposed physical or chemical cause, and its effect. When we attempt to trace a connection we are lost in an infinite mass of complex conditions, out of which the response emerges (J. S. Haldane, Mechanism, Life, and Personality, p. 34).

A very familiar fact is that the same stimulus applied to two apparently similar animals, or to the same animal at different times, evokes different answers. We can indeed give reasons for this, but the reason is often no more than that.

(b) Behaviour.—When we think of a collie dog controlling a flock of sheep according to instructions, or of a swallow returning from its winter in the south to its nest in the north, or of the spider spinning a typical web with webby legs, or the skeleton of the larval freshwater mussel fastening itself to the sand, or of the larval louse slaking its hunger by which alone it can successfully continue its life, or of the amoeba capturing its prey, losing it, following it, re-capturing it, and so on, we are face to face with animal behavior which transcends mechanical description. The behaviour is made up of a succession of acts which are correlated in a particular sequence. This is true even in instances where we know nothing of the associated mental states. In speaking of the amoeba’s behaviour implies chemical and physical events, but the bond of union eludes the chemist and physicist. There are elements of spontaneity, plasticity, adaptiveness, and purposiveness that are foreign to mechanical reasoning. We can make nothing of behaviour without new concepts, notably that of the organism as an historical being that trades with time.

(c) Development.—The condensation of the inheritance into microscopic germ-cells, the combination of two inheritances in fertilization, the subsequent division of the inheritance involved in the
segmentation of the ovum, the process of differentiation which from the apparently simple the obviously complex emerges, the embryo's power of righting itself when the building materials of its edifice are artificially disarranged, the way in which different parts are correlated and, as it were, conspire together towards some future result—these and many other facts lead towards a convincing impression that development far transcends mechanism.

In Science and Philosophy of the Organism (1905), Driesch has with unexampled thoroughness and subtlety tested the possibilities of mechanical description with particular reference to the facts of development, and reached a conclusion of the first importance.

'No kind of causality based upon the combinations of single physical or chemical acts can account for organic individual development; this development is not to be explained by any hypothesis about configuration of physical and chemical agents.

...In short, the description of development is beyond mechanics, what, it may be asked, is the role of the young and vigorous science of "developmental mechanics" (Entwicklungsmechanik) so well represented by the theory of mutants? Has it been shown that the developing embryo, as a material system, does of course exhibit chemical and physical processes which may be analyzed apart and treated simply as great molecules acting and reacting upon one another? But it is demonstrable that even in such cases, such as the tides, is not the ideal formulation even within the domain of the world of chemistry. And if it be adequate to the life of the earth, it will be still less adequate within the outermost limits of organic reality. The question then arises, can it be answered that this is not a biologist's business. All will admit that mechanical formulation works very usefully within the inorganic domain; but the biologist finds that they do not apply to the problems of his particular science. He therefore seeks for formule of his own. (b) It is often pointed out that, although we cannot at present translate vital happenings, such as the division of the cell, into terms of any known mechanics, we may be able to do so in the course of time. It may be, for instance, that the concepts of chemistry and physics will undergo profound modification in centuries to come, and no one can say that they have not changed in the past.

The practical answer to this question is that we can speak only of the chemistry and physics that we know. (c) It is held by some that it is constantly true of the world that it is not possible to explain the fundamental characteristics of an organism as an entity in terms of any known mechanics, that the facts of nature are not reducible to what is known, and that the facts of the organism are not reducible to what is known. If, on the other hand, we should attempt to explain the facts of the organism in terms of what we know, we should find that it is not possible to do so. The organism is not a chemical system, and cannot be reduced to a chemical system. The organism is not a mechanical system, and cannot be reduced to a mechanical system. The organism is not a biological system, and cannot be reduced to a biological system.

4. The uniqueness of life.—The negative conclusion is arrived at with that mechanical or physical-chemical concepts do not suffice for answering biological questions. This is because organisms show a certain apartness or uniqueness, the various theories of which may be roughly designated vitalistic. Before considering these, however, we must refer, practically rather than philosophically, to three preliminary points. (a) It is maintained by some that mechanical formulation, legitimate and useful for certain purposes, appallingly oversimplifies the development of things as they happen. But in certain cases, such as the tides, is not the ideal formulation even within the domain of the world of chemistry. And if it be adequate to the life of the earth, it will be still less adequate within the outermost limits of organic reality. The question then arises, can it be answered that this is not a biologist's business. All will admit that mechanical formulation works very usefully within the inorganic domain; but the biologist finds that they do not apply to the problems of his particular science. He therefore seeks for formule of his own. (b) It is often pointed out that, although we cannot at present translate vital happenings, such as the division of the cell, into terms of any known mechanics, we may be able to do so in the course of time. It may be, for instance, that the concepts of chemistry and physics will undergo profound modification in centuries to come, and no one can say that they have not changed in the past.

The practical answer to this question is that we can speak only of the chemistry and physics that we know. (c) It is held by some that it is constantly true of the world that it is not possible to explain the fundamental characteristics of an organism as an entity in terms of any known mechanics, that the facts of nature are not reducible to what is known, and that the facts of the organism are not reducible to what is known. If, on the other hand, we should attempt to explain the facts of the organism in terms of what we know, we should find that it is not possible to do so. The organism is not a chemical system, and cannot be reduced to a chemical system. The organism is not a mechanical system, and cannot be reduced to a mechanical system. The organism is not a biological system, and cannot be reduced to a biological system.
peculiar to the complex nature of the molecule of protoplasm, on which each exhibits an uncuing alternation of unipolar and bipolar states, the latter resulting in cell-division.

The attraction and repulsion observed between cell and cell are manifestations of the supposed form of energy—but probably not by any means all; just as attraction and repulsion, and manifestations of the same form of energy under certain conditions, but are not by any means the only manifestations. In nerve injuries we may, for instance, really be experiencing manifestations in another way of the same form of energy which under other conditions produces the attractions and repulsions. Lovelace, on the dividing cells, and the actual cell-division. . . By this supposed form of energy, I do not mean a mysterious metaphysical influence, but a form of energy comparable to gravity, electricity, or magnetism—in some respects similar to these but in other respects differing from each, and a form which could be investigated by the ordinary methods of mensuration and computation available to the mathematician (Abastamen, Archiv für Entwicklungsmechanik, xix. 601).

(3) The third view is thoroughgoing vitalism, best represented by the work of Driesch. Its postulate is a non-perceptual vital agency or entelechy, which does not occur in not-living things, but is associated with organisms, where it operates in certain cases, directing the chemico-physical processes so that their results are different from what they would have been apart from its intervention. The postulated entelechy is not the outcome of more complex physical conditions, 'not a new elemental consequence of some constellation'; it introduces, 'in a certain stage, introducing some occasional indeterminism; it is supposed to be a genuine agent, counting for something, 'at work,' as Driesch says. On this view, there is a deep-lying 'unreasonableness,' a difference in principle—between the flight of a bird and the movement of a comet, and biology is by hypothesis autonomous. We cannot enter into a discussion of Driesch's ingenious and consistently worked-out theory of entelechy, or of the three proofs which he gives of the autonomy of life. The first is based on a study of morphogenesis, i.e. of the way in which an organism realizes in development its specific form and structure; the second is based on a study of inheritance; the third is based on a study of the movements of organisms. That they show the impossibility of 'a machine-theory of life' will be admitted by many who are not disposed to postulate an organismal entity. According to Driesch, entelechy is 'an autonomous agent,' 'of a non-spatial nature,' without a seat or localization. It is not possessed, it is not energized; it is not in consistent in its agency with the laws of energy; its function is to suspend and to set free, in a regulatory manner, pre-existing faculties of inheritance.

'There is something in the organism's behavior—in the widest sense of the word—which is opposed to an inorganic reasoning-and which shows that the living organism is more than a sum or an aggregate of its parts. . . This something we call entelechy' (op. cit. p. 368).

In illustration of the criticisms of Driesch's position, reference may be made to three points.

(a) It is argued that, if entelechy is effective, it implies a breach in the fundamental law of the conservation of energy. But it is like begging the question to press this difficulty, and Poynting has suggested, in discussing the analogous case of the operation of our will, that a merely deflecting force does not destroy, though it changes configuration. The will may introduce a constraint which guides molecules to glide past one another instead of clashing—a slight change of spin which may be caused by the slight opposite spin put on the rest of the body.

The will may act as a guiding power changing the direction of motion of molecules in the brain, and we may imagine such a guiding power without having to modify our ideas of the constancy of matter or the constancy of motion, or even the constancy of energy itself (p. 745).

The same may apply to the action of entelechy and attention must be directed to the care that Driesch has taken to state his doctrine so that it does not violate the principle of the conservation of energy. He supposes entelechy to cause actions which are possible 'with such compounds as are present, and which would happen without entelechy. And entelechy may regulate this suspending of the action of the laws. It may be noted, however, that even in another, suspending and permitting possible becoming whenever required for its purposes' (op. cit. ii. 180). Entelechy stops a movement, and the energy of the large systems set up in another, permitting that on the movement may continue, the potential energy being reconverted into kinetic. Thus no violence is done to the principle.

(b) A recurrent argument in Driesch's exposition of his doctrine of vitalism is that no machine-like arrangement can possibly account for the facts of development, inheritance, or behaviour. A machine is defined as 'a given specific combination of specific chemical and physical agents,' and Driesch seeks to reduce to absurdity the theory that any machine could do what is required. His argument is very convincing, and of course we can argue only that it implicates that we know and imaginative combinations or improvements of these, but it seems open to the critic to reply that no one knows all possible machines, and to urge that probably the intractability of a machine does not prove the necessity of postulating an entelechy. Concerning the ingenious machines invented by man, it may not be needless to remind ourselves that the introduction into the present argument is apt to be fallacious. For they, like the wonderful achievements of the synthetic chemists, are the fruits of intelligence, not fair samples of the inorganic world. An ingenious machine, like a type-writing machine, is an elaborated tool, an extended hand, and has inside of it, so to speak, a human thought. It is because of these qualities that it is a little like an organism. Practically, however, most of those who have a near acquaintance with living creatures will agree with Driesch that their behaviour is not very like the working of machines. For certain purposes it is useful to think of the organism as an engine, but we must recognize that it is a self-stoking, self-repairing, self-perceiving, self-adjusting, self-increasing, self-reproducing engine.

(c) Another objection is stated by J. S. Haldane:

In order to 'guide' effectually the excessively complex physical and chemical phenomena occurring in living material and at many different parts of a complex organism, a guiding principle would apparently require to possess a superhuman knowledge of these processes. Yet the vital principle is assumed to act unconsciously. The very nature of the vitalistic assumption is thus totally unintelligible (op. cit. p. 28).

Similarly Jennings urges the difficulty of understanding how entelechy gives its power of coordinating and individualizing:

'To accept the Entelechy unanalysed and unexplained is merely to give up the problem as insoluble'; and he tries to work out a development of entelechies, 'then surely we are merely transferring our problem from the complex that we actually find in time and space to a sort of manufactured copy of this problem, presenting the same difficulties, with the additional ones, that it is impalpable and it is impalpable, and it deals with all. The entelechy simply adds to our difficulties' ('Behavior of the Starfish,' loc. cit. p. 185).

Jennings also points out that, according to Driesch, two living systems absolutely identical in every physico-chemical respect may behave differently under absolutely identical conditions. This depends upon whether, and in what respect, the entelechy takes part in the process. This leads to a very serious admission of experimental indeterminism, which for some minds is enough to condemn the whole argument. It should be stated that Driesch has replied vigorously to the criticisms brought against his position, and that he never for a moment pretended that we could understand
LIFE AND DEATH (Biological)

'even in the slightest degree' how entelechy is able to discharge its function as regulator and integrator.

Differing from Driesch's position, according to which entelechy is not identical with the psychical, is the animism so ably expounded by McDougall in his Body and Mind. In their writings, Panpsychism of Paulsen and the very distinctive position of Bergson should also be considered.

According to McDougall, 'not only conscious thinking, but also affective, pain, desire, and volition, are directly psycophysiological processes. All alike are conditioned and governed by psychical dimensions in which has been built up in the course of the experience of the race' (p. 379).

5. Provisional conclusion.—Looking backwards, we cannot admit that the study of animal behaviour, for instance, is not more than the study of very subtle problems in chemistry and physics; we do not find evidence to justify the view that organisms exhibit a new kind of physical energy in a line with electricity and the life; and we do not share the opinion of many recognized authorities that the facts cannot be met except by a theory of entelechy. What then is our position? It is that of 'descriptive' or 'methodological' vitalism.

Making no pronouncement whatsoever in regard to the essence of the difference between organisms and things, if anything, we hold to the belief that mechanical formulæ do not begin to answer the distinctively biological questions. Bio-chemistry and bio-physics added together do not give us one biological answer. We need new concepts of vitalism; and thus, we hold to a new kind of historicism; a being, a genuine agent, a concrete individuality, which has traded with time and has enregistered within itself past experiences and experiments, and a universe which has hitherto been towards the future. We need new concepts because there are new facts to describe, which we cannot analyze away into simpler processes. In the present state of our knowledge, this is not in the nature of the case, meta-physical.

If we go beyond science in the endeavour to form some connected reconstruction, we should say that these constellations of 'matter' and 'energy' called organisms afford opportunity for the expression of aspects of reality which are not patent in the inorganic domain. We do not think of 'matter' and 'energy' as the exclusive stones and mortar of the ever-growing cosmic edifice; they are abstract concepts, defined by certain methods, which serve well in the description of the physical universe. They certainly represent reality, for we safely make prophecies and risk our lives on the strength of this. But it is quite another thing to say that they are exhaustive. An aspect of reality which may safely be neglected in astronomy and navigation, in chemistry and engineering, becomes patent in the movements of organisms, and we call it 'life.' It is neither a product of 'matter' and 'energy' nor an outcome of the increasing complexity of constellations; it is an expression of the reality of which atoms and their movements are also but conceptual aspects. It may be regarded as that aspect of reality which is clearly manifested only in protoplastic systems— and in normal conditions in all of them. May it not be that the qualities which render the postulation of entelechy or vital impetus necessary to some minds have been in kind present throughout the history of the Nature that we know to be 'in kind,' since it is plain that we share in a movement which is not the unrolling of something originally given, but a creative evolution in which time counts. Instead of supposing the intervention of a non-material agency which controls the chemical and physical processes in organisms, we suppose that a new aspect of reality is revealed in organisms—that capacity for correlation, persistence, and individuality, for growing, multiplicity, and development, which we may call 'life,' which we may nowise be explained in terms of anything simpler than itself.

To the biologist the actualities are organisms and their doings, and life is a generalized concept denoting their peculiar quality. What life in essence or principle is he does not know. Taking life in the abstract, therefore, as 'given,' we have had to content ourselves with stating the general characteristics of living creatures. It is plain, however, that analytical and formal discussion falls far short of giving any adequate idea of life in its concrete fulness. For that requires a synthesis, and that, again, is impossible without sympathy. We must use our everyday experience of livingness in ourselves and in other organisms, not for knowledge alone, but as a source of sympathy wherewith to enliven the larger data of biology; and we need not be afraid of exaggerating the wonder of life. Sympathetically and imaginatively, therefore, we must seek to envisage the interrelations of hundreds of thousands of distinct individualities or species; the abundance of life—like a river always tending to overflow its banks; the diffusion of life—exploring and exploiting every corner of land and sea; the insurmountable life—self-assertive, persistent, defiant, continually achieving the apparently Impossible; the cyclical development of life—ever passing towards the unrolling of death; the intrinsic life—ever cell a microcosm; the subtlety of life—ever drop of blood an index of idiosyncrasies; the inter-relatedness of life—with myriad threads woven into a interrelated web; the drama of life—plot within plot, age after age, with every conceivable illustration of the twin motives of hunger and love; the flux of life—even under our short-lived eyes; the progress of life—slowly creeping upwards through unthinkable time, expressing itself in ever nobler forms; the beauty of life—every finished organism an artistic harmony; the morality of life—spending itself in the service of every individual ends; the mentality of life—sometimes quietly dreaming, sometimes sleep-walking, sometimes wide awake; and the victory of life—subdividing material things to its will and in its highest reaches controlling itself towards an increasing purpose.

LIFE AND DEATH (Primitive).

In primitive thought, so far as we can analyze it, life and death are not the balanced opposites which civilized contemplation has made them. To early man life is the normal condition, death an abnormal catastrophe, unnatural, miraculous, and terrible. An exception is to be made when a man kills his quarry or his foe; here the satisfaction of an end achieved inhibits the feelings aroused by the death of a distinct being. According to Australian philosophy, men would live on indefinitely, except for the result of actual physical violence or of sorcery, a refined form of it. This is the usual idea of the savage, though it is hardly a reasoned opinion. The savage, like the majority of civilized men, lives in the present; this fact involves a certain inertia of thought as to the contrast between life and death, and it is true of both stages of culture that 'the fear of death is as nothing.' The primitive mind, when it exercised itself on the subject of life, was concerned with the acquisition of physical strength and moral influence; it had little sympathy with the problem of the nature of vitality; but the constant rage and terror which characterized its attitude towards death involved a permanent concern with the supposed causes of an event which, though inevitable, remained a mystery and a violation of natural law.

1. The Nature of Life.—The distinction between life and soul is in some cases confused, and in others not drawn. Again, the latter concept includes several ideas. We have, however, to deal with a 'life-principle' whenever there is a clear connexion between a concept and facts of life. For our earlier usage of the word 'death' the chief datum is the difference observed between the dead body and the living and moving body. It is inferred that something has departed from the body when dead; the something is a concrete object or substance, and the idea of something, its appearance, etc., is clearly shown by the Tongan and West African notion that these objects 'die' when they are broken or destroyed. The view that so vaguely idealized a content is concrete is supported by the fact that any haphazard identification serves as 'life'; examples will be found below. But the primal concept is, as the first Australian instances show, to be an idea resulting in which a man's 'life' is itself in repleni.

This perhaps is to be regarded as the second stage of analysis. The Hervey Islanders considered that fat men had fat souls, thin men thin souls. According to the Karen of Siam, a man's tendi disappears at death. It is a copy of the owner, his 'other self.' According to the Karens, which personates the varied phenomena of life is the koikh or koa, which is 'not the soul,' but 'is distinct from the body and its absence from the body is death.' It is also the individuality of the animated being. It merely gives life, and cannot be distinguished from the person himself.

The Iroquois conceived of an exceedingly subtle and refined image, possessing the form of the body, with a head, teeth, arms, legs,' etc.

The next stage is characteristic of Yaman and Malay belief.

'The Dayak idea of life is this, that in mankind there is a living principle called the semangat or semang, that sickness is caused by the temporary absence and death by the total departure of this principle from the body.'

But this 'principle' is a replica of a particular man in a particular place. It is the samang or 'little man,' of the Torajas of Celebes. The semangat of the wild Malay tribes is a shape, exactly like the man himself, but no bigger than a grain of maize. The semangat of the Malays is a 'thumling,' and corresponds exactly in shape, proportion, and complexion to its embodiment or casing (strong), i.e. the body. It is the cause of life; it is itself an individual person, as it were, and is separable from the body in sleep, sickness, and death. A similar conception is found in S. Africa, America, and other localities sporadically, but it is general enough to be regarded as typical.

The problem of its origin is not clear. J. G. Frazer thus describes the conception:

'As the savage commonly explains the processes of inanimate nature by supposing that they are produced by living beings working in or behind the phenomena, so he explains the phenomena of life itself. If an animal lives and moves, it can only be, he thinks, because there is a little animal inside which moves it; if a man lives and moves, it can only be because he has a little man or animal inside who moves him.'

The argument agrees with the fact that the miniature replica is usually supposed to be the cause of life, but it is difficult to understand how the idea of an inner being, whether inanimate things or in living men, could have arisen in the first instance. Only the contrast between the dead and the living body seems adequate to produce it; later, the idea could be applied to all natural objects. As for the miniature size of the replica, this is probably a refinement of an earlier conception, in which such qualities were distinguished, and it would be naturally deduced from the fact that the man's body is still present, without any reduction; that which has departed, therefore, must be infinitesimally small. The same result is obtained.

necessitated by the idea that the life must take its departure by some one of the orifices of the body, and that, possibly, the certain characteristics of the memory-image may have exercised an influence.\(^1\)

In these early stages the life-principle is, though refined,\(^2\) always material; the conception of insubstantiality is quite a late achievement of thought.\(^3\) But certain natural confusions occur. Thus, the \textit{simangat} of the wild Malays differs from the \textit{simangat} held by other races in the same regions, for that which gives life is the \textit{jiwa}. The Patau Malay also believes in a ‘life breath,’ \textit{nyawa}; the \textit{simangat}, in their view, is not the vital principle, but is possessed by every object in the universe.\(^4\)

In his study of the animism of the Moluccas and neighbouring districts, A. C. Kruft finds a permanent distinction between the soul of a living man and the soul of a dead man. The former he considers to be impersonal, though in many cases it is certainly itself a person, and always is a miniature replica of the owner; it gives him life. Its material is fine, ethereal substance; it has various seats in the body where its action is most conspicuous, such as the pulse. It dies when the man dies. The other soul is a continuation of the individual after life and does not appear till death. In the latter conception we seem to have a combined result of the memory-image and the hallucinations of the flesh.\(^5\)

A later detail, which involves the idea that all things in nature either are animate or possess ‘souls,’ is also attached to the theory of the \textit{simangat}, though it is chiefly things concerning or incident to death that possess this miniature replica. The \textit{simangat} of the Eastern Semang is real like blood, or in the blood.\(^6\) Life is usually regarded as being closely connected with the blood—a natural inference from observation of wounds or of death by loss of blood. Life and blood are identified.\(^7\) A vaguer identification is frequently found with various parts or states of the living organism. To some, as the Iroquois, life is the flesh—\(^8\) a concept which probably originated from experience of nutrition. The heart is a seat of life; in some cases it, like blood, has a ‘soul’ of its own.\(^9\) The Australians regard the kidney-fat as an important seat of life,\(^10\) and the caudal fin and omentum are so regarded.\(^11\)

The absence of breath in the case of the dead is a fact naturally inspiring a belief that the breath is the life, or that the life is in the breath. In the Marquesan it was the custom to hold the nose and lips of dying persons, in order to prevent death.\(^12\) In primitive thought there is no explicit distinction between the identifications made with various parts of the body. The early books of the \textit{OT} hold, now the breath,\(^13\) now the blood, to be the ‘life.’ Primitive biology, in its secondary stages, has a larger list.\(^14\)

This is to be included the shadow of a man, which is (like everything connected with personality) a vital part,\(^15\) and a man’s reflexion is also closely akin to, if not identified with, his life. In Moluccas is a soul ‘into which if any one looks he dies; the malignant spirit takes hold upon his life by means of his reflexion on the water.’\(^16\)

The lore of shadow, mirror-image, and portrait becomes prominent, however, only in the third stage of culture—that of the higher barbarism. The Chinese place the dying man’s picture upon his body, in the hope of saving his life.\(^17\) In Siam, when a copy of the face of a person is made and taken away from him, a portion of his life goes with the copy. In some cases the essence with fire is the best known of many metaphorical analogies, and occupies a prominent place in myth—e.g., the fire of life infused by Prometheus into the clay figure which became men—and in metaphysical theology.

Until modern times, speculation has concerned itself with the source of life rather than with its origin. In early mythology conceptions like that of the Harvey Islanders, who regarded a ‘point’ as the beginning of existence, are rare. Rare also are such pseudo-biological ideas as the Maori concept that the life of a man is contained in the catamenia.\(^18\) But the usual conclusion is that the ‘soul’ is the source of life or is itself life.

2. The life of nature. Life in the vegetable kingdom has probably always been recognized, and primitive thought doubtless distinguished it as being different in character from that of animals. The same may have been the case with its attitude to inanimate things, unless it merely ‘personalized’ them.

The view of Tylor, that in primitive animism there is ‘a belief in the animation of all nature,’ and that ‘man recognizes in every detail of his world the animation of personal life and will,’\(^19\) can be applied only to certain developments of the higher barbaric stage.

‘It is not likely that at one stage man regarded everything as alive, and at a later stage gradually discriminated between animate and inanimate. The fact is, that he began by regarding everything as neutral, merely as given. Yet though he never thought of distinguishing these two classes, he distinguished as well as we do between animals and inanimate.\(^20\) Whatever prominence and importance he [primitive man] may have ascribed to inanimate objects, he drew the strongest ties between objects and what was endowed with life.’\(^21\)

An excellent observer remarks of the Kafrs of S. Africa, in regard to the question whether they ‘imagine everything in nature to be alive,’ that they very rarely think of the matter at all. When questioned on the subject of the animation of stones, they laughed, and said, ‘It would never enter a Kafr’s head to think stones felt in that sort of way.’\(^22\)

Throughout the fluid and ill-defined psychology of primitive man we may distinguish a tendency to mark off the concept of things as living from the concept of them as ideas, whether in life or after death. The latter aspect is idealistic, the former practical. In the one case with various parts of the body, in the other, the distinction is the Indonesian view, expounded by Kruft, that the life-soul of creatures is never confused or compounded with the after-death soul. In later psychologies, on the other hand, Tylor’s hypothesis, that eventually the ‘Life’ of a thing and its ‘phantom’ are combined, holds good.

Language has probably had much to do with the combination. The view of Kruft, however, that the Indonesian ‘Life-soul’ is but a part of the world-soul, applies only to the higher developments of animism.\(^23\) Here we have a parallel with the pantheistic theories of the world.

3. Regard for life. Another parallel with these is the regard for life generally, a regard which develops with culture but is more pronounced in Oriental than in Western morality. At first this feeling is a vague altruism, but later it is fused with a rigid code of duty. The life of another is tabooed, and life is held to be sacred. The life of other beings is held to be equal in value to the life of himself. The life of a man is held to be the life of a man, and not of some mythical ‘self-soul’ or ‘world-soul.’

with metaphysical estimates of the intrinsic value of life, as such.

In Buddhism, Jainism, and Taoism the respect for animal life is more concerned with the suggestion that it may not deprive any creature of life, not even a worm or an ant. He may not drink water in which animal life of any kind whatever is contained, nor eat or drink things that are, or must be, destroyed; he walks slowly lest he inhale a living organism; he considers that the evening and night are not times for eating, lest he might then eat a life to his mistake, and he rejects not only meat but even honey, together with various other foods he is supposed to consume, not because of his distaste for worms, but because of his regard for life. 1

Throughout Japan, ‘the life of animals has always been held more or less sacred. 2 In China it is regarded as meritorious to save animals from death—even insects if the number mount to a hundred,... to set at liberty animals intended to be slaughtered.” 3 To kill ten insects,... without great reason to kill..., animals for food,... "to be forewarned to encourage the slaughter of animals" are regarded as errors ‘of the same magnitude as the crime of devising a person’s death or of drowning or murdering a child’. 4 The Burmese ‘laugh at the suggestion made by Europeans, that Buddhists abstain from taking life because they believe in the transmigration of souls, having never heard of it before.’ 5 The same position may be assumed with regard to the Brahman doctrine of ahimsa, which includes the sanctity of all life. On the other hand, ‘no creed in Christendom teaches kindness to animals as a dogma of religious obligation, but all the religions of animals, but Mahayana did not originate on Christian ground.” 6

The life deposit. — A remarkable belief is that of the ‘life-index’ or ‘external soul’, which is found with such regularity in all the stages of the lower civilizations. An early example is the sex totemism of Australia.

The Woyjobinka tribe of South-Eastern Australia ‘held that “the life-index (the evil spirit) and the life of Yarakturk (the Nightstar) is the life of a woman,” and that when either of these creatures is killed the life of some man or of some woman is also killed. In such a case every man or every woman in the camp feared that he or she might be the victim of this merciless power and therefore great fights arose among the tribe.” 7

In later folk-lore the idea is crystallized into the totemism, but previously a host of objects are regarded as eligible for the safe-deposit of the individual life. It is not unusual that the subject is more frequent in mythology than in practical life. The fact that, according to the common-sense view, the more ‘deposits’ of life a man has, the more he is liable to death, may explain this natural difference.

A remarkable aspect of the fact is the connection with the growth of children and the growth of plants. The idea of this conception can hardly be attributed to any other influence than the observation of the growth of growth. It is not probable not originated by the notion of life.

But the sympathetic relation soon develops into a life-interest:

3. In folklore the life of a person is sometimes sown up with the life of a plant that the withering of the plant will immediately follow or be followed by the death of the person. 8

4. Another to the same effect is found in Western Europe. In the eighth century, when two children were born on the same day, the people plant trees in the name kind and dances round them. The life of each of the children is believed to be bound up with the life of one of the trees; and if the trees are cut down, they are sure that the child will soon die. In Sierra Leone it is customary at the birth of a child to plant a shoot of a mango-tree, and they think that the tree will grow with the child and be its god. If a tree which has been thus planted withers away, the people consult a sorcerer on the subject. Some of the Papiassu unite the life of a newborn child sympathetically with that of a tree by driving a pebble into the bark of the tree. This complete mastery over the child’s life; if the tree is cut down, the child will die. In Bali a certain tree is planted at the birth of a child. The life of the child is believed to grow up equally with the child, and is called its ‘life-plant.’ 9

1 Frazer, Golden Bough, ii. 497.
5 The Chinese plant M. pollinosa and the life of Yarakturk (the Nightstar) is the life of a woman, and that when either of these creatures is killed the life of some man or of some woman is also killed. In such a case every man or every woman in the camp feared that he or she might be the victim of this merciless power and therefore great fights arose among the tribe.
6 ib., p. 200.
8 Howitt, op. cit., p. 144. Simeon, the prince of Bulgaria, was bound up with a certain column in Constantinople; if the capital of the column were removed, Simeon would immediately die. This column took the place of the capital, and at the same hour Simeon died of heart-disease in Bulgaria.
9 The conclusion of these ideas supplies a constant motive in fairy-tales and the mythology which is their basis.

Thus, ‘Roshedel the Deathless is killed by a blow from the egg or the stone in which his life or death is enclosed; the magician dies when the stone in which his life or death is contained is put under his pillow; and the Tartar hero is warned that he may be killed by the golden arrow or golden sword in which his soul has been stayed away.” A remarkable instance occurs in the myth of the god Balder. His life was bound up in the mistletoe. The apparent inconsistency that he was slain by a blow from the pillar explained by Frazer: ‘When a person’s life is conceived as embodied in a particular object, with the existence of which his own existence is inseparably bound up, and the destruction of which involves his own, the object in question may be regarded and spoken of indifferently as his life or his death. Hence, if a man’s death is in an object, it is perfectly natural that he should be killed by a blow from it.”

10 The idea that the mistletoe itself is the life of the tree on which it grows is of the same order as the Malay and Chinese idea with regard to the knobs and excrescences on tree trunks. Two converse ideas may be noted. A person whose life is magically isolated has a weak spot, as Achilles. Death, no less than life, may be deposited, as in the stories where it is kept in a bottle. See, further, art. LIFE-TOKEN.

The life-index. — The magic significance of life as a magical essence is established; the formula is applied all round the social and religious sciences. The elementary facts of nutrition thus become the basis of an elaborate vitalistic philosophy. In its more primitive forms this as a practical science of life insurance.

11 Food... during thousands of years occupied the largest space in man’s mental area of vision. For the explanation of the existence of so large a body of superstitions concerning food, and into these enter the magical and, later, the vitalistic theory. Particular creatures are eaten because of their particular vital force. The slayer accepts of his foe in order to assimilate his life and strength (see, further, art. CANNIBALISM, §§ 3-7). In order to procure longevity the Zulus atke the flesh of long-lived animals. Meade injected into the veins of an ox an infusion of the long-lived deer, and so to the lower culture special virtue is assigned to human flesh. Besides the eating of flesh and the drinking of blood, there are various methods of acquiring the ‘life essence.’

12 The Tibetan Buddhist acquires ‘life’ by drinking the ‘ambarisa’ from the ‘Vase of Life’ (see, further, art. Food and Eating the God). Long life is often the subject of charms. The Chinese wear a longevity garment on birthdays. The Hindus ascribed long life to continence. Most religions include prayers for long life. After Frazer, Golden Bough, ii. 1951.

a death, magic is employed to prolong the life of the survivors.

Magical persons, and later the gods, are regarded as both possessing a rich storehouse of life and being able to impart it to others; the savage medicine-man is able to infuse life into an inanimate fetish. Breathing into it is the object of the breath of life (as in Ezekiel's apologue of the dead bones); smearing it with blood gives it the life of the blood. According to the Tantras, a king may slay his enemy by infusing life into the foe's effigy and then destroying it. Divine persons naturally tend to become long-lived or immortal.

But, though divine persons throughout bear a more or less 'charmed life,' absolute immortality is a late conception. The gods of the Homeric pantheon maintained their life through eating ambrosia, the 'food of deathlessness,' and by drinking nectar; and similar ideas were connected with the Persian Anahus and the Indian soma. In Scandinavian myth the apples of Idunn are eaten by the gods in order to perpetuate their life. The Egyptian gods were mortal. The tendency to immortality, however, is carried out in the higher religions, probably in connexion with the natural attribution to the gods of a general power over life and a control of creation. In the end the gods assume in the devout the ultimate hopes and fears of men, and they become 'lords and givers of life.'

6. Renewal of life.—A crude form of the ideas connected with a renewed earthly life after death, or resurrection, may be seen among the Australian aborigines, who speak of the ghost returning at times to the grave and contemplating its mortal remains. Similarly, on the W. Coast of Africa it is the man himself in a shadowy or ghostly form that continues his existence after death. The belief in the revivification of a dead person does not appear until the thalattographic stages of barbarous religion, when it becomes a favourite motif performed by a word of power or by the life-giving touch or contact with the body of the divine person. But the belief in a second life, or, rather, a series of lives, is a remarkable and regular feature of primitive thought. It takes the form of reincarnation; the dead are born again in their descendants, the idea being a natural inference from the resemblance of children to their parents and grandparents. The Central Australians have developed this idea into an elaborate theory of heredity, in which the 'life' is a germ-plasm. Other Australians evolved the notion that white men were blackfellows returned to life; 'tumble down blackfellow, jump up whitefellow,' is a familiar phrase. The whiteness of the native corpse after cremation has been suggested as the basis of the notion. The idea of reincarnation refers also to living parents. Thus an old blackfellow of Australia cries to his son, 'There you stand with my body!' and the son is recognized as 'the actual re-incarnation of the father.' This frequent belief has been sug-

7. The nature of death.—Primitive thought has no definition of the nature of death, but the usual attitude toward it, to explain it (cf. art. DEATH AND DISPOSAL OF THE DEAD [Introductory], vol. iv. p. 411 f.). A common motive of these is a mis-understanding or a trick. At a higher stage death is attributed to the malvolence of those supposed to cut the life of men and so produce death. Otherwise, the separation of the life-giving soul from the body as a fact, not as a theory of origin, is usually explained as the result of sorcery, except in cases of obvious violence or accident. By various means the human sorcerer, like the supernatural demon, destroys or abstracts the life.

In the higher barbarian death appears as a punishment for breaking taboo or other supernatural injunctions. The greater religions connect its origin with sin, Christianity with the primal sin of disobedience. Throughout, humanity is instinctively certain that death is the end of the life, and the conception of a second life is a protest against it.

8. Mythological and ethical applications.—Apart from myths in explanation of the origin of death and the frequent fancies of a magical life-source, primitive thought makes little use of the concepts of life and death as motives of
LIFE AND DEATH (American)

story. Their deification is rarer still. In some stories one or more remarkable personages are brought into close connexion with the facts of life and death. Thus, the Maoris tell how men would have been deadless if Manui, the culture-hero, had not appeared in travelling through the body of Night. In Scandinavian story Life and Ljósfráð (‘life’ and ‘desiring life’) survive the destruction of the world. The usual result is that some great deity possesses control over life, as in Hebraism, Christianity, and Islam. There is a tendency also to connect vitality with the sun-god; the Rigveda speaks of the sun in the character of Svarit, the Vivifier. In Hindu theology Yama, the first of mortal man, became ‘King of the Dead.’ In Christian theology a contrast is drawn between the old Adam, by whom death entered the world, and the new, who re-introduced ‘life’ on a higher plane. A less refined moral is drawn in the Babylonian epic; the conclusion is that Gilgamesh must die and cannot escape the universal lot.

... He will then, at least, not suffer the pangs of hunger in the World of spirits.

The Scandinavian figures, Life and Ljósfráð, are among the rare cases where life is personified. Death is more frequently deified. Old Slavic myth seems to have had a goddess Smrť, and the Baltic customs tell of a god of death, Nalma. The Etruscan figure of Charon may be similar to the last, the conception being derived from human executioners, and the god being a slayer rather than a god of death. The Thamatos of Greek poets was thought of as the harbinger of religious personification. The Shedu of the OT and the Hel of the Eddas are originally places which receive the dead. As a rule, the figure later described as Death is either a god of the gods or a god whose office is indirectly connected with the death of men. So Yama has his messengers, and the Tartars believe in an ‘angel’ of death. The latter is the type of Christian ideas. The Greeks had both Charon and Hermes Psychopompos, but in modern Greek folk-lore Charon has become a figure of terror, Death himself. Death with his seythe may be a transference from a personification of Time.

A certain control over life is assumed in primitive ritual drama, as in the pretended death and revivification of youths at initiation, and of candidates for the priesthood. Ideas of a magical vitality grew up out of sacred meals; at the same time there appears the connexion of sin and death, and the consequent aspiration towards a purging of sin accomplished by a renewal of the soul. Out of these elements arises the ethical view of the renewal, but still uninduced from a mystical idea of a spiritual prolongation of existence. ‘Salvation’ in the life after death was promised by the Greek mysteries. In its lowest terms the salvation resulting from belief in Christ was eternal life. Faith and morality meet when eternal life is the reward for a good life on earth. Life is identified with goodness.

The fear of retribution in a future existence has been impressed by several of the great religions, notably by Christianity. But there is no justification for connecting the origins of religion with either this fear (long posterior to the inception of religious ideas, and a late and special ethical development) or the worship of death or the dead. The dead are mourned or less feared than when they were alive; the infection of death is carefully avoided; the ghosts of the dead are intensely dreaded, and therefore carefully propitiated. Many ghosts, it is true, have been reduced into gods, but there are many keys which fit the doors of religion.

LITERATURE.—This is cited in the article, but the whole of E. B. Tylor’s exposition of animism in his Primitive Cultures, London, 1891, applies to this point.

A. E. CRAWLEY.

LIFE AND DEATH (American).—The beliefs of the aborigines of Americas agree in the main with those of other peoples at the same stages of development; but there are a few interesting features of an individual character. With regard to ideas of the life which informs the organism, the Eskimos identify it or its action with the ‘life-warmth.’ So the Navahos regarded the warmth of the body as the living soul; the ‘shade’ or ‘double,’ a distinct concept, was supposed to wander away when a man was sick or dying; the Sauk identified the soul with ‘vitality,’ and supposed it to exist after death. The Tojotee explained that it was ‘something within’ them which must leave them: this was called death when it quitted them. Identifying breath or air with the vital principle, the Aztecs held that the atmosphere with a mortificatory quality.

In many American languages the Great Spirit and the Great Wind are one and the same both in word and signification.

The Aztec word chcoatl, e.g., means ‘wind, air, life, soul, shadow.’ A phrase attributed to an Indian orator is: ‘The fire in your huts and the life in your bodies are one and the same thing.’ Spirits and human magicians, such as the shamans, devour men’s souls; the result is death. Death is ‘infectious’; a dead man’s belongings decay quickly. Such is the ancient opinion among the Irish also, who hold that a dead man’s clothes wear out more quickly than those of a living man.

The belief in the reincarnation of the dead in children is widely spread and firmly held. The Haida refine upon it by saying that after five such reincarnations the individual ‘soul’ is annihilated.

A special feature of American religious theory, on which practically the whole ritual of the central nations was founded, was developed from the usual primitive idea that divine persons are subject to senility, death, and decay. Alone among the Mexican gods Tetzcatlipoca is credited with perpetual juvenility. The principle was developed that the gods, in particular the sun, would die if deprived of food. Hence the perpetual round of human sacrifices offered on Maya and Nahau altars. This daily ‘feast of flowers,’ as it was euphemistically termed, kept the gods alive. A serious result was the equally perpetual carrying on of warfare for the sole purpose of obtaining captives to sacrifice as victims. The heart, as the symbol of life, was the choicest portion.

19 Ib. I, 592;

It is natural that an old chronicler should say: 'The Maya have an immoderate fear of death, and they seem to despise sickness.' In the Dresden and other codices a God is represented as a figure with outstretched hands, a symbol of sickly mortality, with the marks of corruption on his body, and displaying every sign of mortality, of the decay of flesh and life, a mummiform, corpse-like sign of him, perhaps to typify the connection between birth and death. He also wears a pair of cross-bones. The Hieroglyph which accompanies his figure represents a corpse's head with closed eyes, a skull, and a sacrificial knife. His symbol is that for the calendar of the Maya, which indicates that the period over which the life of the dead, the region towards which they invariably depart with the setting sun. That he is a death-god there can be no doubt, but of his name we are ignorant. He is probably identical with the Aztec god of death and hell, Mictlan, and is perhaps one of these Lords of Death and Hell who invite the heroes to the celebrated game of ball in the Kapal Pupuh, and hold them prisoners in their gloomy realm.

Like Hel and Hades, Mictlan seems to have developed from a place into a person. He is a grisly monster with capacious mouth, like the medieval European identification of the whale and hell. Medieval Europe evolved also, but by poetical rather than religious imagination, a figure akin to that of the American god A. For similar reasons the Sinulac are said to have devoted most of their worship to Cocociname, who is Death.

A profound influence on the later concept of the human sacrifice is this: The idea that the god thus slain in the person of his representative comes to life again immediately, was graphically represented. The skinning of the slain man and dressing in his clothing a living man, who thus became the new representative of the godhead.

This principle, if probable enough, is, however, a secondary development; the revivification of the god was the primary meaning of the sacrifice.

In Mexican theology the supreme deity Thoque-Nahauque (of Molina) is 'he upon whom depends the existence of all things'; he is the case elsewhere, the sun is connected with vitality, 'animating and keeping alive all creatures.' An interesting point is the connexion of Mexican bud-godnesses with the idea of life and its bestowal.

The aboriginal creation of a Great Spirit has been disregarded. Equally unreliable are such forms as the Master of Life (of Laftan), and Master of Breath, though such phrases may have been applied sporadically by the Northern Indians to some 'great medicine.'

A feature of the eschatology is the other-world paradise for the brave, compared only with the belief of Islam, although European chivalry shares the aversion from dying in bed. The 'happy hunting-grounds,' which become a proveer, and the 'Graveyard,' the Guiana belief, 'the orthodox American paradise, in its full glory. In the direction of the setting sun lie the happy prairies, where the buffalo lead the hogs, and where all kinds of animals and birds have excess of the most delicious food and those who have excelled in hunting and horse-stealing, approach as as to assume supreme felicity.'

A. E. CRAWLEY.

Life and Death (Chinese),—I. Popular Ideas.—Life and death are more intimately associated in the Chinese mind than in the Western. The curtain separating life and death is thinnest. The future life to the average Chinese, taught as he is by popular Buddhism and Taoism, is largely a replica of this life and a different phase of existence, but death is no theme of beauty. After passing through the Judgment Halls of the Ten Judges of Hades (a hell with many furies), the victims are supposed to require food, clothing, housing, due reward, means of travelling both on land and on water, and money. All these are sent to them by their friends and relatives by means of burning paper models and imitations.

2. Ancient Beliefs.—The ancient Chinese were unable to distinguish between death, sleep, and a swoon. They therefore tried to resuscitate the dead by calling them by name to return, etc., by providing for them, by keeping their names in the dress that they wore, and, at first, by tightly covering the corpse. Many customs now in vogue in China are due to this belief. Death was a prolonged sleep, and that to suspended animation; and, as the sleeper will wake, so the corpse may do the same, should the soul return to its habitation. Articles which were believed to promote vitality, such as jade, gold, silver, pearls, and cowries, were stuffed into the mouth of the dead. No methods of disposing of the dead were employed which would quickly destroy the body, and coffins were made of such materials as pine and cypress, for they were intended to preserve human bodies from putrefaction and to facilitate their resurrection by enveloping them thus air-tight in a material which, being possessed of vital energy, was considered capable of transmitting life once more into the clay.

The ancient Chinese were most scrupulous in washing and dressing the dead, so that the body might be received in the proper form for the soul to return to its fleshly dwelling-places.

The strong Chinese reprobation of the mutilation of the body has its origin in these ancient ideas, for mutilation prevents the body from being in a fit state for the soul to return, or to appear in the next world. Hence criminals were beheaded as a severe punishment, and strangling was considered a lesser one. The mode since the revolution seems to be that of shooting.

In the belief of the Chinese life 'remains after the soul has left the body.' There is thus a belief in a life in death itself, or, as de Groot graphically describes it, a cohabitation of soul and body after death. In accordance with this idea, there is not a complete separation of soul and body. In the popular ideas of the people, one of the three souls is in the grave. Thus death dominates life, and life lives in death and is not extinguished by it. One of the other souls is believed to inhabit the ancestral tablet, while the third passes on to the other world.

3. Classical Ideas.—If we turn now to the ancient classics, which throw a light on the early life of the Chinese, we find, besides the views already expressed, higher conceptions as well, or, at all events, less gross ones. Amidst all the ceremonial and ritual, the belief in immortality is clearly seen. Ancestor-worship alone is enough to prove this. Even before the days of Taoism and Buddhism, the souls of the ancestors were believed to be in heaven. Confucianism teaches the existence of the soul after death, but nothing regarding the character of that existence. The knowledge of a future life was hazy and indefinite in the old religion of China.

'Thus they looked up to heaven (whether the spirit was gone) and buried (the body) in the earth,' for, it is added, 'the body and animal soul go downward; but the intelligent spirit is high.'

The attitude of Confucius towards death was that of an agnostic. He virtually avoided a direct answer to the question asked him by one of his disciples about death, his reply being: 'While we do not know life, how can we know about death?' The elder commentators say that the master 'had no answer, because spirits and death are obscure and unprofitable subjects to talk about.' Some of the modern Confucians writers agree with these observations, but the majority say that the master's silence was profound, and showed the proper order in which such inquiries should be prosecuted, for 'death is only the natural termination of life.' To the ordinary reader, however, it would appear that this reply was only an exemplification of a passage in the Doctrine of the Mean (xl. 2), 'There is that which even the Sage does not know.'

The followers of Confucius have not risen above the agnostic posture which he took, and here it was that Buddhism came to satisfy the longings of the ignorant as to the future with its scheme of rewards and punishments, its firm beliefs and precise statements, its apparent knowledge of futurity, and its assurance of lives to come and the influence of this life on them.

The duration of life and its early or late ending were believed by most of the Confucian school to be dependent on man's proper use of life, and this is a very general belief among the Chinese.

'Haven does not cut short men's lives—they bring them to an end in mutual confidence.' 'A man truly wise makes little of life.' 'He who tries to live as a Sage is sure to have long life.' A concrete example of this is the Great Shun (c. 2500 B.C.), whose filling pike was so great that it attained the age of 1000.

Length of days, therefore, was regarded by the Chinese as the reward of virtue, and longevity is one of the five blessings earnestly desired. Over many centuries the Chinese have lived longer than before; and many a wise man would welcome the New Year, bearing the wish, 'May the five blessings descend on this door.'

Though what is stated above is the general opinion, all have not held it.

The materialistic Wang Chung (c. a. d. 97) says, 'Worthies are taken ill and die early, and wicked people may be strong and robust and become old, while good and virtuous men die not a retribution for evil doing.' When a man expires, his fate is fulfilled. After his death he does not live again. 'Human life and death depend on the length of the span of life, not on good or bad actions.'

The Chinese temperament is one which enjoys life to the full. The people are generally contented and happy, and the deep hidden meanings of life are largely wanting.

4. Taoism.—In the 3rd and 4th centuries B.C. Chinese philosophy was in its golden period. It critically examined life and its connotations, and evolved original conceptions of the nature, motives, and mysteries of existence. This 'poetry of truth and wisdom' revealed a few notable men among its adherents. Later, Confucianism, with its love of rites and ceremonies and its reverence for former sages, had the effect of turning men's minds from the inquiries which a philosophical spirit delights to make, and Taoism, under whose guise such inquiries had arisen, to a large extent changed to a system of rites and idolatry.

Primitive Taoism—that shown to us as developed through the sayings and mind of its founder, Lao-tzu (b. 604 B.C., and its earlier writers—knew little more than Confucianism as to the great subjects of life and death.

Lao-tzu (Laotse, 4th cent. B.C.) says: 'The living and the dead . . . know nothing of each other's state.' 'We all have an end.' 'The good and the bad is unknown.' 'The Scholar (Chuang-tzu, 3rd and 4th cent. B.C.) asks: 'What should the dead know of the living or the living know of the dead? You

and I may be in a dream from which we have not yet awaked.'

'To him who can penetrate the mystery of life, all things are revealed.'

The prolongation of life and the cheating of death of its due, or, rather, the raising of mortal life above death by the transforming of life into a higher existence, has been one of the aims of Taoism, to be attained 'by quietism and dis-passionatism, by regulating one's breath and using medicines.'

Lao-tzu is stated to have said that, to a perfect man, 'life and death . . . are but as night and day, and cannot destroy his peace.' In Lecius we find (as the statement of one almost a legend) that life and death were looked upon in the same light. Lecius says that 'the source of life is death.' 'There is no such thing as absolute life or death: '7 c. f., 'from the standpoint of the Absolute, since there is no such principle as life in itself, it follows there can be no such thing as death.' 8 On the other hand, we have such statements as: 'the dead have no knowledge . . . It gives rest to the noble-hearted and causes the face to turn white.' The sage looks upon life and death 'merely as waking and sleeping.'

In the idealistic and mystical writings of Chuang-tzu (Chuang-tzu), one of the great Taoist philosophers, who lived about two centuries after the founder Lao-tzu, there are some striking statements. He says that, for the sage 'life means death to all that men think life, the life of seeming or reputation, of doing or action, of being or individual self.' 9 'He who clearly apprehends the scheme of existence and is not rejected over life or repine at death; if he knows that terms are not final.' In other words, if life and death are not linked in his mind, then life is inevitable, for it 'comes and cannot be declined. It goes and cannot be stopped.' 10 The quick passage of life is thus expressed: 'Man passes through this sublunary life as a white horse passes a crack. Here one moment, gone the next.' 11 The life of man is but as a passing day to man.' 12 'The living are men on a journey.' 13 'Life is a lean.' 14

Taoism borrowed largely from Buddhism, and developed its scheme of life and death, amplifying its descriptions of a revivified life, which are to succeed death itself. 15

In the Epicurean Yang Ch'iu's philosophy (c. 300 B.C.) life is to be lived for the pursuit of 'pleasure, and the life of confucian is deathitous for it is a pursuit of his individuality. There is to be a disregard of life and death; life is of importance only to him who lives it, and that solely during his period of active life.' 16 The dead man cannot become a body again. 17

5. Buddhism.—For the general attitude of Bud- dhism as regards life and death see art. DEATH AND DISPOSAL OF THE DEAD (Buddhism). It is, however, more than questionable whether esoteric Buddhism, with its metaphysical aspect towards the world of senses, has much or any hold on the masses of the people. 18 Accordingly, many of

LIFE AND DEATH (Christian)—In passing from the OT view to that of the NT there is no abrupt or startling gap, although a delicate tact is conscious of a difference of atmosphere, and becomes aware that the elements common to both are not in the same proportion, and appear to have been subjected to some organic change in the later form.

In the OT words denoting 'life' occur in 166 passages, and in the Apocrypha in 24; words denoting 'death' occur in 364 passages, and in the Apocrypha in 111. On the other hand, in the NT words denoting 'life' occur in 138 passages, and words denoting 'death' in 128. In this quantitative analysis the striking fact is that death occupied the OT mind more predominantly than life. Qualitatively taken, however, a striking difference at once appears. Life in the OT for the most part refers to existence here in the flesh, and comparatively rarely rises above it, being summed up in the LXX phrase in Sir 27:2; 'the life of man is in the number of his days.' Instances occur, of course, especially in the later Psalms and Wisdom literature, of life being regarded as independent of bodily conditions, but these are to be treated as indications of a transition in thought to a higher plane, as a praeparatio evangelica.

The significant feature of the NT allusions to life is in their want of any real interest in mere earthly living, and this feature is plain even where the necessities of experience compel reference to the fact of physical death. Thus, out of the 135 passages where 'life' (psalm) or 'living' occurs, more than seven can be referred to physical life. In one (Lk 12:) the text varies, and the life referred to might be heavenly. In Lk 16 the life of Dives is sharply contrasted with the life of Lazarus. Ac 8:2 is a quotation from the LXX; Ac 17:3 is inspired by Stoic thought. In Ro 8:6, 1 Co 2:3, and Ph 3, where life and death are conjoined as correlative terms, the sentence is formed with the life of the spirit and life, but the probability is that in each case the meaning is that spiritual life and spiritual death face us. In the first passage it is invisible powers personified that are declared incapable of saving the Christian from Christ's death; in the second passage the words are equally patient of either meaning; and in the third, if Theophylact may be followed, the spiritual meaning prevails.

Besides the OT the NT does not seem to be used anywhere in the lower sense.

The case is different with the term 'death' (Θανάσιοι), for in something less than a score of passages in the Gospels, and in eight passages of Acts, the death of Jesus is referred to; in nine passages of Heb, physical death, especially that of Jesus, is the subject. It is only personified in conjunction with Hades, or is described as being followed by a second death, or is regarded as the term of this life. On the other hand, St. Paul and St. John, with hardly an exception, when they refer to death at all, mean spiritual death, not physical. Our task is to examine the passages where the terms ζωή and Θανάσιοι, or their cognates, occur in the NT, in order to ascertain their precise meaning.

1. Life.—(a) The first mode of expression for the 'life' which Christ gives is to be found in the use of the definite article. Examples of this are Mt 7:4, 'straitly is the way that leadeth to life'; 18:16, Mt 9:3, 'to enter into the life mailmed,' 'to enter into the life with one eye'; Mt 19:16, 'thou wouldst enter into the life'; Jn 5:23, 'behold the life'; 5:16, 'the bread of the life'; 8:3, 'shall have the light of the life'; 11:2, 'I am the life'; Ac 3:15, 'the prince of the life'; Ro 6, 'the law of the spirit of life in Christ Jesus'; 2 Co 4:18, 'the light in you'; Ph 3, 'the mortal may be swallowed up by the life'; 1 Ti 6:11, 'lay hold of the eternal life'; 1 Jn 1, 'the word of the life'; 3:2, 'he that hath the Son hath the life'; Rev 22:19, 22:21, 'the tree, the crown, the book of the life'; 21, 'the water of the life.'

In all these cases the article is used in what grammarians call the anaphoric sense, by which the substantive is pointed to as referring to an object already definitely known. Thus, in the instant case the implication is that life is mentioned in that with which the reader were already familiar as the subject of Evangelic preaching, and an object of their own religious experience. It is also implicitly contrasted with another and a lower kind of life—that of the natural man, of the man of this world (cf. F. W. Blass, Grammar of NT Greek, London, 1905, p. 160).

(b) Life which is unreal and fleeting is set aside in favour of the life which is real and abiding: 1 Ti 4:2, 'life that is now and life which is to come'; 6:20, 'the life that really is.'

(c) It is assigned a heavenly nature by a predicative clause: Ro 5:5, 'we shall be saved by his [the Son's] life'; 2 Co 4:4, 'the life of Jesus'; Eph 4:2, 'the life of God'; 2 Ti 1:11, 'life that is in Christ Jesus,' 1 Jn 5:5, 'the life in his Son.'

(d) The characteristic NT expression qualifying life, however, is 'eternal,' rendered in AV 'everlasting' 24 times, and 'eternal' 49 times, but both are used as a quantitative in terms are not qualifying, as giving a quantitative in terms of new life I live, and Christ is all things to me, breath and life and light,' (See M. R. Vincent, 'Philippus and Philomen,' ICC, 1897, in loco).
The question whether `æon' and `æonian' are to be rendered qualitatively or quantitatively is not identical with the question whether a Jewish or Greek conception is the determinant, for the Hellenization of this Christianity was an organic change if not in its acute form, from the earliest NT days. Greek thought had penetrated Jewish before NT times (W. Bauer, Die Religion des judenrum innerhalb des christentums, Berlin, 1903, viii, 27), and that is one of the 'aeon' torments", in 4 Mac 9; 'æonian life' in Enoch 10; 'judgment of the æon of Æons,' 102; 'the King of the æon,' 277), and is embedded in the NT itself. Moreover, the Jewish antimthesis of 'life on earth' and 'that world' lay on the border-line of Greek thought, and might pass easily into it. The witness of Philo must be added to that of the Synoptic Gospels (with their many isolated sayings redolent of Greek thought and their record of the teaching of a mystery-religion), the Fourth Gospel as a whole, Eph. and Col., and the constant tendency of the Greek in St. Paul to burst its Jewish fetters.

We conclude, therefore, that `æon' or `æonian' in the NT is life that belongs to a higher order than animal or ordinary human life; it is from above, and the recipient of it is lifted, by possessing it, into a higher side of life, a new plane of being. The present life indefinitely or infinitely prolonged, nor is it life beyond the grave distinguished as such from life on this side of the grave.

It is not possible here to say that the word `æon' or `æonian' stands for a superhuman being who is good or evil, supreme or subordinate. Hippolytus (Ref. iv. 29) questions speculators who 'spoke of a sedition of æona and of a revolt of good powers to evil, and of a concord of good and wicked æona.'

Tremens (Iren. i. 15) relates that the Valentinians taught the Temple when he was twelve years old, and in his baptism when he was thirty. The apocalyptic references in the system of apo. K. Reichenstein (Poliphilus, Leipzig, 1901, p. 130) quotes a Hermetic hymn addressed to the gods on the mountain in the world of becoming. Similarly, Plato (Tim. 37) says: 'When the father and creator saw the creature which he had made moving and living, the created image of the eternal gods (æon ù Æôn ù), he rejoiced, and in his joy determined to make the copy still more like the original; and, as this was eternal (ágllos), he sought to make the universe eternal, as far as he might.' In this sense, where Plato wants to express the idea of everlastings, he has the word ágllos ready to his hand. But, when he comes on to express the idea of a different sense (ágllos): 'Now the nature of the eternal being was æonian (æonian), but to bestow this attribute in its fullness on a creature, he might, be said to make a moving image of the æon (ágllos); and, in order to be the same time that he, when he saw him, he added in unity (ägllos ágllos) an image that in itself was æonial) to move in accordance with number; and this image we call time. And, in the reference to the fact that he was dealing with a category of quantity, and, accordingly, he employed the word ágllos, 'eternal.' J. Adam (Fidius of Pontus, Cambridge, 1861, p. 86) translates upon in his translation of Plutarch (fr. 181, ed. Bergk) as the 'living man,' and says that it never means 'eternity,' but 'eternal.' The passage is: "æoiai áglloiai eis oxai ù tauta ù ómoun (fr. 11, xix. 27). Plato's allusion of æon and Æon of time to Eternity, is made on the page in Philo (ed. T. Mangey, London, 1714, i. 490), who makes the three æons, Æon, æon, and æon, before sun and moon were created, an image of æon and the æon of the æon, and the æon after the sun, which is a copy of æon. Similarly, he says (Sup. 619b) that 'Æon is the invisible world is called æon, as that of the sensible is called time.'

The transition from the sense of 'æonian' in the LXX (where it [or its cognates] is used about 240 times) to its sense in the NT is of the nature of an evolution. The NT sense of 'spiritual,' or 'divine,' is not wanting in the OT, yet the more usual sense of the term is that of duration. Out of this lower sense there gradually unfold, at first tentatively and then with increased assurance and the grounding on which duration rests, viz. the possession of an essence which is superior to the category of time. What endures is that of which time is but the changing expression, and the name of Christ God is seen to consist in the power which He confers of escaping from the jurisdiction of 'the prince of the power of the air' to the higher realm where the æon or 'Æonian' kings rules.

The use of the term 'æon' in the NT is important for our present purpose; for, in addition to the passages in which the temporal meaning of the term is required, there are a number which allude, and that is a further gift of Christ. 'Æon' is certainly used in a personal sense. Different ages, or different regions of the universe, are placed by God under the control of rulers to whom the name of 'æonian' is given. In Ac 15 the rendering should in all probability be 'God maketh these things known from æon.' So in Ac 3 and Lk 1 the prophets are said to receive their inspiration from æon; the Æon is beyond the scope of our knowledge. The word 'æon' is best reached by paraphrasing it: 'From the realm of the æon the news has not been heard of anybody opening the eyes of a man born blind.' In Eph 2 no æon is raised, for this 'æon of æons' of this world there is clearly a personal being, since he is given as a sub-title 'the prince of the power of the air.' In 1 Ti 1 God is distinguished as the 'King of the æons.' In Col 1 the revelation given to the saints is exalted above that given to the æons. The latter knew nothing of the mystery of the indwelling Christ, the hope of glory. The knowledge of this was the prerogative of the saints. In 2 P 3 the 'day of æon' can be nothing but the 'day of the Lord,' and hence the æon here is Jesus (cf. also He 1, 1 Co 10,1 Ni, and the appendix to Mk in the freer-logic).

The new heaven and the new æon, in the climate of a Gnostic environment, that among the Gnostics the doctrine of personal æon was universal, and that 1 Clem. 35, Origen (c. Celsum, vii. 31), Ignatius (I. 1. 1) relates that the Valentinians taught the temple where he was twelve years old, and in his baptism where he was thirty. The apocalyptic references in the system of æon. K. Reichenstein (Poliphilus, Leipzig, 1901, p. 130) quotes a Hermetic hymn addressed to the gods on the mountain in the world of becoming. Similarly, Plato (Tim. 37) says: 'When the father and creator saw the creature which he had made moving and living, the created image of the eternal gods (æon ù Æôn ù), he rejoiced, and in his joy determined to make the copy still more like the original; and, as this was eternal (ágllos), he sought to make the universe eternal, as far as he might.' In this sense, where Plato wants to express the idea of everlastings, he has the word ágllos ready to his hand. But, when he comes on to express the idea of a different sense (ágllos): 'Now the nature of the eternal being was æonian (æonian), but to bestow this attribute in its fullness on a creature, he might, be said to make a moving image of the æon (ágllos); and, in order to be the same time that he, when he saw him, he added in unity (ägllos ágllos) an image that in itself was æonial) to move in accordance with number; and this image we call time. And, in the reference to the fact that he was dealing with a category of quantity, and, accordingly, he employed the word ágllos, 'eternal.' J. Adam (Fidius of Pontus, Cambridge, 1861, p. 86) translates upon in his translation of Plutarch (fr. 181, ed. Bergk) as the 'living man,' and says that it never means 'eternity,' but 'eternal.' The passage is: "æoiai áglloiai eis oxai ù tauta ù ómoun (fr. 11, xix. 27). Plato’s allusion of æon and Æon of time to Eternity, is made on the page in Philo (ed. T. Mangey, London, 1714, i. 490), who makes the three æons, Æon, æon, and æon, before sun and moon were created, an image of æon and the æon of the æon, and the æon after the sun, which is a copy of æon. Similarly, he says (Sup. 619b) that ‘Æon is the invisible world is called æon, as that of the sensible is called time.'
life which forms the theme of the NT. To be born from above (John 3:3) is to be turned and become as little children (Matt 18:3) to come unto the resurrection of life (John 5:24); to put on Christ (Gal 3:27); to be quickened together with Christ (Eph 2:6); to be in Christ (2 Cor 5:17); to put on the new (Eph 4:22-23). These are all new creatures (Gal 6:15)—these and many similar passages describe that dynamic process of which the result is eschatological life, or salvation, or the Kingdom of God, or bliss.

2. Death. Christian theology has been at once oppressed and confused by its failure to prove to the mind that in the NT it is not physical life cleared of its experiences, but that it is called life. Just that it is not physical death as such is connected with sin. (1) Reflection would assure us that, when life is used in a super-physical sense, it is at least probable that the death referred to is always something more than the death which dissolves the connexion between the self and its physical vehicle. If one be of the transcendental order, so must the other be. It has never been explained how to maintain a causal nexus between sin as a wrong act of will and death as an event of the natural order. Modern science has convinced itself that death has reigned not only since Adam's transgression, but from the first act of creaturehood, apart from sin, is a process of nature and not a super-natural punishment for sin. (2) Christianity is admittedly a religion whose home is in the spiritual order, and its light cannot be perceived in the physical, though real, is only indirect. From its superior standpoint it may have something to say as to the origin and meaning of physical death, but, if it speaks of death as intimately bound up with its own life, that death will not be of the physical order. (4) The law of analogy points in the same direction. A principle which is operative on one level repeats itself on another in a more comprehensive and elevated form. It may be described without strainning as love engendered in matter, or, conversely, as love in the spiritual world exercises an attraction which binds spiritual beings as surely as gravity binds together atoms, so death as physical is a reflection of a similar principle in the world where life is life indeed. (5) All philosophy assures us of the existence of an infinite principle or truth in the finite order. In fact, of the existence of a univeral in the particular. But a physical death is a fact in the world of space and time; hence it conceals what is more than a fact—a truth or idea, or a fragment of reality presented under the guise of the actual. If, therefore, a religion which proclaims itself as having the real for its object speaks of death, or attributes to death any place in its world, it cannot be supposed to limit its reference to the death which is merely physical.

It will be found on examination that the conclusion thus reached a priori is confirmed by a careful scrutiny of the evidence. (a) We may conveiently begin with passages in which death is obviously treated as acting in the spiritual sphere. The following passages in the Fourth Gospel may be cited: 'He hath passed out of the death into the light' (John 5:28); 'If a man keep my word, he shall never see death' (John 8:51); in ch. 11 the difficulty caused by the apparent inequality of Jesus in the beginning, by the reference to a physical death. (b) We find that the believer should never die can be fairly met only by the hypothesis that the story in form moves on the physical plane, but that in substance it is the story of that death of the sin unto death (or not unto death) and the reference to the manner of death in 1 Cor 15 is contained in what is certainly a gloss. In 1 John we have similar references to spiritual death: 'He that loveth not abideth in the death' (3:9), where the death is clearly on the same plane of being as love; in 5:11 the sin unto death (or not unto death) is also clearly a sin which is followed by death of the same order, viz., in the world of free will, for it is said in explanation that God will give life for them that believe unto death. It is, therefore, a new creation (Gal 6:15)—these and many similar passages describe that dynamic process of which the result is eschatological life, or salvation, or the Kingdom of God, or bliss.

In the Epp also many passages occur in which death must be interpreted as spiritual. In Rom 6 St. Paul, speaking not as a jurist but as a preacher (cf. W. Sanday and A. C.orraine, Romans, Edinburgh, 1865, ad loc.), sets up an ideal standard with ideal consequences for violation of it. Those who outrage the plainly expressed mind of God as to what righteousness is do so with the full knowledge that they deserve death ('und neint damit den ewigen Tod' [H. A. W. Meyer, Der Brief an die Romer, ed. B. Weiss, Gottingen, 1899, ad loc.]). In the striking passage Ro 6:23, unless St. Paul is guilty of inexcusable logical confusion, the death which in vv. 17-21 is obviously spiritual must be of the same kind in vv. 18-19. The current exegesis which assumes such looseness of thought in St. Paul is itself, to a great extent, apart from any sense of the meaning that is simple, plain, and consistent throughout: Adam was guilty of a sin which was spiritual in its character, being a misuse of free will; therefore he brought into the world a death or a spiritual death has afflicted mankind ever since. But now at last the Christ of God, by Himself entering into vital union with a race self-deprived of the higher life, that is, by sharing in some sense their loss, has restored what they had lost; He has, that is, obeyed the law that only through death do we enter into life. The death He has undone is that which consists in the fact that the life He has borne is that which consists in the process of taming the lower nature, in the process of the mystic crucifixion. The one lost eschatial life by self-will; the other gained it by obedience, and gave it through love.

Similarly, the linking of baptism with Christ's death and life in Ro 6 is explicable only if it is eschatological life and eschatological death that are in question, and the best proof of this is to be found in the difficulties into which this exegesis has long been implicated through its mistaken assumption that the life and death referred to are physical. Hence it has to say that St. Paul's 'thought slides backwards and forwards from the different senses of "life" and "death" almost imperceptibly' (Sandy; Headlam on 6). But, from the facts that Christ's death was transacted in the spiritual order, that baptism in its genuine meaning was a moment in a dynamic process, that the life which Christ truly lived was an eschatological life, it follows that, the life being the same both in the Lord and in His disciples, they both were united in the mystic Vine, since one and the same life was in it and in its branches. Therefore, St. Paul concludes, since it is now eschatological life that rules in both Christ and His disciples, it is both to be his own and to the life and death referred to are physical. Hence it has to say that St. Paul's 'thought slides backwards and forwards from the different senses of "life" and "death" almost imperceptibly' (Sandy; Headlam on 6). But, from the facts that Christ's death was transacted in the spiritual order, that baptism in its genuine meaning was a moment in a dynamic process, that the life which Christ truly lived was an eschatological life, it follows that, the life being the same both in the Lord and in His disciples, they both were united in the mystic Vine, since one and the same life was in it and in its branches. Therefore, St. Paul concludes, since it is now eschatological life that rules in both Christ and His disciples, it is both to be his own and to the
Even the famous passage in 1 Co 15 is given a coherent meaning only when the thought of spiritual life and spiritual death is kept in the foreground. It is true that here the thought is less pure, and that the physical death of Christ and His resurrection from physical death are made the proofs of physical death till they come. But, even so, it is not the physical resurrection that is the vital point, but the spiritual, of which the physical is but an expression. The argument is as follows. To be still in your sins is death; faith, however, when it comes, annuls this spiritual death, for it is essentially life. This living faith (the life of God in the soul) is what filled Christ, and constituted His title to the higher state of being, as is proved by the fact that He overcame (spiritual) death; the proof that He did so overcame spiritual death is to be seen in the fact that He could not be holden by physical death. Hence death in both senses is abolished, or is in the process of being abolished, but the death which is the enemy is spiritual, and, if physical death comes into question at all, it is incidental only or by way of illustration. That this is the true interpretation becomes clear when we observe that the remainder of the chapter (vv. 52-58) is concerned only with affirming that this higher spiritual, or risen, life will require a cognate spiritual body, and that as God gave the life so He will give the suitable body.

(b) There are, however, unquestionably many passages in the NT which seem, on the surface at all events, to refer exclusively to a physical death. They are those which in the Gospels (12 times) and the Acts (8 times) deal with the death of Jesus Christ. But even here a sound exegesis will compel us to a conclusion that what is said and what is signified. What is said is that Jesus suffered physical death at the hands of the civil and ecclesiastical authorities of His day. What is signified is that His sufferings as witnessed had a hidden counterpart and a universal validity because, He being a heavenly subject, what He experienced in strong crying and tears affects all who are united to Him as a transcendental subject by being made sharers of His life, partakers of His divine nature. What is signified is that His crucifixion is a mystic process before it takes shape in the moment of a physical death, and that this process of crucifixion, therefore, applies to all who are made one with His life (Gal 5:1, 6). What is signified is that the physical death and burial of Christ are a reflexion of a spiritual death and burial which He underwent in order that He might be a radiating centre of heavenly life to all men. The real death and burial are to be found in the world; the death and burial that fall under history are shadows of the real.

The Epistle to the Hebrews also refers explicitly to the physical death and sufferings, but here we must allow for the exigencies of the line of argument adopted. This compelled the author to place the physical death of the man Jesus over against the physical death of the animals slain in OT sacrifices. Yet, even so, the force of the argument depends on the superior worth of the former. His sacrifice was all-compelling, partly because it was voluntary (7:28; 12:10) and more, because of its transcendent worth, it being the offering of One whose life was divine, and made in accordance with the power of an Indissoluble life (7:26) and through an exomian spirit (8:2). The life, we may say, that even here is dealt with is essentially spiritual, and is physical only in a secondary and subordinate sense.

It is a truth that small class of passages alone remains where death is of an ambiguous appearance. In Rev 11:8, 12:9, 20:12. Death is personified and joined with Hades, and both may attack man on his physical or on his spiritual side. In Mt 20:34 and Lk 13 the death of the heathen world, where spiritual death is surely meant. In Mt 16:16, Mk 9:1, and Lk 9:27 contemporaries of Jesus, it is said, should not taste of death till they see the kingdom of God. It is impossible to say what was the original context of this triplicated passage, but it is improbable that the passage itself is to be regarded as a falsified prophecy of a literal fact. The 'Son of God' and the 'Son of Man' are terms which express inner realities, and it is at least likely, then, that 'death' is also an omission. In this case the meaning of the passage is that there were some (a 'remnant,' the few who were 'chosen') who would not taste the bitterness of spiritual death, because to them would be vouchsafed the mystic vision of the King in His beauty, of the land that to most men remains far off.

It will be clear, from what has been said, that the NT and Christian antithesis is not that of the OT and Judaism, between this world and the next, but between two kinds of life here and there. It is a qualitative and not a quantitative difference. On one side is the life of sense, of intellect, of static forms, of fixed perceptions and well-defined conceptions—the life, in short, whose boundaries are set by the practical needs of the empirical age. On the other side is the life which creates the very power by which sense and intellect discharge their limited functions, which is in itself distinct of forms, is only partially grasped by perceptions and for the most part remains outside conceptions—the life, in short, which Jesus came to reveal and to give, which is called theon, or spiritual, or heavenly, or divine, and is that everlasting stream from the life of God of which all expressions of life are at all levels fragmentary flashes. We pass from the fragment towards the complete and perfect in exact proportion to our deeper and separated self to the life of the whole, which is God. It is this enhanced life and expanded consciousness that the religion of Jesus Christ and His Church is primarily concerned with. Its interest in eschatology, in theories about resurrection, in hypotheses such as that of universalism, of conditional immortality, of the nature of the ultimate union of soul and body, or of reincarnation, though it may be suggested to the reader that it is concerned with a higher life experienced here and now, and to grow hereafter more and more towards the perfect day. It is interested in theories about that life, but its interest in them is not vital.

W. F. COBB
magical means to kill their enemies, thinking thus to be rid of them. Such inconsistencies arise from the blending of the single distinction between physical life and death with the extremely ancient, and almost universal belief in immortality—a belief that is rooted partly in the passionate abhorrence which death inspires as an indignity inflicted upon the living, and partly in the fact that death is known to us only through observation of the external world, and not by conscious inner experience.

Life and death are facts, since they are ever being forced upon our notice; death is a falsehood, however, because we have never known it to be true of ourselves, and, furthermore, because we will not admit that it can be true of ourselves. But, if after the physical death we are not dead, then we must be alive. The words ‘life’ and ‘death’ thus both acquire a double meaning, and a wide field for speculation opens out; the achievements of the Egyptians within this field have here to be considered.

1. Philological.—Whereas the Egyptian word for ‘to die,’ mort, Coptic 모트 (indefinite), 모크 (qualitative), is shared with all the Semitic languages, the verb for ‘to live,’ 무, Coptic 무, 무, is of doubtful affinities. Several derivatives from the same stem, such as 무, ‘sandal-string,’ 무, ‘goat,’ 무, ‘ear,’ fail to suggest any earlier or more concrete meaning for it, while other words having the same radical, such as 무, 몽, (Coptic 맹), or 무, ‘mirror,’ clearly derive their meaning from 무, ‘to live.’ Closely related in sense are the verbs 무, ‘to exist,’ and 려 (Coptic 맨, ‘life’). See particularly H. Hertz, ‘La Représentation collective de la mort,’ in Assoc. x (1903-06) 154.

belief in immortality; these are 무, ‘to become,’ 무, ‘come into existence.’ For ‘death’ there are various euphemistic expressions, such as 오 또는 오, ‘passing away,’ 려, ‘reaching port’; ‘my dying day’ is once expressed by 려 무 너-미 무, ‘the day on which it went well with me’ (Sphinx, iv. [1901] 16); the phrase 오 림 임, ‘to attain to beatitude,’ is ambiguous, sometimes referring to honours old age and sometimes to death. The dead are described as 무 너 무, ‘those who are yonder,’ or as 오 너 무, ‘the weary ones.’ Theological is the phrase 무 나 오, ‘to go to one’s ks, or double’; so, too, are the words 무, ‘glorified being,’ 무, ‘noble,’ and key, ‘blessed,’ applied to the illustrations dead. Two epithets that from the early Middle Kingdom onwards are appended to the names of dead persons reflect the one the identification of the dead with Osiris, and the other the

LIFE AND DEATH (Egyptian)

xxvi. (1904) 130), was first enunciated by Battiscombe Gunn, who proves the symbol to depict the strings or straps of the sandal.

No demonstration of Gunn's discovery (acknowledged by A. Erman in 'Aegyptische Grammatik,' 1911, p. 88) has yet found its way into print; the crucial evidence in the following argumentation has been supplied by Gunn himself. There is an object called 'nḫ, exactly resembling the symbol and hieroglyph for 'life,' which is often represented pair-wise at the sides of the sandal. Buildings and coffins are covered with pictures of articles deemed necessary for the happiness of the dead in the after-life, and care is taken in most cases to place such objects in its appropriate position; as regards the body of the dead man within the coffin; thus necklaces are shown on the level of his neck, sceptres within reach of his hand, and so forth. A priori, therefore, it is to be concluded that the object was connected with the feet—a point clinched by the fact that a pair of these objects is usually shown next one or more pairs of sandals, while the other objects are not, and that they are, when otherwise shown, shown more clearly connected with the feet (see J. Garstang, Burial Customs of Anc. Egypt, London, 1907, pl. 6, opposite p. 165; E. Lacau, Sarcophages antérieurs au nouvel empire, Paris, 1914, no. 23394 [p. 90]; H. Schäfer, Priestergräber, Leipzig, 1908, fig. 72 [p. 94], 83 [p. 95], and pl. 11). In several instances the accompanying inscriptions describe the pair of objects as 'the pair of the sandals under his feet' (cf. Garstang, Burial CUstoms, pl. 102); the preposition 'under' must not be pressed too closely, but it at least shows that the 'nḫ was part of, or belonged to some way to, the sandal. If now we compare the object \( \Omega \) with the representation of the sandals, we shall see that the same elements enter into both—the long loop that passes over the toes, the two straps which are fastened to the sides of the sandals, and possibly a kind of thong bow or buckle. It is difficult to make the representations harmonize in detail, but⁠—with one exception, namely, that the modes of binding the sandal to the foot vary greatly—and there is also the extra pair of sandals, perhaps actually worn but laid out in such a way as to exhibit them to the best advantage—we shall hardly doubt that the objects shown on the Middle Kingdom coffins and called 'nḫ are a sparse pair of sandal-strings for use in the event of those attached to the sandals requiring replacement. The cut of the preceding page depicts various examples of the sandal-strings both as an object and as a hieroglyph, together with pictures of sandals for comparison; the hieroglyph is normally painted black.

There being no obvious connexion between the literal depiction of the sandal-strings and the idea of life, it must be supposed that the idea of life, not being itself susceptible of pictorial representation, was symbolized by an object the name of which fortuitously coincided in sound with the in question to the procedure is merely the procedure called 'phonetic transference,' extremely common in hieroglyphic writing.

It is, of course, possible that 'nḫ ('sandals'), 'sandal-strings,' and 'nḫ ('life') (the vowel in both cases is hypothetical), are ultimately connected etymologically, but, as said above, the coincidence is too slender to demand certainty; it is certainly wrong to advance the hypothesis that the sandal-strings were used only because they resembled the symbol of life, the origin of that symbol itself being regarded as undiscoverable. The evidence of the earliest writing (the absence of the scene of death) proves that the 'sandals-sign was regarded as a phonetic and not as a pictorial sign.

As a symbol the 'sandals' is everywhere to be found on the Egyptian monuments. Gods and goddesses hold it in their hands, or present it to the nose of their favourites. It appears with arms supporting a standard (e.g., E. Naville, The Temple of Deir el-Bahari, London, 1905, pl. 149) or as itself representing the legs of a human figure (Lauver, CI 15): such religious representations have still to be collected and classified. As a mere ornamental device the 'sandals-sign is frequently found on furniture, jewellery, etc., often in association with other auspicious symbols, e.g., \( \Omega \), \( \Omega \), 'life, stability, and prosperity.' As an amulet the 'sandals is fairly common, and is usually made of green or blue faience.

(6) There is no corresponding symbol for 'death.' The words 'death' and 'to die' are in early times followed (or 'determined,' to use the technical expression) by a sign representing a man fallen upon his knees, and bleeding from a wound on the head; later this sign is merged in a wider application and varying form—the commonest form is \( \psi \)—which accompanies various words meaning 'prisoner' or 'enemy.' Very often, however, these hieroglyphs are mutilated or suppressed because of their illomened associations (ZA li. [1914] 19).

3. Literal views of life and death. How life was envisaged may best be learned from the following words on behalf of a dead man:

'May there be given to thee thy eyes to see, thy ears to hear what is spoken; thy mouth to speak, and thy feet to walk. May thy hands and arms move, and thy flesh be firm. May thy members be pleasant, and mayest thou have joy of all thy limbs. Mayest thou scan thy flesh (and fix it) whole and sound, without any blench upon thee; thy true heart being with thee, even the heart that thou didst have heretofore' (K. Sethe, Urkunden des AT 47. Altertums, Leipzig, 1894-95, iv. 214).

Death is the negation of life; in slaying their foes, the Egyptians sought to make them 'as though they had never been' (Urkunden, iv. 7, and passim), and the custom of cutting off their hands and phalli indicates what they held that this act was intended to deprive them. Further light is thrown on these materialistic conceptions of life and death in the passage of the 175th chapter of the Book of the Dead, where the state of the dead is described as 'an emblem in the hand of the dead, where the state of the dead is described as 'an emblem in the hand of the dead, hence is stopped in the hand of the dead' (see p. 1903, § 14); the cube, or block, 

'Out of truth it is without water, it is without air—deep, dark, and void, a place where one lives in quietude. Pleasure of love and life is not there to be had, nor for the dead is there in lieu of water and air and love, quietude in lieu of bread and beer.'

Inertia is the chief characteristic of the dead, wherefore they were called 'the weary,' the ' inert' (§ 1); elsewhere we find death compared with sleep (e.g., Pyramid Texts, ed. Sethe, Leipzig, 1908, 721). Life, on the other hand, is full of activity, and chief among the needs which are air to breathe ('breath of life is a common expression) and food and drink for sustenance. Here, again, the wishes for the dead are the best evidence of the things deemed needful for the living: bread and beer, oxen and geese, cloth and linen, incense and myrrh, and things good and pure whereon a god lives—so runs the common formula, which hardly less often mentions 'the sweet breezes of the Northwind' as a necessity of life. The place of life was pre-eminently the earth; 'O all ye who live upon earth,' begins a favourite invocation.

Various views were held as to the whereabouts of the spirit of the dead, but it is evident, or at least can certainly be supposed to be correct, that the spirit was not one of the dead; those who are yonder is, as we have seen, a common designation of the dead. That the land of death is a land where there is no returning (though it was early said, already in the pyramid passages (p. 175) we find the warning, 'Go not upon those western ways, for those who have gone yonder come not back again' (the same thought recurs later; cf. Harris, 690, recto 7, 2). Religions as to the duration of life and death are often encountered in the texts. The Egyptian prayed that, like Joseph, he might attain to the age of 110 years (see RTAF xxiv. [1912] 16-18). In comparison with death, the endlessness of which was so obviously alluded to (cf. the 'city of eternity' for the necropolis, 'the lords of eternity' for the funerary gods), 'the span of things done upon earth is but a dream' (PSTF i. [1912] 190; cf. Pop. Petersbuehnen 1116 A, recto 55 [Les Papyrus hiéroitiques ... de l'Ermitage, 1913]; it should be said parenthetically that this comparison of life with a dream refers only to the natural sequence of its events, not to any speculations concerning its reality). With regard to the extension of the idea of life, it seems to have included man and the animal

1 Except for this and other valuable references the writer is indebted to Professor Sethe of Göttingen.
kingdom only (cf. the words quoted from a Memphite text in § 11); it is doubtful whether an Egyptian would have spoken of plants as living; nor is there any expression found to describe the neutral inanimate state of things not belonging to the animal world.

4. The hatred of death.—The opening words of the gravestone-formula, *O ye who love life and hate death,* strike to the root of the most profound feeling in the Egyptians for the intense love of life and detestation of death more than any other. We have devoted more time and thought to funerary things than has been done by any other people before or since. The best expression of these feelings is on a stele dating only to the year 46 B.C., but which contains in its inscription a woman speaks from the tomb to the husband who has survived her:

'O brother, husband, friend, highest—thine heart shall not grow weary of drinking and eating, drunkenness and love. Celebrate a happy day; follow thy heart by day and night; put no care in thy heart. What are thy years upon the earth. The West (i.e. the place of burial) is a land of slumber, dark and heavy, the habitation of those who are yonder, who sleep in their mummy-shrouds, nor wake to see their likeness, nor regard their fathers and mothers, and their hearts are rest of their wives and children. The five waters of which all have a share for me it is thirtieth, but it comes to him who is upon earth. There have I, though water is beside me, and I know not the place where and what this day. . . . Turn my face to the North wind on the bank of the water; perchance so may I catch the mouth of the wind but death, his name is "Come"; every one to whom he hath called comes to him straightway, their hearts are afflicted, through fear of him. There are also men beside them either of gods of men; great and small alike rest with him, nor can any stay his finger. He loves all that are living together with their tablets. The old man moves to meet him, and all men fear and make petition before him. Yet, he turns not his face towards them, he comes not to him. He who is with him, he hearkens not. When he is worshipped, he shows himself not, even though any manner of being is given to him. Anzahl der schlagenden Urden des ägyp. Alterthums, Leipzig, 1843, pl. 16.

This is perhaps the only passage in which death is personified, though the Egyptians were not averse to a certain abstractation of abstract ideas; Life, e.g., is found beside Health in the outward guise of a Nile-god (J. E. Gautier and G. Jéquier, *Mémoire sur les fouilles de Licht, Paris, 1903*, p. 25). The inscription *celebrating a happy day* recurs again and again in the songs of the Harper at Egyptian banquet, together with the reminder that life is short, death inevitable and eternal. Herodotus tells us (II. 79) that at the entrance of the temple of the goddess Isis a figure of a dead body in a coffin was borne around and shown to the guests, with the words: *When thou longest upon this, drink and be merry, for thou shalt be such as thou art. No reference is made to this custom in our texts, but it is thoroughly Egyptian in spirit (see also Plut. de Is. et Osir., xvii.). The old songs collected by W. Max Müller, *Die Liturgiepoese der alten Ägypter*, Leipzig, 1856 (pp. 29-37), recall the wretched fate of the dead:

*The nobles and glorified ones . . . buried in their pyramids, who built themselves chapels, their place is no more; what is become of them? I have heard the words of Imhotep and Hardebt, told and told again; where is their place? Their walls are destroyed, their place is no more, as though they had never been. None cometh thence who can relate how they are there . . . Here cometh the inevitable fatal: 'Be of good cheer, forget and enjoy thyself. Follow thy heart, so long as thou livest; place mouth on the heart, clothe thyself with fine linen, anoint thyself; forget sorrow and remember joy, until arriveth that day of putting to shore in the land that loveth silence.*

5. The hope of immortality.—From the same Theban tomb from which the last words are drawn (tomb of the priest Neferhotep [50], XIth dym.; compare a song expressing widely different sentiments: *I have heard those songs that are in the ancient toms, and what they tell exalting life on earth, and belittling the region of the dead. Therefore do they show the men of the land of Eternity, the just and fair, where terrors are not? Wrangling is its abhorrence, nor does any gird himself against his fellow.*

That land free of fear, all our kinmen rest within it from the earliest day of time. The children of millions of millions come thither, every one. For some may tarry in the land of Egypt; none there is but passes not yonder. That land of immortality is but as a dream; but a fair welcome awaits him who has reached the West (ZBSA xxx, 109).

This pretty poem voices the opinion of those who, holding this term faith in immortality, rejected the cold comfortless views of death already illustrated. No doubt that faith was born of a revulsion of feeling against the pitiless cruelty of death; for the conclusion of death is the destruction of torment and also of the than; and because of the reason, it did not supersede or drive out the opposite belief. There is an argumemtative, controversial note in the assertion of the old funerary texts, 'Thou hast departed living, thou hast not departed dead' (Pyramid Texts, 154; cf. 533); or we may quote the reiterated assurance, 'Thou diest not,' in the same texts (657, 775, 781, 792, 810, 875, 1464, 1477, 1810, 1812, 2291). The multifarious funerary rites, the contracts made with ka-priests, and the petitions or threats to passer-by and visitors to the tombs all imply that the benefits of immortality were not to be obtained except by a certain forethought, separate effort. It is true that a discontinuance of the funerary cult might not entail complete annihilation; the Egyptians dreaded, for instance, lest the conclusion of life be the beginning of an endless state of decay and fall to pieces (Book of the Dead, titles of chs. 45, 163), this fear giving rise to the strange apprehension of a 'second death in the necropolis' (Del. chs. 44, 176; 45, 192).

Similar conclusions might perhaps be drawn from the variety of the theories concerning the fate of the departed, who were alternately (or even simultaneously) believed to be stars in the sky, dwellers in the other world, incarnations of Osiris, or spirits living in the tomb or revisiting their earthly homes (see art. STATE OF THE DEAD [Egyptian]). It is unthinkable that all these divergent views were accepted and believed with a fervent sincerity; rather they were conjectures sanctioned by ancient tradition, half-believed, half-doubted, and expressed with a naive and credulous thoughtlessness. The same time failed to silence the haunting suspicion that absolute death, after all, might be a reality.

6. Secondary views of life and death.—Under the influence of this conception of immortality the terms *life* and *death* became so imprecaton each with the meaning of the other that they no longer contradicted and excluded one another as they had originally done; *life* was not necessarily the short term of existence upon earth, and *death* was perhaps but another mode of living. Sometimes, of course, by the abstraction which language permits, the words were used in their old strictly contrasted senses, but often there is left only a shadow of the original meaning; *living* may be any form of existence vaguely analogous to physical, terrestrial existence, and *death*, either the state or condition of existence that is to be applied to various states from which some characteristic feature of living was absent. A few examples, mainly of philosophical interest, may serve to illustrate this transition of meaning. Not only was prolongation of life the reward of moral conduct (see ETHICS AND MORALITY [Egyptian], § 6; but in a sense the moral life was the only true life; in the Teaching of Ptahhotpe we read:

*As for the fool who hearkens not, he achieves not anything, he looks upon him who knows as one who is ignorant, and upon things useful as things harmful, . . . he lives upon that*
Life and Death (Egyptian)

23. Mummification. Men, a divinity, friends, matter, ones), Capart, Pharaoh (sSp soul (W. 13 thus, he that kind relatives have knew bright the early (Cairo, by vitality sidered hieroglyphs often were imputed or superseded, obviously because they were considered to have the same power to injure as living things (ZA li. 1-64).
7. Death and the gods. — Could the gods be said to die? In sense, no doubt, they were considered to live more fully, more truly, than human beings. The solar deity in particular was full of vitality; the Pharaoh is said to be 'granted life in his latter days upon truth'; regular hymns, especially those to the Aten (the solar god of the heretic king Akhenaten) represent all life as emanating from the god; and all gods and goddesses were dispensers of life. On a closer view, however, we find that the kind of vitality that the gods are said to have is more analogous to the life of the blessed dead than to the life of human beings; to the virtuous dead it is promised, 'he who is yonder shall be a living god' (Erman, Gesprächen eines Lebensmädchens mit seiner Seele, Berlin, 1896, p. 142; cf. Pop. Petersbg, 1116 B, recto 56). That the gods dwell afar off together with the dead is shown by the following sentence from a sepulchral stele of the Middle Kingdom: 'I have gone down to the city of eternity, to the place where the gods are' (Cairo, 20485). Various dead Pharaohs and celebrities were posthumously deified (see art. Heroes and Hero-Gods (Egyptian)), and the green or black complexions of their images suggest that they were not regarded as wholly alive. Osiris, as King of Eternity, chief of the Westerners, led but a shadowy existence, and his遥远 appearances were in fact the terminus of his living to his terrestrial representatives. The Pharaoh ruled as Horus 'on the throne-of-Horus of the living'; under another aspect he was the 'living splint of image of Atum' (sip nāt a 'Itm). Alternately regarded as 'son of Re' and as identical with Re, the King did not die, but 'flew to heaven and joined the sun, the flesh of the god becoming merged in its creator (Sinuhe, R 71). Erman and Mnevis bulls were respectively living emanations of Ptah and Atum, and other sacred animals whose cult was celebrated in late times doubtless stood in a similar relation to their divinities to whom they represented. Lastly, the historical aspect from which the gods were sometimes regarded represented them as rulers of a far-distant age, and in consequence, as beings long since dead.
8. The dead as a class of beings. — In the Book of the Dead and elsewhere we find the following classification: men, gods, blessed dead (3q, 'bright' ones), and dead (ntw) (see E. A. W. Budge, Book of the Dead, London, 1908, pp. 113, 293, 3.98, 308, 366, 395, 477). In this classification there is a kind of chronological hierarchical arrangement; the dead of the most remote times are holier, and partake more of divinity, than the recently deceased. So, too, the Turin Canon of Kings conceived the earliest rulers of Egypt to have been the gods of the first creation; then came the lesser gods, and, lastly, the followers of Horus and earliest historical kings. Manetho records a similar sequence of 'gods' and 'mortal dead' (vives of nqtht), In the Book of the Dead and elsewhere 'the dead' are spoken of in a way that clearly assumes them to enjoy a kind of existence; they 'see', 'hear', and so forth.
9. Relations of the living and the dead. — Some Egyptians, influenced more by anthropological theories than by the unambiguous evidence of the Egyptian texts, have asserted that the funerary rites and practices of the Egyptians were in the main precautionary measures to protect the living against the dead (e. g., J. Carpat, in Trans. Third Congr. Int. Egypt., Oxford, 1908, i. 203). Nothing could be farther from the truth; it is of fundamental importance to realize that the vast stores of wealth and thought expended by the Egyptians on their tombs—that wealth and that thought which was not only the material but also the practice of mummification and a very extensive funerary literature—were due to the anxiety of each member of the community with regard to his individual future, and not to the feelings of respect, or fear, or duty felt towards the other dead. We have only to read the story of the exile Sinuhe to realize the horror felt by an Egyptian at the prospect of dying abroad, and of being there deprived of every honours; it is a feeling akin to this that created the whole system of funereal observances.
It does not vitiate the assertion here made that the dead cannot bury themselves, and are at that extent at the mercy of the living. Death does not absolutely snap all relations; and motives of filial piety, the calculation that one's own funeral rites are dependent on others, liberal inducements in the form of legacies, previous contracts with the deceased, and also a certain modicum of fear and hope—all these things afforded a certain guarantee to the dying man that his own wishes with regard to burial and post mortem cult would be carried out. But there was no real ancestor-worship or objective cult of the dead in ancient Egypt. The feelings of the living towards the other-dead, if they may be so called, constitute an important question apart from the question of funerary rites (see art. Death and Disposal of the Dead (Egyptian)). The Egyptians wailed and mourned at the death of relatives, not merely out of grief, but as a matter of propriety; under the New Kingdom, mourning-cloths of a bluish colour were worn by women at the funeral (ZA xlv. 162); we have at least one possible allusion to fasting on the occasion of a death (Pop. Petersbg, 1116 B, recto 42); friends as well as relatives attended the funeral. It was thought that after death the deceased might return to at least provide for their children on earth (Urkundenlv. iv. 491; Nina de Garis Davies and A. H. Gardiner, Temp. of Amenemh., London, 1914, pl. 37); and we have a number of pathetic letters to departed relatives praying their intervention and help (Cairo, 25,195, hieratic text on linen, Old Kingdom; Cairo, 25,375, and Petrie collection, bowl with hieratic inscription, before Middle Kingdom; Pitt-Rivers collection, cup with hieratic inscription, 7th-8th dyn. =PSBA xiv. (1892) 328). In one of these letters (Pop. Leyden 571, 20th dyn.; see Maspero, Études égyptiennes, Paris, 1878-91, i. 146-159) I. See, further, art. Ethics and Morality (Egyptian), § 13 (18).
bitter reproaches are addressed to a dead woman by her widower, who has fallen ill, blaming her for her neglect of him after all his kindness towards her while she was alive.

10. The dead as malignant beings.—In the magical and medical papyri incantations are often directed against any male or female dead person male or female, who shall come to injure N, the son of M. The dead are conceived of as the cause of disease, though perhaps only those dead, as in the modern gypsy belief, who may be a household over the earth. The evidence seems fairly clear that actual ‘possession’ by the dead, conceived of as haunting spirits, is meant in such cases; for the demon is charged to ‘flow forth,’ and honey is said to be a useful medicament which is sweet to men, but bitter to the dead’ (Erman, Zaubersprüche für Mutter und Kind, Berlin, 1901, p. 12 f.) At the same time, the duly buried dead also had power to take vengeance on those who injured their property or violated their tombs (H. Sottas, La Préservation de la propriété funéraire, Paris, 1913). Evidently in Egypt, as in other lands, there was a danger that the dead should act as evil spirits, perhaps in the blood, the symbol of death; in a papyrus it is lamented that ‘plague is throughout the land, blood is everywhere, death is not lacking’ (Gynaec. Suv. p. 64, Am. Sect., Leipzig, 1909, p. 23); and, perhaps because of its association with blood, red colour is in many papyri avoided for writing the names of the gods, except in the titles of evil gods, or those evil gods.

11. Origin and nature of life and death.—The Pyramid Texts (1460) recall a time ‘when heaven was not, when earth was not, when mankind was not, before the gods were born, before death had come into existence.’ Many cosmogonic legends were told by the Egyptians (see Erman, Ägyptische Religion, Berlin, 1909, pp. 32-36, for best summary); most of them referred the origin of life to some god, but there was a superstition which attributed self-generative powers to various small forms of animal life, such as mice, snakes, or flies. The frog was particularly prominent in this connection, doubtless owing to the numbers in which tadpoles appear, just as though they had come into existence by themselves out of the wet mud. Hence not only did the frog become a symbol of the resurrected creatures of the Nile, but also it was intimately associated with the beginning of things; in the Hermopolitan myth the eight primitive creatures had the heads of frogs or snakes, and in the Abidene tale the frog-headed goddess Heket was associated with Khnum in the creation (see W. Spiegelberg and A. Jacoby, in Späth, vii. [1905] 215-228).

Life, once being started, was continued by the physical methods of reproduction (see esp. Song of Harper, 1. 1; Admonitions, 12. 2-4), but the gods, especially the sun-god, Re, were none the less the cause and mainspring of life (the birth-scenes in the temples of Luxor and Deir el Bahri are very instructive in this connexion).

A daringly speculative attempt to follow up this train of thought is found in an inscription from Memphis, a late copy of a text of early date. J. H. Breasted, in the Philosophy of Memphite Priests, in ZA XXXIX. (1901) 30, which seeks to explain how Pha, having primitively divided himself into ‘heart’ (the seat of the imaginative, judging faculty), as impersonated by Horus, and ‘tongue’ (the organ of command, i.e., the executive, will-function) was personified by Thoth, said that he transferred part of his soul to the vital functions of the body, in consequence his impressions press upon the functions of ‘heart’ and ‘tongue’: when the eyes see, or the ear hears, or the nose smells, they convey this sensation to the brain and in the heart that causes every recognition (judgment) to go forth; it is in the tongue that is the heart of the world and that makes what the heart desires. In this way Pha necessarily appears to be the cause of all things done by living creatures; he is, in other words, the vital principle itself. This psychological analysis of human, or rather animal, activity is singularly unique, and perhaps represents the thought of some unusually individual rather than that of the priests and learned men generally.

The medical papyri show that a serious attempt was early made to understand the workings of the body, but in the papyri as opposed to the scientific views with the current mythology has yet come to light.

12. Magico-medical views.—A certain pre-natal existence is assumed by physical and mythical expressions, as ‘he was already (already) in the egg’ (Sinuhe, R 93). The normal view, of course, was that life began with birth; a writer speaks of the ‘children’ who are broken in the egg, who have seen the face of the crocodile before they ever lived’ (Lebensmude, 79). The medical papyri contain prognostications for telling whether a child will live or not; ‘if it says (a sound like the word for “yes”); it will live; if it says (a sound like the word for “no”), it will die’ (Pap. Ebers, ed. L. Stern, Leipzig, 1875. 97, 134 f.). Spells were used to prevent women from conceiving, and there is various other ways in which birth is touched upon by the magico-medical literature. Amulets and charms of all sorts were employed to protect life; and, conversely, magic was secretly employed to bring about an early death, by magical incantations (see papyri, e.g., Pop. Lee; see P. E. Newberry, The Amhurst Papyri, London, 1899). A Turin papyrus attempts to cover all contingencies by enumerating all the possible kinds of death that may happen to a man (W. Pleyte and F. Rossi, Pap. de Turin, Leyden, 1869-75, p. 120 f.). Some kinds of death were considered happier than others; death by drowning, e.g., was considered by many as a just punishment because Osriris had perished in this way, and those who died thus were called happy, ‘blessed’ (ZA xlvi. [1909] 132). Curses were considered efficient magical means of affecting life (for a good collection of curses see Sottas, op. cit.). Oaths are conditional curses; it was usual to swear ‘by the life of Re,’ and so common was this style of oath that the verb ‘only, to live,’ was used transitorily in the sense of ‘to swear by,’ and the Coptic word for an oath is anash. Most contracts and judicial depositions within the New Kingdom begin with the words, ‘As Anubis endures, and as the Sovereign lives,’ that is, because Anubis often swore oaths affecting their own life and property (conditional self-curses; see Spiegelberg, Studien und Materialien zum Rechtswesen des Pharaozeitreiches, Hanover, 1892, pp. 7-81).

13. Life and the law.—On this subject consult the art. ETHICS AND MORALITY (Egyptian), § 13 (1-3), from which it will be seen that the sanctity of human life was strongly felt, as far at least as Egyptians were concerned. A few details may be added here. Abortion was considered a crime (Pop. Turin, 55. 1), unless the charge made in the passage here quoted was one of b. naturality leading to a miscarriage. Particularly abhorrent was bloodshed between close relatives, as father and son, or a man and his maternal brothers (see Gardiner, Admonitions, p. 9). Capital punishment was less severely considered if the sentence of imprisonment and the bastinado (Pop. Petersburg, 1164, recto 48 f.), and persons condemned to death were allowed to make away with themselves.

14. Life as a thing undesirable.—The Egyptians' intense love of life and appreciation of its value are reflected in many of the passages that have been quoted. There is, however, a limited pessimistic literature (see art. ETHICS AND MORALITY [Egyptian], § 6) in which life is regarded as undesirable. This point of view may have been inspired originally by some such anarchic con
LIFE AND DEATH (Greek and Roman) —

The outlook on life of the average Greek of the 5th cent. B.C. may be illustrated by the language which Herodotus, in his interview with Cimon, King of Lydia.

When Solon visited Sardis, after all the grandeur of the royal palace had been exhibited for his admiration, he was asked by Cimon whom he considered the happiest man (hapax) he had ever seen. To the surprise of Cimon, Solon answered, 'Teilus of Athens,' because, 'On him Death did not come with a troubled existence.' And so it mostly was; the Egyptian remains true to his love of life — not perhaps the life on earth with its mingled joys and sorrows, but the life of his dreams, the land of Eternity, 'The just and fair, where terrors are not,' and where 'none girds himself against his fellow.'

LAMARTINE.—There is no published monograph on the subject; such references as are necessary have been given in the text. For the history of the happiness doctrine in the 18th cent., see H. H. H. ALAN H. GARDINER.

on here. If they are, the news that penetrates to them must be supposed to be slight in itself or at any rate of so uncertain a nature that it was necessary that they should not advert to the matter at all. Hence it is a mistake to suppose that the Greek view is that the duty acts in an arbitrary and, so to say, spiritful fashion. It is true that the conception is expressed as to lend colour to such an interpretation.

Thus in Herod. vii. 10 Artabanon, the uncle of Xerxes, tries to dissuade Xerxes from invading Greece: 'Do you see how God strives with his lightning those animals which rise above others, and suffer them not to vaunt themselves, while the lowly do not at all excite his jealousy?' Do you see how He hurls His bolts against the most stately edifices and the most lovely trees? For God is wont to cut down whatever is too highly exalted, but He is a lover of the simple and meek, and of a man of a number of men; when God in His jealousy (διάθεσις) strikes them with fear or with thunder, they often perish in a manner unworthy of themselves, because God suffers none to be proud save His  

But, while this may have been a popular conception, the underlying idea is a much deeper one. It is, in fact, nothing more than the expression of the Greek idea of justice, or Dike. The definition of justice (δικαιοσύνη) which Plato gives in the Republic is nothing new, but is implied in the whole Greek attitude to life, as Plato says: *δις γε τα των προκειμενων δικαιοσύνη και ταυτα των ημων σωματων εντολας* (113 A).

Now, as applied to the relation of God and man, justice lies in the recognition that the divine and the human destinies are utterly unlike. The gods and men are alike the children of earth (mother) and heaven (father): 'from one source spring gods and mortal men' (Hesiod, Works and Days, vii. 107); but the lot of the gods is altogether different from that of mankind. Pindar emphasizes this distinction in a beautiful passage:

'One is the son of gods, the other of gods, and from one mother we both have, breath. But separate altogether is the power (faculty, i.e. capacity, gift) that sendeth us; for one is naught, but the other is heaven's gift, affected by no unshaken for ever. Yet do we resemble somewhat, in mighty mind or in bodily form, the deathless gods, albeit we know not what line sovereign Destiny hath appointed as to run either by day or by night' (Nem. vi. 1 ff.).

Here we have the two characteristic distinctions which the average Greek drew between the gods and mankind: the gods are deathless and ageless, and untouched of evil; the years of man are few and full of sorrow, and the certainty of death; the gods have knowledge of the future; for man 'the river of provision is set afar' (Pind. Nem. xi. 46). Now it is implied in the very nature of mortality that human life is a chance, a gamble; a chance of good and evil. A life of unbroken success, even if not attained by or attended with wickedness, is already a breach of nature, an injustice, an environment on the attributes of divinity, and so excites the jealousy of God, who allows none save Himself to be proud.

A life of unbroken success is no portion for men:

*Happy (δικαιοσύνη) is he to whom God hath given a portion of glory (ευτυχος, especially success in the national games), and to live all his life with enviable fortune and in opulence; for no mortal is happy in all things' (Beecher, v. 50 ff.).

Hence it is a condition of abiding prosperity that a man's happiness should not be uninterrupted; it is only by being interrupted will it conform to the law of nature, the demands of justice: 

*In thy new success I rejoice, but also I grieve that jealousy there (here, i.e. in the city) requires glorious deeds. But only thus, they say, will a man's happiness (ευτυχος) prosper (φυσαραι); if it is not wrecked by such things as base and cowardly, and evil' (Pind. Pyth. vii. 35 ff.).

*Not one is without lot in sorrow nor shall be; yet the ancient prosperity (ευτυχος) of Datis attains them, good and bad alike; they change these and their portion* (144 A).
This is the point of Clytemnestra's words in
Esch. Agam. 904 ff.:

"Let there be no jealousy; for many were the evils that we endured, if our possessions were not in our grip, as fortune should not excite jealousy. It is but the effect to former adversity.

So Nikias in Thucyd. vii. 77. 3:

"Our calamities are likely to abate: for the enemy have had enough of it. As fortune expedite the joyous on any of the gods, we have now been sufficiently punished."

If a man is attended by an unbroken felicity, he must restore the balance by a voluntary sacrifice of his happiness.

This is the point of the famous story of Polykrates of Samos (Herod. iii. 60 ff.). His continued prosperity (συγγενεία) excited the anxiety of his friend Amasis, who wrote to him in these terms: "It is pleasant to hear of the good fortune of a friend and ally. But the excess of this prosperity does not please me, because I know how jealous the deity is. As for me, I would choose that my affairs and those of my friends should sometimes be fortunate and sometimes stumbish, rather than be fortunate in everything. For I cannot remember that I ever heard of a man becoming a saint while his prosperity continued." Polykrates did not listen to his friend's advice.

The philosopher Zeno from the island of Eba is quoted as saying in his Discourses: "The whole life of man is like a race of horses in a stadium. In the middle of life a man is when he begins to be a youth, for then he has the strength to do many things. If he is a bankrupt at this age, it is foolish, for now he is in the prime of his life."

"Not for happiness in everything did Areus beg the gods, Agamemnon: thou must have grief as well as joy. For thou art not mortal," says the old man, Agamemnon (Ib. xxv. 48, 25 ff.). "If thou, Hiero, understandest a path of saying, then hast heard, from those who were of old and knowest that for one good the least distresses gods must avert from two evils. This fault cannot endure with decency, but only the good, turning the fair side out."

"..."Pindar illustrates the doctrine by the story of Asclepius, whom Zeus slew with the thunderbolt because he tried to bring a man (Hippolytus) back from the dead—an attempt to overstep the limits of mortality, and therefore demanding punishment. The same story is referred to by Esch. Agam. 904 ff., in a passage which excellently illustrates the Greek doctrine:"

"Excessive prosperity demands voluntary seclusion, says Pindar. Then it proceeds: 'Abandon this, lord of Zeus, from the very field destroys the plague of famine. But the blood of death that has once fallen on the ground of a man's feet—who shall call that back by any incantation? Did not Apollo for a speedy (that is, repelling in his divine prerogative of immortality) stop him when he was come back? And were it not that one fate is appointed by the gods to check another fate, from going too far, my tongue would have outrun my heart, etc.' All life is based on the principle of justice, compassion, balance, that each should have its own."

Hence, too, it is ग़ा वे ग़ा, the gifts of good-luck, that excite jealousy, not the good things which are worn out."

The doctrine of the jealousy of the gods is re-illustrated as a 'poetic falsehood' by Aristotle, Met. 1. 2, 888:

"The things which make up human happiness are, according to Solon, adequate endowment of worldly goods, health, beauty of person, prosperities of children, and a death in accord with these goods.

This enumeration of the several kinds of happiness is consonant with general Greek feeling. The principal catalogues occur frequently. Thus the distich inscribed in the temple of Leto at Delos (Aristotle, Eth. Eudem. 1214 E 1, Eth. Nic. 1. 8, 1099 b 25):"

"Praiseworthy (εὐσεβής) is justice, best (ἀγαθόν) is health, and sweetest (βολής) of all is to attain what one desires."

The same order is given in Theognis, 255 ff. (cf.}

\[\text{LIFE AND DEATH (Greek and Roman)}\]
Sophocles, frag. 328 f.). A popular section, or drinking-song, says:

"Be he for a mortal man; second, to be fair of body (μηδ' ανθρώπον) to have wealth without guile; fourth, to be good with others."

Philemon, frag. 163, gives (1) health, (2) success (εὐσεβία), (3) joy (χαλκοῦ), and (4) to owe no man. (Pyth. i. 99 f.) says:

"Success (of wealth, practically—prosperity or happiness) is the first of prizes; a fair fame (τὰ δόκομα) is the second; he who both chanpioned on both and taken to be his last received the highest crown."

Cf. Isid. I. v. 12, v. 12, Nom. i. 33, iv. 46, Pyth. i. 104; Aristoph. Av. 618; Soph. Oid. Col. 144; Plutarch, Mor. 10. 185; Bacchylid. i. 27 ff.

Aristotle, happiness is an ἐπιθυμεῖν ἀναργύρως. But he admits, in Eth. Nic. i. 8, that nevertheless it does appear that happiness has need of the other goods as aforesaid. For it is impossible or not easy for a man unprovided with these to do noble things. For many things are performed by friends, wealth, political power, the instruments, as it were, of action. The lack of some things mars happiness—the lack of birth, children, beauty. You could not well apply the term "happy" to a man who was utterly ugly, or low-born, or solitary and childless. Again, still less, if his children or his friends are altogether bad, or if he had good friends or children who are now dead. As we have said, happiness seems to proceed from a manifold of causes. Hence the identity of good fortune (εὐσεβία) with happiness, others identify happiness with virtue (ἀρετή). In the Rhetoric (i. 5), where happiness is defined more popularly, such 'external' goods as the above are termed 'parts of happiness,' and the list is εὐσεβία, γοητεία, χρυσερροια, πλοῦτος, εὐεργεία, πολιτεία, εὐγένεια; the physical excellences, as γένεσις, κάλλος, ἀγάπη, μέγεθος, δόματα γαστρονομίας; and δόμα, τιμή, εὐεργεία, ἀρετή."

He proceeds to explain what he means by the several terms here employed.

(a) εὐσεβία, good birth, may be predicated of a nation or of an individual. As applied to a nation or a State, it means that it is autochthonous or at any rate ancient, and had as its earliest leaders distinguished men, and had many distinguished members in the course of its history. As applied to an individual, it refers to descent on either the male or the female side; it implies legitimacy, i.e. both father and mother must be citizens (ἄρσα, ἀρσή) in lawful wedlock (Arist. Pol. iii. 14; Dem. v. Nob. Aristoph. Av. 1660 ff.); it implies further, that the earliest ancestors of the family were famous for virtue or wealth or some such distinction, and that many members of the family, both men and women, have in the course of its history distinguished themselves.

The high importance attached to heredity is evident on every page of Greek literature (see art. PINNAR).

(b) γοητεία, the possession of many and good friends, a friend being defined as 'one who, if he consider anything to be good for another, is ready to do it for the other's sake' (Arist. Rhet., loc. cit.). Friendship is a prominent place in the Greek ideal of life.

"Of all kinds of love the love of friends; also am I in trouble, but joy also seeks to behold its own assurance" (Pindar, Nem. viii. 42 ff.). "To cause a good friend I count even as that a man should cast away the life in his own bosom, which he loves most" (Soph. Oid. Rest. 611 ff.).

We hear of many celebrated friendships—Achilles and Patroclus, Orestes and Pythias, Castor and Pollux. The last is the theme of one of the most beautiful of Pindar's poems, Nem. x.

"The mortal one of the two, Pollux, asks to be allowed to die with him: 'Grant me O Lord, to die with him!' A man's honour is departed when he is left of his friends, and few things that are faithful in the day of trouble to share the travel!' (76 ff.).

The false friend is the object of bitter scorn (Proc. Isth. ii. 11; Ezech. Agam. 798, etc.). We hear, of course, of a more cynical view, that one should always look upon a friend as a possible enemy (Soph. Aj. 677 ff.; Eurip. Hippol. 253 ff.).

(c) δόματα, wealth.

(d) εὐεργεία, the possession of many friends: these may be predicated either of the community or of the individual. In the case of the community, they mean the possession of a numerous body of splendid youth, splendid in stature, beauty, strength, and athletic prowess and splendid morally, the moral qualities desirable in a young man being self-restraint and courage. In the case of the individual, they imply that his children, male and female, are many and good. In a woman, the physical excellences are beauty and stature; the moral excellences are 'self-control and industry without illiteracy' (μελέτη ἄρσης ἀκαλλατημένης).

"The high standard of female excellences in the ideal woman, against the bitterest thought of the childless man when dying is that his wealth will go to an outsider:"

"Even as a child by his wife is longed for by his father who has reached the end of youth, and that he had in his heart, since wealth that falls to an outside alien's keeping is most hateful for a dying man (Pind. O. x. 41 ff.);

partly in that there will be no one to pay the memorial offerings to the dead god (prothesis). These motives find their consequence in the frequency of adoption (εὐεργείας)."

(e) εὐγένεια, a good old age. This denotes an old age which approaches physically in "without pain," if it comes rapidly, or slowly but accompanied with pain, it is not a good old age. This requires both physical excellences and good fortune. It is incompatible with weakness or disease, and a man must have good fortune to live long and remain οὐρατος. "It is indeed true that some attain long life without physical excellences." (f) The physical excellences: (1) ἄγαγς, health, i.e. freedom from disease, full possession of bodily faculties. Such valetudinarianism as that of Herodicus (Plato, Rep. iii. 406) is not desirable, as it means the denial of all, or nearly all, human pleasures. (2) Euph. beauty. The possession of beauty is appropriate to different periods of life: the young man must be adapted to exercises of speed and strength, and pleasant and delightful to look upon. Hence pantheistics are most beautiful. The man in the prime of life must be fit for military exercises, combining grace with sternness in his appearance. The old man must be equal to such exertions as are inevitable, and his appearance must not be repulsive, i.e. must be free from the disfigurements of age. (3) ἀγάπη, strength. (4) μέγεθος, stature—but not so as to be unwieldy. (5) δόματα, athletic excellence—more is very important, speed; good running, wrestling, and boxing.

1 Cf. Isaeus, ii. 45 ff. "I have shown you that the laws give power to childless men to adopt sons. It is clear, moreover, that I paid attention to their life while he lived and how he was to die. My opponent wishes to turn me out of my father's estate, to be great or small; wishes to make the dead man childless and nameless, so that there shall be none to honour in his behalf the ancestral holies, none to make annual offerings to him (κοινάς αὐτῷ εἰμένων), but to rob him of his honours. Providing for this, Menades, being master of his property, adopted a son that he might not die. Do not, then, be persuaded by these men to rob me of the title of heirship, which is all that is left, and make my adoption by them invalid. But, since the master has come to the house to give power to dispose of it, help us and help him who is now in the house of Hades and do not, in the name of gods and divinities, allow him to be insulted by them ('see, further art. Anomos (Greek))."
LIFE AND DEATH (Greek and Roman)

(9) δέ, or ἔσοδα, i.e. to be regarded as a good man (εὐδαιμονιάς), or as 'the possessor of something which all men or most men or good or wise men desire.'

(10) τιμή, or honour, i.e. honours paid for benefactions either great in themselves or great in their public charges, barbacan compliments, prostrations and giving place—local compliments.

(11) εὐσεβία, or good fortune. It is the gifts of fortune that especially excite envy.

(12) ἀρετή, virtue. This is discussed in Ἐθε. ch. ix.

(13) Virtue is not merely desirable—as gifts of τέχνη—but also ἐπισκόπητος. It is 'a faculty of providing and preserving good things and a faculty of conferring benefits,' and its elements are justice, bravery, self-control, 'magnificence' (μεγαλοπρέπεια), high-mindedness, liberality, gentleness, wisdom practical (φρονημένος) and speculative (σοφός).

The virtues which go to make up virtue, the μέγας ἀρετής, are given by Aristotle in the Ἐθε. i. 1—9, and are: wisdom, prudentia, μεγαλοπρέπεια, μεγαλοφυσία, εὐθευθυνία, προσφιλία, and what Aristotle calls 'πολιτική ἀρετή,' which Plato, Rep. 402 C, gives σωφροσύνη, ἀρετή, μεγαλοπρέπεια, εὐθευθυνία, and καὶ τῶν ἄλλων ἀλών, Περ., 73 E—74 A, δικαιοσύνη, ἀρετή, σωφροσύνη, σοφία, μεγαλοπρέπεια καὶ δόλος πάμελαῖος.

The four cardinal virtues, according to Plato, are courage, justice, temperance, and wisdom (Rep. 427 B); but the sovereign virtue, which involves all these, is justice, which, as we have seen, Plato defines as τὰ τῶν ἄνδρων πράξεων καὶ μᾶλλον πράξεως. In the famous passage of Pindar (Nem. iii. 74 f.), the first three virtues are that of youth, that of men, and that of the old, while the fourth seems to be nothing else than justice, which is the sovereign and governing principle of all the rest: Οἶο νόμιμα τὰ ἄνθρωπον τὸ θανάτῳ αὐτὸν, τοῖς ἄνθρωποι τοῖς παράκηρτοις τὰ ἀνόητο πράξεως.

However this may be, justice includes all the other virtues. And the moral conscience of all demands the name of justice that the just man shall have his reward. So Hesiod, Works and Days, 570 f. " Now may neither I nor son of mine be just among men! For it is an ill thing to be just, if the unjust shall have the greater weight with men! For Zeus doth bring to pass. 'Injustice may prevail for a time, but justice is better in the end.' (ib. 217 f.) 'On that which is pleasant but corrupt, see justice as a most bitter end awaits!' (Pind. 11th, vi. 47 f.) 'Too swift are the minds of men to accept a guileful gage, and of men to withstand a hasty reckoning!' (τριπλαί διδόμενοι [Pind. Pyth. iv. 159 f.]). On the other hand, end and beginning are alike pleasant if God speed;"

How, then, and where shall it be better for the just man? The typical answer of the Greek moralist is 'Here and in this life.' Hesiod expresses the prevailing view of the Greek as of the Hebrew wisdom when he says:

"But whores to stranger and to townman deal straight judgments, and not with depart from justice, their city flourishing, and the people prosper therein. And in their land is peace, the nurs of children, and Zeus doth never debar for them. Neither doth Semele ever consort with men who deal straight judgments, nor Doon; but with mirth they send the works that are their own. For them earth beneath much livelihood, and in the hills that their tops touch each other, the oaks middle born: their roeky sheep are heavy with wool; their wolves bear children like unto their parents; they flourish with good things continually, neither go they on ships, but bounteous earth beneath fruit for them (Works and Days, 524 f.)."

Even so was the thought of the wealth of the world in this

1 πᾶν ξένος τὴν ἡπείρον παραλλαγήν, ὡς ἕγγεισθαι, καὶ ἔγγεισθαι ὡς συνάρτος παρέχεται, ἐσώρον ἐν ἴππῳ (Rep. 433 B).
2 ἐν ἴππῳ, Ἐθ. i, 172, ἐν ἴππῳ ἔμαθεν μὲν ἄρετα δ' ἐν τοῖς αὐτοῖς εὐτυχεῖς ἐνόμον. (Rep. 433 B).
3 Ἐθ. i, 172; cf. Aristot. Ἐθ. i, 9, ζητεῖ δὲ καθιστών μὲν ἄρετα δ' ἐν τοῖς αὐτοῖς εὐτυχεῖς ἐνόμον. (Rep. 433 B).
LIFE AND DEATH

(Greek and Roman)

which are among the most striking in the range of Greek literature:

"Wretched were the deeds of proverbs . . . is a conspicuous star, a most true light for a man, if he hath it knowed that which is to come; that the helpfulness of the dead pass, straight here to the nonce, while the sins done in this kingdom of Zeus one judges under earth, pronouncing doom by abode of night and day. But in the night and day the good enjoy the sun, receiving a life free from toil, vexing not the earth with might of hand, neither the waters of the sea in that ghostly life, but with the honoured of the gods they that rejoiced in keeping their oaths live a terrestris life, while they who do no good are cursed. And that from which on either side have endured to refrain their souls utterly from misfortunes, travel by the Way of Zeus unto the tower of Croesus, where round the islands of the Blest the Ocean breezes blow, and flowers of gold are glowing, some on the land from glorious trees, while others the water feedeth, with strawberries and garlands whereas they extenuate their hands by the true covenants of this present life, that the good may hereafter thrice crown. Croesus, husband of Reia, throned highest of all, Pelops and Gausus are numbered among these, and thither his mother brought Achilles, when she laid with her prayers the heart of Zeus." (O. ii. 845.)

Fidler's teaching here appears to be that the soul passes through three successive incarnations, alternating with a disembodied state, and that only after passing through all these blasphemously is it finally redeemed. Such souls, according to ancient opinion, of which Fidler (frag. 157), receive a final embodiment as kings and wise men and athletes, and after death become, not indeed gods, but heroes:

"From whom Persephone in the ninth year accepts the estate of ancient woe, the souls of them she sends back into the upper sunlight. From them spring glorious kingdoms and men swing and strong might in wisdom, and for the future they are called by men holy heroes." Again, in frag. 157 Fidler says, in reference to the mysteries:

"Happy is he who beholds these things before he goes beneath the earth; he knows the end of life, he knows its god-given beginning, its endings.

According to this view, the soul lives after death, it alone being of divine origin:

"By happy judgment (Ganymede) she leadeth to an end which sets free from woe. And the body, indeed, of all gods with magnificent Deity, but there remains alive a phantom of life; for that alone cometh from the gods. It sleepeth when the limbs are active, but to men asleep in many a dream it reveals the coming judgment of pleasant things and hard." For the souls of the good there awaits a paradise which is imagined in terms of human bliss:

"For there shines the strength of the sun below while here it is night. And in meadows of red roses their suburb is shadly with frankincense and lavender golden thorns. And some in houses going in rooms, some in the lyre take their delight, and by themFloorished all the fair flower of blessedness and in every measure of advancement spreadeth a mais of the lovely places while they evermore attain all manner of Inns in far-lighting fire on the altars of the gods." (frag. 159.)

J. R. S. 1894."

Strange, indeed, would this have sounded to the Homeric hero, and hardly strangely, it would seem, to the orthodox Greek of the 5th century. It is not easy to estimate how far the ideas to which Fidler here gives expression had affected the general body of his countrymen, but it would not appear that they had done so very deeply. The general attitude to death continues much as in Homer. A state of bliss after death is not held out as an incentive to righteousness in this world. Nor is the hope of a blessed immortality offered to comfort the dying or mitigate the grief of the bereaved. Where this is so desirable, it is merely as a κακὸν καταφρογή, a refuge from evil, a dreamless sleep:

"Would that some fate might come, speedy, not over-painful, nor with lingering bane, bringing to us the everlasting, endless sleep?" (Oisko. A. 145 ff.)

It is probable, indeed, that the conception of the state after death exercised any determining influence on the average man's conduct of his life.

When one attempts to discuss Roman views of life and death, there occurs at the outset the comparative paucity of genuinely Roman evidence. The general attitude of the Roman towards life and death presupposes the same general framework as we have outlined in the case of Greece; the same conception of the goods which make up the content of human happiness; the same conception of death as the end and not the beginning; the same belief in the duty of paying solemn offers (parrhesia) to the dead. When we advance beyond orthodoxy and beyond the world of poetical fancy or philosophical speculation, we find that we are merely encountering Greek ideas in a Roman dress.

Greek and Roman alike believed in gods who had a very real regard for the sins and the virtues of mankind, rewarding the good and punishing the evil, but in this life, in their own persons or in those of their immediate descendants. Greek and Roman alike believed that the dead in some sense survive and that it was the duty of the living to make offerings to the dead. But for Roman as for Greek, the after-world was but a dim shadow of the present. There was no lively conviction that it would fare worse in the after-world with the bad than with the good; there was no lively conviction that there was any true after-life at all, certainly no such conviction of an immortal felicity as could prompt to martyrdom or self-sacrifice, or alleviate the hour of bereavement with the hope of a blessed reunion hereafter. When Cicero lost by death his beloved daughter Tullia, the same consolation written to him by his friend Servius Sulpicius (ad Fam. iv. 5) the topics of consolation are drawn from practical and secular considerations: that she has been taken away from the evil to come, and that she has but shared the common lot, not of individuals only, but of cities:

"Ex Asia rediens, cum ab Elda Megaram versus navigarem, cepi regiones circumcincta prospicientes: postea me est Elda, antea me Megara, Latina Piraenae, sidero Icere opus quota quidem tempore florentissima fuerint, nunt quam prostrata et mirae et ecclesiae laudabiles. Cons. elongato omnino sic cogitaveram: 'Iam nunc homoniulus indigamur, si quis nostrum interiit aut occiderit us, quorum vita brevius esse debetur, cum uno loco tot oppidum endam, propter hanc resurrectionem, et ut in te, Sertii, cohors et inominis hominem esse nausam?'

Nor in Cicero's most touching reply is there any hint of other consolation.

Nothing, perhaps, in the consideration of the conception of life and death is more significant than the attitude adopted in the question of suicide. The general feeling both in Greece and in Rome seems to have been that suicide was suicide rather than condemnation. Thus, e.g., Fidler, who three times refers to the suicide of Ajax, in no case hints at any moral wrong in the act, nor does he reproach the hero.

"By happy judgment (Ganymede) she leadeth to a Hence, the suicide was condemned by the Thebans points clearly to a different attitude on the part of the Greeks in general. Naturally the Orphic Pythagorean school, insisting on the reality of a true existence conditioned for weal or woe by the account of the present life, condemned suicide. In the Phaedo, 61 C.E., Plato says that the good man will desire to be dead in order to free his soul from the crumbling influence of the body, which binds him in the pursuit of truth: 'only, perhaps, he will not do violence to himself, for the spirit, if it is not lawful to think of oneself as being in a sort of prison' (Φυσικά ψυχή), from which he has no hope of escape, but rather to pass away' (cf. Cicero, Cat. Mai. 20; Plato, Phdr. 250 C, Cratyl. 400 C, Gorgias, 493 A). Macrobius (Com. in Somm. Sop. i. 13) tells us that Plotinus objected to suicide on two grounds: (1) it is a perturbed soul, the beginning of a movement of dissolution; (2) it is a step which, once taken, is irrevocable. On the other hand, in the Laws, 854 D, Plato recognizes that in certain circum-
LIFE AND DEATH (Hebrew)

There are two words which in the English OT are very often translated 'life': nephesh and hayyim. Nephesh denotes the inner occult cause of life's activities. A nephesh is a concrete entity, resident in the body, which, if scarcely coming within the range of man's senses, is at any rate thinkable. It is a psychical something, endowed with many attributes, of which life is the chief, though it may also have others, physical and psychical. Hayyim represents life abstractly, as a state or condition—vitality, mental and moral activity.

1. Nephesh.—OT psychology has always been a crux for Biblical scholars, because they have too often desired (as Franz Delitzsch) to form a 'system' of Biblical psychology. They have too often expected to find everywhere the same grade of civilization and the same type of approach and outgrowth, which, however, are more or less formed of that of thought than is actually present, and have not (until recently) allowed for primitive, ethnic modes of conception. The word nephesh is found in all Semitic languages, in much the same sense as in Hebrew; and therefore we must not be surprised if some extremely primitive beliefs, not taught—perhaps even discouraged—as doctrines by the men who were organs of revelation, have arrived in occasional metatheses or modes of speech.

There were three ways in which the phenomena of life were regarded by early man: (1) objectively, through the external or material, in the most elementary life of other men and in himself; (2) subjectively, by self-consciousness, through which man became aware of many different emotions and appetites, thoughts, and activities which were taking place within him; and (3) by the consciousness that he was being acted on by forces or beings extraneous to himself. We can scarcely point to a time when man did not fancy himself an object of interest, often of assault, to spirits good or evil, by whom he was surrounded. When the external influence came gently, the Hebrew called it n'shamah, 'breath'; when violently, he called it lik'ah, 'wind'; and that part of his nature which was accessible to these gentle or violent invasions, by God or by spirits, he called respectively his n'shamah and his lik'ah.

(1) The objective view is the antithesis of death; and from the beginning the thoughts of man were directed to the phenomena of life by their startling contrast with death. There were two ways in which death must have impressed primeval man, the cessation of all breathing, and as being caused by the shedding of blood.

(a) The universal and inevitable accompaniment of death is cessation of breathing; and this, by the force of contrast, would certainly direct the close attention of early man to the phenomena of breathing; the rising and falling of the chest, the varying rapidity of the inhalations, in rest and exercise, and the vapor visible from the mouth and nostrils at every exhalation. How did he account for this? Beyond all doubt, on principles of animism, which ascribed all internal movement, energy, and activity to an indwelling, living entity. Nephesh is often defined as 'the inner principle of life.' The vague term 'principle,' however, is much too modern. Early man personalized all our abstractions. The cause of breathing to them was—indeed, was the living spirit or soul, dwelling in man's chest, the breath-soul, which Senites called the nephesh, i.e. a semi-physical, semi-spiritual something, a potent reality, not to be identified with the breath, but the occult cause of the breathing; and, when it left the body for a considerable time, death was the result. To die, or 'yield up the ghost,' is to 'breathe out the nephesh' (Jer 15, 11). When Rachel was dying and gave a name to her infant son, 'her nephesh was departing' (Gen 35, 18). When Elijah prayed for the recovery of the Shunammite's son, he stretched himself on the child and the child's nephesh came into him again (1 K 17, 20). When the Psalmist is sinking in a morass and in danger of drowning, he cries, 'Save me, for the waters are come in even unto my soul' (Ps 69). (b) The second startling phenomenon of life was the pulse, and the beat of the heart, which ceased when the blood was shed, in battle or in any other way. The occult cause of the heart-beat was conceived to be another nephesh—the blood-soul, resident in the blood; and, when the blood was shed, the nephesh was released. The shedding of blood received much scrutiny and thought in connexion with the thought of the more or less assigned the efficacy of sacrifice to the blood-soul. This is most accurately expressed in Lv 17, 14. 'The nephesh of the flesh is in the blood. . . . The blood
LIFE AND DEATH (Hebrew)

The noun nephesh, more laxly in Dt 12:5, 'the blood is the nephesh.' This is elucidated in Lk 17:14, who read, 'The nephesh is all flesh its life, by reason of one,' nephesh (so Kt., Kal.), i.e. we may say that the blood is the nephesh of the flesh, if we bear in mind that there is a nephesh resident in the blood, which is the cause of the vitality of the blood, and therefore also of the flesh. Hence the repellent feature in eating the flesh of animals whose blood had not been shed before death was that, in eating such flesh nephesh, we had not been allowed to escape, one would eat the nephesh, and this is strongly forbidden in the words: 'But flesh with the nephesh . . . shall ye not eat' (Gen 9:9; cf. Dt 12:2).

Human nature was not at first considered as a unity, but attention was directed to the centres of activity, where a mysterious energy was at work; and, long before man used the word nephesh as we use the word 'soul,' the several organs were considered separately, as so many independent centres of vitality. The heart, the liver, the kidneys, and the eye were regarded as distinct potencies endowed with life, not intcrrelated or unified one with another. The word nephesh is not used in the OT of the cause of the vitality resident in each of these organs, but it would be quite analogous to the Latin concept of the mighty peoples if they did ascribe to each a nephesh.

It was a very general belief in old times that a nephesh might go out from its abode without causing death for a considerable time. What is to us poetry and metaphor was in the hoary past often accepted as solid fact, as, e.g., when we read of Jacob in Gn 44:24, 'His life (nephesh) is bound up with that of his sons.' And of Jesus than in 1 S 18:9, 'his nephesh was knit to the nephesh of David.' In the statement that the soul of Shechem clave to Dinah (Gen 34:3) we have reference to the primitive belief that in love the (or a) nephesh leaves the body and enters into union with the soul of its beloved; and a similar belief underlies the phrase which compares peril to being out of one's own 'hand' (Job 10:12, 15:21, Ps 110:8).

The consequences of the temporary departure of a soul were believed to be giddiness, mental de- rangeinent, sickness, or death (Targum, P.Ci. 435 L). The OT text of the death of Saul in 2 S 1, 1f., if, with Graetz, we may alter the difficult, if not impossible, words טו יכ into טו יכ. Saul has been wounded and is bleeding to death, and his words would then be: 'Giddiness hath taken hold of me, for my nephesh is no longer in me.' We have a similar underlying belief in the phrase which we use metaphorically: 'I have poured out my soul,' as Hannah said to Eli (1 S 19:2); as Job also says: 'My soul is poured out upon me' (30:26); and as is said of the righteous servant: 'He poured out his soul unto death' (Is 53:12). In the first two cases the result is extreme prostration of mind and body, and in the third case death. It is the voluntary surrender of life.

The blood-soul may be 'smitten' when a wound inflicted causes bleeding (Gn 37:25, Dt 19:10); or this nephesh may be 'slain' in unintentional homicide (Nu 31:47-50), or in murder (2 S 4:5); while in Dt 27:21 a curse is pronounced on one who should accept a bribe to slay a nephesh of his blood. The Hebrews were forbidden to make 'an incision to the nephesh,' i.e. to incur the loss of the nephesh by the loss of blood (Lv 18:12).

(2) The subjective method.—It is quite certain that men practised observation long before they practised introspection. When man habituated himself to turn his thoughts within, he became conscious of himself as a unity; the various organs were his organs. He was no longer an assemblage of vital organs, but a unity, and he was a unity, an organism; and the mysterious cause of his internal activities was his nephesh, his soul, the cause of his energies and emotions. Thus the nephesh in the OT, when it was not the soul as such, as aor (La 1:11) and thirst (Is 29:9), and also of the outgoings of life in desires, longings, and wishes (1 S 20:25, 2 S 3:9). It is also the centre of the passing of all sensuality. The meditations of Job are compared with appetites such as hunger (La 1:11) and thirst (Is 29:9), and also of the outgoings of life in desires, longings, and wishes (1 S 20:25, 2 S 3:9). It is also the centre of the passing of all sensuality. The meditations of Job are compared with appetites.

Most ancient peoples believed that the souls of the departed lingered some days near the corpse; and, while some peoples had no dread of the departing spirit, others, including the Hebrews, had a great terror as to the mischief it might effect; and their holier funeral practices were designed to scare the spirit away. We have indications of this belief in the lingering of a soul in the fact that a Nazirite is forbidden during his vow to come near the nephesh of a dead man (Nu 6:5); a man rendered unclean through a nephesh was not allowed to eat the Passover (Ex 13:4); the Nazirite took a hair of the dead body one month later (9th). Indeed, any one, male or female, who was unclean by a nephesh must go and remain outside the camp until purified (7), and a high priest on no account (9), any time to enter a room where the nephesh of a dead person was at large (Lv 21:11).

Eventually, after or before the funeral, the soul was believed to return to the origin or the source of its existence, either to the creator, as is said of the soul of Noah (Gen 9:16), or of Adam (Job 14:2, 15:18, Ps 110:8).

The consequences of the temporary departure of a soul were believed to be giddiness, mental derangement, sickness, or death (Targum, P.Ci. 435 L). The OT text of the death of Saul in 2 S 1, 1f., if, with Graetz, we may alter the difficult, if not impossible, words טו יכ into טו יכ. Saul has been wounded and is bleeding to death, and his words would then be: 'Giddiness hath taken hold of me, for my nephesh is no longer in me.' We have a similar underlying belief in the phrase which we use metaphorically: 'I have poured out my soul,' as Hannah said to Eli (1 S 19:2); as Job also says: 'My soul is poured out upon me' (30:26); and as is said of the righteous servant: 'He poured out his soul unto death' (Is 53:12). In the first two cases the result is extreme prostration of mind and body, and in the third case death. It is the voluntary surrender of life.

The blood-soul may be 'smitten' when a wound inflicted causes bleeding (Gn 37:25, Dt 19:10); or this nephesh may be 'slain' in unintentional homicide (Nu 31:47-50), or in murder (2 S 4:5); while in Dt 27:21 a curse is pronounced on one who should accept a bribe to slay a nephesh of his blood. The Hebrews were forbidden to make 'an incision to the nephesh,' i.e. to incur the loss of the nephesh by the loss of blood (Lv 18:12).

(3) The objective-subjective method.—Man believed himself to be the object of attack or of benign influences from other spirits, or from the one great Spirit, God. It was conceived of as in the woman being concupiscible, as conceived of it as 'breath' (רעהות), and when it was violent he spoke of it as a 'wind' (רוח), partly, no doubt, because it caused him to pant with excitement. The stronger emotions of man were traced to the רעהות, or spirit of man, while the gentler emotions and the inspirations from the Divine were due to the action of the Divine רעהות or the human רעהות. See Spirit.

2. Hayyim.—Hayyim is a plural form, for which no singular is extant (the root is י or י, 'to live'). It is an intensive plural, denoting diversity in unity. As the plural form בּלֵיתוֹנָם seems to express the conception of one God with many manifestations, so hayyim expresses life in its many manifestations and modes. G. H. A. Ewald truly says that the word 'life' is 'most expressive and crowded with meaning.' Its various meanings it is now our purpose to deploy.

(1) Physical life.—Hayyim is used of physical existence (a) in relation to time only, representing the continuance of the existence of God or man, in possession of their varied activities; thus we read of 'the days of one's life' (Dt 4:1, 1 S 7:12), 'the years of one's life' (Gn 23:1b, Ex 3:6), and 'the days of the years of one's life' (Gn 53:47); (b) in relation to its antithesis, physical death (Jos 2:10, Jer 20:1, Ps 89:45); and (c) in relation to the events
which occur in one’s lifetime, or are the outcome of one’s energies or activities, as marriage (Lv 18:9, 10); death (Ps 94:2), and misfortune (Job 1:21). In God’s promises (Ps 104:23), sensual enjoyments (Ec 3:9), ‘They were lovely and beautiful in their lives’ (2 S 13:2); ‘My soul is weary of my life’ (Job 10:21). ‘Preserve me, O Lord, for my life’s sake.’

The remarkable thing as to the Hebrew usage of *hayyim* is the clear conviction that ‘life’ is something more than a continuation of physical existence. There is a clear recognition of the dignity of man that it was meant to live the life of an animal or a life of sensuous gratification. Such a life is unworthy of so dignified a creature as man is. As man’s sense of dignity developed, the word ‘life’ became filled with deeper connotation. Roughly speaking, man’s view of ‘life’ passed through the same three stages as we have found in regard to the word *nephesh;* (a) man’s life consists in what he has, ‘the abundance of the good things that he possesses’—the objective regard; (b) man’s life consists in what he is, his character—the subjective regard; and (c) man’s life consists in his relation to God, the influences which come to him from communion with the Divine—the objective-subjective regard. In passing through this development, Israel was subconsciously discussing the problem of life in his time: what is man’s highest good? Wherein does man’s true life consist? And his three answers were: (a) happiness, (b) goodness of character, and (c) fellowship with God.

(2) Joyous life.—Life, to be worthy of the name, must not be existence merely, but exuberant, joyous life. Life is not the humdrum of physical existence, but it is the possession of goods, family and wealth, which can contribute to man’s enjoyment. It is the exhilaration of the red-letter days, when life is sublimely worth living. ‘A life of joy and felicity is alone worthy to be called life.’ This was always implied in the Oriental salutation: ‘Let the king live’ (1 K 1:4, 2 S 16:1). It is associated with largesses of the gold of Sheba (Ps 72:16), with riches and honour (Pr 22:17), with prosperity and large possessions (Dt 31:9; Heb. v. 20). In Ec 9 the Hebrew reads: ‘See life with the wife whom thou lovest;’ but AV and RV both correctly interpret: ‘Live joyfully with the wife;’ and, when a man is in his prime, to enjoy a day that is a day of days: ‘In the light of the king’s countenance is life’ (Pr 16:14).

(3) Ethical life.—True life consists in what a man is and not in what he has. The ideal life is a good life, a life of righteousness. ‘In the way of righteousness is life’ (Pr 12:18); ‘Wisdom and discretion are life to the soul’ (3:22); ‘Keep her [wisdom]; for she is thy life’ (4:9); ‘The words of wisdom are life to those that find them’ (4:20); ‘Whoso findeth wisdom findeth life’ (8:35). There are three things which ‘tend to life’: righteousness (110:2), the labour of the righteous (103), and the fear of the Lord (19:23). In the conscious part of the word ‘life’ we read of ‘the way of life.’ ‘Torah is light;’ the reproofs of instruction are the way of life (6:35); ‘He that heareth instruction is in the way of life’ (15:32). Similarly, the sense speaks of a ‘fountain of life.’

The Torah of the wise is a fountain of life (134:9); so is the ‘fear of the Lord’ (14:27) and ‘understanding’ disciplined by correction (10:26). In Lv 18 in the Code of Holiness there is a statement, repeated in Neh 9:26 and developed at length by Ezk 18:3: ‘Ye shall keep my statutes, and my judgments; which if a man do, he shall live by them.’ The statutes and judgments are the rule and guide of life merely, but as providing the pabulum of the moral life. This appears more strikingly in Dt 8: ‘Man doth not live by bread only, but by every word that proceedeth out of the mouth of the Lord doth man live.’ Surely the practice of the covenant of life consists in the attainment of character—of that moral life which is acceptable to God.

Similarly, Heczekiah in his Psalm, speaking of the promises of God, says: ‘By these things do they that do God’s will live’ (Is 58:17); and this life of the spirit, which is the life of my spirit’ (Is 38:5), and in 55:9 the Lord calls men through His prophet, saying: ‘Incline your ear, and come unto me: hear, and your soul shall live.’

(4) Religious life.—The passages hitherto considered refer to the moral life nurtured by the instruction of the wise and by obedience to the revealed will of God; but the OT saints rose to a higher conception of life than even this—the life which is nourished by fellowship with God, the life concerning which the Psalmist could say: ‘The Lord is the strength of my life’ (27:2); ‘I love thee, O Lord, my strength’ (18:1); ‘The Lord is my strength and my shield’ (29:1); ‘My prayer shall be unto the God of my life’ (42:9). ‘In God’s favour is life’ (30:9); the only life fully worthy of the name is that spent in the consciousness of His favour. Deuteronomy promised repeatedly a long and prosperous life on earth as the token of God’s approbation, but the mysteries soar above and beyond this present sphere. ‘The righteous hath hope in his death’ (Pr 14:3). They rejoiced that God was their portion’ (Ps 119:49), ‘in the land of the living’ (Ps 142:2), that God was their ‘guest-friend’ (Ps 18), and therefore there is an eternal covenant between Him and them.

The high-water mark of a sense of unending friendship with God is found in Ps 73: ‘Whom have I in heaven but thee? And there is none upon earth that I desire beside thee;’ and from this the inference is drawn: ‘I am continually with thee. Thou shalt guide me with thy counsel and afterward receive me to glory’ (v. 26). God’s friendship is the only true abiding good. This enables a man to triumph over death. Thou wilt show me the path of life; in thy presence is fulness of joy; in thy right hand there are pleasures for evermore (16:11); I shall behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness’ (17:13).

1 "In all these Psalms," says Dillmann, "there is a full sense of a joy always already begun in this life, which to their authors gives the value of an assurance regard to the consummation of such a life, but only necessarily with God. But it is always expressed as a self-establishment, not as the rule and standard of all life; or, we need not wonder that such deep experiences are somewhat rare."

In conclusion, we turn to the significance of the word ‘life’ in Ezekiel. The prophet looks forward with great expectancy to the return from exile, but it is under the glamour of vastly improved religious conditions. The Kingdom of God is to be with men. The Lord’s servant David shall be the benign prince and ruler (37:44, 49). Jehovah will take people from among the nations and sprinkle clean water upon them, give them a new heart and put a new spirit within them, and cause them to walk in His statutes and keep His judgments (36:24). Ezekiel contemplates a new age—a Kingdom of God on earth. But, before that is established, the people are to experience the conflict with the powers of evil, in which the wicked who are unfit to form part of the new Kingdom shall perish. Those who do wickedly shall not live, they shall surely die (18:31-32). Those who ‘do that which is lawful and right,’ being endued with the new heart and the new spirit, ‘shall surely live’ (18:34). The Kingdom of God with its great moral and religious privileges is ever before the prophet’s eyes. ‘Life’ is to pass safely through the impending conflict with evil
and to enter on the new Kingdom, in which God's presence will lie much more real and evident (48); to 'die' is to perish in the crisis and to be excluded from the Kingdom. LITERATURE.—H. Wheeler Robinson, The Christian Doctrine of Man, Edinburgh, 1911, ch. 1, Religious Ideas of the OT, London, 1907, chs. 1-2; E. B. Taylor, The Hindu Gods, 1911, chs. xvii.

Rigveda, among the earliest Aryans to enter India worshipped a vast number of petty spirits, but they learned, rather later, to revere a number of the greater phenomena of nature, and also laid much stress on the worship of their ancestors. This ritual formed the foundation on which all the institutions of the Aryan family were built, though it may well be that the religious belief had its own ultimate origin in the natural organization of the family. At all events, the belief in the power of ancestors profoundly marked the entire organization of society. The priest—family priest and controlled the worship of the ancestors of the family in all details. Centuries after their entry into India, when the Aryans were engaged in the imperial work of bringing all the tribes under their sway and in their political and intellectual domination, the great doctrine of karama and re-birth took shape. With Farquhar we may conjecture that 'among the many religious tribes the invaders met on the broad plains of the North, there must have been seen who held the common primitive belief that the souls of men might become incarnate in animals. There were probably telestatic clans who believed that at death a man became, like his totem, a tiger, an ox, a frog, or a snake'. Whether the transmigration idea came from this source or not it is impossible to say, and, indeed, it is more probable that it was at first a deduction from the physical transcendences which were observed among kindred. But, even if the idea that human souls might undergo animal births comes from the arboreous, that is but one element to the complex doctrine. That which gave the belief its power over the minds of its adherents was the connexion of this fairy-tale idea with the powerful ethical conception of retribution; and we may be certain that that was the work of the Aryans. The doctrine first appears in the earliest Upanisads. Thus, while transmigration has been believed in by the latest Hindu doctrine, the karama (q. v.) is, as far as we can yet say, unique.

Inextriably, though by no means consistently, intertwined with this moral theory of retribution is the more primitive and far more widespread belief that souls are something almost material, although they may not be always palpable or tangible.

1. Vedas and Brahmans. — In the Rigveda the conceptions of death are not entirely consistent, but the principal belief relating to the aja bhaga, or 'unborn part,' was as follows. When the remains of the deceased had been placed on the funeral pile and the process of cremation had begun, Agni, the god of fire, was prayed not to scorch or consume the departed, not to tear asunder his skin or limbs, but, after the flames had done their work, to convey to the fathers or ancestors the mortal who had been presented to him as an offering. His eye was hidden to go to the sun, his breath to the wind, and so on. As for his unborn part, Agni was supposed to kindle it with his heat and flame, and, assuming his most auspicious form, to convey to the world of the righteous. Before this unborn part can come to its curse from the third heaven, however, it has to traverse a vast gulf of darkness. Leaving behind on earth all that is evil and imperfect, and proceeding by the paths which the fathers laid down, the soul passes from Agni, Enchanted in the flames of the Fiery Gold Fire, like that of the gods, soars to the realms of eternal light in a car or on wings, on the undying pinions wherewith Agni slays the Raksasa, wafted upward by the wind, and to the voice of the Daitya, who in a complete and glorified form, meets with the ancestors who are living in festivity with Yama, obtains from him, when recognized as one of his own, a delectable abode, and enters upon a more perfect life.

In the Vedâs death was held to be the going-forth from the living of his breath, or of the thinking part, the mind, which was held to reside in the heart... Heaven, a happy hereafter, was all that was looked forward to by these Vedic Aryans, throughout the hymns there is no weariness of life, no pensive longing.

From death there is no awakening; the shade, the breath, soul, or spirit has gone forth and returns not.

In the 'Tattvottvam Brahmana' the souls of the deceased are said to dwelt the first day in the houses of the stars, the stars are the lights of those righteous men who go to the celestial world. In the 'Taittirîya Brahmana' the 'souls' attach to mortals their life breath, yet, as the 'Katha Upanishad' declares: 'No mortal lives by the breath that he receives up the nostril; that which goes down into another is in whom these two reposè.' There was something which went out of man in sleep and death; something underlying the eye, the heart, the breath, the vital breath, broader than life. In the 'Rig Veda,' the sun, though it holds the life breath of mortals, is something more. It is held by the Soul of the Self, or the Atman, the Atman of the stars that move not, and moves not, of all that fills the heavens and the earth. Of man there is also the Atman, 'the self smaller than small, greater than great, hidden in the heart of that creature.' A man who is free from desires and free from grief sees the majesty of the Self by the grace of the Creator. It is this Atman, Self, or more abstract in its conception than soul, Psycho, or 'animus,' that becomes also the Universal Self, the Self of the World, 'bhîmîvân Atman,' of which the Vedas speak: 'When that which had no bones bore him who has bones, when that which was formless took shape and form... This Indian sage... had first to sweep away all that which had been produced, even the gods themselves, and to his grace there remained but the inner essence, Brahman, from which all things issued forth, and into which all things resolve themselves. There remained also the Self, the Soul, the Atman of man. There was but one step further to be reached by the Indian mind, and that was the inner essence was not that by which was the Creator, but was the Brahman, became the Great Self, the 'Paramatman,' the Universal Self, into which was merged the Atman, or Self, of man. Soul was conceived as material, although it also possessed selected mental qualities. It could quit the body in dream sleep, and certain diseases were supposed to be due to the withdrawal of the soul, 'Aam.'

2. Upanisads. — In the pre-Buddhist Upanisads the soul is supposed to exist inside each human body and to be the one sufficient explanation of life and motion. In the living body it dwells ordinarily in a cavity in the heart, and is of the size of a grain of rice or barley. In later speculation it grows to the size of a thumb and, is therefore, called the 'dwarf.' In shape it is like a man. Beliefs varied as to its appearance and as to its composition. Our passage says that it consists of consciousness, mind, breath; eye and ears; earth, water, fire, and ether; heat and no heat; desire and no desire; anger and no anger; law and no law—in a word, of all things. Thus the soul was conceived as material, although it also possessed selected mental qualities. It could quit the body in dream sleep, and certain diseases were supposed to be due to the withdrawal of the soul, 'Aam.'

Also, in this life, the soul of the departed is said to go to the sun and to Upas, the dawn.
to be due to its having escaped from the body, so that charms had to be employed to bring it back. In the same way, the seeds that have existed before birth in some other body, and opinions varied as to how it got into its first body. We also find a curious speculation, with three views on the subject: that, of the gods, as a consequence of their good deeds, when the body on which they rested was haunted, they took from the gods to the other, from the ether into the air, from that into the rain, thence on to the earth, and from it into plants which become food to males, whence they pass into females. At an ordinary man's death the top part of the heart is lighted up, and the soul, guided by that light, departs from the heart into the eye, and through it into some other body, exalted or not according to deeds done in the body which it is leaving. The soul of the man whose cravings have ceased goes to Brahman. The Upanisads are almost unanimous that the soul will not obtain release from re-birth either by sacrifice or by penance.

"It must be by a sort of theosophic or adorant insight, by the perception, the knowledge, that one's own soul is identical with the Great Soul, the only permanent reality, the ultimate basis and cause of all phenomena." 5

In the Kaučikā Brahmanādhaman, the belief in transmigration is combined with a notion that souls go first to the moon. All who depart from this world go to the moon. In the bright fortnight it is gladdened by their spirits, but in the dark one it sends them forth into new births. It is the door of heaven. Him who rejects it it sends on beyond, but whose rejects it not, him it rains down upon this world; and here he is born as a worm, a grasshopper, dog, boar, serpent, tiger, or a man or some other creature, according to his deeds or his knowledge. 6

3. Jainism.—The philosophy of Jainism, probably the oldest living Indian creed, defines the universe as not created and not controlled by any individual god. As substance it is without beginning and without end, but it is not homogenous, since it consists of substance (dravya), which is either jiva, 'alive', or ajīva, which may be translated 'inorganic'. There are five kinds of substance not alive, viz. matter, space, the two others, and (figuratively) time; but living beings are composed of signs and substances of substance, body, and the Jain belief is that nearly everything, even plants, particles of earth, fire, and wind, is possessed of life. In other words, the Jain philosophy is pure animism. Jiva is sometimes translated 'living being' and sometimes 'soul', yet it is not one individual universal world-soul, but a mass of mutually exclusive, individual souls, and every soul having attained its highest state (mokṣa) is styled paramamān, or 'great soul', a term only very roughly translatable by the word 'god'. Jainism thus fails to draw any definable distinction between 'life' and the soul. Dravya may be defined from several points of view. From the standpoint of its own unchanging nature it is that which ever exists. For example, the soul now embodied as a cat may in its next life be incarnated as a dog, man, insect, or what not, yet remain, in spite of all these changes, the same individual soul all the time; and thus, while the body is merely a vast multitude of cells which come and go, the soul is. But in this substance whose qualities (guna) do not come and go, and which is always itself, never becoming or merging into another, though in their modifications (parādya) the gunas are ceaselessly changing. This view of its permanent state is invisible, but, when compounded in a subtle way with visible, tangible matter, it is rendered visible, and men, angels, etc., are examples of this change. The Jains did not know when these conceptions were formed by Jainism, and we cannot say that Jain philosophy evolved them unaided. They were apparently borrowed from the Hinduism current at that time in India and were modified by the Jains in their own way. The earliest Indo-Aryan conception of life as a series of re-births was far more primitive, and was developed not on metaphysical lines but for ethical purposes.

4. Buddhism.—Buddhism, as an organized creed, has disappeared from India, but the ideas which it adopted or promulgated are still living and form one of the sources from which the Indian beliefs as to the origin of life are drawn. For instance, the Buddhist teaching that all life is due to a common source appears to find expression in the doctrine that the Buddha himself is a rebirth of Buddha his horse, as well as his wife, his companions, and even the Mahabodhi tree and the four treasure-vases. These are the seven that were born simultaneously, but which make up seventy-two when the four vases are as one. Another legend declares that with the Buddha itself were born 500 Sākyas, princess, 500 maidens, 500 servants, 500 horses, 500 elephants, and as many treasurers came to light. A very similar conception has survived in modern India.

Thus in the legend of Oēga, his mother is destined never to bear a son, but his parents rule some of the devas, and she is given to her. She divides it among a Brahman woman, another of the lowest caste, a grey mare, and herself; and all four females, hitherto barren, become fruitful. In another cult-legend a Brahman gives a Rāja three grains of rice, and each of his three queens swallows one and bears a son. A stock incident in folk-tales is the gift by a Jātaka of a barleycorn to a barren widow whereby she conceives. For the Buddhist doctrines see Art. Death and Resurrection of the Dead (Buddhism).

5. Mediæval.—Three or four centuries before the Christian era a religion with Vāsudeva as its central figure and a school of his followers known as Bhagavata was founded in India. According to the Mahābhārata, the sun is the gate, and after entrance those who are free from sin, all their material impurities being burnt, remain as atoms in him (it); then, released from him, they enter the individual souls of the Anguish, viz. soul and body, and the coming, they enter the Pradyunna (mind) form. Leaving this, they enter that of Saṅkīrṣaṇa, i.e. the form of the individual soul (jīva), and after this, the form of the Supreme Soul, who is everywhere and who is Vāsudēva, 'he who covers the whole world and is the resting-place (ādhvāsa) of all beings.' Vāsudēva next became identified with Kṛṣṇa and Viṣṇu, and finally with Nārāyaṇa; and the Bhakti system or Ekāntika Dharma (monothelism) was attached to the Vaiṣṇava creeds. Its earliest exposition in the Bhagavatādīta teaches that they who know the incarnations and the deeds of Bhagavat are released from the body and not born again. The discipline prescribed, however, for the attainment of the Brahmān condition is religious, not merely moral, and this determines the Bhakti doctrine from that of the Katha and Bhadrāranyaka Upaniṣads. Mention is made of two paths, and those who die while the sun is in its northern course (Uttarayana) go to Brahmā, while those who die while he is in his southern course go to the orb of the moon, from which the soul returns. Again, the whole
creation (Saṅsāra) is compared to a pipal-tree, which is to be cut by the weapon of indifference or detachment. When a soul departs from a body it takes away the karmas (senses), of which mānas (mind) is the sixth, and brings them in when it assumes another body. The soul itself is a part of Bhagavat and is eternal. By becoming sūnya (emptiness) it knows all. By becoming fire he aids digestion. There are two souls in the world, one, changeable, the other not, and besides these there is another, the highest or Paramātmā, with an unchangeable lord, supports all three worlds after entering them. Thus it appears that it is the animal soul that goes out of the body along with the six senses and enters new ones in that condition.

6. Modern Aryan.—The multiplicity and, it must be confessed, inconsistencies of the older doctrines current in India regarding life and death are reflected in the countless beliefs now existing, but through all the bewildering variations which prevail a few dominant conceptions can generally be traced, and a remote and savage tribe will be found professing a creed which is based on the fundamentals of orthodox Hindooism. Even the regular terminology will reappear in forms more or less mutilated. So numerous are these beliefs that only a few of them can be given.

The life of India is that it is indestructible. This leads to a readiness to take life—which to the European appears callous and brutal indifference to it. Thus in 1841 S. C. Macpherson was deputed to Ganjūn in Madras to suppress female infanticide and human sacrifices among the Khonds, a tribe which believed that souls return to human form in the same family, but that they do not so if the naming ceremony on the 7th day after birth has not been performed. As the Khonds ardently desire sons, they saw in this belief a perfect justification for female infanticide as a means of reducing the number of female souls to be re-born in the family.1 A very similar belief prevails in the Panjab, where a girl child is or was killed with rites and an incantation bidding her ‘send a brother instead.’ Exchange is not murder.

How far this and similar beliefs account for the reluctance to cremate young children does not appear. But the souls of those dying after infancy or childhood are very widely believed to pass into another world, at least for a time. Thus in the Panjab the Kanets of the Kull valley sometimes after a cremation make a small foot-bridge over running water in the neighbourhood to help the passing of the soul of the deceased.2 Yet the same people practise a form of divination, which is very widely spread, to ascertain, immediately after death, what animal the soul will enter or has entered.

This belief is perfectly consistent with a belief in metempsychosis and yet compatible with the worship or propitiation of the dead, who may be benevolent or the reverse. Among the kindly dead may be numbered the spirits of ancestors, of parvā or sīttās, and saints, of dutiful widows who have committed sāti, and so on. But the propitiation of the malevolent dead is much more necessary, and therefore prevalent. For example, in the Kumon division of the United Provinces the lowest class, the Dons, and even the lower classes of Brahmans, the Kins Brahmans and Rajputas— in fact, the bulk of the population—believe in the powers of the malevolent or vindictive dead. Thus, if a man has two wives and drives one to suicide, any disease afflicting the other wife’s children is ascribed to her ghost, which must be propitiated, and gradually comes to be treated as a god. If a man is killed in a quarrel, every misfortune befalling his son or her children is ascribed to the ghost.

‘There is reason to believe that the emotion caused by the dread of the effects of karma is much stronger in the hills than in the plains. It is said that if a man is killed in a quarrel, the debtor will, it is believed, be re-born as the ox or pony of his creditor. If a man’s son dies it is believed that he was his father’s creditor in a former life, and the debt being now extinguished there is no necessity of his further birth.’ The latter belief is said to lead to the great consolations of the death of an ordinary son is a much more serious matter.

The certainty of the operation of karma is not without considerable effect on practical morality.1 It is automatic, so that specific or occasional, as by Parmeswar (God) of any sin is hardly required. Similarly, the idea of forgiveness is absolutely wanting; evil done may be outweighed by meritorious deeds only so far as to ensure a better existence in the future, but it is not effaced, and must be atoned for. As to the objection raised to the theory of transmigration—that it does not follow from it that the soul remembers previous existences—such a consciousness is recognized in the case of great ascetics; and even a person born in a degraded position knows that the reason for this is his wrong-doing in a previous existence. The nature of the soul, according to the reincarnation creed, is such that when a man has died, by placing ashes from a potter’s kiln in a shallow vessel and smoothing them. Next morning they will be found marked with human foot-prints, claws, and the like, simply because the soul is to be re-born as a man, a bird, a tree, etc. To ensure that they shall be married to each other in a future existence, a man and his wife may bathe together in the Ganges with their clothes tied together. The important difference in the teachings of theoretical Hindooism and popular religion in regard to heaven and hell is that the former declares that there are only five stages of existence in the chain of transmigration, while in the latter there is generally an idea that the soul, when sufficiently purified, may go to dwell for ever in heaven, which is regarded as a place where the soul will enjoy material comforts. In popular Hindooism there is no idea of absorption in the deity or of recurring cycles of existence and non-existence.

The conception of life as something impalpable, yet apparently material and certainly transferable, is extremely common in India, and may, indeed, be described as the most popular. Thus a woman who has lost her child will bathe in a river, and pour wavy water over herself through a sieve, in order to ensure a fresh conception. For the same reason very young children are sometimes buried under the threshold, so that the life may come back again. This idea leads to the popular belief that life may be stolen, and so on the night of the Divāli, or feast of lamps, male children are occasionally stolen, and killed so that a barren woman may bathe over the body and conceive a son of her own. As in other ritual murders, it is desirable to kill the child as much in pain as possible. And during the śrādhdas, the ancestral fortnight when the sun is in Virgo (Kanyā), occurs the Kanatātara, or ‘fighting in Kanyāgat,’ also termed śākta pāvan (‘sharing with others’), in which women of good Hindu caste, even Khatris and Brahmans, of a childless Panjâb, take its grave. On the first day of the śrādhdas, the goddess Lakṣum’s image in the house or lane is painted with cow-dung, and the women belonging to it go out early in the day to a holy bathing-place, revenging on the way

women who are known to have sons. This leads to the large, wordy passages, but men must not interfere. The belief is that by cursing the sons of others the female attracts the male souls to herself through the intervention of the male sex, and the mana is worshipped daily and thrown into the river at the end of the fortnight which is held sacred to the spouse of Siva the destroyer as well as to the dead. Married women are also obliged to become widows, in order to propitiate the good God.

On the other hand, regular fights take place between large gangs of women on their way to the river, and the affair is treated as a festival.

LITERATURE.—This has been given in the footnotes.

H. A. ROSE.

LIFE AND DEATH (Iranian).—With their marked tendency towards optimism, the Iranians loved life (anghas, gaya, jyeda, jì, ùldàna) and abhorred death (máhrās, meredýu); the one is the creation of Ahura Mazda, the other of Angra Mainyu (Ys. xxx. 4), who have been at variance since "the beginning of life" (Ys. xiv. 2). Not only was life first created by Ahura Mazda (Ys. xili. 5, xlv. 6, xlviii. 6), and not only did he give life to the body (Ys. xxxi. 11), so that Zarathushtra asks (as he has the "only" life) to be (Ys. xxvii. 11; cf. xxxii. 1), but he is the "lord of the deeds of life" (Ys. xxxi. 8), and from him come the joys of life (Ys. xxxii. 10; cf. xxxiv. 14). The Amesha Spentas (q.v.) give aid to the life of man. Zarathushtra fittingly presents the "life of his own body" as a "blessed offering" (rátà) to Ahura Mazda and Asha (Ys. xxxiii. 14). On the other hand, the demon Wrath (Aisht) is the life of man, and the wicked and unbelievers mar it (Ys. xxx. 6, xxxii. 9, 11).

Life in this world is not all; indeed, though Zoroastrianism teaches that all good things are to be enjoyed in full measure, life here below is but a preparation for the richer life beyond. For this reason Zarathushtra asks from Von manah and Asha the "wors of life" (uxdd anghèh), while the "right ways of well" (ærzès savangóh patà) are to be learned from the religious teacher in the present life (Ys. xlv. 8, xliii. 3).

If life on earth is the "first life," the "second life" is that of the dead, and the "third life" (the man of the Life,) "the perpetual term for those who take the devil's side in human life" (J. H. Moulton, Early Zoroastrianism, London, 1913, pp. 146, 131) seeks a further development (Ys. xili. 11, liii. 8). Heaven is the place of "long life" (Ys. xili. 12, 13). Most significant of all is the presence, among the Amesha Spentas, of the goddess immortality, Améretâ (Ys. xlv. 17, xlv. 5, 10, xliii. 1, ii. 7), for in heaven life is to be for eternity (Ys. xiv. 7). When we turn to the Younger Avesta, we find the outlook upon life unchanged. Long life in this world is a blessing and an object of prayer (Ys. lxvii. 11; Afrúnánán, i. 18), while both Ahura Mazda and the Gáthás are honoured with life and body (Ys. v. 3, lv. 1; cf. lii. 3). Life is twofold: "this" or the corporeal (lit. oséos), and the spiritual (ahmádas, ahúah manangziat). This is stated in the gyané (Ys. xiii. 6; 3aúkhâ ... ahúah ... ahúah yó astavót ŋsac aií manangyáh, Ys. liii. 25), so that prayer is made to Ahura Mazda to be "life and a corporeal" for both lives (gyané asten-tóscés ... ukgúth ángwân, Ys. xili. 3). The "best life" (wakitta ahu, Ys. ix. 19, and often) is actually a synonym for "heaven," as the "worst life" (acsita ahu, e.g. Vend. iii. 30) is for "hell," and this conception is still in the Persian form, donat, to "heaven," bikhát. The "best of the best life" is the "righteousness of Asha" (Vend. xvii. 6); and in the time of the final saesbâyan, Asta-vérita, men will live for ever, for there shall be no more death (Ys. xiii. 89), even in the final count of Zoroastrianism, when "the seed of Yima" reigns (Ys. ix. 5; Vend. xiii. 5).

In the Gáthás death is seldom mentioned. The whole stress of Zarathushtra is on life, to be devoted to overcoming the powers of evil and gaining the eternal joys of heaven. Even the wicked do not die; they are damned to the everlasting torments of hell (Ys. xlv. 7, xlvii. 11). In the Younger Avesta, on the contrary, death is an important feature. We need not detail the corruption wrought by the "corpse demon" (Nasu; cf. Gr. rékn, 'corpse'), which forms the main theme of Vend. vi.-xii. (see also art. DEATH AND DISPOSAL OF THE DEAD [Parsi]), and we need only mention that a standing epitaph of Haoma (q.v.) is dírtrát ("from whom destruction [especially death] remains far"); Ys. ix. 2, 19, x. 21, xi. 8, 30, xxxii. 14 (on the latter passage see Moulton, 71 f., 338). Death is one of the worst of evils (Ys. iii. 7-12; cf. iv. 19), and the first to stay it was Thrita (Vend. xx. 2), while it is the Druj (the Lie, the negation of the truth of Ahura Mazda) [?] who destroys life (Ys. lvii. 15), 'life' here probably being meant in the eschatological sense. As we have seen, in the blessed future there will be no death, and in this present world only the wicked forget" the man of piety prepare for it (Aogemodásecta, 32 ff.), for it is inevitable (i. s., 53 ff.).

According to the Pahlavi Dinás-Mainiy-i Xrat (vii. 20), which seems to be a summary of the Zoroastrian belief, the seven planets "pervert every creature and creation, and deliver them up to death and every evil." According to the Bundahish (l. 7; cf. xxx. 20 ff.), the creatures of Ahiran will perish on the Last Day, when the heavens and the earth shall be created anew and when the creation of Ahura Mazda shall reign supreme, after wicked men shall have been purified by the flood of molten metal which at that time will cover the world.

Of mythological concepts of life and death there is scant trace in Zoroastrianism, the sole allusion, evidently borrowed from a Semitic source, being to the tree Gókar (the Gaokeru of Ys. i. 30, Vend. xx. 4, etc.), or white Hóum, which is "the counteractor of decrepitude, the reviver of the dead, and the mediator for gaining the salvation of Zá-Sparràxas, viii. 5), and from which, at the áwrókàsthwás, is obtained one of the components of the food which will give undying life to all (Ys. Bundahish, xxx. 25; cf. ix. 6, xviii. 1, and see F. Wendorfmann, Zör. Studien, Berlin, 1889, pp. 219, 253; F. Spiegel, Erák. Alterthumskunde, Leipzig, 1871-78, i. 464 f.).

LITERATURE.—The principal references are given by C. Bartholomae, Atirên. Wörterbuch, Strassburg, 1900, xxx. "Anghâv, Gaya, Jiyâv, Jiyáv, Ubân, Ubân, Mâhrâs, ..."[Gyamdâs, etc.], no special study of the subject has yet been written.

LOUIS H. GRAY.

LIFE AND DEATH (Japanese).—As might be expected, the early Japanese conceived of life and death as being entirely dependent on breathing. The word for 'to live,' iku, is associated with iku, 'breathe;' and iku, 'the expression for life and vitality, is believed to mean iku-no-michi, 'during breathing,' or iku-no-michi, 'the way of respiration.' Similarly, the word for 'to die,' shi, seems to mean shi-ins, 'the wind goes' (a derivation of the word from shi-ins, 'to pass away,' is disputable). These very ancient words are still in common use, though the people think little of their etymology.

The mythology opens with the primal power of production. Three deities are said to have sprung out of the primordial chaos. One of these is the Eternal-Ruling (Ame-no-miinaka-nushi), and the
Life is soevial with breathing, but vitality endures longer and acts beyond bodily limitations. Soul, the source of vitality, is considered to be a thing precious and mysterious like a jewel or ball. It is called tama or tama-shii, 'subtle aerial ball.' But it is not always a unity or a homogeneous whole, for double mentions of sols or double entities are spoken of. They are either mii-tama and ara-tama or aiki-mitama and kushi-mitama. The mii, 'nill,' 'quiet,' 'refined,' is contrasted with the ara, which tamae are constantly involved in the ritual or prayers, some of which are of remote origin. It is undeniable that in the pristine faith of the Japanese the generative powers played a great part, but these divinities themselves were thought to have been generated spontaneously, and the first pair are followed by a series of similar deities. They were all generated independently from one another and in turn displaced or hid themselves.

The last of these pairs are the Male-Who-Invites (Izana-gi) and the Female-Who-Invites (Izana-mi), who are doubtless counterparts of the first pair. They are united in marriage, by order of the celestial deities, and brought forth the islands which make up the Japanese archipelago, and nearly all sorts of elements and objects (see, further, art. Cosmology etc., ed. by a Japanese). The stories of these births show that many objects of nature were believed to be animated, as was, in fact, whatever manifested any power, good or evil, on men. The female deity became all them bearer, and consisted and consorted dies. This death, however, is not to be taken as a natural death in our modern sense of the word. After her death the goddess is found in Yomotsu-kuni, i.e. 'the dark country,' which is thought to be in a subterranean region. The male deity visits her there and, against her will, looks on her body by torch-light. Enraged at his importunity, she, accompanied by her attendants of the heavens, pursues him, in order to catch him and to make him a member of the realm of life and darkness. Their dialogue on the boundary of the world and the dark region tells of the life and death of human beings. The female deity, now the genie of death, threatens the male that she will take the lives of one thousand men every day, while he exclaims that he will give birth to one thousand and five hundred men every day. Thus we see how this pair of generative powers were divided and metamorphosed into the powers of life and death. A similar antithesis is attributed to the Heaven-Shining (Ama-terasu), the goddess of light and culture, and the Swift-Impetuous (Susa-no-wo), the god of darkness and outrage. These two are said to have been born of the Male-Who-Invites, either alone or in union with his consort. These divisions, however, are not thoroughgoing. Usually, in popular belief, life is ascribed to the power of the Producing deity or deities, and death to the power of evil spirits, who are indefinite in their personalities.

The stories told of the deities, of their generation and death, and of life and death in general, show nothing but the descendants of the idea of conception. They are coloured by ethnological incidents and are also possibly mingled with foreign elements. Still it is certain that the pristine beliefs contained the ideas of spontaneous generation and generative reproduction, on the one side, and the belief in unnatural death, caused by evil forces, on the other. This idea of death as the violent cessation of life survived the belief in spontaneous generation, and is still so in some parts of Japan, which are intended as a means of avoiding the contagion of pollution or to prevent evil influences of all kinds.
Shinto. *Karma* and fate are still believed to be the same, but *karma* is not strictly subject in the details of its teaching. The majority, in fact, think little of life and of its origin; but evils and diseases are, in many cases and by many people, seen as *karmic* retribution. Among the educated classes and educational circles agnosticism, so common to the Japanese mind and to Confucianists in this connexion, is a recognized principle. Young Buddhists, who are now eagerly engaged in reconstructing their faith in Buddha, are not strict in the doctrines of karma and transmigration.

**M. ANESAKU.**

**LIFE AND DEATH (Jewish).—** Optimism is the keynote of post-Biblical Judaism. Everything that God does is for the best (Berakoth, 60b), and this life is essentially good, to be contemplated with joy and gratitude. ‘For every breath that a man draws,’ says the Rabbis, ‘let him praise God’ (Midr. Rab. to Qoq 2). Yet life is not an end in itself, for it must be lived under a sense of responsibility to the Giver, and all its worth resides in this aspect of it. At death a man loses the opportunity of obeying the Torah and of adopting its teachings (Shab. 30a). ‘Morality,’ says M. Lazarus, summing up the teaching of Judaism on this subject, ‘is man’s vocation’ (Ethics of Judaism, § 116), and the Rabbinical legend tells us that the angel Sinai: ‘If Israel accept not the Commandments, it is better that the earth revert to chaos’ (Shab. 83a). ‘The world,’ say the Rabbis elsewhere, ‘stands upon three pillars: the Torah, Worship, and Benevolence’ (Abot, i. 2); or, according to another maxim, ‘upon Justice, Truth, and Peace’ (ib. l. 18). ‘The Torah is the medicine of life’ (Yoma, 72b); in other words, life is made sane and efficient by religion. God, according to the Talmudic doctors, says to Israel: ‘My light, the Torah, is in thy hands; thy light, the soul, is in Mine. Tend My light, and I will tend thine’ (Midr. Rab. to Le 29). The supreme hope of the Jew is to behold the Kingdom of God established on earth, and thus, in a notable passage of the Liturgy for the New Year Festival, he prays:

‘Put Thy fear, O Lord God, we beseech Thee, upon all Thy works, so that all mankind may bow before Thee, and become one bond united to do Thy will with a perfect heart; for we know, O Lord God, that Thy will is Thy right hand. And so give glory, O Lord, to Thy people, to those that fear Thee, and the opening of the mouth to those that trust in Thee. For then the righteous shall see and be gladdened, and iniquity shall shut its mouth, and all wickedness shall be wholly ashamed and confounded, for the proud road of sin shall pass away from off the earth. Then every creature shall own Thee as its Creator, and everything that hath breath shall cry, O Lord, the God of Israel, reigneth, and His dominion roeth over all’ (cf. Sir 30:6).

But, though the true life of the life service, it must be glad service, for the view of life taught by Judaism is serious, but cheerful’ (Lazarus, § 253). The Shekinah (the Divine Presence), says the Talmud, does not come in response either to grief or to pain, but only to glad tempering, to gladness (Shab. 106b). This is the essence of Jewish doctrine on the subject; neither asceticism nor hedonism, but joy springing from and tempered by the religious ideas, is the central doctrine of Judaism. ‘There should be no unrestrained laughter in this world’ (Ber. 31a). The history of Israel, with all its tragedy, is sufficient to forbid such mirth; and the pious Jew denies himself many pleasures in memory of the solomonic Jerusalem. Moreover, unlimited enjoyment is incompatible with a religious outlook on life; the good man will conceive of himself as living under a Divine law, with which
his pleasures must be made conformable. On the other hand, the ascetic idea is alien to the true Jew; for the pleasures of his life are no evil thing, and its indulgence, under right conditions, is commendable. Even the impulses that make for physical pleasure are the Divine handiwork, and the life of the righteous man who renounces them must have as its motive, not the satisfaction which it yields, but the desire to promote the Divine purpose for which they were created. That indulgence is a duty, a religious duty.

Thus the Rabbinical law, following the general rule laid down in Ber. 38a, prescribes a number of prayers to be recited by the Jew on indulging in various pleasures—some whimsical character—on partaking, e.g., of various kinds of food, on inhaling the scented flower, on looking upon the sea, on beholding new clothes for the first time. By such means physical gratification, when sanctioned, is also sanctioned. Furthermore, the tendency to self-indulgence is not repressed, but restrained; natural desire is tempered, not extinguished or suppressed. Material comfort and aesthetic pleasures are regarded as integral parts of an ethically sound life (Leviticus, 11:21). It is a Jewish boast that the Hebrew language is rich in words connoting joy. The Rabbis count ten such synonyms (Alot de Rab Yehudah, i. 255). The Feast of Tabernacles is called the “season of our gladness” par excellence (see Authorized Prayer Book, ed. S. Singer, p. 255); it would seem extraordinary that this festival was instituted for the specific purpose of gladness, as though the religiousness of joy was to be justified by the joy itself. The day is set apart by a special celebration in its honour (M. Joseph, Judaism as Creed and Life, p. 195). Joy is itself service; but it must be transmuted into service by being purified. Pleasure must be dignified by being used for self-restraint. At meals, the Rabbi teaches, words of Torah must be spoken, otherwise he will cease to be a symbol of the assembled company at the sacrifice of the dead (Alot, iii. 3). A man should eat only when he is hungry, not when he is hungry to the point of illness; when he is in anxiety, and always in moderation (Hullin, 84a, 6). The Talmud inveighs against gluttony and luxury (Pessachim, 114a). In fine, Judaism commands the golden mean between unlimited gratification and extreme self-denial. Indulgence and renunciation must be regulated; something of both must go to the making of the daily life; and each must find its justification in the higher utility. "Here," says Moses Luzzato (18th cent.), "is the true rule on this subject;—the worldly pleasures which a man needs not it is his duty to eschew; but those which for one reason or another, he does need he cannot renounce without sin. This is the safe rule. But its application to the various circumstances of life must be left to the individual; the law is but an indication (Shabbat, ch. 13)."

A far older teacher, Judah Halevi (12th cent.), aptly says: "One should not go beyond the bounds of nature (if there are any) in the object of a devout heart" (Kiddah al-Khassuri, tr. H. Hirschfeld, London, 1900, p. 46).

It is due partly to the difficulty of defining the via media of moderation, and partly to the sorrowful experiences of the Jewish people, that occasionally temperance has overstepped the safe line, and lost itself in austerity. The Talmud tells of a Rabbi (Ze'era) who fasted a hundred days (Baba me'zia, 55c), and of another (Mar ben Rabina) who fasted practically all the year round (Pes. 69b). There have been Jewish sects, like the Essenes and the Karaites (qq.v.), which have been marked more or less strongly by austere practices. In Judaism, as in other religions, mysticism has had its influence for the world and its joys as its corollary. The ancient teachers of Hillel and Shammai, even formally discussed the question whether life is worth living (Erubin, 156). This uncertainty is often visible. The devotee who gives himself to fasting is called a sinner (Talmuth, 11a, 22b); a man must die for the Torah, and yet he must not (Baba Kamma, 61a; Erubin, 6b); to sleep on the earth is commanded in one place (Baba Kamma, 62b); but in another the converse is enjoined (Ber. 26b). But these contradictions are either passing or incidental phases of Jewish thought; a firmer note is the rule, and the ascetic and the pessimist are only by-products of Judaism. It is a bad sign, say the Rabbis, to despise life (Tana. 98). Talmud Hillel, "In the sin-offering brought by the Nazirite (Nu 6:4) by contending that his very abstinence from strong drink was a sin (Talmuth, 11a).

According to a Talmudic utterance, in the next world men will be called to account for the lawful pleasures which they have refused in this life (Jer. Kiddushin, ch. 4). And the real Jew speaks in these maxims. Judaism finds the thought of his curses upon his life, but not to the exclusion of this world. "It has revealed heaven to men, but earth as well" (M. Giddemann, Das Judentum, Vienna, 1902, p. 56). It has no doubt for its own sake, no commendation for the temper that voluntarily courts pain and abridges life for the greater glory of God. Suffering has to be patiently endured when it comes; it has even to be welcomed as the seed of moral regeneration. "With thy very wounds will I heal thee," God, according to the Rabbis, cries to man (Midr. Rab. to Lv 18:18) "the fundamental meaning of this reference is to that which afflicts bear his name (Midr. Thalhim to Ps 94); 'if thou desirest life, hope for affliction' (ib. to Ps 16)." Such utterances betoken not a worship of sorrow, but a recognition of its disciplinary power, of its value for the character, its significance for the life. Judaism sees no merit in suffering, but only in the right bearing of it; and between its teachings and the ideas of the self-mortifying Hindu there is an impassable gulf. Suicide is a crime, and its perpetrator is not to be mourned (Midr. Rab. to Gn 9:16; Maimonides, Hilk. Raze go, xi. 4); but the slow suicide that comes of self-mutilation or of the use upon of health is also reprehensible. 'Ye shall keep my statutes, and my judgments: which if a man do, he shall live by them' (Lv 18:5) 'live by them,' says the Rabbinical gloss, 'not die by them' (Yoma, 82b).

Scattered among the motley contents of the Talmud are the materials for an entire treatise on medicine and hygiene; and the fact is itself significant (Shabbat, ch. 13), that the ascetic life is only the external form of physical life by the old Jewish sages. Personal cleanliness is exalted into a religious duty, and joy, love, and gratitude, to which each of which one can approach God. Thy contrition on a fast day does nothing to bring thee nearer to God than thy joy on the Sabbath and on festivals (Kiddah al-Khassuri, ch. 13)." A far older teacher, Judah Halevi (12th cent.), aptly says: "One should not go beyond the bounds of nature (if there are any) in the object of a devout heart" (Kiddah al-Khassuri, tr. H. Hirschfeld, London, 1900, p. 46). Thus it is evident that the physical life is also religious life. If the ethical terrors of the sacred law frighten away from the bath-house, tell his disciples that he is about to perform a sacred rite; it is a religious duty, he explains, to tend the body, upon which God has bestowed the life and beauty of a "living soul" (Lv 25:23). Personal cleanliness, the Talmud teaches, is the avenue to spiritual beauty. "(Aquila Sarutin) which defends him in serving life, it further declares, overrides the religious law (Yoma, 85c). It is not only allowable, but a duty, to extinguish a dangerous fire on the Sabbath day, and so to secure the public safety. The religious authorities are inured to delay and to be on the quiet of sufferers. The heads of the community are to be foremost in the humane task (ib. 84b). For the dead, even though he be the King David himself, the Sabbath must not be broken; but it may be broken for the living, even for a child a day old. "Put out," says the Talmud, "the light of a lamp on the Sabbath day rather than extinguish God's light of life" (Shabb. 30b). In a wiser passage in I Mac 5:23-24), the Jewish patriots are described as resolving to defend themselves on the Sabbath instead of passively sacrificing their lives for the tree, as their brethren had done before. Self-preservation is a duty. To slay a fellow-countryman in the command of another, he is a criminal (Ps 20s, 257). Personal sacrifice for oneself, self-defense is justifiable. If we are called upon to choose between saving our own life and that of another, we must save our own (Shab. me'zia, 63b). Self-torment is forbidden (Shab. kamma, 91a), as is the courting of needless danger to life—by sleeping, e.g., on the ground, or remaining in a dilapidated house (Talmuth, 50b; Ber. 26b). In certain animals 'unclean' meats, usually forbidden to Jews, may be given to the patient (Yoma, 50c).

There are limits, however, to this regard for the physical life. A man may break every law to save his life except those which forbid the three cardinal sins, idolatry, incest, and murder (Sanh. 74a). Those who sin are in another word "murderers" (Ps 57:6). But, with these reservations, the duty of preserving life is paramount. Nothing must be done to abridge
life and death (Jewish) 41

The duration of life even in the case of the dying (Shab. 151b).

Death, says the story of a sage who, suffering martyrdom at the stake, is adjured by his disciples to end his agony by giving them a command. They follow, 'God,' says, 'alone can take my life; I may not' (Aboda Zara, 18b).

Regard for life is exalted to reverence. The gift of God, life must be treated with the utmost care. The Talmudic law proscribing kindness to the lower animals is in part actuated by this motive. God has created the various types of animal life, and desires their perpetuation. It is his design that men may hommage to the Divine will this as in every other respect, and to make himself the instrument for its fulfillment (see Aaron of Barcelona, Sepher Hayyim, 15th cent., §§ 284, 254).

Life, then, according to the Jewish idea, is not evil, but supremely good; it is not a burden to be shufled off with a sigh of relief.

'This world is not a vale of tears. It is a beautiful world, and men must keep it beautiful by the inborn graces of their own lives and by the joy they weave into the lives of others. On the other hand, the true Israelite does not think of this world as his home. It is but a halting-place on the journey from one world, eternity to the next. A non-climactic to the palaces (Shab. iv. 16), 'a wayside inn' (Me'irah katan, 9b), the port where we must equip our lack if we would fare safely on our faithful journey (G ethical, 6).

Life is not to be longed to unduly, or to be yielded up grudgingly. When the Master's call comes, it must be obeyed cheerfully; for, since He does everything well, the decree that removes us is as wise and good as is the ordinance that places us here.

'Fear not,' says Ben Sira, 'the sentence of death. . . . Why dost thou refuse, when it is the good pleasure of the Most High? (Sir. 41:12).

This acceptance of death as the dispensation of Divine justice is the keynote of the ancient Jewish burial service, which takes the form of a tholosy, and, indeed, is so styled. Its distinctive name is idud haddin, 'justification of the Divine sentence,' and its essence is expressed in the following quotation:

'Righteous art thou, O Lord, both when thou artillest and when thou maketh light. . . . It is not for us to murmur at Thy method of judging. . . . Blessed, then, be the righteous Judge, all whose judgments are righteous and true. . . The Lord says, and the Lord hath taken away; blessed be the name of the Lord' (Authorised Prayer Book, p. 311).

On hearing of the death of one dear to him, the devout Jew uttereth the benediction: 'Blessed be the righteous Judge' (Oe, p. 292).

The Israelite, then, is taught not to desire death, but to despise it. If in life he has the opportunity for service, in death he discerns the signal for ceasing his labours. He is so to live as to be ready for that signal whenever it is given; his 'garments' are to be white, 'as one knows when the King may come' (Shab. 153a). And, so prepared, he can await the unknown hour calmly.

G. H. Dalman is not warranted in charging the Jew, as does Max Miller also in his Ghetto Lectures, 'parochial, one-sided, and narrow-minded' (Anthropological Studies, London, 1929, p. 369), with an undue dread of death.

'The celebration of the New Year and the Day of Atonement,' says Dalman, 'according to the notions attached to it by orthodox Judaism, instead of mitigating or banishing the fear of death, strengthens it' (Christianity and Judaism, Eng. tr., Oxford, 1901, p. 40). He is doubtless thinking of the passionate prayers for life which fill so large a place in the liturgy for those solemn days. But those days are essentially days of penitence; and, if the Jew supplicates for life, it is in order that by repentance and amendment of life he may increase his chances of entrance into the Kingdom of Heaven.

Death itself has no greater terrors for him than it has for any other mortal on earth, as any reader of the Talmud will see. He does not encourage such fears, but exhorts the Jew to contemplate death with a tranquil mind as the end and the climax of the well-spent life. Such, for example, is 'the season of the year when the Angel of Death, armed with the sword of a flaming flame, is likened to the gathering of fully-ripened fruit or the quenching of the flame of a burnt-out lamp. The death to be dreaded is the morally premature one, which is brought into the half-ripened fruit or the untimely extinction of the lamp (Midr. Rab. to Gn 25).

Death is a natural ordinance; his work finished, the worker must go and receive his reward. Hence Issae, Moses for Joshua, David for Solomon (Midr. Thallim to Ps 116).

And God saw all that He had made, and beheld it was very good—'it is death', that is meant, says a Rabbi (Midr. Rab. to Gen 1).

The origin of the richly-dressed angel of one who gently draws a hair from the surface of milk (Ber. Sa); this called 'death by a kiss' (Baba bathra, 17a).

The death of the wicked, on the other hand, is like the painful impaling of a thorn from wool (Ber. Sa).

Death is the liberator (Shab. 30a); it is like the being entered into port of a well-laden vessel (Midr. Rab. to Ec 7:18).

Hence it is that the Wise Man says, 'the day of death is better than the day of one's birth' (ib.).

It is fulfilment as compared with mere promise. Far from being the primeval curse, death is a blessing. The day that Adam died was made a holiday (Tana d'be Elyahu, ch. 16).

'The death of the righteous,' God says, 'is a grief to Me, and never should they die if they did not themselves ask for death; for did not Abraham say, 'I would be dust and ashes,' and Jacob, 'Let me die now!' (Midr. Thallim to Ps 116).

The idea, however, that life is desirable as the opportunity for obedience persistently recurs in the Rabbinical literature. The thought of its cessation, therefore, is not welcome.

Even Abraham, who, as already indicated, prays for death, is represented to us, in his great prayer, as being averse to it. He refuses to surrender his soul when the archangel Michael claims it; and to win his compliance the angel, at the dividing of bread, puts on the garb of a poor man, and appears to the patriarch clothed in light. In this manner the Angel of Death, first in the temple, then in the palace, and finally, invincible, has to divert his attention by a strategem before he can perform his mission (Shab. 30b).

The Angel of Death is a familiar figure in the Rabbinical literature, and, as in the later Biblical writings (e.g., I Ch 21), he is armed with a sword. Its point is tipped with gall, and it is this bitter drop that slays (Aboda Zara, 20b).

Sometimes the weapon is described as a knife (Ketuboth, 77b); sometimes Death is pictured as strangling his victim with a cord. His presence in a town is betokened by the howling of dogs (Baba bathra, 60b).

According to some ideas, Death is a fallen angel (Pirke R. Eliezer, ch. 13), and identical with the Serpent in Eden (Wis 2:9).

His name, which often occurs in Rabbinical literature, is Sammael, i.e., 'the drug of God,' a reference to the gall on his sword. Legal opinion, however, denied the existence of an Angel of Death, just as it scoffed the idea of a personal Devil. 'Satan, the Angel of Death, and Evil Desire are one and the same' (Baba bathra, 15a).

In other ideas it is the impulse alone that tempts and destroys. Death, however, is the friend of men, especially of the righteous. Benevolence disarms him (Derekh zequte, ch. 8); he also instructs those who are weary of life (Ber. 51c).

He respects the wishes of the just as to when and where he will perform his summons (Mo'ed katan, 22a).

A Talmudic legend tells how a famous sage, Joshua ben Levi, appointed to die, and permitted beforehand to see his place in paradise, seized the knife of the destroying angel, whereupon a heavenly voice rings out the command, 'Give back the knife; the children of men have need of it' (Ketuboth, 77b).

Long fellowship has made good the use of the story in his Legend of Rabbi ben Levi.

The necessity of death, however, applies only to the existing worldly order. In the Golden Age there will be no death; Messiah Himself will slay 'a death without sorrow' (Pesikta Rabbati, ed. M. Friedmann, Vienna, 1860, 161b [the Scripture proof cited is Is 25]).

As to the origin of death, various opinions are expressed. The familiar idea that death was brought into the world by the pains inflicted by the Serpent in Rabbinical literature (see Shab. 55b; Erubin, 15b; Tana d'be Elyahu, ch. 5); but we find it much earlier in Sir 23:2. Closely connected with this idea is that of Abraham four hundred years before the death of Isaac, Moses for Joshua, David for Solomon (Midr. Thallim to Ps 116).

'And God saw all that He had made, and beheld it was very good'—it is death that is meant, says a Rabbi (Midr. Rab. to Gen 1).
LIFE AND DEATH (Teutonic).—Our knowledge of the conceptions of life and death among primitive Teutonic peoples can be gleaned from three fields: (1) the fragmentary information on Teutonic beliefs and practices given by classical and early Christian writers; (2) the organized religious belief of the Norse peoples, particularly the cult of the chief gods, which embodies beliefs common to the general Teutonic stock, and reveals traces of their far-remote ideas and beliefs as well as of Teutonic tradition, folklore, superstition, and custom, both in early times and in modern survivals. From a study of this material it would appear that the processes of thought on these topics among the early Teutons were very similar to those now formulated for all primitive peoples. The early Teuton, in dividing all that affected him into animate and inanimate, probably took for his criterion the power of motion; from the confusion of this power with the faculty of volition animistic ideas would arise in connexion with active natural phenomena, and, later, even with inanimate objects, while a still further development would appear in personification, with inevitable sex-distinction, and in symbolic beliefs. The criteria for the attribution of death would be the loss of the power of motion and the phenomena arising from it; from the observation of sleep, dreams, trances, etc., would spring animistic beliefs. A further stage would appear in the identification of the principle of life with those intangible or tangible manifestations, such as breath, warmth, colour, pulsation, or blood, with whose innuance in the body life is obviously connected; hence the belief in a material form of the soul, leading to the idea of the 'eternal soul.' Of the later forms of belief Teutonic folklore and myth give ample evidence, allowing one to presuppose the earlier stages.

1. The principle of life in nature.—The four elements are constantly represented as imbued with life, and as capable of transmitting or producing life. The strength of the belief in running water is shown by the wide-spread Teutonic worship of streams and springs (cf. Grimm, Teut. Mythol., p. 101), and the practice of bathing in magic springs testifies to the Teutonic belief in the supernatural power of water for health (cf. Frazer, G.B. IV, pt. vii., Balder the Beautiful, ii. 29). The personification of the living element in water is generally feminine. The belief in life inherent in fire is shown by the general Teutonic myth of Wieland, originally without a fire demon, and by the Norse personification of fire as Logi, later confused with, and superseded by, Loki. The life-transmitting powers of fire appear in the customs still practised throughout Teutonic Europe, at the ceremonial bonfires, especially at Easter and Midsummer (ib. ch. iv.; note that Frazer admits the existence and significance of these customs, although he deviates [ch. v.] from Mannhardt's explanation of fire-festivals). Akin to fire-beliefs is the belief in the quickening power of the sun, shown in the connexion between the summer solstice and the Midsummer fires, and in the custom of rolling fiery wheels or other sun-symbols. A curious example of belief in the generative power of lightning occurs in the superstition that the sun's rays are produced by a lightning-stroke. The connexion between fire and human life appears in the representation of souls as flames or will-o'-the-wisps.

Air has a particular connexion with the principle of life under two chief aspects: first, breath, the symbol of life (cf. Voluspa, 18); secondly, wind or whirlwind. Wind made known the presence of spirits, and was credited with the power of restoring life to the dead and to trees and plants; and, as in the story of Balder, and the early idea of the conscious power of weapons (cf. 'the sword that fights of itself' [Skirnisund, § 1]), was long retained in poetry and folk-tales.

The close connexion of trees with the principle of life is proved by the well-attested Teutonic worship of trees, and by the idea of the World-Tree, with its parallel occurrence in the identification of trees with the guardian-spirits of peoples, tribes, families, or individuals. (See Hamadryads [Teutonic].) The use of plants and fruits to convey life is frequent even in modern superstition, and an early instance occurs in the Yule Sacrifice (ch. i.), where the queen becomes pregnant after eating one of Freyja's apples. The ashes of the Yule and Midsummer logs were touched and kept for the same purpose (Branches and Twigs, § 5).

Certain animals, particularly the boar, had a special connexion with the power of life and its transmission; others had an intimate connexion with life and as able to transmit or to produce life, as to arise the power of transference or of shape-
changing. Another form of this sympathetic connexion appears in the "external soul"; but to the Teutons this was the logical conclusion of depositing the external soul in animals, as seems never to have developed among the Teutons (K. Helm, *Allgym. Religiongesch.*, i. 23 ff.). In heroic song the human life-history is shadowed by that of the animal, as were Woldidrich and Sigardr Sven. The serpent, in other cults so important a symbol of life, because of the renewal of its skin, has little efficiency in Teutonic mythology. The tenacity of the belief in individual life in the natural world appears in frequent personification, though it is sometimes difficult to distinguish between nature-personifications and those local deities which abound in Teutonic belief, but which may be a later development.

It is a moot point whether the primitive Teuton believed in a universal life-giving spirit; without going so far as to assume a monothelistic origin for Teutonic mythology, we can yet believe that the principle of life was early personified, though whether as earth-spirit or as sky-spirit it is impossible to decide. Animistic thought generally tends to the latter, but the Northman evidence, the North-Swedish combination, and the Swedish worship of Freyr as a fertility deity all point to the former.

And while that life-conception with its productivity, and traces of phallic worship are not lacking (ib. i. 214-225). The origin of world-life has already been treated (see COSMOLOGY AND COSMOLOGY [Teutonic]); the revival of world-life and its different phases were celebrated at the Easter, Midsummer, and Yule festivals.

2. The origin of individual life. — The Teutonic conception was prevented from becoming metaphysical by that material view of the world which is illustrated by the ceremonies followed at birth (see BIRTH [Teutonic]); and the lack of individualism in the life-conception is shown by the importance assigned to blood-ship, heredity, and rebirth. Blood-ship was the closest of ties, and the mingling of blood was the symbolic ceremonial for sworn brotherhood (cf. art. BROTHERHOOD [Artificial], i. 7). The power of heredity consists in the transmission of racial qualities, especially courage and hardihood, as in the case of Sinffóti (Fosunga Saga, 8). The idea of rebirth, which still persists, was deeply rooted in Norse belief, and accompanied its characteristic proneness towards the idea of naming children after dead ancestors; the name was of great efficacy in the attraction of ancestral qualities, and even implied the transmission of a personality. The impossibility of re-birth was considered a misfortune (cf. F. Herrmann, *Nord. Mythol.*, p. 35 ff.). Similarly, the *hjálingja*, or genius in female form, could transfer itself from the dead to a beloved kinman (Fæga Gláma Saga, 9). The different stages of human life were little regarded; we know of no initiatory ceremonies at adolescence, although Karl Pearson (Chances of Death, London, 1897, vol. ii. ch. ix.) considers that the licentious character of medieval Walpurgisnacht revelry may have derived their origin as sexual festivities; otherwise we hear only of military ceremonies (Tac. Germ. 13) or of heathen feasts (Ynglinga Saga, 40).

The material representation of the soul was probably induced by the observation of dreams and similar phenomena, where the soul appears to have an independent existence, or by the location of the soul in the heart, liver, or head. An extension of this material representation appears in the doctrine, common to all Teutonic peoples, of the "external soul"; the chief evidence is the story told of the becoming immortal (ib. i. 23) of King Gunderbam, whose soul was once observed to issue "in modum reptilis" from his mouth during sleep. Survivals of this idea in fairy-tales show the control exercised by the individual over his external soul by depositing the soul in a place of apparent safety, in an object or plant, and thereby prolonging indefinitely the body's existence (cf. Frazer, ii. 116 ff.; Cf., ch. v.). A case of control exercised by an external soul was told of the bard Nornagatr, whose life was identified with a burning candle (Saga of Nornagatr, 11). The soul's power to assume animal form and to go on journeys (hamfarir), later connected in Teutonic mythology with personification, and connexion of such ideas with the observation of states of super-normal activity appears in accounts of berserk-gang and shape-changing (see TRANSMIGRATION [Teutonic] and Lycanthropy, § 1).

An extensive power over the principle of life was acquired by magic, chiefly sympathetic, prophylactic, or coercive, and it was possible to induce animal and vegetable fecundity, as by the sympathetic magic of the Midsummer fires. Instances of the sacrifice of human life to ensure vegetable fecundity occur in the immolation of the kings Donnald and Olfr (Ynglinga Saga, 18, 47); a slightly different case is that of Aunn, who gained an added ten years of life for each son sacrificed (ib. 29). Magic use of plants, etc, of charms could induce both the connexion with the animal and vegetable world, its soul's coming (Sigdrfjumbl, 9). Life could be protected or prolonged by various practices, such as passing the individual through a cleft tree or hollow stone, with a charm (Grimm, p. 1167; Frazer, ii. 168 ff.); the story of Balder exemplifies prophylactic magic to secure invulnerability. By spells poison could be rendered innocuous (Englite Saga, 44, 75, 79), and sickness prevented or cured, while the perpetual battle of the Jötnings exemplifies the power to renew life indefinitely (Skaldskaparmali, 47). Charms also had power to suspend life (cf. the sleepthorn), and to harm or destroy it; metamorphoses were often compulsory, the result of external magic.

3. The conception of death in nature. — The elements have all a death-dealing as well as a life-giving power; especially fire and water; water can induce a malignant power on Midsummer Day, and demands a human victim; similarly, many vegetable and animal objects had death-dealing powers, inherent or temporarily acquired.

4. The conception of death in nature. — This arose from the phenomena attending sleep, which foreshadowed the soul's departure; the soul is still materially represented as issuing from the mouth in the form of a bird or mouse, and its exit is facilitated in every way. In Norse mythology the dead made an actual journey, and needed shoes to travel the Hel road. The idea of cessation of activity after death, if it ever existed, was soon superseded, as is proved by the universal custom of providing the dead with material implements; the earliest tombs contain copper and vessels, not armour and weapons—a sign that at first feasting, not fighting, was to be the chief occupation. Activity after death could be exercised still on earth, but it was then frequently malignant, and could be prevented only by burning the corpse (Laxdela Saga, 17, 24). Spirits could return in animal or in human form (Eggjeygr Saga, 51, 55), and hauntings show the power of ghosts to affect the living; fear was probably as great an incentive to ancestor-worship as reverence. Activity in another world was materially conceived as a close parallel to mortal life, as is proved by the nature of the implements provided, and such activity was often localized, as in the Gallic *Diaconus* (ed. K. Lehndorff, Berlin, iii. 23) of King Gunderbam, whose soul was once observed to issue "in modum reptilis" from his mouth during sleep. Survival of the Valhalla belief is the final poetical development of the conception of Oðinn as god of the slain; in a less warlike age a more peaceful prefigurement
aries, the Rosengarten of the later German poets; Saxo Grammaticus’s account (Gesta Danorum, i. 31) of Hadding’s voyage to the under world represents an intermediate stage (cf. art. ELIEST, ABDON of THE Teutonic). The power of death was in- 
exorable and inevitable, even the gods being doomed to perish at the world-death. Death was personified in many forms as a messenger, or as an embodiment of the Teuton, Hel, or of H. In Saxo’s Prose 
spurious, the weapon, Grimm, Coercive Preventive, tangible prophylactic coming but H.
14). exercise search secondly, art.

moral difficult rare- 

entirely Teuton art. to prevent, prophylactic, to human life, of the case death of the Teutonic—

fey. The en- 

able- 

power, the "Teutonic," of Teutonic, to personi- 

ted, exorable, of the personification of life death prevailed, and gave rise to the idea of weakening death’s power by insulting or beating a tangible representation (Grimm, p. 767).

In spite of the undoubted fatalism of Teutonic peoples (see art. DOOM, DOOM MYTHS [Teutonic]), the belief, born of instinct and desire, prevailed that magic enabled man to exercise a twofold power over death; first, in retarding or hastening death; secondly, in controlling and summoning spirits (Erbyggja Saga, 55). Preventive magic against death might include the wide range of charms to preserve health, great barrenness, bald sickness, or stanch blood. Coercive magic to compel death was apparently as frequent as preventive, though naturally more secret. It was possible to foresee the doom of death upon another; to control the premonition of it in oneself—
to be fey. The summoning of spirits (hátrina), performed by means of the valgaldr, became in Norse mythology an important branch of magic art (cf. MORT, Teutonic).

5. The ethical aspect of life and death.—It is difficult to deduce the ethical outlook of the average Teuton on life and death because of the extremely objective character of the literature, but the notion of a moral aspect of world-life and world-death is proved by the fact that the end of the world comes “automati- 

cally,” involving the gods also. Respect for the principle of life is presupposed by the importance attached to fertility and all that promotes it; but this was instinctive, and originally entirely non-moral. Respect for individual life rarely appears, except in kinship; the slaughtering of the last of the kind as a vicarious expiation for the blood-tie (Saxo Grammaticus, Gesta Danorum, ii. 1; Beowulf, 2436 ff.); but even this was probably due more to tribal than to moral instinct. Custom rather than respect governed the sacrifice of the person as of the lento- 

tion of life, as in the case of the Gothic widows (Procopius, de Bello Goth. ii. 14). Chivalrous sparing of life was little known, for Saxo Gram- 

maticus’s assertion to the contrary can hardly be substantiated from earlier literature (Gesta Danorum, v. 190). The fatalism so deeply ingrained in the Teutons coloured their whole outlook, but it was unfeigned by remorse for an ill-spent life or by fear of coming punishment; and the lack of a moral division after death is so general that it is tempting to explain apparent inconsistencies by the theory of Christian influence. Suicide was allowable when due to grief for a friend or kinsman, and was more honourable than an ignoble death (cf. Saxo Grammaticus, tr. O. Elton, London, 1894, p. xxxvi). The practice of human sacrifices pointed to little respect for human life in the abstract (see art. HUMAN SACRIFICE [Teutonic]); the fact that such sacri- 

fices were prophylactic or propitiatory was held sufficient justification. If indeed any were necessary. There certainly seems to have been a strong idea of sacrificing the life and welfare of the one to that of the many. It would add greatly to our knowledge of the intermedi- 

ty, the subject if, in the account of prophylactic sacrifices, the least clue were given to the mood and temper of the victim—whether he were merely passive under compulsion or a willing and exalted sufferer.

LIFE, FUTURE.—See STATE of the DEAD.

LIFE-TOKEN.—‘Life-token’ or ‘life-index’ is the technical name given to an object the condition of which is in popular belief bound up with that of some person, and indicates his state of health or safety. The object may be an artifact, such as a tool, a weapon, or an ornament; or it may be a tree or plant, an animal, or even a well, or a vessel of water or some other liquid. The most familiar examples are found in the Arabian Nights. In the story of ‘The Two Sisters who envied their Cadette,’ with which Galland con- 

cluded his version (cf. R. F. Burton, Supplemental Nights, London, 1886-88, iv. 491 ff.), Prince Bahman, on departing on a search of the island of the golden water, and the singing tree, leaves with his sister a hunting-knife, the blade of which will remain clean and bright so long as he continues safe and sound, but will be stained with blood if he be slain. His brother, following him, leaves a string of pearls, which will run loose upon the string while he is alive, but after his death will be found fixed and adhering together.

The incidents, in fact, common in folk-tales all over the world where the hero goes on a perilous adventure, and his friends require early infor- 

mation, that they may in case of need sail forth to rescue or avenge him. It is necessary here to draw atten- 

tion only to one wide-spread cycle—that of the modern variants of the ancient Greek story of Perseus. In these tales Perseus is often represented as one of the mother’s having partaken of a magical fish. Some portion of the offal of the fish is buried in the garden; a tree grows on the spot and becomes the life-token of the children. Sometimes a portion of the blood is preserved, by its direction, in phials, one for each of the children, to boil or become turbid in case of misfortune. In a story from Pisa the fish-bone is fastened to a beam in the kitchen, and sweats blood when anything untoward happens to any of the boys.

There is thus an original organic connexion be- 

between the life-token and the person whose condition it exhibits. This connexion supplies the interpre- 

tation. The life-token is derived from the doctrine of sympathetic magic, according to which any portion of a living being, though severed, remains in mystical union with the bulk, and is affected by whatever may affect the bulk. Sympathetic magic, however, is not confined to folk-tales; it has a practical bearing. It is applied in witchcraft and folk-medicine to the injury of human beings and every object that comes into relation with them. Accordingly, we find the life- 

token not only in folk-tales, but also in everyday custom and superstition.

A striking and pathetic example of a severed portion of a human being employed as his life-token is recorded in the United States. Early in the last century a boy in Granton County, New Hampshire, was badly scalced that a plug of flesh, half an inch in diameter, sloughed off, and was carefully treasured by his mother. When he grew up, he left home and was never heard of after; but his mother, from time to time, examined the fragment of skin, persuaded that, so long as it was sound, her son was all right and well, and that it would not begin to die until his death. For thirty years, until her death about the
Turning now to artificial objects—an illustration may be given of a somewhat unaccustomed life-cycle.

Father George Eich, reporting in the Annales de la Propagation de la Foi (1895) a recent visit to Easter Island, relates that the native converts persistently inquired after another Roman Catholic missionary, Father Albert, who had previously visited them. They said that he had caused the great stone cages which, as usual, they had lived in, and told them: ‘When you see this cross tall, you will say, Father Albert has just died; let us pray for him.’ Father Eich went to see the cross, and found that it was the cage which had been set up again, and bore traces of its fall. On questioning them as to the precise date of its falling, and how it coincided exactly with that of Father Albert’s death in Spain, he thus replies: 1894 (VII, xl [1900] 326, quoting the Annales at length).

This kind of life-token easily lends itself to divination concerning the health or prosperity of absent friends, or even the prospects of life of actual members of the family.

In Thuringia, when it is desired to know whether absent children or other kinsmen are still living, all that is necessary is to stick a loaf of bread with ears of corn before putting it into the oven. The bread is then placed about the home of the absent persons concerning whom inquiry is made; and, if any of them is searched in the process of baking, the person symbolized is speedily dead (A. Witzschen, Sagen, Sitten und Glaubensaus Friesingen, Vienna, 1878, p. 251). Zulu women, when their husbands were away, hung the crossed Sleeping-mat on their wall. So long as it hung, that was a sign of hope; and when it fell, the husband was considered to be dead. To do so, he is believed to be dead (T. Arbouset and F. Daumas, Exploratory Tour, Cape Town, 1846, p. 14; cf. H. Callaway, Rel. Systems of the South Indians, Natal, 1913, p. 571). The candle is often offered in Brittany. A sailor’s wife who has been long separated from her husband, considers that it is her duty to light a candle, and to some shrines and lights a taper before the saint. If her husband is yet alive, of course, it burns well; otherwise the flames are weak and intermittent, and will not last.

The cauld with which some children are born also becomes an index of their health and prosperity. For this purpose great care is taken of it.

But, as in the stories, the life-token is not always determined at the birth of the person whose fate it is to indicate. When a child has been placed through a young ash-tree split for the purpose, in order to cure infantile hernia, the tree is bound up and plastered, in the hope that it may grow together again; and according to the success of the treatment the child is expected to recover or not. More than this, so intimate has the connexion between the tree and the child become by the operation that if the tree afterwards fells, the child will die. Thus the tree is not merely dependent upon the fate of the child; the child is also dependent on the fate of the tree. This mutual dependence is sometimes expressly mentioned in the stories. Thus, in the following from the close connexion established between the human being and the object constituted as the life-token, in the stories it is often forgotten; generally in practice it is at least implicit.

On the Eastern peninsula of Maryland, opposite Baltimore, when a member of a family leaves home, a bit of live-for-ever is stuck in the ground to indicate the fortunes of the absent one. It will flourish if he prospers; otherwise it will wither and die (J. F. Eich, 1893 [1901] 1932). At Rome every Emperor solemnly planted on the Capitol a laurel, which was said to wither when he was about to die. A successful general to whom a triumph was accorded, after the occasion of the cereus set by Livia, a laurel, similarly believed to wither when he was about to die. In the southern United States the temple of Qurbanus, one called the Patriarch tree, the other the Fleece. So long as these trees flourished, it was said that the temporal authority of the State, the Patriarch, lived. But it began to fall at the time of the Social War, when the Flens suppressed the Patriarch’s Monarchy. Monarchical trees, neither sickly nor shrivelled, gained the superiority (Pliny, HN xiv. 36). This superstition, which on certain occasions, as at marriage or change of dwelling, or at a funeral, to cage and retain the soul, and in sickness to recall it from wandering and rest it to the patient’s body, is also found in the practices and superstitions, the object in mystic relation with a man is by no means always called his soul, or said to contain his soul. It seems, therefore, to the writer, that in many instances it is applicable to a word expressing a definite conception when it is not applied by the people holding the superstitution or exercising the custom. Ideas
are often vague, and, where they are so, to affix terms to which.connot to us something definite.

In Nigeria a great tree frequently stands in a village, and is lived with medicine and vedoe offerings. It is described by the local people as a man who lived as a sapling, a boy, a man, a father, and a god (C. Partridge, Cross River Native, London, 1906, pp. 194, 256). The wood is sacred and is taken independently viewed the gift of the gods, the father, the man, the boy, the child, and the tree itself has the power of protecting the village against enemy attacks.

The Montols of Northern Nigeria believe that the tree is a, gift of the gods to the community. It is considered to be the home of the gods, and hence the tree is a sacred place. The tree is believed to have the power to protect the community from harm and to bring good fortune. The tree is also believed to have the power to cure diseases.

Further, if life is a unique object, whether physically (so to speak), as in the case of an ailting child passed through a split sapling, or by the arbitrary appointments of myself or another, if it is owed up to God that injuries intentionally inflicted on the object in question will react upon me. The felling of the sapling causes the death of the child. In the classic story of Melasger the hero's life came to an end with the burning and extinction of the fateful brand. This belief is the foundation of that department of magic which is used for injuring others by damaging or destroying things which have been closely attached to them, or to which identity with them is imputed. Fragments of the hair, nails, food, or clothing, portions of the blood or saliva, and earth from the footprint of the enemy in the house of the victim, are taken by the witch as a means to injure the life, which are still a portion of himself, though detached; and he may be injured or even done to death by the appropriate treatment of any of these objects. So also to stick pins or daggers into, or to burn, the effigy of a man is to wound or kill the person represented. These are all well-known magical rites. Parallel with them is the treatment of such objects for the purpose of benumbing the person to whom they belong.
The navel-string of an infant, taken by a mother to church at her churching, and laid down beside the altar or in some other suitable place, is deemed in Mecklenburg and Thuringia to be efficacious in inducing the child to live. Among the worshipers of the devil, the veneration and care of objects which are considered to be life-tokens, or life-tokens, independent of the animals that haunt or inhabit them.

On a mount in Franconia a fountain issue near the ancestral home of an ancient noble family. The clear stream rushes forth inclusively the whole year round; and it was believed to fail only when one of the family was about to die (J. Griswold, Deutsche Sagen, Berlin, 1859, ii. 186, 189; Flinte, JV xix. 22). Tiberius Graccius once caught a pair of snakes upon his bed, and was advised by the soothsayers to kill one of them, but warned that his life would be bound up with that of the one, and his wife with that of the other. Rather than put an end to his wife's life, he had his own self killed in a short time (Ptolemeus, Tiberius Graccius). At the death of a family, the body was washed three times, and the remembrance of it was a sapling stocked with as many fish as they had kids. When say of the monks fell sick, one of them received the whole content of the world; and the monk was going to die, the fish would die three days before him (W. Crook, Leben, Leipzig, 1845, p. 286; cit. Leonhard Vare, Treue Liess der charmne, Paris, 1855, p. 307).

On the island of Buru, one of the Moluccas, the same belief is extended to the caimans. No Burunees, we are told, dares kill a caiman, lest he should unwittingly cut off the head of his nearest kinsman (Wilken, iii. 13). In fact, the belief that the lives of human beings are bound up with those of certain of the lower animals was as extensive and far-reaching as it is very precarious, and the idea is considered not to be viewed as the guardians or incarnations of the souls of the forefathers.

Lakes and streams also serve as life-tokens, independent of the animals that haunt or inhabit them.

On a mount in Franconia a fountain issue near the ancestral home of an ancient noble family. The clear stream rushes forth inclusively the whole year round; and it was believed to fail only when one of the family was about to die (J. Griswold, Deutsche Sagen, Berlin, 1859, ii. 186, 189; Flinte, JV xix. 22). Tiberius Graccius once caught a pair of snakes upon his bed, and was advised by the soothsayers to kill one of them, but warned that his life would be bound up with that of the one, and his wife with that of the other. Rather than put an end to his wife's life, he had his own self killed in a short time (Ptolemeus, Tiberius Graccius). At the death of a family, the body was washed three times, and the remembrance of it was a sapling stocked with as many fish as they had kids. When say of the monks fell sick, one of them received the whole content of the world; and the monk was going to die, the fish would die three days before him (W. Crook, Leben, Leipzig, 1845, p. 286; cit. Leonhard Vare, Treue Liess der charmne, Paris, 1855, p. 307).

The present writer has elsewhere (LP ii. 1855, 13) pointed out that the custom of secreting or crystal-gazing (q. v.) is intimately related to those of looking into the depths of a well or a pool of water or ink, and into a magical mirror, for the purpose of gaining tidings of absent friends or distant events. It will suffice to say here that the hallucination on which it is founded is equally created by being produced by gazing intently on any dark and polished surface like that of standing water, a mirror, or a piece of stone, and that the superstition is practically world-wide.

The march between the life-token and the belief in the life-token is especially connected with any individual is ill-defined. It is by no means necessary to appoint one's own life-token; the health or prosperity of the absent may be divided among several, and thus the arbitrary appointment by anxious relatives or friends at home. There is but a step between this and the drawing of auguries from events and objects not appointed at all. This step is often taken both in tales and in real life.

In an Indian tale three drops of blood appearing on the knife while eating are considered an omen of another's evil or success, and a divination. In a Bushman tale the gods are reported to speak through the blood. In another tale, the blood is considered to be the sign of the gods, and hence the tree is a sacred place. The tree is believed to have the power to protect the community from harm and to bring good fortune. The tree is also believed to have the power to cure diseases.

Further, if life is a unique object, whether physically (so to speak), as in the case of an ailting child passed through a split sapling, or by the arbitrary appointments of myself or another, if it is owed up to God that injuries intentionally inflicted on the object in question will react upon me. LIG HT AND DARKNESS

Primitive (J. A. MacCulloch), p. 47.

Chinese (J. Dyck Ball), p. 51.

Greek and Roman (J. S. Reid), p. 56.

LIGHT AND DARKNESS (Primitive).—Among the lower races the nature and origin of light and darkness gave rise to many questions, and the answers to these are found in a great variety of myths. Frequently light and darkness are associated with the hard darkness, as in an Australian myth—

*The word became fruitful; it dwelt with the face glimmering; it brought forth night. The grey night, the long night, the lowest night, the hottest night, the black night, to be felt; the night to be touched, the night unseen, the night following on, the night ending in death.*

The Caro mythology relates that the Ata o te po, gods of Hades or darkness, existed before heaven was lifted up, and were more ancient than the Ata o te ra, gods of light, because darkness precedes light. Their chief was Hine nui te po, the great mother of Light, or Hades. Light and life are represented by Tana mir te ra, the great son of day. A creation epic describes the cosmogonic periods, the first of which is that of thought, the second that of darkness:

1. **Emorial darkness.**—A wide-spread idea seems to be that night precedes or gives rise to day, darkness precedes or gives rise to light. Light, the light of day, appears to come gradually out of the darkness of night, whereas darkness falls over the light of day and extinguishes it, but does not come from it. Man also, asleep and inert during darkness, rises to fresh activity with the light. A pre-existing state of darkness, out of which light and darkness are separated, is thus generally presupposed. Many Australian tribes believe that long ago darkness or semi-darkness prevailed, until the sun was made or released. An emu’s egg was thought to have brought light or set fire to a wood-pile belonging to a sky-being. The latter sees how beautiful earth now is, and therefore he makes a fire every day. There is little warmth in the morning, because it is not fully kindled, and it is cold at night when the fire dies out. The jackass roases men to the light. If he did not, or if children imitated him, there would be nothing but darkness. Or the sun is created as the result of certain obscure rites performed by men who complained of having no heat or light; or there is darkness until the magpie propels the sky and sets free the sun. The last-mentioned myth, that heaven and earth are close together and that, until they are separated, their offsprings are in perpetual and universal night, prevails over Oceania. The children, or gods, or a serpent, or the hump from apart and so let in light and air.

5. [Paris, 1906] 252. In all such cases the faith-token exactly corresponds with the life-token.

6. Reine Bassett, Nouveau Conte berbère, Paris, 1897, given in a note on p. 400–401, an extensive list of stories in which the incident occurs. Many of these are abstracted and discussed by F. J. Child, English and Scottish Popular Ballads, v. vol. 1, Boston, 1880–89, in the introductions to the ballads of Hind Horn (i. 157), and Bonny Ben Horn (ii. 317), and by W. A. Cussen, Popular Tales, v. and xii., Edinburgh, 1877–1880, and in his dissertation appended to John Lane’s Continuation of Chatterton’s Tales published by the Chaucer Society, London, 1880–89, 1896, 1934. Discussions will be found on the incident and its relation to custom and superstition by R. G. A. Wilson, in the Transactions of the Royal Antiquary Society of Ireland. The following are Storiken van den Indischen Archipel, ‘De betrekking tuschen menschen, dieren en planten, of het volksgeloof’, and De Simonsmycke, collected in his Verschiedene Geschichten, 4 vols., The Hague, 1891. 3 vols., and E. S. Hartland, The Legend of Perseus, 3 vols., London, 1884–86, ii, ch. viii. See also Art. Life and Death (Primitive), § 6.

Hindu (A. Hillebrandt), p. 60.

Iranian (J. H. Gray), p. 62.

Semitic and Egyptian (W. Cruikshank), p. 62.

The myth of Heaven and Earth as a divine pair is common in W. Africa, but its most significant expression is found among the Yorubas, who say that Obutala and Oduoda, their chief god and goddess, were shut up in darkness in a calabash in the beginning. She blamed him for this, whereupon he blinded her.

Among the Eskimos, a people dwelling for a great part of the year in darkness, many myths deal with this subject. According to one of these, men came out of the earth, lived in perpetual darkness, and knew no death. There came a flood which destroyed all but two old women, of whom desired both light and death. Death came,
and with its sun, moon, and stars. Another widespread myth is that of the brother who, in the time when darkness covered the earth, ravished his sister. In her anger at his brutal conduct, she purposed to him to the sky with a brand. He became the moon and she the earth, ever pursuing the moon, except in winter, when she remains in her house and there is darkness. The stars are sparks from the brand.

A well-known Chinese myth relates that in the beginning all was darkness. From a great mound egg, which divided in two, came Poon-Koo Wong, who made the sky out of the upper and earth out of the lower half. He also made sun and moon. Chinese philosophy speaks of T’ai-Khi, the Most Ultimate, which produced the cosmic souls Yang and Yin, male and female, heaven and earth, warmth and cold, light and darkness. In Japan an old myth in the Kojiki speaks of a time when Heaven and Earth were not separated and the In and Yo (= Yin and Yang) not yet divided. All was chaos and presumably darkness.

A Finnish cosmogonic myth in the Kalevala relates that from the upper and lower parts of an egg which fell into the primeval waters were formed heaven and earth, from the yolk the sun, from the white the moon, and from the darkness in the egg the clouds.

Scandinavian mythology contains an elaborate myth of beginnings. There was first a void world of primeval darkness whose extremities were mysteili, fire, on its northern, níll, fog; from the one proceeded light and warmth, from the other darkness and cold. According to Grimm, giwangu-geo is the equivalent of the Gr. ξαός, meaning both ‘abyss’ and ‘darkness.’ In the Edda, Day personified is the son of Night, each of them having a horse and car, in which they journey round the earth. The primitive method of counting time with Scandinavians, Tentsons, and Celts was on the principle that night preceded day, the moon, which ‘governs the night,’ being the measurer of time. Túctus says of the Teutons that they count the number of nights, not of days, for the night seems to precede the day. Caesar writes of the Celts that they define the divisions of seasons not by days but by nights, and observe time from the moon on order that day follows night. A Celtic myth embodying these ideas has not come down to us.

2. Origin of light.—In some of the myths just cited the origin of light from darkness, or from the creation of sun and moon, is already found. As in the Maori myth, light is sometimes prior to the sun (cf. Gn 1:14). Some other examples of such myths may be cited. In Bushman belief the sun was a mortal on earth from whose body light radiated for a short distance round his house. Some children were sent to throw him up to the sky as he slept, and now he lightens the earth.

The Baronga think that the reflection of light on the sea after the sun’s rising is a kind of Ja-Lae-en light, whence the sun is renewed daily. It is ‘cut out from the provision of fire,’ and dies in the West nightly. Light is also called ‘that which makes to go.’ According to the E. African myth, how two men came to a cave, looked in, and saw the sun. One of them removed a stone, and was burned up. Then the sun ascended on high to light the world. 3. Succession of light and darkness, day and night.—In some instances light, not darkness, is primordial; or after creation, when day exists, a night is still unknown. Numerous myths relate how darkness is produced and the regular alternation of day and night follows. The Wumbel, an Australian tribe, say that at one time the sun never moved. Nurel, tired of eternal day, bade it go down by the west. In Banks Island, Qat, after making all things, did not know how to make night, and there was always day. Therefore he decreed that there was night at Yava, and went there to get it from I Gong, Night. Returning with it, he bade his brothers prepare for night. The sun now moved westward, and the other night-brothers returned. After a time he cut it with a knife, and daylight again shone out. In Lepers Island this is told of Tegaro. The Meitheis say that at first there were two suns which rose and set alternately. A slave, tired of getting up twice a day, caused them to be divided. There was now always darkness. The other sun refused to come forth, but at last did so as a result of certain ceremonies. The savage Malays of Malacca have a myth of three suns, one of which was always left in the sky. The female sun was induced to swallow her husband and child, and now there was night. A native Brazilian myth tells that at first there was no night. Night, or a cobra who owned night, slept at the bottom of the waters. His daughter would not sleep with her husband till he procured darkness from her father. Servants were sent in turn to bring a darkness from him. In spite of all warnings, they opened it, and all grew dark. The daughter now separated day from night. In Santa Cruz sun and moon are said to have travelled together, but by a trick the sun caused the moon to fall into a marvellous cave, where he fell on her. Night is the result of a part of the moon becoming black through this trick. A Finnish myth says that in the beginning there was nothing but water and light—an unusual version of the cosmogonic idea. In some instances night is formed as the result of a dualism. The Yezidis say that God made the world beautiful. Then Malik Tatts appeared before Him and said that there could be no light without darkness, no day without night, and accordingly He caused night to follow day. In a Wallowah Mären God sends a bee to inquire of the devil, the master of night,
whether there should be one sun or more. The
tree rests on the devil's head and bears his cog-
itation that, if there are several suns,
men will get so accustomed to heat that there will
be no fear of hell; night will be as clear as day;
and the works of darkness will be brought to an
illuminating point. In some cases the sun created
day, and the devil made night as an offset to it. 2
The same dualism is found in a Melanesian story
in which all that Tagaro makes is good. 3 Supe,
which is used for tying a female, is bound in a
night dance. The sun had to be tied to his wife.
But the lion said that several suns would be born and all would be burned
up. All agreed that it was better for the sun not to
marry. In disgust he hid himself in the sea,
and all became dark, to the consternation of the
animals. But the hcn, persuading him that mar-
riage was a disgrace, caused him to rise from the
sea every morning. 4 This myth obviously origi-
nates from the apparent disappearance of the sun
into the sea at night, and his apparent rising from
it in the morning. An Eskimo myth relates that
sun and moon were once removed, causing dark-
ness. The moon would void in a boat liberated
by his aunt to go south, where he will find
the light. He arrives at a hut where light like a
ball of fire is lying, but it is hidden by a man
shovelling snow, which causes obscenity. He
steals the light and is pursued. He breaks off pieces,
each of which produces day, which is then followed
by night. They are of unequal lengths because
sometimes he travels a longer time without
throwing light, sometimes for a short time. 5 This
myth exactly reproduces the phenomena of
the Arctic dark winter, and the phenomena of days
and nights of varying lengths.

—Gods of light and darkness; sun and moon.

—Day and night or their rulers or representatives,
sun and moon, are often personified as male
or female, or as husband and wife, as in the Eskimo
myths already cited (§ 1). This is found in Ameri-
Indian mythology; and in Australian belief, e.g. among the Arunta, the sun is female, the
moon male. 6 It is also found among the Andaman
Islanders (the sun is the wife of the moon), the
Indians of the South Pacific, and the Toda,
Cumana, among the Ewe and Yoruba, in Tahiti,
among the Fugates, among the Ainus, and among
the peasants of Oberpfalz. 7 In another American
myth, a sun and night are two wives who produce
light and darkness by sitting alternately at the
doors of their tent. 8

In New Britain sun and moon, to whom belong
respectively day and night, are children of Iiu
and Mamoo, and, having gone up to the sky, have
stayed there ever since. 9

In a Tongan myth Yates and Tonga-iti quarrel
about the parentage of the first-born of Papa, each
claiming it as his own. The child is cut in two.
Yates throws one part up to the sky, where it
becomes the sun; Tonga-iti throws the other
to the dark sky, whence the moon. This is explained
as Day and Night alternately embracing Earth, their joint offspring being sun and moon.

In Norse mythology Night and Day are mother
and son, set in the sky by All-Father, who gives
each a horse and chariot to drive round the earth.
The sun also has a chariot. 10

In many of the Toda, just cited sun and moon
are not always regarded as causing light and dark-
ness, or rather day and night. These exist apart
from them, though the two are associated together.
A clear connection is the six nights of what is
brought down, but, however, is seen in
another group of myths—those of the
sun-catcher. In some of these the sun is tied down,
as in a Toda instance, by a demi-god. There
is at once darkness on the earth and in the under
world, whether the sun goes at night. The people
of both imply the demi-god for the sun's release. 11
More usually the sun is captured because his course
is far too rapid and darkness comes too soon—found
in many Polynesian myths—or too erratic, as in a
Ute myth. 12 Sometimes, however, he is captured
in order to lengthen the ordinary day, and this
group is then connected with magical rites which
have also this for their purpose. 13 Again, he is
captured by some persons who wish to amuse
themselves, but it becomes so hot that the cap-
tors run away. 14 The second group of myths is
obviously suggested by the question as was raised by the Inca prince: Why cannot the
sun wander freely about? Clearly because he
obeys the will of a superior being. This is an
idea found also in the mythologies of the higher
culture.

For further examples see Melville, U. (1881-85) 550; Lang,
Myth, Folk and Rel., 2, 124 f.; R. B. Taylor, Early Hist. of Man-

Light and darkness, day and night, sun, moon,
and stars are often personified or worshipped as
gods, or the sun, moon, and stars, as sources of
light, are the dwellings of gods. Thus the Ainus
believe in a spirit of light who lives in the sun or
animates it (ERE i. 242). Many African tribes
have a high god, often the sky personified, and
many gods worship the heavenly bodies as
sources of light. Lobo, the high god of the Bak-
wiri, has a name signifying originally Heaven or
Sun, and so in many other instances. 16 Shango of
the Yoruba is the sun, dwelling in a flowering
house of brass; one of his trains is Biri, the darkness. 17
The Kavirondo myth, as telling the sun, the
latter regarded as apathetic, occasionally benefi-
cient, but usually malignant. 18 Among the ancient
Teutons and Celts sun and moon were also divini-
ties to whom a cult was paid. 19 Among the Poly-
nesians Ka-ne is the sunlight and Tangaloa
is the lord of light, his brother being Rongo, god of
dark and night. 20 The Andaman Islanders connect
Pulaga, their high god, with the sky, where he set
the sun and moon, who give light by his command. 21
Among the Hottentots Tuani-Goani, the red dawn, is opposed to the dark sky personified as Gaunah. 22

VOL VIII.—4
5. Regions of light and darkness.—As in the higher religions the benignant or beneficent gods are associated with light or dwell in the sky (cf. 1 Th. 5:18; dwelling in the light which no man can approach unto), so it also is in savage belief. The Australian high gods, Bunji, Mungun-ngaur, and Baiame, dwell in the sky or in Kulidi, "eternal brightness," but the rival god, the Murray River deity, is an embodiment of light. The higher Polynesian gods, Tangaroa, Tangaloa, Titi, etc., dwell in the night heavens, seven or ten in number. The Khoms reverence Bura Penu, god of light, or Bella Poona, the sun-god, whose dwelling is the sun and the place where it rises. Puluga, the Andaman high god, lives in the sky. This is true also of many African gods; e.g., the Zulus hold that their sun-god, Mpungu the Fiord dwellings behind the firmament. Similarly one of the names of the supreme being of the Indians of Guiana signifies "the Abode One in Skyland." Many of the Teutonic gods, some of them gods of light, dwell in the sky, where Valhallita was situated.

From the sky the gods descend to earth, along the sky they make their way up and through the sky they survey unseen the doings of men.1

So also Elysium, the abode of the blest, whether it is in the heavens over or below the earth, is always a region of light and brightness. In contradistinction to this, the abode of unhappy spirits in all mythologies is dark and gloomy, in this resembling the abode of the shades in religions where no distinction has been made between good and bad spirits—the Bab. Arallu, the Heb. Shôel, the Greek Hades (see the series of artt. on BLEST, ABODE OF THE).

The subterranean Pueblo or Tartar of the Carolina Indians is cold and dark. In Polynesia, Pa, or darkness, was the primal source of light and of the gods of light, so it is also conceived as the subterranean place of night without departed spirits to. In Nanumena the wicked go to a place of hatred and darkness. The Japanese Yami or Hades, means 'darkness,' and it is preceded by Yasa-wo-no, a personification of the evil Campbell, and a moon-god, ruling also the darkness of night.2 In the Teutonic Nithed is a place of darkness surrounded by fogs and gloom (see BLEST, ABODE OF THE).

6. Evil powers and darkness.—Evil gods, gods of death, etc., are often associated with darkness, or divinities who are not evil have often acquired a sinister aspect in so far as they are associated with the night or even with the moon, the ruler of the night. The Sakni believe that the lord of hell, a cavern in the interior of the earth, is a friend of darkness, and cannot bear the light.3 In Polynesia, Rongo, brother of Tangaroa, is god of darkness and night; Hine-nui-te-po, the great mother night, into which all must fall, is a personification of night and death.4 Some Australian divinities to whom evil powers are ascribed are connected with darkness and night. The Japanese Suna-wo-no, already referred to, is another instance. Much more generally all evil spirits, demons, ghosts, and the like are associated with darkness, which men's fears have populated with them.14

7. Dualism of light and darkness.—The contrary nature of light and darkness, the qualities instinctively associated with each—life with light, death and terror with darkness—might easily suggest to primitive minds a species of natural dualism. The day seems to be allowed up by night, again to appear and drive it away; at an eclipse sun or moon is wholly or partially concealed by darkness, figured as a beast or demon, but again emerges victorious. There are in some instances on the lower levels of culture light, or day, and darkness, or night, may be personified and regarded as in conflict. That this was the case is obvious from such a dualistic system as the Parsee, which is fundamentally concerned with an older natural dualism of light and darkness, giving rise to a moral dualism of good and evil. The same dualism is found sporadically in other higher religions, and in faiths in which the influence of Parseism was felt,15 also perhaps in such a dualism as exists in the religion of the Burias (q. v.). On the other hand, since light, day, sun, seem to rise out of night, they are perhaps more often regarded as produced by darkness, rather than hostile to it, as in Polynesian mythology and elsewhere (§ 1). It is also probable that modern inquirers into savage myths have too resolutely assumed that mythical personages represented, on the one hand, light, sun, or dawn, and, on the other, darkness and night, and that myths of a contest between a hero and a demoniac being necessarily meant a contest between light and darkness.1

In S.E. Guinea evil spirits called terréna inhabit dark places and wander about at night; and it is certain that in many cases, especially in primitive races, a spirit causing disease, earthquakes, etc., lives in caves and dark places. The Polynesians thought that lower spirits concealed themselves in dark caverns by day and came out in the night. The Australians also peopled the darkness with a variety of horrors. Living beings ready to generate every conceivable other example from savage belief might be cited. Similarly, among the Teutons scenes on the demonic and supernatural beings were associated with the darkness, and in folk-superstition generally fairies, witches, demons, werewolves, vampires, and the like, were the objects of fear. In the hours of darkness, especially 'at the four midnight hour when bad spirits have power,' Goths, Demons and Spirits, FAIRY, VAMPIRE.

Among savages, as also among higher races, there is a wide-spread fear of the darkness. Many savages will not travel or even leave their huts or camp at night; or, if they do so, they must be armed with firebrands and the like to keep evil spirits at a distance, since these fear the light. Thus we find magical rites to overcome the terror of darkness: e.g., in New Caledonia the priest, when cutting the umbilical cord of a boy, had a vessel of water before him, dyed black as ink, in order that when the child grew up he might not fear to go anywhere on a dark night. For similar reasons an eclipse of the sun or the moon is universally feared. Generally a monster is supposed to be destroying these bodies, and, since they are so often regarded as the sources of darkness, it is feared that their destruction would mean a return to the primordial darkness. Every precaution is therefore taken to scare off the destroying monster or to bring to an end whatever other mythical cause is attributed to an eclipse.6 In connexion with the belief that evil spirits have power in the dark must be noted the wide-spread idea that their power causes a dawn and if they are surprised by daylight, they are destroyed. This applies to all evil beings, demons, witches, fairies, etc. See art. FAIRY.

Light and Darkness (Chinese).—The Chinese outlook on life and attitude toward religion give more prominence to light than to darkness.

The two principles which pervade all nature and to which everything is assigned—the sun and yin, the dualistic elements of Chinese philosophy—are also the two headings into which light and darkness are differentiated. Yin, it may be said, is darkness, and yang light. The latter stands for the upper world of light, the former for the lower world of gloom and semi-darkness.

It is difficult to classify as gods of darkness any of the gods of the Chinese, unless Yama (Yen-ma, Ye-ho), the ruler of Hades, with his entourage of officials and demons, be considered as such. The light of the sun is wanting in the Chinese nether world; it is a land of shades and of the shadow of death, for a two-fold ground. The idea of hells in Taoism was derived from Buddhism; but the conception was developed on different lines. Utter darkness reigns in eight hells out of the thirty-six millions of various hells and horrors in the future world of Chinese Buddhism.

In the primitive religion of the ancient Chinese nature-worship was prominently apparent, and remnants of this are still found in the Oriental religion of divinities or opposed to divinities or spirits of light—e.g., gods residing in the heavens. In primitive religion decisive examples of a conflict between light and darkness are few in number, but the mythic method is seen in the words of a Basuto who described nature as given up to perpetual strife—the wind chasing the clouds, darkness pursuing night, winter summer, etc. If, as has been supposed, the Polynesian sun is the light of the sun, as has been seen, Mani captures the sun, then the story of how he intended to pass through the body of Hine-mai-te-po, but was unsuccessful and died, and so brought death into the world, might be a myth of the sun or light being swallowed up by darkness.

In Khond belief the supreme creator, Bura Pemmu, the light- or sun-god, is opposed, not by a male god, Tahtu, as in the Egyptian mythology, but by the bringer of disease, death, and other evils. Japanese mythology preserves a story of the retirement of the sun-god to the rock cave of heaven, leaving his father to direct the work of the misconduct of his brother Sassu-wo, the storm-god and later ruler of Yomi (the dark Hades). The gods dance in front of the cave, and she comes out to see them and is prevented from re-entering. Light is thus restored to the world. This suggests a myth of the strife between light and darkness. Later Shinto theologians allegorize the goddess's retirement as emblematic of the darkness of sin, and the renewal of light as signifying repentance.

Grimm has suggested that many phrases in Tenth century language used of light and darkness, day and night, show the one as a hostile, evil power in contrast to the kindly character of the other, and that there is perennial strife between the two.

7 The god of thunder, as symbol of lightning, was the protector of the heavens and earth, and his making a mistake, for one occasion, finding the white rind of a melon flung away, in the darkness of a smoke-beagned Chinese kitchen, he mistook it for rice and killed with his chisel and hammer the supposed waster of good food. To prevent the recurrence of such an event the goddess carries a mirror in each hand, or one in her two hands, and flashes light on objects before the god strikes. This is the explanation of the lightning's fiery wing.

The god of fire is another of the gods connected with light. His name, Hwa Kwang, may be rendered 'Beautiful Light.' Unlike the majority of the popular gods, he was not originally a human
being, but a lamp, of which the snuffers of the wick were turned into a man by the recital of a charm. He set the lamp and its flame on fire. Both Buddhists and Taoists claim him.

The Buddhists deify light by personification in the bodhisattas Marichi Deva. The Chinese represent him with all the attributes of the Sun Northern very. In two of her hands she holds up emblems of the sun and moon. She is the goddess of light, and protects nations from war. Among her other titles is that of Quantum. The Taoists also claim her as one of their deities, and fix her residence in a star in the constellation of Sagittarius.2

Buddha after Buddha, commencing with Śākyamuni Buddha, has light as one of his attributes, or some manifestation of light appears in the course of his life in connection with him. Five-coloured lights flashed at his birth, and flame burst from his dead body. Every Buddha has, among his characteristics, a circle of light between his eyebrows by which he can illuminate the universes.4 'Light' and 'Brightness' often appear in the names given to different Buddhas, as well as occasion-ally to others, and to different objects. Among these names of Buddhas, present or to come, supposed to be real or fictitious, are such as ‘Brightness of the Law,’ ‘One whose feet display myriads of Lights’ (The Bhagavad Gita); ‘The Buddha of Fixed Light,’ ‘Light and Bright,’ ‘The Buddha Effulgent of Sun and Moon,’ ‘The Clear and Bright Efficiency of Sun and Moon.’ The 539th Buddha of the present Kalpa is called 'The Buddha of Wonderful Light.' Some twenty billions of Buddhas have the title of 'Cloud Sovereign Illuminating King.' Five hundred arhats will reappear as Buddhas with the same name as of 'Radiant-Wisdom and Brightness.' Some of the demons in which Buddhism believes shed a glare of light.8 A realm mentioned in Buddhism is 'The Realm of Great Light.'9 One of the sixteen (or eighteen in Northern Buddhism) celestial worlds is that of 'Light and Sound,' and another is that of 'Unlimited Light.'9 Buddhist five 'Luminous Treatises.'10 A fictitious degree of sannādhi is also called 'Pure Light and Brightness,' and another 'Prosperous Light.'11

In Northern Buddhism the 'Buddha of Boundless Light,' diffusing great light, Amitā (Amitābha), originated in the ideal of boundless light, and was thought to exist as a real person. He is the most popular of all the Buddhas among the Chinese people. In his heaven, the wonderful and glorious Paradise of the West, two Buddhas 'radiate light over heaven and earth and great worlds.' Amitā Buddha himself, in the words of the Chinese poem singing his praises, has a

1. . . halo of light that encircles his head,
2. The sun of to-morrow is less glorious than he,12
3. As to those who enter that heaven,
4. The material body of men while on earth is exchanged for another eternal and bright,
5. That is seen from afar to be glowing with light.14

This new mystical school makes use of the simbolism of light in its description of religious states of its devotees. In some cases light plays an important part in the advent to earth of a god on his incarnation, and even one of the mythical emperors of China, the Yellow Emperor (2698 B.C.), owed his origin to this.

With the Taoist gods, a ray of light shoots down arrow-like from heaven to the future mother shortly to be delivered of a child, and thus the divine is blended with the human in the infant, who has some of his deities expel some sin from which his godlike nature has not saved him, or to cure or to eradicate some infirmity still inherent in his moral nature.

We find a brilliant light in connexion with the preparations for the birth of the Taoist Gemmous Sovereign, the Supreme Ruler, and in his later incarnations a golden light or a glistening light2 descends. Some one at similar experiences occurred when the Taoist Aged Sire united with lights, and became dust, and was born on earth.2 A Taoist writer of the Yuan dynasty says that light broke forth spontaneously in the primordial void, springing from itself in the heart of the void, and his idea would appear to be that to attain illumination one must empty oneself as the primordial void of which he speaks was empty.

The word 'Buddha' is one of the Chinese clan-names or surnames, as it is in English, but it also appears sometimes as an individual name bestowed on an infant, and occasionally in union with some other character in a name selected later in life.

LITERATURE.—This is sufficiently cited in the footnot.-

J. DYER BALL.

LIGHT AND DARKNESS (Christian).—The symboolical use of the words 'light' and 'darkness' is very common in early Christian literature, and in the main was derived from the OT, as will be seen by the references given below. As time went on, the metaphor of light served as one method of expressing the theological conception of the Persons of the Holy Trinity.

1. The symbolism in the NT.—We may pass by the obvious metaphor by which to speak or act 'in the light' is to do so 'openly,' and to speak or act 'in the darkness' is to do so 'secretly,' as in Mt 1027, Lk 12 (cf. Jn 183, and Eph 510, I Co 4). More to our purpose are the numerous passages where 'light' stands for spiritual, moral, and religious
2. The word 'Buddha' is one of the Chinese clan-names or surnames, as it is in English, but it also appears sometimes as an individual name bestowed on an infant, and occasionally in union with some other character in a name selected later in life.

The opposition between light and darkness is expressed in Jn 323; men had the opportunity, for light is come into the world, but they loved the darkness rather than the light, for their works were evil—every one that doeth ill hateth the light. 'Darkness' expresses the state of the world before the Incarnation (Jn 114, Lk 1); the idea is taken from Is 99, where it is said that 'the people that walked in darkness have seen a great light.' To be in a state of sin and ignorance is to walk, or sit, or be in darkness (Jn 114, 22, Jn 83, 1 Th 54, Ro 29, Lk 19). In Jn 89 the 'light of life is the light,' which both springs from life and issues in life (B. P. Westcott, Gospel according to St. John, London, 1905, in loc.). The metaphor is very common in the Johannine writings, but only fully developed in Jn 89.

In Mt 623 the body full of light (φωτεινός) denotes purity and holiness, and the 'body full of darkness' (ομοιομονωτικός) denotes evil; so Lk 1924 (cf. Pr 14).2

LIGHT AND DARKNESS (Christian)

In Ac 26:18 the preaching of the gospel is to turn the power of Satan unto God. St. Paul uses the metaphor freely. The 'works of darkness' are the evil deeds of the present 'night,' and the 'armour of light' is to be put on in view of the approach of the day (Ro 13:12; cf. Eph 4:12, 13). We are partakers of the inheritance of the saints in light, and have been delivered out of the power of darkness to the glory of God in Christ Jesus (Eph 5:13). Light has no communion with darkness, and therefore Christians are not to be unequally yoked with unbelievers (2 Co 6:14, quoted in A. J. Guppy, viii. 34, to forbid Christians to pray with heretics. So St. Paul uses the verb 'to darken' (οὐξώνεω or οὐξώζω) in Ro 1:21 and Eph 4:18, metaphorically of the hardening of the heart or the blinding of the eyes by ignorance, just as he uses 'to enlighten' (φωτίζω) in a metaphorical sense in Eph 1:18 (cf. Jn 1:2; see below, § 4). St. Peter speaks of our being called out of darkness into God's marvellous light (1 P 219). The curious passage 2 P 1:19 where prophecy is as 'a lamp shining in a squallid (αὐξανόμενος) place,' may be compared with Mic 3, where 'darkness' is used of want of spiritual perception in a people.

The name 'Light' is given to God. Not only is light a gift of God, but God is by nature 'light.' (1 Jn 1:5 ὡς ἄθανατος); therefore He can be held to be the Light in different senses. In all, we have 'the light of men, shining in darkness'; He was 'the true light which enlighteth every man, coming into the world,' i.e. by His Incarnation (see Westcott's note), in contrast to the Baptist, who was but a witness of the light (Jn 1:18). Because He is the light, He will shine (ἐκφαίνεται) on the awakened sleeper (Eph 5:14). He is to be a light to all men (Ac 15:11, quoting Is 35:9 (the reference is to Christ, not to St. Paul, though the Apostle identifies himself with the prophet); cf. Is 42, where the Servant of Jehovah is to be a light of the Gentiles—a phrase repeated of the 'Son of Man' in Ephithetic Enoch, xviii. 4 [1st cent. B.C. ?]); the phrase 'dwelling in light unapproachable' (1 Ti 6:16) might be applied to the Son (so Chrysostom, Hom. xviii. in 1 Tim., in loc.) or to the Father, but probably it refers to the Father (cf. Ps 104, Dn 2:25). See also § 3, below.

In an inferior sense the servants of the Incarnate are 'lights.' The Baptist (see above) is 'a lamp that burneth and shineth,' in whose light the disciples were willing to rejoice for a season (Jn 5:35). All Christians are the light of the world (Mt 5:16, cf. Ps 29:5 [φωτισάμενος], and are sons or children of light (Lk 16, Jn 12, 1 Th 5, Eph 5:1 'once darkness . . . now light in the Lord'). The angels are angels of light (Rev 11:14; we may compare the light which shone when the angel released St. Peter, Ac 12). In contrast to this, the devil and his angels are 'world-rulers of this darkness' (Eph 6:12), i.e., as the Peshitta paraphrases, "rulers of the world of this darkness" (meaning 'of this dark realm').

Of the darkness 'mentioned in Mt 6:23 (for Jewish parallels see W. C. Allen's note in loc., ICC [1912]) 229-225; this is the place of punishment of sinners, and we may compare Jude, where the fallen angels are said to be 'kept in everlasting darkness' (τό ἄθανατον τοῦ ἀνέκδοτος) unto the judgement of the great day,' and 2 P 2:4, where the 'blackness of the darkness' (το ἄθανατον τοῦ ἀνέκδοτον) is said to have been kept for evil men. The darkness is 'an abyss of darkness' (Eng. tr., J. Cooper and A. J. Maclean, Edinburgh, 1902) the symbolism is very common, both in the apocalyptic and the eucharistic passages of the Old Testament; see 2 Macc. 7, 601-604 and in the Church Order proper. Christians are children of light (i.e., prof., 1, 3, 12, 37). In the liturgy of this work (i. 23) God is called 'the Father of lights' (Ja 1, 'King of the treasures of light,' 'Illuminator of the perfect,' 'Giver of light eternal.' Elsewhere in the book He is called 'Giver or Maker of light' (i. 26, 43, 'God of the lights'). Whose 'vessel' is the light (ii. 7). Our Lord is 'Begetter of light of light eternal,' who has 'shed light on the darkness within us' (i. 26). Jesus is the name of light (ii. 27). The illumination of the heart is frequently referred to (i. 18, 21, 25, 31, 32, 38, ii. 5, 7, 8). Somewhat more sparingly the simile is used in the Apostolic Constitutions. Christians are 'children of light' (i. 2, iii. 32, 46, 54, as in the parallel passages of the Old Testament (see these, arranged on opposite pages, in F. X. Funk, Didasc. at Const. Apostolorum, Paderborn, 1905). The Father inhabits light inaccessible (Apost. Const. vi. 11, viii. 16, from i. 16). Jesus is the true light (v. 16), and the bishop must be a student, and enlighten himself with the light of knowledge (i. 5; cf. vi. 37). These phrases (except v. 16) are not in the Old Didascalia. In Sulpicius's Sacramentary God is called the 'Pater lumen et vita' and is prayed to give us the (or a) Spirit of light (§ 1; JThSt 71 [1899] 105, in Funk [op. cit. ii. 172], numbered § 13). Gregory of Nazianzus (Orat. xi. 5 f. [A.D. 381]) calls angels and men 'light' in an inferior sense, though in the highest sense God alone is light.

In the Clementine Recognitions, now thought to be of the 4th cent., Simon Magnus, denying that God has a Son (cf. 2 Macc. 10:12), identifies God with a 'light-bearer' and ineffable light (i.e., God), of which power even the Demiurge, Moses, and Jesus are ignorant (i. 49).
3. Light as describing the relation of the Father and the Son.—We may now investigate the use of the phrase 'Light of Light' (φῶς ἐκ φωτός) applied to our Lord. In the NT the Father is Light, and the Son is Light; but the above phrase is not used, though in \( \text{He} 1^1 \) our Lord is the effulgence (ἀφαλάδεια) of the Father's glory and the very image of His substance; the reference seems to be to the 7th, where Eusebius has 'God of God, the effulgence from everlasting light, ... an image of [God's] goodness.' (For various Patristic comments on \( \text{He} 1^1 \) see Westcott's note, \textit{Epistle to the Hebrews}, London, 1889, p. 11.)

An early approximation to the phrase 'Light of Light' is found in Origen (\textit{de Prin.} i. 1), who says that God is light, illuminating man, and interprets 'thy light' in Ps 38 of the Son. In the 2nd cent. Justin had used the illustration of fire kindled from fire with reference to the Son and the Father (\textit{Dial.} 11, 125); and Tatian (c. \textit{Graec.} 5) re-echoes his words. So also Tertullian (\textit{Apol.} 21) says that a ray of the sun is still part of the sun; there is no division of substance, but only an extension; thus Christ is the Spirit of God, and God of God, as light of light is kindled. But Athanasius sees a danger in the similarity of the two. He says (\textit{De Tri.} 23) that the Son is not as light kindled from the heat of the sun, which is commonly put out again, but is 'effulgence' (ἀφαλάδεια), signifying that He is more than one in power and might, 

"Being of this mind the Fathers at Nicaea spoke of the Only-begotten as 'Light of Light,' "Very God of Very God," and so on, and consequently added the Homoeoteleuton, so that any one who entertains the idea of variability of light in relation to light, of truth in relation to truth, or of the essence of the Only-begotten in relation to that of the Father" (\textit{Ep.} i. 3, to Maximum).

Passing to later times, we note the curious fact that the phrase does not occur in the present Nicene Creed. Origen in the \textit{De Prin.} i. 1, 2 took the idea of 'effulgence' from the Hebrew phrase (\textit{Baal Shem}) meaning 'illumination'; but in the Nicene Creed it was used in a slightly different sense. The phrase 'Light of Light' is found in the creed of Nicæa and in the enlarged creed (called the creed 'of Constantinople') which came into general use. It was derived by the formers from the creed of Eusebius of Cesarea which, as Eusebius told the Nicene Fathers, had been handed down from preceding bishops of that see, and used in the baptismal catechism of the Church had 'God of God, Light of Light, Life of Life' (\textit{Socrates, HE} i. 8). On the other hand, the phrase 'Light of Light' is not in the creed of Gregory Thaumaturgus (c. A.D. 260), which has only 'Sole of Sole (\( παπος ἐκ παπος \)) God of God.' In \textit{Anto. Nicae. Chr. Lib. xx.} (1852) 5. In \textit{Cyril of Jerusalem (Cat. iv. 7) the Son is called \( \text{hegomen Life of Life, begotten Light of Light;} \) in xi. 4 Cyril repeats the phrase 'Light of Light.' But in the same passage he speaks of Wisdom, and King of King, and God of God, and Power of Power' (cf. xl. 18). The phrase 'Light of Light' occurs in R. H. Connolly's reconstituted creed (4th cent.; \textit{TTHN} ix. (1908) 280), but not in the creeds of the various Church Orders, though those of the \textit{Apost. Const.} (vii. 41) and of the \textit{Eugyptian (Coptic)} and \textit{Ethiopic Church Orders} are of the Eastern type (those of the \textit{Treatise of our Lord, the Canons of Hipponusus, and the \textit{Verona Fragments} are the Western or Roman creed). It is instructive to note the different creeds of the Council of Antioch in Ephesians, A.D. 341. The second creed in \textit{On the Third and Fourth Councils of Nicaea} has 'God of God, Perfect Perfect, King of King, Lord of Lord, the living Word, the living Wisdom, [Life], the true Light,' etc. The third creed has merely 'perfect God of perfect God.' The fourth creed, drawn up by a continuation of the Synod of 341, has 'God of God, Light of Light, who is the Word and Wisdom and Power and Life, and the true Light' (these creeds are given in \textit{Athanasius, de Synodal}, 22, 24, 25, and the second and fourth in \textit{Socrates, HE} ii. 10, 18; see them also in \textit{Hefele, Concilia}, Eng. tr., Edinburgh, 1876, ii. 77–80). With reference to the phrase in question Basil, when dealing with the relations of the Son to the Father, and speaking of the phrase 'like in substance' (\( \text{εὐγον} \) \text{οις} \text{οὐ} \text{οίδα} \)), says that he will accept the phrase if the word \( \varepsilon \gammaραμαλλάγως \) ('without any difference') be added, as in the \textit{Henotikon Decretum}.

4. Baptism and Light.—In the \textit{early Church} the symbolism of light was closely connected with the sacrament of initiation. Baptism was, especially by the Greeks, called 'illumination,' \( \phiωνεύω \) or \( \phiωτεύω, \) as in Justin (\textit{Apol.} i. 61), in Gregory of Nazianzus (\textit{Orat.} xl. 1; cf. ii. 30), once in the \textit{Apost. Const.} xi. 3 (where it expressly includes the laying on of hands; in vi. 1 and viii. 12 the word is used literally, of the pillar of fire, and in ii. 5, v. 1 metaphorically, of knowledge; cf. 2 Co 45*), and in the \textit{Older Didascalia} (\textit{Verona Latin Fragments}, ed. Haner, p. 87); post-initiation is called \textit{quod dictum Gracius fortiens,} with reference to \textit{He} 6 (not in the corresponding passage of \textit{Apost. Const.}). Similarly the selected candidates for baptism were called \textit{ὁνωματαρῆς,} or 'illuminated' (\( \phiωνατῆρες \)) as in Justin (\textit{Apol.} i. 61, 65, \textit{Dial.} 129). Clement, \textit{Strom.} i. 1, 17, quotes \textit{Eph} 59 of baptism, and wrongly derived φως,
times of persecution, and that, when churches were built above ground in times of peace, the usage was continued and was given a symbolic turn (W. E. Scudamore, in DCA ii. 993 ff.). This custom orale may be partly due to the custom carried on by the opus," light," Cyril of Jerusalem (Cat., Intro. i. xi. xiii. 21), and the Apost. Const. (viii. 38 and 33); Eusebius says that Constantine at his baptism was filled with heavenly light (Vit. Const. iv. 66). The lamps that were used in the baptismary were often called in Greek φωτιστήρας; the Arabic Didascalia (§ 35), which derives its account of the church buildings from the Testament of our Lord, i.e., the apocryphal Church of the Saints, indicates this nuptial lamp into Arabic (Funk, Did., etc. Const., Ap. ii. 124 f.).

This symbolism is found also in the NT. In He 6:12 the noris participle φωτισθεῖσα ('illuminated'); denoting a definite act, clearly refers to the Christian act of initiation, and the Syriac version, both the Peshiṭta and the Ḫabaristic, in translating these passages, explicitly refer them to baptism. The metaphor has been thought to have been derived from the Greek mysteries, though the NT φωτισθεῖσα are quite unlike the heathen ones in that in the former the revelation of the unknown is what is emphasized (cf. Mk 4:1; Co 4:13, 15).

The custom of the candidates for baptism carrying torches probably came from the metaphor, not the metaphor from the custom, which is perhaps alluded to by Cyril of Jerusalem (Cat., introd., and i. 55) and a certain one to that custom in the apocryphal Preaching of Paul, in the Eikonie Gospel, and in the Old Latin codices a "g" (in Mt 28:20), to read 'lumen ingens' or 'magnum'; see H. B. Swete, Holy Spirit in N.T. London, 1910, p. 43 n.), and is a commonplace of Syriac literature.

In the Diatessaron it was related that a light flashed on Jordan, and the river was girdled with white; this reading is attested by Barašibba and Laboshi (see F. C. Burkitt, Evangelion domēpharreska, Cambridge, 1904, p. 115).

From the baptismal metaphor, Epiphany was called 'The Holy Lights' (cf. Greg. Naz. Ora. xxxix. and xi. 1); our Lord's baptism is the event principally commemorated at that festival in the East (see, further, art. EPHANYPH).

5. Liturgical use of lights. There are many traces of the symbolic use of lights in Christian services, from the 4th cent. onwards. Perhaps the earliest is in connexion with funerals. At the Spanish Council of Elvira (c. A.D. 305, can. 34) the custom of carrying candles for one day and a night in a cemetery was forbidden, lest the spirits of the saints should be disturbed—a custom probably borrowed from the heathen (see Hefele, op. cit. 150).

But in some form the custom continued. Lights were carried, especially on Good Friday. In the 5th cent., candlesticks, taperries, and tapers were placed on the altar, and the altar was lighted. In the 6th cent., candlesticks became common in all the principal churches. In the 7th and 8th cent., taperries were used in the liturgy. In the 9th cent., taperries and tapers became common in all the churches of Rome. In the 10th cent., taperries and tapers were used in all the churches of Rome. In the 11th cent., taperries and tapers were used in all the churches of Rome. In the 12th cent., taperries and tapers were used in all the churches of Rome. In the 13th cent., taperries and tapers were used in all the churches of Rome. In the 14th cent., taperries and tapers were used in all the churches of Rome. In the 15th cent., taperries and tapers were used in all the churches of Rome. In the 16th cent., taperries and tapers were used in all the churches of Rome. In the 17th cent., taperries and tapers were used in all the churches of Rome. In the 18th cent., taperries and tapers were used in all the churches of Rome. In the 19th cent., taperries and tapers were used in all the churches of Rome. In the 20th cent., taperries and tapers were used in all the churches of Rome. In the 21st cent., taperries and tapers were used in all the churches of Rome. In the 22nd cent., taperries and tapers were used in all the churches of Rome. In the 23rd cent., taperries and tapers were used in all the churches of Rome. In the 24th cent., taperries and tapers were used in all the churches of Rome. In the 25th cent., taperries and tapers were used in all the churches of Rome.
LIGHT AND DARKNESS (Greek and Roman)

—In the fields of the Hellenic and the Italic civilizations we have in historic times a divinity recognized as supreme. Zeus or Jupiter, who is a personification of the sky and the daylight that fills it. He has counterparts in the religious systems of kindred races. Among Greeks and Romans and peoples subjected to their influence, there are two groups of contrasted deities, those of the upper world (Gaia or sky) and those of the underworld (Hades or infernal regions). These deities were identified and worshipped by the Greeks. There was a time when the chief sacred centres had mysterious connexion with the realms of darkness, where the fear of obscurity had more power over men’s imagination than the delight in heavenly radiance. The spot at which there were reputed entrances to the domain of Hades and darkness were numerous in early Greek days. In many instances, subterranean pheno-

mena, earthquakes, sulphurous or mephitic emanations, disappearing rivers, or medicinal waters had much to do with the superstitions that gathered round such places. Even in historic Greece practices of a primitive character were maintained in such localities, for in religions the new never entirely drives out the old; there is always super-
position of strata. At Teanum, a promontory of Laconia, there was a cleft through which Herakles and Orpheus had both passed when they visited the infernal shades. In the Frigas (186), Aristophanes puts an absurd speech in the mouth of Clorion, the ferocious, passionate Diogoras from the island of Lesbos, in which he said, "I am the saviour of the nether darkness. This is illustrated by the story of the visit of Anax to the Cumean Shyl, as told by Virgil, and by the behaviour at Delphi of the Pythian priestess, the mouthpiece of the oracular Apollo. The secrets of the future have been supposed in all ages to be in the keeping of spirits below, while in Greek literature the sun has knowledge of all the secrets of the present. The name ‘ncromancer’ indicates the persistence of the belief about the dwellers in the regions of darkness.

As time went on, many of the places which had been principally associated with the powers of darkness passed into the possession of deities who were mainly of a benevolent character. This was strikingly the case with Delphi, where, as the later Greeks said, the worship of the chthonian deity Earth (Gē or Gaia) was succeeded by that of Apollo, god of brightness. As civilization and culture strength-
ened, the reverence paid to the gods beneath was apt to be left to the uninstructed, and to pass into the backwater of superstition. Some of the figures of the dark domain lost their original validity, and were merged into the general form of the darkness. Thus it was with Demeter and Persephone as they appeared in the historic age in the mysteries celebrated at Eleusis. Hades, the consort of Persephone, underwent a like change, indicated by his later name Plouton (Pluto), i.e., god of wealth or prosperity. The change of view was sometimes sided by epithets used by the poets, and even more so, by divine deeds to be propitiated by well-sounding titles. So the avenging spirits of gloom, the Furies, were venerated as ‘Eumenides,’ benevo-
lent ones (cf. artt. EUMENIDES, ERINYES; EUHEMISM).

A profound alteration was wrought in the religious conceptions of the Greeks by the rein given to their myth-making fancy and to their artistic genius, working on things divine. As human traits were inwrought into the texture of dimly apprehended superhuman existences, and were enraptured by the clouds of poetry and the dreams of art, their original connexion with natural objects became veiled, and in some cases was forgotten. The process had already been carried far when the Homeric poetry arose in its glory. Some figures that did not very readily lend themselves to transformation received little notice in later worship. Eos, the dawn-goddess, is promi-

nent in Homer, but, as she is also obviously the dawn, she was present but little in the Greek mind. Ovid remarked that her temples were the rarest in the world (Metam. xiii. 588). But the divine being who is wrestled in poetry and art does not generally lose all traces of the natural deities that gave him his origin. Zeus remained the actual source of events in the sky. Where we say ‘it rains’ or ‘it snows,’ the Greek said ‘he rains,’ or ‘he snows,’ and over the ancient name of Zeus, Horace speaks of the hunter casting at night ‘under the chilling Jove’ (Od. i. i. 25). Apollo was always connected with the sunlight, and Artemis with the moon and the stars. When the overgrowth of legend became abundant, there was an impulse to return to the veneration of actual heavenly bodies. Thus the worship of Helios, the sun, went on side by side with that of Apollo. Naturally, in historic times the devel-
opment of mythology produced a mixture of attributes, and the interference of many divinities with one and the same function. The appearance and disappearance of the heavenly bodies suggested that the realms of light and darkness had inter-

communication. Hermes, in the main a god of brightness, becomes a conductor of souls to regions below. More peculiarly individualistic, yet beneficent and at other times was thought so. Therefore Apollo, the sun-god, has a mission to destroy life, as well as to preserve it by medicine and to enhance its value by poetry and music. Dionysos, whose connexion with the sun is clear, also has to do with the shades; and so with other divinities. The bad effects of heat led to the idea that Pan, the god of the open country, is most to be dreaded at noon-day, for then he can inflict madness. The mild gleams of the moon and the divinities who guide them were usually beneficent, but sometimes had the contrary activity. The waxing moon brings fertility, and the waning moon brings sickness and death. Hekate, a moon-god-

dess, kindly and supernal in the earlier age of Greece, became later a malignant power of dark-

ness. It may be remarked that the reverence paid, with clear consciousness, to astral bodies as such was never at any time so marked in historic Hellenas as among Babylonians and Semites. As a religious motive it belongs rather to the late Hellenic age, and the age of Greece-Roman civilization, and even then, as we shall see, it affected the outer fringes of Greek civilization, where it was wresting with barbarism, rather than figuring in genuine

Besides the light of heavenly luminaries, great and small, there is the irregular and alarming fire...
from heaven, the lightning. The deities who rule the regular light also send lightning, especially Zeus, one of whose chief emblems is the thunder-bolt, and also Athene and Apollo. It is sometimes a sign of divine anger, as when Semede died by its stroke, sometimes an indication that the god has signified his will and given a presage of the future. To interpret the sign is, of course, a matter for an expert. Lightning was thus connected with divination and prophecy, and spots struck by the sacred bolt were revered.

The fire which is of use to men on earth could not but be regarded as in its origin divine, and as venerable, being a symbol of the eternal. The apparent everlastiness of the fire of which sun, moon, and stars are the manifestations doubtless contributed to the importance of fire in the ritual of worship. A vein of thought which lies deep in the nature of men in the earlier stages of religion, that the gods are envious of human beings and grudge them the things of which they wish to possess themselves, is illustrated by the legends of which Prometheus was the centre. The gift of fire was one which the gods would fain have withheld, and they punished him who outwitted them. A number of Greek divinities have relations with the fire and fire-workers, uses the fierce subterranean flames which find vent in the crests of Ætna and the Lipari Isles. In Homer and the poets generally he is the maker, guardian, and applier of the torches, the emblems of the Olympians, of the sceptre of Zeus, of the arrows of Apollo and Artemis. Hestia, goddess of the family hearth, has an especial connection with earthly fire. She is the only one of the greatest deities without a visible form, the only one who has no temple, no altar, no proper place of worship. The sacrifice of the heifer on the occasion of Hestia's departure from the great halls, which is the least transparent significance in life, equivalent to the hearth of the house, always regarded as in some sense an altar. As every house had this altar, so the great State family had its central hearth-altar for all the burgesses. When a city sent out some of its sons to found a colony afar, the central fire of the new community was lighted from the central fire of the old home. When a city was under a monarch or despot, its common hearth was in his dwelling; in a republican community it was in the town-hall (παράθεσις) [see, further, art. HEARTH, HEARTH-GODS (Cicero)]. The connection of Hestia with the hearth, with the hearths, is the least and simplest in the range of Greek religion. Where the name of a divinity retains an obvious meaning, he does not lend himself to a covering of myth. Another divinity was invested with the functions of the old. Dionysos or Bacchus. The pine-tree and the torches that it provides figure in the Bacchic revels, as depicted, for instance, by Euripides in his Bacchae. What we call the St. Elmo's fire was connected with the great twin-gods, the Dioscuri, Castor and Pollux. The gods of light and darkness must have a potent influence on life, and especially on the beginnings of life. The hearth-fire was treated as a symbol of the generation of the human being, and a growth of legend and ritual was developed from this idea. The light-bringing divinities are very naturally the ones who drive away the prenatal darkness into the light of life, and many deities were at different times and in different places supposed to exercise this function (cf. art. BIRTH [Greek and Roman]). Zeus himself, at the latest age was a god of birth; but the powers that guide the milder radiance of the moon rather than those that wield the fiercer splendour of the sun had chiefly this duty, and the greatest among them was Artemis.

The mysteries of the darkness beyond the grave, in which departed souls were hidden, gave rise to multifarious practices and beliefs. There were many divine beings who either ruled the dead or guarded souls against the perils of the passage from this world to the next. There is no portion of the field of Greek religion in which the development of ideas from Homer's age to the time of the latest Greek philosophic speculation was more complex. The notion of a possible deliverance from the bonds of death prompted a series of beautiful tales, such as that of the restoration of Alcestis to Admetus, the theme of the funeral games of Euripides, the recovery of Eurypylus by Orpheus, or of Perséphone by Demeter. In this connexion the most interesting evolution, from a religious and social point of view, is to be found in the Greek mysteries. They represent the striving of souls on earth to be assured of safety in the perils passage from the bed of death to a happy abiding-place in the world beyond. Starting from gross forms, in which enchantment had a great part, the mysteries were refined and moralized so as to satisfy the higher yearnings of the spirit, and to instil that better hope in death which, Cicero says, was given by initiation at Eleusis (de Legibus, ii. 36).

During the great age of Greece there was among the Hellenes no wide-spread conception of such a mysterious influence of heavenly bodies on human life as was supposed in the Symboles, the Orphic and Pythagorean scriptures. The expiation of sin by fire, however, of divinity to the heavenly bodies appears comparatively late in the history of Greek philosophy. Plato, in his Timæus (p. 38 f.), describes the fixed stars as divine existences brought into being by the Workman (Demiurgus) of the universe at the bidding of the supreme god. In other passages he assigns divine character to the sun, moon, and planets. He was followed, with variations, by later thinkers—Xenocrates, Heraclides of Pontos, and many others. Aristotle described the celestial bodies as containing a great divine element and pointed out that belief, now explicitly declared by philosophers, was implicit, in an obscure form, in the popular mythology. Like doctrine was taught by the Stoics and particularly by Cleaneiths, who considered that in the sun lay the guiding power in the nocturnal storms. It was common to call the heavenly bodies visible gods as opposed to the unseen divine power. These notions were prevalent among the Neo-Platonists. Apollonius of Tyana (q.v.), the seer and wonder-worker of the late 1st cent. A.D., venerated the sun at dawn, like many an Oriental of to-day. That the practice was popular in Greece is shown by the salute which Sokrates offers to the rising luminary, at the end of his great drinking-bout, in the Symposium of Plato. The Neo-Platonists, who powerfully affected the thought and religion of the Roman imperial period, embraced and developed beliefs of the pre-natal darkness into the light of life, and many deities were at different times and in different places supposed to exercise this function (cf. art. BIRTH). Euripides (Greek and Roman). Zeus himself, to the latest age was a god of birth; but the powers that guide the milder radiance of the moon rather than those that wield the fiercer splendour of the sun had chiefly this duty, and the greatest among them was Artemis.

The mysteries of the darkness beyond the grave, in which departed souls were hidden, gave rise to multifarious practices and beliefs. There were
the departed spirits of mortals, did not receive their
due from the living was much more marked than
in Hellenic communities. In the historic time,
till Christianity prevailed, the bodies of the dead
were cremated, but some of the attendant cere-
monies pointed to a belief in immortal death—
the rule (cf. art. DEATH AND DISPOSAL OF
THE DEAD [Greek]). In primitive days the tomb
must have been regarded as the only place haunted
by the ghosts, and during that age it was as often
treated in many ceremonial practices. But quite
early a conception must have sprung up of a general
habitation for those who were colloquially called
'the majoritv'. The Romans, however, never
imagined for themselves a judgment beyond the
tomb, which should assign one dwelling-place for
the good, another for the bad. The great scheme
pictured by Virgil in Encid vi., which has stimu-
lated the imagination not only of poets but of
many theologians ever since, was drawn after Greek
patterns. The genuine Roman under world was a
trance of gloom, and the spirits were minded to do
harm to the living unless they could secure
immortal life. To avoid sickness, they would
sometimes be induced to come forth. But the
Roman nation as a whole is haunted by the dead.
As a result the tomb became a centre of life, and
the annual festival of the deceased was an
important rite in the Roman calendar. Such
festival was not the only one connected with
deads, and the care for the happy transition of
the spirits of those who had died was shown in the
treatment of the tombs. From the earliest times
the care of the dead and their deified spirits has
been an object of Roman worship. In the earlier
periods of Rome the dead were not regarded as
brought the whole of the Patent Hill supposed to
have been the work of Romulus when he founded
Rome; there was another in the Forum, and others
elsewhere. Festivals at these places were made to
all the deities—a phrase in which dead mortals
are included, as being in some sort divine. Every
Roman tombstone was inscribed 'Dis manibus,' to
the gods pointed to. These Larentes and Lemures,
whose proper offerings were made, are merely
the ghosts regarded collectively, in their unsatisfied
and therefore terrifying aspect.

As to special divinities of the realms beneath,
the country inhabited at Rome seems to have
been Tellus, Mother Earth, 'the parent of all
tings and their common tomb,' as Lucretius calls
her (v. 239). In the later age she was less and less
regarded, in consequence of the attractiveness
of Greek invasions in the sphere of religion.
Names like Genita Maa, Lara, and others invoked in
the indignations (v., v.,) appear to have been epithets
of Earth. So, in Greece, Gaia was in some sense a
goddess of the dead, and the same attribute was,
of course, given to the divinized figure of Earth in
other mythologies (cf. art. EARTH, EARTH-GODS,
§ 4). A curious place of communication with the infer-
nal regions was a spot called 'Terentus' in the Cam-
pus Martius, where probably at one time nuptial
vapours rose. This was a centre for a cult newly imported from Greece—that
of Dis (whose name is a rendering of Pluto or Plout-
on) and Proserpina. The cult was probably grafted
on to more ancient and purely Roman ceremonial.
The festival of the Lemures, one of the typically Roman
'secular games,' celebrated theoretically, but not
always in practice, at intervals of a century, to
ensure the safety of the city. The most famous
celebration is that ordered by Augustus in 1 B.C.,
when Horace acted as laurate and supplied the
Carmen Seculare.
The idea of a communication with the realms of
darkness through an opening in the earth can be
traced in other directions. The devoto, whereby
the citizen could ascend to the infernal regions
and thereby secure a favour for his country,
is an example. Livy (vii. 6) and other ancient
writers have told how, in 392 B.C., Curtius,
rising in full armour, made the ascent at night and
was not discovered at the summit. He was
considered to have entered a chasm in the Forum, which closed up after him.
The spot retained the name of the pool of Curtius.'
Here in the reign of Augustus the populace cast
down coins every year on the emperor's birthday,
to secure his welfare (Suetonius, Aug. 57). The
devoto of the Dicii, whom vouched themselves
to death by the enemy, thereby binding the powers
to favour the safety of the country, was somewhat
different. But, should the devoted man fail
to find his death, the terms of his vow were satisfied
by burying a lay figure in the earth with due cere-
mony—a curious example of the ease with which
the gods might be induced in Roman ritual. The
walking up of the earring Vestal Virgin is an in-
stance of the penal application of the devoto.

It is hard to discover in Roman religion the worshipping of the gods of death.
Through the worship of Lemures, which carried with him the traditions
of the powers of the sun, man would know the gods, as a result of
the worship of the sun and moon into Rome from his own country, and that a temple
of the sun on the Aventine was founded by him.
This was the opinion of Varro (de Ling. Lat. v.
74), and Tacitus (Ann. xiv. 41) attributed a temple
of the moon (Luna) on the Capitol to Servius Tullius.
But the official Roman calendar of fes-
tivals, which is known to every ancient ages,
gives no sign of official reverence paid to
to the sun or moon. At Rome, the cults of the
public priesthood devoted to them either at
rion or elsewhere among Italic peoples, though
Varro assigned such an office in old days to the
Aventine. They were associated in the country of the Sabines, in whose
tongue ansuel denoted the sun. The Aventine, as
is well known, was a home of cults introduced
from Greece. The existence of a deity called
Noctiluce (the 'night-shining one') on the Palatine is
hard to explain. The situation implies high anti-
quity, for no god realized as foreign was allowed to take up an abode within the pomarium of the city
before the age of the Second Punic War. The
name may have been an epithet of Juno, who
was connected with the sky. In a ceremony connected
with the fixing of the calendar she was addressed
as Juno Caelestis. Juno, goddess of the sky, the
name Lucina (closely connected with luz) was
attached to her as the power which brought the
child to light and birth. When the Sicanian Lucina
was transferred to Diana, the function of the Greek
goddess, as superintending human birth, was transferred to Diana.

The veneration of Volcanus as god of fire belongs to an old stock in Roman religion, but unlike
Hephaistos, he was worshipped, it seems exclu-
sively, as protector against danger to men from
fire. He was a popular divinity, and his cult was
one of which longest survived the intro-
duction of Christianity. The forms with which
another divinity, Vesta, was venerated were remarkable. Her religion of the Roman people.
Her ability with fire and her kinship with the Greek Hestia are obvious; but the worship of Vesta among Romans is far more conspicuous than that of Hestia among Greeks, possibly because the Hestia family resisted the assaults of time more stoutly than that of the Greek family.

A great feature of Roman religion is the parallelism in many respects of the religious ceremonial of the family and the State. And the private and public worship of Vesta resemble each other not a little. Every house had a cult of Vesta, and the name was restricted to the divinity; it had no connotation like the name Hestia, which meant 'hearth' as well as goddess. So thoroughly is Vesta a Latin deity that outside Latium hardly any signs of her existence have been found— a surprising fact when the similarity between Hestia and Vesta is remembered. In the home the cult of the goddess belonged to the matron and the virgin daughters, whose duty it was to see that the fire on the hearth was not extinguished.

The centre of worship for the great State family was the ancient shrine of Vesta in the Forum, and no public temple or altar devoted to her service existed before the end of the Republican period. To the primitive and the antiquity the round shape derived from that of the earliest home. Close by dwelt her priestesses, the Vestals, of whose abode important remains have been preserved. The recent publication of their site has contained an image, for Vesta was the one ancient divinity in Rome who never succumbed to the anthropomorphic impulses of her worshipers. The only symbol of the goddess was the other fire, whose extinction signified the imperious change to the land. Lapse of duty or impurity of life on the part of a Vestal was an omen of disaster, only to be averted by the sacrifice of the sinner. The Vestals were the daughters of the community, regarded as one vast family. Augustus, who loved to present himself as the restorer and maintainer of the most ancient Roman rites, connected Vesta with the dwelling-place of the imperial family on the Palatine. The Pontifex Maximus had a public residence close to the house of the Vestals. Augustus made this office an appanage of the emperor, and made over the official house to the Vestals. He set aside a portion of his palace on the Palatine to replace it and established there a second State temple of the goddess (see, further, art. HEARTH, HEARTH-DOES [Roman]).

We turn now to the later age of Rome. The conscious worship of the sun marked distinctively the dying days of Roman paganism. The oldest shrine dedicated to the sun was on the Quirinal, and seems to belong to the time of the Second Punic War, and to be a result of the mighty tide of religious influence which then invaded Rome from Hellas. A desire to venerate the sun was manifest, however, earlier, when he appeared with his attributes on the Roman coinage. Augustus placed in Rome two Egyptian obelisks before the temple of Cesar, and they were supposed to be devoted to the sun. Vespasian transformed the obelisk into a representation of the sun a great colossal figure erected by Nero in his own honour. Several influences contributed to increase Roman reverence for the luminary, to which inscriptions from the end of the 1st cent. A.D. bear increasing evidence. Some of the most powerful divine invaders who came from the East to conquer the West were associated with the epithets mentioned above. Philosophers and mystics had preached the divine nature of the sun and other celestial bodies. Immigrants from the East, and Romans, especially soldiers, who had resided there, brought the veneration of the cult of sun worship, an influence of sentiment towards monothelism aided the movement, for the one god was often, and not unnaturally, identified with the sun. It was not, however, till after Constantine, that the divinity of Roman citizenship to the inhabitants of the cities of the empire, had cut away the ground for fencing off the civil gods of Rome from those of other communities that public and formal recognition was given to the sun. And the confident event in the history of Roman religion was the accession to the throne of Elagabalus, who bore the name of an eastern solar god, whose priest he had been, like his ancestors before him. This was the divinity of the Syrian city of Emesa. The boy-emperor deposed Jupiter from his supremacy among Roman deities, and, placing his own god in the vacant seat, brought to Rome the round black stone which was the symbol (rēro) of the god. In his array of titles the emperor made his office as 'priest of the unconquerable sun Elagabalus' (Sacerdos invicti solei Elagabalit) take precedence of the ancient designation of Pontifex Maximus. This was done in spite of the fact that the divine ruler of Emesa was sometimes correlated with Jupiter, probably because the eagle was an emblem of both. Augustus built the Palatine residence of the emperor, and to it were removed the fire of Vesta and other venerable possessions, the Palladium that came from Troy, the shields of the Vestals, and an altar to the sun and the stone which symbolized the Great Mother (Magna Mater), whose essentially Oriental divinity had been, curiously, recognized four centuries earlier than that of any other immigrant from the East. To give completeness to his innovation, Elagabalus made the foundation-day of the temple the same as the traditional foundation-day of Rome itself, the twenty-first day of April. He also ousted Vesta from the Palatine, where Augustus had planted her, and gave her place to the god Elagabalus. The ritual of the usurping god contained Oriental features revolting to the Roman mind. Among the emperor's pranks was a marriage between his divinity and the goddess of Carthage, sometimes identified with Juno and called 'the heavenly,' sometimes with Venus. It was about this time that 'Juno Colonisa' came to be widely venerated in the West, as connected with the moon. The religious revolution of Elagabalus found some favour in the army, always a nursery of Orientalism. But, when his memory was laid under condemnation, the divinity of Emesa suffered with him and was exiled from Rome.

The sun-god was to be glorified again, but in a saner fashion, in a later part of the same century, by Aurelian. He erected a fine temple in honour of the unconquerable god of the sun. His biographer (Hist. Aug. 25) narrates a miracle which occurred when Aurelian defeated Zenobia and her host under the walls of Emesa. At a critical moment he was encouraged by a divine form, which appeared again to him in the temple of Elagabalus within the city and was identified with that divinity. The writer supposed that the god established at Rome by Aurelian was Elagabalus; but the condemnation that this divinity had undergone makes the idea improbable. Some scholars have thought that Aurelian's god was the god of Palmyra, also connected with the sun. But it is most likely that the emperor did not wish to correlate him with any particular Oriental manifestation. The only indication connected with the East that降雨 made it is that Aurelian is especially associated the god with old Roman practice by denominating the new College of priests as Pontifices. The sun was selected by
the emperor as embodying the monotheistic conception; and, in so far as that is concerned, he may be said to have borrowed from the East. An interesting inscription recently discovered in Messia records how Licinius the elder and Licinius the younger ordered the consecration on an image of the sun and the establishment of a ceremony in his honour just before the great crowning victory of Constantine, won near Adrianople in 323 A.D. So it is that the name had ceased to play any part in his sun on his coins, a practice common since Aurelian's time.

We come now to the most dominant of all the recessional deities in the Roman sphere—Mithra, who is named 'Mithra the unconquerable sun' in many inscriptions. The Mithraic system was complex and many-sided, however, and this is only one aspect of the god. His cult embraced elements derived from many sources, not only from the Persian religion in which his origin is to be found, but from Babylon and elsewhere. Sun, moon, and stars were prominent in the ritual. The extraordinary spread of Mithraism in the Roman empire was mainly the result of tendencies which we have noted in other directions. The vogue of Mithra was especially notable on the frontiers, a part of the empire in which it was least expected to find. Many of his shrines have been found in the inner lands, especially on the sites of seaports. At Rome he was venerated on the Janus festival; the Mithraeum at Constantine had cornered a remarkable shrine. Another lies under the church of San Clemente, and memorials have also been found where the Vatican now stands. The connection of the Mithraic worship was specially due to the provision which it made for satisfying some yearnings which afterwards found a fuller gratification in Christianity. So many were the myths and fables connected with the religion of Christ and that of Mithra that Christians attributed them to the subtle malevolence of evil demons. The religion spread rapidly among the freedmen and soldiers, but also attracted the educated and the officials, and found favour with princes. Its close-knit organization, with its official priests and its ascending grades of illumination, kept believers together in the manner of the Christian rites. It could have been suggested that over this part of the moral element which its mysteries embodied. It instilled into its votaries a higher aim in life and a better hope in death than any other form of pagan creed.

The idea of the sun as the primeval sun, as the father of all, goes back to the very first time. Not only on the Danube (see, further, art. MITRAISM).

In conclusion, we may note that the evil associated with the sun varies with the age. The myths of the sun as the father of life-stirring and love-sapping influence have naturally in all ages taken deep root in the human mind, which welcomed the reappearance of light as the release from the night or the long darkness of winter, and transformed the contrast of light and dark into one of life and death, freedom and bondage, good and evil, virtue and sin. The great representative of light, life, freedom, and goodness was to the mind of ancient India Usha, the goddess of dawn, and her rival Rātri, the night, or, in a sense more averse to human life, tānas, the darkness. The imperishability of light found its expression in the consecration of Aditi, which other scholars explain merely as eternity (cf. Hillebrandt, *Ved. Myth. iii. 106 ff.*).

Ums is not only a goddess of the dawn of every morning, she also dominated the turn of the year. The first day of the New Year (cf. A. Ludwig, *Der Rīgveda*, Prague, 1876–88, iv. p. xi, 173; Hillebrandt, *Ved. Myth. ii. 25 ff.*). Ums is partly the Ostara of the Rīgveda poems (F. Künge, Zeit- schrift für deutsche Wortforschung, ii. [1901] 42). She brings back the sun, the fire, the sacrifice which has been discontinued during the decayed period of the year; sometimes she is also called ṣaría or ᵇḷaṭṭahkan, and under the name sarāmā she became the mother of the two heavenly dogs, the strāmayaṇa.

The Indians divide the year into two periods, the Uttarayana, when the sun proceeds towards the north, and the Dakṣināyana, when he goes towards the south, the light half of the year being sacred to the gods, the dark half to the deities. Sometimes (e.g., *Satapatha Brāhmaṇa*, ii. i. 3. 1) it is said that spring, summer, and the rains are the god-seasons, while autumn, winter, and the cold season are the pitṛarātrikṣa, or father-season. Sometimes (cf. *Vedic Rom., ed. by W. C. Wright*, i. 796) we may begin the New Year with the winter solstice or with Easter time, according as we lay greater stress upon an astronomical or a practical point of view. Indian writers also oscillated between the two possibilities, and faced the problem in the same manner as their brothers did among Teutonic, Slavic, and Indian tribes (cf., e.g., F. M. Müller, *Contributions to the Science of Mythology*, London, 1807, ii. 718). The Vedics authors speak of the dark half of the year as tānas, and originally meant thereby the winter, the personification of which was Vṛtra, not the retainer of the heavenly rain, as has generally been believed, but the demon of winter, who was slain by Indra, and who regains the light and sets free the streams bound by the fetters of frost and ice. This idea was inherited from pre-historic times, and formed under the influences of a more northern climate than that of the Indian plains. The farther the Aryan tribes advanced towards the south, and the longer they settled under a milder climate, the less that idea harmonized with their more settled and temperate climate; the notion of tānas was transferred to the really dark season of India—the rains; and the residue of the past and the germ of a new time were thus equally precipitated in the ancient

A. Hillebrandt.

LIGHT AND DARKNESS (Iranian).—The antithesis between light and darkness among the Iranians was closely connected with the antagonism between Ahura Mazda and Ahriman. This feature attracted the attention of Plutarch, who says (de Is, et Oeis, xlv. 1) that Ahura Mazda was born of pure light, and Angra Mainyu of darkness, so that this whole world springs from darkness. Angra Mainyu (Ahura Mazda) was the light and the darkness the darkness, and in the Persian religion the light and the darkness are given the same name as in the Hymns, ‘Evdax-sa納ha 1 (possibly, (Arda-i-Virdi) and (Atar-i-Virdi),’ (cf. Porphyr. Hipp. Pythag., p. 41, ed. A. Nauck, Leipzig, 1860; Hippol. Refut. liv. 2, iv. 49; A. Rapp, ZDMG xlix. (1854) 481). The Persian word abad-dar (indicating the abode of the Attributes) (tr. E. Blochet, HHR xxxvii. (1898) 41) and in al-Shahristani’s Kitâb al-miîlât wa’l-nîzâl (tr. T. Haarbrücker, Halle, 1850-51, i. 275), but also in the Armenian writers (e.g. Thomas Aztaruni, l. 3), while Dio Chrysostom (Orat. xxxvi.) goes so far as to make the assertion —not thus far substantiated elsewhere—that, in order to create, Ahura Mazda had to ‘behold the darkness’ (Ys. vii. 8; xxiv. 1; Arta-i-Virdi, Bombay, 1827; Zend-Avesta, Paris, 1893-95, ii. 178), the righteous man hopes to attain to ‘the place of light’ (yâstâd), not to ‘the place of darkness’ (târlâd) (Ys. vii. 8; xxiv. 1).

The good view of the light as the ‘Ultragama of Ahura Mazda is clearly seen in the following passage of ‘bright’—Ashta (Ys. v. 4), the Amesha Spenta and their presiding spirit (Ys. xii. 82, 84, xiv. 15, 17; Aši (Ys. vii. 1, 6); Apam Napâ (Ys. xiv. 52; Sihr bâh, ii. 30), the ‘glory’ (Axe mârâkha (Ys. xiv. 52)), and especially Yima, whose conventional epithet (êlâst) is not so completely blended with his name that in modern Persian he is known only as Jamshid.

The sun, moon, and stars are hidden to give light (Ys. xxii. 5, 9, 13), and the light of the moon is hidden (Nyâgâh, iii. 7), while the great mystery of the brightness of the light of the sun, if the sun no longer rose, ‘the demons would destroy everything that is in the seven regions of the world, and the spiritual angels would find no resting place and no abiding place in this corporeal existence’ (Ys. vi. 13), and in general Nyâgâh, i. iii.; Ys. vi.-viii.). Indeed, the fairest of the forms of Ahura Mazda are the earth and the heavenly light, i.e. the fire and the sun (Ys. xxxvi. 6, vii. 8); and in the palace which Ahura Mazda built for Mithra there is neither night nor darkness (Ys. x. 50).

Darkness is a special attribute of hell (Ys. iii. 35; Age miałaevâdâš, xxvii.), for which ‘darkness without beginning’ is a synonym (Ys. xxii. 35; cf. Spiegel, ii. 18 f.). The demons are ‘spawn of darkness’ (or, perhaps, ‘possess the seed of darkness’ (tomasea-vahra) (Ys. vi. 4; Nyâgâh, i. 14; Ys. viii. 80), and seek refuge in darkness (Ys. xvi. 18), or hide in the earth (zemare-grma (Ys. ix. 15; Ys. xii. 81; Westergaard, Freg. iv. 33) or in caverns (Ys. iii. 7, 10)—a phrase which may possibly point to survivals of an old druidic cult (cf. Moulton, pp. 57, 128 f., 132, 399). Properly enough, therefore, divine aid is sought to resist ‘darkness, woe, and suffering’ (Ys. lxii. 17; cf. Nyâgâh, i. 1).

Turning to the Pahlavi texts, we are told that the ‘region of light is the place of Ahuramazd, which they call "endless light" ’ (Bundahïs, i. 2), and that the place of the Amesha Spenta is ‘in that best expanse of heaven’ (Ys. xxxi. 10, xxiv. 2), while Arã-Î-Vîrâf, when in the presence of Ahura Mazda, perceived only brilliant light (Arât-î-Vîrâf Nâmak, &c.), and the radiance of...
Zarathushtra within his mother, during the three days before his birth, was so great as to illuminate his father's whole village (Dinkart, v. ii. 2, vii. ii. 55-58).

According to the same texts, hell is full of darkness (Dvitiyāṃ-Dīnak, xxvi. ii. 2, xxxii. ii. 4, xxxvii. 28, 45), so intense that it 'is fit to grasp with the hand' (Bundahish, xxvii. 37; cf. Dīnā-i-Mainyu-1-Krōt, vii. 31). This is an ordinary dark in the shade of Zarang Mainyu (Bundahish, i. 3), and when, in his fruitless endeavour to destroy the light of Ahura Mazda, he emerged from hell, he made the world at mid-day as dark as midnight, returning from it as from the grave. If he formed many demons (ib. i. 10, iii. 14). In fact, 'the most steadfast quality of the demon himself is darkness, the evil of which is so complete that they shall call the demons also those of a gloomy race' (Dvitiyāṃ-Dīnak, xxxvii. 85). In contrast, although sun, moon, and stars will continue to exist after the renovation of the world, they will no longer be necessary, 'for the world is a dispensary of all lights, and all creatures, too, are brilliant.' (ib. xxxvii. 128). The power of the demons during the darkness has already been noted. Therefore, 'when in the dark it is possible that demons and fiends seize upon one-third of the wisdom and glory of him who eats food in the dark.' (Sāyast-ā-Śayast, ix. 8; two-thirds are taken if one eats with un washed hands) - and in that event, no light of the last Sātār Nask of the Avesta dealt, among other topics, with 'the husby who spills anything after sunset, or who scatters a morsel of food to the north, at night, without a recital of the Ahuravair' (Dinkart, ix. xix. 2). To the same category of concepts belongs a short Parsi poem contained in the second volume of the collection of Rivayat of Dīnak, after his defeat.1 As J. J. M. de Wyzewa, 207, 19-208, 4; the edition is not yet published, but the writer has a set of the proofs through the courtesy of the editor and J. J. M. de Wyzewa.)

According to this, 'Rivayat on the Lighting of a Lamp, the lamp-light drives away all demons, and it adds:

1 From that light of the Fire the world is bright, since it is hostile to the demons of Ahura Mazda; if there were not always the light of the Fire, there would not be a single man in the world. This little poem is immediately followed, by the account of the lighting of the Sama and the reciting of the verses of the Sūtār Nask for the Avesta dealt, among other topics, with 'the husby who spills anything after sunset, or who scatters a morsel of food to the north, at night, without a recital of the Ahuravair' (Dinkart, ix. xix. 2). To the same category of concepts belongs a short Parsi poem contained in the second volume of the collection of Rivayat of Dīnak, after his defeat.1 As J. J. M. de Wyzewa, 207, 19-208, 4; the edition is not yet published, but the writer has a set of the proofs through the courtesy of the editor and J. J. M. de Wyzewa.)

The problem of the relation of light and darkness was even more vital than the earliest Iranian text people to suppose; for it gave rise to philosophical speculations which materially helped to form the leading Zoroastrian sects.

Al-Shahrastānī goes so far as to declare that 'all problems of the Magians turn upon two main points: why the light mingled with darkness, and why the light cleansed itself from darkness; they post the mingling as the beginning, and the cleansing as the aim.'

The Gāyomārīan sect maintained, according to al-Shahrastānī, that light had no beginning, but darkness was created. Whence, was their problem—whether from light, which, however, could not produce anything even partially evil, or from something else, though there was nothing which had light as the properties of creation and eternity. Their rather lame solution was that Ahura Mazda thought to himself: 'If I had an opponent, how would he be formed?' From this thought, which did not harmonize with the goodness of light, Anga Mainyu was produced. The mingling of light and darkness was due to the fact that the light gave men, before they were embodied, light by which men, led by the properties of creation and eternity, made the realms of Anga Mainyu or battle with them. They chose corporeal existence and battle, on condition that they were aided by the light to eventual victory and to the final resurrection at his defeat.

The Zarvanite sect held that the light produced a number of creatures of bright, divine nature, the most important of whom was Zarvan (Time), who, after murmuring prayers for a son during 9999 years, entertained the thought: 'I enhance this world is nothing else. From this time on, Anga Mainyu was born, and from Zarvan's wisdom sprang Ahura Mazda. There were a number of minor speculations among this sect—e.g., that the Sun was originally the moon; in that case, the Moon was the Sun, to which it was said, 'I meditated upon treachery until, like Satan, he fell.' The Mashhūtes thought that a portion of light had transformed itself into darkness.

The Zoroastrians (Zoroastrians) entertained, according to al-Shahrastānī, the views of light and darkness which we would naturally infer from the Avesta and Pahlavi texts. Both light and darkness had existed from the beginning. Good and evil, purity and impurity, etc., had arisen from the mingling of light and darkness; and, had there been no such mingling, the world would not have existed. God was the source of both (cf. X. xv. 5, cited above), and in His wisdom had mingled them; but light alone is real darkness, being, in fact, only its necessary antithesis; and, since they are antithetic, they must war against one another until the light shall allay and destroy the darkness.

Thus in Zoroastrianism the problem of the relation between light and darkness becomes part of the greater question of the origin of good and evil; and from this point of view the antithesis of light and darkness is found again—whether independent or derived—in several Gnostic systems (cf. ERE, vol. vi. i. 238 f.), as well as in Mandaeism (A. J. H. W. Brandt, Mandäische Religion, Leipzig, 1880, p. 39 f.) and Manichaeism (K. Kessler, PHR, xix. (1903) 205 f.). See art. MAZANDAN.

LITERATURE.—In addition to the references given in the art., other citations from the Avesta may be gained from C. Bar- tholomae, Abüwir, Wörterbuch, Strasbourg, 1904, s. v. 'Rāsik,' *Rauzān,' 'Hrwān,' *Hrwān,' etc. (cols. 1487-1492, 648-650). No special treatise on the subject has as yet been written.

LOUIS H. GRAY.

LIGHT AND DARKNESS (Semitic and Egyptian).—I. Peoples and period. —Babylonian (Assyrian), Egyptian, and Hebrew beliefs on the subject of light and darkness may all be taken together. Although in course of time they became widely divergent, at the outset and for a considerable period they showed many points of similarity—a fact to be derived to the contact and the common origin, in part if not in whole, of the peoples inhabiting the countries of the Near East. For the Babylonians and the Hebrews this affinity is generally admitted, both being of the Semitic stock. Further, the words of God, the positive contact between the early Egyptian race and the Babylonians has been made extremely probable by Hommel. Winckler, too, remarks with justice that the cults of the Horus-child belongs to the same religion as the Babylonian, and is in this sense Semitic.1 Sayce, while tracing many analogies of the same kind between Babylonian and Egyptian beliefs, takes a further step, and sees in 'the triumph of the gods of light and order over the monsters of chaos not only the birth of the present creation, but also the theological victory of the Semites over the Sumerian.2 Without going so far as this, other scholars admit that the mythological compositions of the Babylonians were derived from Sumerian sources.3 The upper limit of the period to be considered is, therefore, before 2050 B.C. and the lower limit is placed in Sumerian times, about the middle of the 3rd millennium B.C.

1 T. K. Cheyne, Bible Problems, London, 1904, p. 200. Linguistic affinities are worked out by C. J. Ball in the Hibbert Journal, 1900, p. 133. See also M. de Wyzewa, op. cit., p. 207, note 3, for 'light.'

fourth millennium B.C. and the lower limit may with propriety be fixed about the time of the Hebrew Exile, before the influence of Persia, followed by Greece, could have been felt. 1 Throughout this period of three millennia the predominant feature of the Babylonian mind is the cult of the sun-god. We should therefore expect to find in the records that have survived much that is cognate to at least the first member of our subject. Owing to syncretistic tendencies always present, and the case with which those ancient peoples tolerated antinomies in belief, no uniform presentation of their views about light and darkness can be given.

2. Various relationships of light and darkness.

—While the words 'light' and 'darkness' appear to stand in a co-ordinate relation, in reality they are contrasted terms, to be compared with 'day' and 'night,' 'life' and 'death,' 'good' and 'evil.' 2 In all these cases the co-ordinate relation holds good in the sense that light and darkness, etc., can be regarded as complementary terms, conveying the idea of the whole—e.g., the daily round, the sum-total of existence, and the ethical contents of life. The exceptional view whereby both light and darkness are traced to the same creative source (as in Zoroastrianism) may also be looked into this connection. 3 In general, however, the relation between light and darkness continues to be regarded in Semitic thought as adversative, slightly veiling a dualism which perhaps has been inherited from prehistoric times, and which is not resolved (Jahwism excluded), even theoretically, into a monism until the limit of our period has been passed. 4 We have throughout to reckon with that 'Oriental resignation to the contrasts in life' which marked all the peoples of the Ancient East. 5 The theory that prevailed might at best be termed 'optimistic dualism.' 6 With special reference to light and darkness there was a contest present in the beginning (cosmology), and this is daily and yearly renewed, with every day and night, every spring and autumn (or summer and winter), and it may even extend through the course of the world cycle. 7 While light and darkness have, therefore, each a separate kingdom, the one being for day and for life, the other for night and for death, there is evidence in the development of religious thought in Egypt in the inroads of an invasion of death upon the other's domain, resulting in a measure of fusion. This is concisely summed up by saying that the solar cult was stylized and the Osiris myth was deified. A subtle theory of a similar kind has been formulated for Babylonia, as an instance of which we may quote the representation of the sun as under-world divinity, 'because in his light the stars disappear and perish.' 8 There is much less warrant for such crossing over of the ideas of light and darkness in Babylonian thought. Regarding the 'Astral Theory' as a whole, it may be remarked that, were it accepted, it would greatly extend the possibilities of our subject. It requires, however, more agreement than at present exists as to the date of the origin of scientific astronomy among the Babylonians before its findings can be used with any measure of confidence.

3. No science of light.—Judging from present data, the likelihood is that the peoples of antiquity were not conscious of the fact that the universe is under the domination of natural law. Theirs was 'the cosmography of appearances' 9—a view of the world resting at the empirical stage. They had no scientific theory of light; darkness was not merely the absence of light. Both were 'material entities':

1. The matter of light issues forth from its place and spreads over the earth; at night it withdraws, and darkness comes forth from its place, each in a hidden, mysterious way. 10

The 'substantiality of darkness' may be specially remarked. Exemplified by this 11 higher conception of the quality of light was indeed reached. According to Hahn, in the later parts of the OT light is used as a symbol of deity because it is the finest and most indispensable instance known, and there is no danger of corporeal form being attached to it.

'The deity as light gives the transition to the deity as spirit.'

Bearing in mind that the peoples of the Ancient East were accustomed to concrete views of what are accepted by us as abstract qualities, we shall understand better how they received the phenomenon of light and darkness mainly according to their physical effects and their bearing upon life. Light was of service to them; darkness formed a hindrance. This was transferred to the feeling of light they rejoiced in; darkness they dreaded. Love of the light and hatred of the darkness lie at the root of many of the myths of antiquity, and are evident in the metaphorical usage of the two terms. By an entirely logical transition light is associated with warmth, and darkness is linked with cold. This applies to the cycle of the year, which is of more importance in ancient belief and practice, as appears in the Samoz cult, than the cycle of the day. From warmth again there is an easy passage to life and growth, and from cold to decay and death.

4. Light and darkness as associated with deities.—Like great natural forces, such as thunder and tempest, light and darkness were seen to lie beyond human control, and thus they came to be associated with deity or deities, and with beings more than human. Light is the creation of good gods, although it has also a hurtful side, when found in conjunction with the scorching heat of summer, and when bound up with lightning and fire. Darkness is viewed less as a creation of the gods than as an instrument for the subservient use of evil spirits, who could not exercise their beneficent power apart from darkness. Still there are gods specially associated with darkness, both in Babylonia and in Egypt. Many deities bear names and attributes compounded with words signifying 'light,' and their temples are similarly termed (e.g. E-Babbara, 'the shining house' [sun-temple at Sippar]). In addition to Shamash, the sun-god (and other deities who in their original function are merely aspects of the sun), Nannar or Sin, the moon-god, and Ishtar, 'the light of the heavens,' the foremost place must here be given to Marduk or Merodach (Amar-Ud), 'sun of the sun,' or 'child of the day,' as being the god of light by pre-eminence. He, too, is generally regarded as a solar deity, although an attempt has been made to prove that he is independent of the sun, being simply the god of light. 12 Although appearing at the summit of the Babylonian pantheon, he

11. E. H., art. 'Darkness (Babylonian), vol. i. p. 184 ff.
certainly did not hold undisputed sway, either at the beginning or afterwards, and the light between light and darkness, typified by Marduk (or the One, see below) was continued down the ages. How this should be is perhaps best explained on the theory of Radu, 2 who contends that Marduk is the god of light considered not as an illuminating power, but as a life-giving principle, which appears in the warmth of the spring. His light with Tiamat is a light of the light, i.e. the warmth, against the darkness, i.e. the cold. By this line of argument Marduk comes into relation to the Punamu-Adonis (and Ishtar) cycle of myths, and is also to be placed in opposition to Nabû, the god of the darker half of the year. Viewed as a solar deity, then, Marduk stands for the sun-god of spring, who brings 'blessing and favours after the sorrows and tribulations of the stormy season.' Before Marduk was exalted to the chief place, Anu, Ningi, Enlil, and Ea fulfilled a similar rôle in the myths of creation, 4 and in later times Ashur arose to dispute the glory. The nearest approach to a god of darkness, energizing in the world of nature, is Ea (Ea, god of the domain, is the thunderer). 5 The darkness which he causes (e.g., in the Flood Story, ii. 46 f.) is relieved by the lightning, in virtue of which he has some title to be regarded as god light also. With him may be compared Girru (Gibil) or Niniku, the god of fire, whose symbol, a lighted lamp, is as old as the 14th cent. B.C. 6

Of the evil spirits that love the darkness, mention may be made of the seven evil demons who, aided by certain of the great gods, were thought to be responsible for the darkening of the moon by eclipse or storm, and even for the disappearance of the sun from sight for a month. 

1 From city to city darkness work they, A hurricane, which mightily hunts in the heavens, are they, 
2 Thick clouds, that bring darkness in heaven, are they, 
3 Goads of wind rising, which cast gloom over the bright day, are they. . . .

In the official cults of Egypt sun-worship was all-important. Less is said about the moon, although it finds a place. 7 Within his own domain, which is the upper world, Ra (Amon-Ra), the sun, figures as a life-giving power, a set-off to the cycle of life and death. The power of death and darkness in the under world, to which so much importance was attached in Egypt. Here, it would seem, light and darkness are concomitants of the fuller notions of the life after death. We must imagine in this event the apparent exception of the ‘Aton’ cult of the XVIIIth dynasty (in the reign of Ikhnaton). In the ‘Solar universalism’ of that period, which finds expression in a series of unexecuted hymns, 8 while the whole activity and beneficence of the sun are rehearsed, its life-giving power is still in the forefront. In the Egypt the part of Marduk was taken by Horus the elder. 9 An equivalent to Ishtar is found in Hathor, by whom some scholars call ‘the goddess of light.’ 10 Specific gods of darkness appear in Set (or Set-Apoph) and in one member of the Hermopolitan ennead, Kek (see above, Kek). 11 (For the gods of the underworld see below, § 7.) In Egypt the demons of darkness were, like those of Babylonia, an awful power for evil to the living, and conscientiously active in the realm of the dead.

The Hebrew conception of God is frequently conveyed by means of language (much of which is metaphorical and poetical) drawn from the realm of light (see Job, vi. 14-16, 18, 20, Ezk. 11:18, 19, 20, 22; Hos. 6:1). But, while light is readily employed as a symbol of Jehovah, from first to last there is no idea of identifying Him with this manifestation of nature (as in the case of Marduk). While God is investlled of as luminous above measure, He is at the same time thought of as hidden, and His ways are reckoned to be mysterious. For this reason darkness, the ‘natural antithesis’ of light, also enters into the imagery of the OT (Ex 20:11, Deut 41:52, 1 K 8:9, Ps 18:11, Am 5:8, Zeph 1:10).

It is surprising that, though the Hebrews were Babylonians, they did not find an equivalent for the name of the god of darkness (Aton) who shared the Babylonian and Egyptian belief in demons and evil spirits, hardly a trace of such powers of darkness is evident in the religious literature of ancient Israel.

5. Light and darkness in cosmology.—According to the main version of the Babylonian Story of Creation, Marduk, the god of light, prevails over Tiamat, the personification of chaos, of which darkness presumably forms part (see Vol. ii. p. 190). In Mummun (table I. 4) ‘the flood,’ or chaos, the equivalent of ‘the darkness’ which in Ga 1 is said to have been ‘upon the face of the deep,’ is identified with the Babylonian and Ptolemaic ‘whirlpool’ of which we have seen a parallel in the flood-story of Genesis (see below). While this knowledge is unattested by Yehow, the goddess of light, as we see in the case of the Egyptian Amun, it is evident to be distinguished from the ‘lights’—stars, constellation, and sun—which light is, as it were, localized (Gen 11:25). In Egypt there is no detailed account of creation. 12 Sayce 13 and

14 Some ascribes the light- and darkness to ‘the sun-god of Egypt,’ see Ebsy xxi. 485.
LIGTH AND DARKNESS (Semitic and Egyptian) 65

Jeremiah’s remark on sectional parallels to the Babylonian main version. Different conceptions of the origin of light appear. Light according to one primeval chaos is an ocean from which the sun-god (Atum) arises, bringing his own light with him; according to another, light is laid up in the world-egg, which was brought current so long in Egypt that the sun died every evening, and every morning was resurrected. In the interval he moved with difficulty through the realm of darkness, and, as a passive body, had to be lighted through the interplay of light and darkness. In addition to the deities of light were also present to bear witness, and a second world was rendered necessary of such a kind that they could bear the light.2

Deutero-Isaiah’s exalted conception (40b), whereby the creation of light and darkness is referred to the same divine source, is the verbal outcome of monothelmism.3 It has an anthropomorphic parallel in the words ascribed to Ra: ‘When I open my eyes, there is light; when I close them, there is darkness.’4 This, of course, applies to the daily renewal of light and its withdrawal every night.

A reduction of earth to primeval conditions would involve among other things the extinction of light and by inference the return of the darkness of chaos (Jer 4a). An Egyptian myth, found in the Book of the Dead, represents Atum (see above) as defacing what he had made, bringing a return of the darkness.5 It was as the dimming. Over this Osiris (lord of darkness) is to rule.6

6. Light and darkness in human experience.—
The cosmology, although relating to what is first in the order of things, is itself the product of reflection upon the phenomena of the present. The processes of thought which give origin to the myths connected with the world’s beginning, and to mythology in general, may be placed in times antecedent to the-Semitic period. The myths, having been invented and reduced to writing, were now exercising a certain counter-influence on current ideas. They were never absent from the back of the mind and were, as we have said, a very biding, familiar development. We may suppose that light and darkness, especially light, would in time have been accepted as in the course of nature, and have ceased to attract attention. But there came interruptions of the usual order—e.g., in the eclipse of moon or of sun—and on such occasions the mythology was speedily recalled. The cults also were of such a kind that they kept the mythology alive. The great festival of New Year in Egypt, the Sed, and the transcription and frequent recitation of funerary literature in Egypt, much of which had been handed down from very early times; the festivals attending new moon, full moon, and the new year, and every occasion of national or local assembly—all must have exercised much influence towards the preservation of traditional beliefs. There was thus but slight opportunity of escaping from the legacy of the past. When the Egyptians looked upon the fiery clouds that attended the rising sun, their minds reverted to the pits of fire that were supposed to mark the eleventh division of the Tutt. The multifarious representations on cylinder-seals of the orbs of night and day, especially of the figure of the sun-god rising between the mountains of the East, depicted with streams of light flowing from both sides, or with rays of light protruding from his shoulders, give a vivid conception of the ideas constantly at work in the minds of the Semites and their kindred. In addition to anthropomorphic representations of the deities of light, their symbols, especially the sun’s disk, winged or unwinged, abounded both in Egypt and in Babylonia. It is remarkable that all the obelisks and pyramids of Egypt, which were symbols of the sun in addition to their other uses. Temples to these deities of light were also present to bear witness, and a second world was rendered necessary of such a kind that they could bear the light.2

1 OT in Light of the Anc. East, p. 168, and, in more detail, Die Parasbolisten, etc.
4 E.R.E. art. ‘Cosmogony and Cosmology (Hebrew),’ vol. iv. p. 165. Delitzsch, q.v., points to this verse as containing Old Persian dualism; similarly Jeremiah, OT in Light of the Anc. East, p. 228; a different view is given by H. Gunkel, Schöpfung und Chaos, Göttingen, 1899, p. 139 n.
5 Based on E.R.E. iv. 223; cf. Sayce, Religion of Anc. Egypt, p. 27.
8 1 K. 7:4.

Thoughts of light and darkness were further kept in the minds of these ancient peoples by the terms assigned to the
day (Asv. ivmh, Heb. dwr, ‘light’); to the morning, or East (Asv. el ‘Sunnī, Heb. mabir, ‘the rising of the sun’); to the evening, or West (Asv. erē, Samn., Heb. melā ha-shahmenah, ‘the setting of the sun’); and by certain Babylonian moon names (Ar., Aljura, the second or ‘bright’ month; Addur, the eleventh, or ‘dark’ or ‘glowing’ month). One series of directions in Hebrew gives north (‘ēffon) as the ‘obscure’ or ‘dark’ place, and south (‘adār) as the ‘bright’ or ‘illuminated’ place.

7. Light and darkness in relation to the state after death.—The contrast between light and darkness is of the highest importance in Eschatology, but darkness is most strikingly revealed in their views of the state of the living and of the dead.

1. Darkness without light’ is one of the curses invoked by Hammurabi on any one who should venture to deface his stele. This is synonymous with death. The grave to which the dead are consigned is ‘the dark dwelling’ (Sumerian Unurg), which in its extended meaning is applied to the under world, the abode of the shades (cf. Ps 89:15). The departed soul itself is a ‘creation of darkness’ (Sumerian, gidinu, Semitic, cdímma). The darkness attending death was to some extent relieved in the practice of the living by the use of artificial lights in the preliminaries to burial and by occasional illuminations in proximity to the tomb. From Palestinian excavation it has been ascertained that lamps are exceedingly common in graves with their impure and evidently symbolic purpose. Their purpose has been variously explained, and one and the same interpretation will hardly suit every era. The readiest explanation would be that in earlier periods, a light on a level with food and drink vessels deposited with the dead. Whatever was of service to the living might also serve the dead.

Among the Babylonians the general idea was that it was a misfortune for the dead again to be brought to the light of day. Unless decent burial were given, their spirits would return to earth, but only to plague the living. In the under world (or preferably the other world) there was their home, and there their spirits found rest. The classic description of this abode of the dead is found in the myth of Ishtar’s Descent to Hades, to the land of no-return (cf. Gilgamesh Epic, ii. 436-452):

[Transcribed]

‘To the house of darkness, Irrashu’s dwelling-place, To the house from which he who enters never returns, To the road whose path is not back, To the house where he who enters is deprived of light, Where they lay down, their sustenance, their food they see not, in darkness do they sit.’

Over this gloomy realm of the Babylonian dead the god Nergal presides, with his consort Ereshki-gal, goddess of the dead. At Osiris was lord of the under world, and there held his court. This also was a world lying in darkness, which was relieved one hour in twenty-four, during the passage of the sun-god and his train through each division of the vault. The entrance to this realm of the dead lay, for both Babylonians and Egyptians, in the west, where the sun goes down. On the other hand, the east, as the point of sunrise, is the abode of life; but this has an interest only for the sun-god and the privileged few who shared his daily recurring glory. Although the point of departure to the under world and the point of return thither, for interments, were not necessarily the location, relatively to earth, of the region of the dead. The Egyptians placed it beyond the circle of mountains guarding the earth, perhaps on the same map as their immaterial regions, or even beyond it. In the Babylonian and Hebrew conception it seems to have lain beneath earth, even lower than the waters of the abyss (aspšt), themselves associated with darkness. This was a region which the sun, living or dead, could not pierce.

A better fate for departed spirits, some if not all, was also conceived of—symbolized, e.g., in the recovery of Tamman from the under world and in the sun-bark with its occupants who returned to the region of light. Light here plays the principal part, although the obstacle of darkness has to be surmounted before the goal of light can be reached. One of the emblems in the Book of the Dead is for making the transformation into the god that giveth light (in) the darkness, or light for darkness. The ‘island of the blessed,’ in the Gilgamesh Epic, is cut off from the world by a barrier including twelve double-hours of travelling through thick darkness.

The Babylonian heaven was the reserve of the gods, save in exceptional cases. In Egypt, at an early date, the king shared in the delights of heaven, and was exalted to life with the gods in the sky. Later this was qualified by the Osirian doctrine, whereby the realm of the blessed could be attained only by redemption from the under world through faith in Osiris or Amon-Ra. This other world is a realm of light for the most part.

The created sun-god was called ‘the light’ in the Babylonian religions, and is ever the symbol of the light, used as a symbol of the soul, including that of the sun-god. The khû, or beatiﬁed spirits, feed upon the divine grain (i.e. the body of Osiris) and are in the land of the Light-god. Later, the followers of the sun-god, who travelled with him in the Boat of Millions of Years, eventually became beings consisting of nothing but light (cf. Is 60:18).

Hebrew thought about the state of the dead in the under world shows close kinship to the Babylonian, and is less developed than that of Egypt. The utmost allowed, even in the later books of the OT, falling between the years of 2800 and 1600 B.C., was the idea that the shades may emerge from Sheol back to the light of the upper world (Is 26:19).

Liguori.—Saint Alfonso Maria di Liguori was born 27 Sept. 1696 at Marianella, near Naples. He was the eldest son of a rather impoverished noble family, and, according to his biographers, was from early youth observed for his charm of manner, and his precocious ability. A strain of Spanish blood seems to have lent him a greater seriousness of mind and tenacity of purpose than are common among natives of Southern Italy. He devoted himself to the law, and took the degree of Doctor of Laws at the age of sixteen, being then so small of stature that, to the amusement of the spectators, his doctor’s gown hid him almost completely from view. He afterwards practised in the courts of Naples for nearly eight years with extraordinary success; but it would seem that in 1723, in a case in which large pecuniary interests were at stake, Liguori, in the interpretation of an important document, was guilty of an oversight which, when brought home to him, covered him with confusion, and disgusted him with his career and with all worldly ambition. This was a most innocent life, and now, giving himself up to solitude and prayer, he had what he believed to be a..."
supernatural intoxication to consecrate the rest of his
days to God in the ecclesiastical state. He
wished to become a Redemptorist, but his father,
who had already been much distressed on two
different occasions by his son’s unwillingness to fall
to an advantageous project of marriage that had been suggested, hastened
to yield. Eventually to his father’s entreaties, and acting on the advice of his confessor,
himself an Oratorian, the young lawyer gave up
his idea of leaving home, but began to study for an
ecclesiastical career, and in 1726 was ordained priest.
In the first six years of his ministry Alfonso worked under the direction of an
association of missionary priests, and devoted himself
as well, at Naples, to the care of the Jesus-woods, among
whom his labours bore extraordinary fruit. He
converted many hundreds from a life of sin, and
formed a sort of confraternity, the ‘Association of the
Chaplents,’ for these poor outcasts, to ensure
their perseverance in good. In 1729 Liguori was
brought into relation with a certain Father Thomas
Falcoia of the ‘Pit Operariz,’ who conceived a deep
respect for the young man, and, when he himself
was appointed minister of Castelmezzano, he led to the conviction that Alfonso
was an instrument divinely sent to carry out
a project which he had long secretly cherished of founding a new order of the
missions, and herds and peasants of that part of Italy.
The scheme eventually took shape in the little town of
Scali, near Amalfi, twenty miles from Naples.
There the ‘Congregation of the Most Holy Re-
demption,’ from which name the members are most
commonly called Redemptorists, was founded in
1732. Bishop Falcoia was at first its nominal
superior, but he lived at a distance whilst Alfonso resided with the
community. Hence, on the
bishop’s death in 1743, Alfonso was formally
elected to preside over his brethren. In 1747
he was made provinciale, and in 1750 he was made
provincial of the most holy order of the
Redemptorists, and he spent the rest of his days
in the directorship of the Institute. A
document drawn up in those very early days by
the hands of Alfonso himself in the vain hope of
obtaining the approbation of the king of Naples,
Don Carlos (afterwards Charles III. of Spain),
supplies a concise account of the special character-
tistics of the new Order.

*The principal aim of the priests so associated is to imitate as closely as possible… the life and virtues of Our Lord Jesus Christ and to imitate him, as far as may be, in their own spiritual advantage and that of the people of this kingdom—especially the most forsaken of these, to whom they render spiritual aid. In their houses they lead a perfect community life, under obedience to their superior, and perform the functions of the sacred ministry, such as instructions, confessions, the supervision of schools, confessional duties, and other devot gatherings.

They go about the dioceses in which they are established, giving masses, and, as a means of preserving the good results which they have been by the grace of God to effect, they return from time to time to the districts which have been evangelized, to bring them back to the faith, and to teach people in their
best resolutions by another series of instructions and sermons as well as by spiritual advice and so forth. In the monasteries as well as abroad they endeavour, with the help of divine grace, to follow closely in the footsteps of the Most Holy Redeemer our Lord Jesus Christ, in order to instruct the people by example as well as by precept.

As a means of attaining this end, there are twelve points of its rule set forth in their constitutions. The headings of these are: Faith, hope, charity, poverty, humility, obedience, silence and prayer, formation of conscience, good counsels, poverty, humility of heart, obedience, meekness and humanity of heart, mortification, recollection, prayer, abnegation and silence, and of the sacred books.

Each of the associates passes one day every week (now one day every month in recent years, and three times a week in the interests of his soul, in order to be able to employ himself afterwards with more arduous in securing the spiritual welfare of his neighbour.

In their houses they consecrate a large part of each day to silence, recollection, prayer, meditation, and in some of these times a day.

Their houses are to contain but a small number of subjects. As for their admission, they endeavour to ensure that only those may be admitted who live in a home, and not in the convent, and not in any family, resources which they may have been accustomed to employ, are made spontaneously for the love of Jesus Christ, by the priests of the faithful’ (Gerché, Saint Alphage de Liguori, Eng. tr., i. 109).

Despite domestic anxieties and counteradvice in the government of the new Institute, Liguori, down to about the year 1752, devoted himself indefatigably to the actual work of preaching, while leading at the same time a life of extreme abstemiousness and penury. At that period his health began somewhat to fail, and henceforward he devoted more time to literary activities, composing a number of books of piety and instruction, as well as the comprehensive work on moral theo-

logy by which he is especially remembered. As early as 1747 the king had wished to make Alfonso archbishop of Palermo, but by earnest representations he has succeeded in evading the proffered honour. The Redemptorists were resolved to take a special vow to accept the no ecclesiastical dignities, but in 1762 influence was used with the Holy See to dispense the saint from his vow, and, sorely against his will, he was induced to take the pope to accept the bishopric of Sant’ Agata dei Goti, a tiny see to the north of Naples, among a peasant population unpleasantly notorious for their barbarism and irreligion. Here he worked wonders for the reform of morals, but after an episcopate of more than thirteen years he permitted Pope Pius VI, in 1775, to allow him to resign in order that he might end his days among a community of his own Order. Broken with years, and with apostolic labours, and with the incredible anxieties which he practised, he retired to Nocera dei Pagani, but twelve years were still to pass before he was called to his reward. In the mean-
time he was destined to endure trials which probably cost him more severe mental suffering than any of the difficulties which he had previously encountered. For forty years and more, mainly owing to the influence of the anti-clerical and all-

powerful minister Bernard Tannei, who was the virtual ruler of Naples, the formal recognition of the Redemptorists as a religious Order had been withheld by the Government. This had been an obstacle in the way of its expansion, reducing it, as it did, to the position of an illegal association. At the time of Tannei’s downfall in 1776, the Order numbered only nine houses—four in Naples, one in Sicily, and four in the States of the Church. In 1779, under a different administra-
tion, everything seemed to point to the adoption of a more generous policy. Promises of favour were made on behalf of the Government, and in response the Redemptorist rule was formally submitted for State approval. From the point of view of the aged founder, the result was disastrous. The rule was approved, indeed, but in a fundamentally modified form (known in the controversies which followed as the ‘Regolamento’), which set at

ought many of the most essential features of the constitutions as hitherto observed, and which practically reduced it from the status of a religious Order to that of a mere pious association. Liguori, who was now 85, decrepit, deaf, and almost blind, was induced to sign the Regolamento, and it was for the time adopted in the Neapolitan dominions, but the Redemptorists belonging to the houses founded within the States of the Church energetically protested against the acceptance of such a caricature of their rule. The Holy See pronounced in their favour, and the unfortunate schism thus
caused in the Order had not been healed when, on 1 Aug. 1787, the saint died at Neora del Fagano. His followers were not more satisfied with the outburst of popular enthusiasm which it evoked and the marvellous events that followed, brought about a happier state of feeling. The Government of Charles III. in Oct. 1786 ordered the suppression, under papal sanction, of the different houses of the Order were once more reconciled with each other. From this time forward, and especially after the outbreak of the Napoleonic wars, the French Revolution and the Napoleonic wars, the development of the Order was rapid. In 1786 the first Redemptorist house north of the Alps was founded at Warsaw by Clement Bofaner, afterwards beatified. From there the Congregation gradually spread to Austria and through Europe, while a beginning was made in the United States in 1832 and in England in 1843. The Redemptorists have since made foundations in Ireland (1851), Kimmou, near Perth, in Scotland (1809), in Brazil, Dutch Guiana, the Congo, Australia, New Zealand, and many other distant countries. At present the Order numbers rather over 4000 members, half of whom are priests, the rest lay-brothers and students preparing for ordination. The strict ultra-monastic views distinctive of the followers of St. Alfonso di Liguori have been out of fashion with State officials, and, like the Jesuits, they have several times been banished from different European countries. Still no serious attempt has been made to combat their moral influence, and the severe rule of the Order has suffered no relaxation.

Alfonso di Liguori was beatified in 1816, canonized in 1839, and declared 'Doctor of the Universal Church' by Pius IX. in 1871. The terms of this last pronouncement, though somewhat vague, may be held to constitute a guarantee of orthodoxy for the saint's writings, at least when taken as a whole. Moreover, it may fairly be inferred from the language used that he is commended for holding a golden mean in his moral teaching between a Jansenistic rigorism on the one hand and dangerous laxity on the other. A full bibliography of Liguori's works may be found in Berthe, Encycl. tr., ii. 756 ff. Two works especially in this long catalogue have been subjected to much adverse criticism. Against the Le Glorie di Maria, first published at Naples in 1730, and since translated into every European language, many objections have been raised on the ground of its alleged extravagant 'Mariolatry' (see, e.g., E. B. Pusey, Eirenicon, Oxford, 1865, passim). But it is to be remembered, as Newman points out, that 'St. Alfonso wrote for Neapolitans, whom he knew, and whom we do not know' (see the whole context in J. H. Newman, Letter to Pusey on the Eirenicon, London, 1866, p. 108 ff.). The character and traditions of the people are very different from ours, and he was writing to protest against what he considered to be a veiled attack on that simple and venerable devotion to the Blessed Virgin which he shared, and which is a very important factor in the religion of his countrymen. It is, however, the Theologia Moralis that more than anything else brought the obstacle to the vision of Liguori originally (i.e. in 1748) published his views on moral questions in the form of a commentary on a well-known text-book for students, the Moral Theology by Franz Bohn. But the second edition in two volumes (Naples, 1753 and 1755) appeared as an original work, and the author continued to revise and enlarge it as the successive editions were exhausted. The eighth edition, which was printed in 1779, was the last to reveal his personal attention. Seeing that not only has Newman been declared a doctor of the Church, but that earlier authoritative decrees in 1803 and 1831 pronounced that there was 'nothing worthy of censure' in his writings (on this cf. Newman, History of the Religious Orders, note G, p. 333), and that all his opinions might safely be followed by confessors, it is fair to conclude that by the theology of Liguori the moral teaching of the Roman Catholic Church has been based ever since, while we admit this, it must be said that few indeed of the exoteric critics who have inveighed against his teaching have taken the trouble to understand 'laxity' of this or that isolated proposition set out, often inaccurately, and always apart from the context, as, e.g., in the notorious pamphlet of Robert Grassmann, Ausseige aus der Moraltheologie, etc.), but the man who does this is most commonly a publicist who knows nothing of ethical systems and who has never considered the difficulties which follow from the acceptance of a contrary principle. Nothing can produce a better impression than to lay down the rule that under no possible circumstances must the truth be departed from, but those who most positively commit themselves to this are also those who make the least progress. The extremely difficult problems which arise in practical life, and who have never attempted to square their own conduct by any consistent principle.

They believe, as Newman well says, 'that on a great or cruel occasion a man cannot help telling a lie, and that he would not be a man did he not do it, but still it is wrong to do it, and he must trust that the sin will be forgiven him, though he goes about to commit it. It is a truism, and had better not be anticipated, and not thought of again after it is once over.'

Now Liguori, like all his fellow-bishops, believed that for those whose duty it was to contradict objections and instruct their flock it was necessary that these and other moral questions should be thought out. Moreover, it must be said, in answer to such criticisms as those of the Philans, that these contain in art. Casuistry (vol. iii. p. 240), that priests administer a code of law in the tribunal penal and, like lawyers, doctors, and magistrates, they have to acquaint themselves with technicalities which, in the case of certain questions, involve unsavoury details quite unfit for public discussion.

One of the special grounds of reproach against Liguori's moral system is his adoption or defence of the principle (p. v.) that the difference between this and probability, rightly explained, is not very momentous, and many modern writers on the subject, especially the theologians of the Jesuit school, have maintained that St. Alfonso's views diverged but slightly from those of approved probabilists. According to the probabilist system, starting with the admitted axiom that a doubtful law does not bind (lex dubia non obligat), a man is not justified in conscience to obey as long as there is a sound probability against the law—as long as, e.g., in a matter of extrinsic testimony, where doctors disagree, one unrealizable authority teaches that a particular precept has no binding force. The probabilists, on the other hand, held that, unless the authorities who maintained the binding force of the law were more weighty than those who excused from it, such a precept could not be set aside without sin. Between these rival views comes that of Liguori, who held that, when the reasons or authorities were
equally balanced for and against the law, then a man without peril to his soul was free to use his liberty.

'A doubtful law does not bind. But when two opposite opinions are equally admissible, and you have a strict doubt as to the existence of the law. Therefore the law, being equally admissible, is pronounced, how nor binding force. Therefore it is true that you can follow an equally probable opinion in favour of liberty' (Berti, Eng. tr., ii. 110).

A critical and definitive edition of the Theologia Moralis, with adequate critical apparatus, has only recently been brought to completion: Theologia Moralis S. Alphonsi Mariae de Ligorio, ed. Leonard Gaudé, 4 vols., Rome, 1905-12. The editors give a satisfactory explanation of the inaccuracy of so many of the saint's quotations as printed in the current editions.

LITERATURE.—The fullest life of St. Alfonso de Ligorio is by Berthelot, 'L'Alphonse de Ligorio,' in the 'Collection des biographe et étude de l'ecrivain de Ligorio, 3 vols., Naples, 1796-1799 (a valuable source written by a devoted disciple of the saint). See also C. Villecourt, Vie et institut de S. Alphonsi Mariae de Ligorio, 4 vols., Tours, 1893; R. Didier, Léonard de Bruxelles, orientalistes ou religieux, de Ligorio, Regensburg, 1897; A. Cepeletat, La Vie et l'œuvre de St. Alphonsi Mariae de Ligorio, in a posthumous edition of the Order with full bibliography will be found in M. Haimsbach, Die Orden und Kongregationen der kathol. Kirche, Paderborn, 1908, iii. 319-332.

LIGURIAN RELIGION.—Solitude is certainly known of the early history and geographical distribution of the Ligurians that any attempt to give a general account of their religion is impossible. The details of the deities that were worshipped in Roman times in the Ligurian area strictly so called may be mentioned. The most noteworthy are those closely attached to a particular spot, such as Mars Cemenelum (BEL, V. 1301) sometimes worshipped without the first name, and clearly connected with the town of Cemenelum; and Bormanus, who was probably, like his namesake in the north of Italy, a cult to a deity that was worshipped in Roman times in the Ligurian area strictly so called may be mentioned. The name literally describes them; for the true Ligurian was born on his body a small silvery scar which is the symbol of the Virgin Mary and the equivalent to spiritual death. The emblems are worn by both sexes. The men carry the box on a red silk scarf or a thread tied round the neck, while the women wear it inside their costume, on a neck-string. When working, the male wearer sometimes shifts it to his left arm.

The Ligurians are Dravidian, that is to say, they belong to a stock that was established in India before the arrival of the so-called Aryans. They are dark in complexion, in common with the races of Southern India, and speak Kannarese, a Dravidian language. They have been not inappropriately described as a pene-centric people of Hindu tradition, though it may be questioned how far their rejection of many of the chief dogmas of Brāhmaṇī Hinduism leaves them the right to be styled Hindus at all. Of the Brāhmaṇī trinity—Brahma, Visnu, and Siva—they acknowledge only the god Siva, whose emblem, the linga, they bear on their persons. They reverence the Vedas, but disregard the later commentaries on which the Brāhmaṇīs rely. Originally they seem to have been the product of one of the numerous reformed religions in India that have been joined with Jupiter Optimus Maximus, and sometimes themselves called Iinones—a plural form which never appears in pure Latin inscriptions. It would be exceedingly unsafe, without other evidence, to see in this a trace of any polymorphous strain in the Ligurian conception of Olympia; a nearer parallel is the (presumably) generalizing plural in such animistic figures as Nymphe, Faun, or the 'Clouds' of Homer. (See also H. A. Grue, 'The Gods of Greece and Rome in the Poems of Homer,' in the 'Jacobsen Annual,' 1911, p. 5, and notes and refs. There, it is to be remarked that the most archaic of the so-called "Great Mothers" will be found in the Index to CIL (p. 1180). The other deities of the locality are all of common occurrence in Italian communities.

On the important question of the ethnic character and conceptions of the Ligurians, reference must be made to EBR, art. 'Ligurians,' and the authorities there cited. It is, and in so far as, the view of W. Ripley ('Who were the Romans? Brit. Acad. Trans., i. 1897, 42, with the comments of the present writer, ib.) may be accepted as sound, the early history of Ligurian religion would be the same thing as that of the pre-Tuscan population of Western Italy. Other communities of Ligurian origin inhabited parts of the rest of Italy and other dwellers on the soil of what afterwards was Latium (see I. F. Will, Die Bevolkerung, especially the paragraph on the archaic cult of Ariadne).

LIGAYATS.—The Ligayats are a religious community in India, numbering nearly three million at the census of 1911, of whom more than half are found in the southern districts of the Bombay Presidency. They constitute the bulk of the Belgaum and Bijapur one-third of the population is Ligayat, and in the adjacent district of Dharwar they constitute nearly 60 per cent of the total. Beyond the limits of the Bombay Presidency, Ligayats are numerous in the Mysore and Hyderabad States. They also form an important element in the population of the north-west corner of the Madras Presidency.

1. Description.—The Ligayats, who are also known as Lingawants, Lingangis, Sivabhattas, and Virasivas, derive their name from the Skr. word līgha, the bull-like emblem, with the suffix ayā, and are the people who bear the līgha habitually. Their name literally describes them; for the true Ligayat wears on his body a small silvery box containing a stone phallic, which is the symbol of the Virgin Mary and the equivalent to spiritual death. The emblem is worn by both sexes. The men carry the box on a red silk scarf or a thread tied round the neck, while the women wear it inside their costume, on a neckstring. When working, the male wearer sometimes shifts it to his left arm.

The Ligayats are Dravidian, that is to say, they belong to a stock that was established in India before the arrival of the so-called Aryans. They are dark in complexion, in common with the races of Southern India, and speak Kannarese, a Dravidian language. They have been not inappropriately described as a pene-centric people of Hindu tradition, though it may be questioned how far their rejection of many of the chief dogmas of Brāhmaṇī Hinduism leaves them the right to be styled Hindus at all. Of the Brāhmaṇī trinity—Brahma, Visnu, and Siva—they acknowledge only the god Siva, whose emblem, the linga, they bear on their persons. They reverence the Vedas, but disregard the later commentaries on which the Brāhmaṇīs rely. Originally they seem to have been the product of one of the numerous reformed religions in India that have been ¹ The census of 1921 gives the following figures for Ligayats: Bombay Presidency, 729,431; Mysore, 1,339,516; Madras Presidency, 136,092; total India, 2,305,039.
aimed against the supremacy and doctrines of the Brāhmans, whose selfish exploitation of the lower castes has frequently led to the rise of new sects essentially anti-Brahmanic in origin. It seems clear that, in its inception, Lingayatism not only rested largely on a denial of the Brāhman claim to supremacy over all other castes, but attempted to abolish all caste distinctions. All wearers of the lingam were proclaimed equal in the eyes of God. The traditional Lingayat teacher, Basava, proclaimed all men holy in proportion as they are temples of the great spirit, and thus, in his view, all men are born equal. The denial of the supremacy of the Brāhmans, coupled with the assertion of the essential equality of all men, constituted a vital departure from the doctrines of orthodox Hinduisms. Other important innovations were: the prohibition of child-marriage; the removal of all restrictions on widows remarrying; the burial, instead of burning, of the dead; and the abolition of the chief Hindu rites for the removal of ceremonial impurity. The founders of the religion could scarcely have forged more potent weapons for severing the bonds between their proselytes and the followers of the doctrines preached by contemporary Brāhmānic Hinduisms.

The reader must not assume that this brief description of the fundamental doctrines of a religious movement which has lasted for over 700 years conveys an accurate picture of the prevalent Lingayatism of the present day. In connection with the attitude originally assumed towards caste distinctions, there has been a very noticeable departure from the practice in this respect among Lingayats in India as yet a subject requiring much elucidation. In its development no mean influence must be allotted to function, religion, and political conduct. The race has not entirely failed materially to assist the formation of Indian society on its present basis. One of the most interesting phenomena connected with the evolution of modern caste is the working of a religious reformation in which caste finds no place on the previously existing social structure of caste units. If caste is largely a manifestation of deep-rooted prejudices tending to retard and preserve barriers between the social intercourse of different sections of the human race, it would seem not unnatural to expect that it would tend to reassert itself within the fold of an essentially casteless religion so soon as the adherents of the latter are no longer themselves subject to it and is not unlikely that the mere fact of converts having joined the movement at an early stage in its history would generate a claim to social precedence over the later converts, and thus in time reconstitute the old caste barrier that the reformers spent themselves in endeavouring to destroy. One of the most interesting pages in the history of caste evolution, therefore, must be that which deals with the evolution of caste inside the fold of a religious community originally formed on a non-caste basis. A remarkable instance of such evolution will be found in the history of Lingayatism. The Lingayats of the present day are divided into three well-defined groups, including numerous true castes, of which a description will be found in the section dealing with their social organization (see p. 72). With the rise of caste distinctions, numerous other changes occurred in the nature of the Lingayat religion. The āgyas or jñāgama, the priests of the community, devised in Siva a ritual and ceremonies in which the influence of the rival Brāhman aristocracy can freely be traced. The more important of these ceremonies are described in § 4 below. But it is essential to note that the foundation of Lingayatism that the most important ceremony of all, known as the āstagārpa, or the eightfold sacrament, should be understood by the reader. It is commonly asserted nowadays by prominent members of the Lingayat community that the true test of a Lingayat is the right to receive the full āstagārpa, and that the possession of a few of these eight rites only does not entitle the possessor to be styled a member of the community. The contention is generally made with the popular usage of the term *Lingayat*.

The āstagārpa consists of eight rites known as

1. Āgada
2. Linga
3. Vēndaka
4. Rudrākṣa
5. Mantra
6. Jñāgama
7. Pūjā
8. Prasād

On the birth of a Lingayat the parents send for the guru, or spiritual adviser, of the family, who is the representative of one of the five akāra, or holy men, from whom the father claims descent. The guru binds the liha, or the child, and washes it with vibhātī, or a garland of rudrakṣa (seeds of the bastard cedar) round its neck, and teaches it the mystic mantra, or prayer, known as Namah Siva—i.e., 'Obeisance to the god Siva.' The child being incapable of acquiring a knowledge of the sacred text at this early stage of its existence, the prayer is merely recited in its ear by the guru. The child has then to be presented to the god Siva in the person of a jñāgara, or Lingayat priest, who is in priestly order. At the arrival the parents wash his feet, and the water in which the feet are washed is described as the tirtha or charayatirtha of Siva. This water is next poured over the liha attached to the infant. The liha is made up of a piece of cloth in which a dish is placed in the child's mouth. This final ceremony is known as prasād. Occasionally the double characters of guru and jñāgara are combined in one person. When the child attains the age of eight or ten, the ceremony is repeated with slight modifications.

It will be seen that this eightfold ceremony forms a very convenient test of a Lingayat's religious status, and may be not unlike compared to the rites of baptism and confirmation which are outward and visible signs of admission to the Catholic Church. But it is clear that they are distinct, and in the same way not all members of the Lingayat community undergo the full ceremony of initiation. It would probably be safer to apply the term *Lingayat* to all wearers of the liha, whether they are Catholics or Buddhists or Christians, or to a few only of the eight sacraments. In so doing, the lower orders, from a social standpoint, of the Lingayat community will not be excluded, as they would otherwise be, from the fold.

Lingayats are not permitted to touch meat or to drink any kind of liquor. The greater number of them are either occupied in agriculture or are traders. They are generally reputed to be peaceful and law-abiding; but at times they are capable of dividing into violent factions with such rancour and hostility that the dispute culminates in riots, and occasionally in murder. Among the educated members of the community there is a strong spirit of rivalry with the Brāhmans, whose intellect and capacity have secured them a preponderating share of Government appointments. Except for these defects, the community may be described as steady and industrious, devoted to honest toil, whether in professional employment or occupied in trading or the cultivation of the soil.

2. History.—Until the recent publication of two inscriptions, which have been deciphered and edited by J. F. Fleet, and throw an entirely new light on the early history of a Lingayat religion, the movement in favour of this special form of Siva-worship was commonly supposed to
have been set on foot by the great Lingayat saint, Basava, in the latter half of the 12th century. The acts and doctrines of Basava and of his nephew Channabasava are set forth in two puranas, or sacred books, named after them, the Baseswaranarayana (ed. Poona, 1905) and the Channabaswara Purana (ed. Mangalore, 1851). But these works were not written until some centuries had elapsed since the death of Basava, and the writer states (p. 222), an animal sacred to Siva, and that a connexion is traced between Basava and the god Siva. At the age of eight, Basava refused to be invested with the sacred thread of the twice-born caste, to which he belonged by birth, declaring himself a worshipper of Siva, and stating that he had come to destroy the distinctions of caste. By his knowledge of the Saiva scriptures he attracted the notice of his bishop, who then persuaded him to work for the king of Kalyana, Biljala. Basava gave him his daughter Gangadevi in marriage. Subsequently Bijjala, a Kalachurya by race, who underwent a minor pilgrimage to Kalyana in the middle of the 12th century, installed Basava as his prime minister, and gave him his younger sister Nilachanana to wife. The puranas further recount the birth of Channabasava from Basava's unmarried sister, Madalambika, by the descent of the spirit of the god Siva. The myth in connexion with this miraculous conception is interesting. Basava, while engaged in prayer, saw an ant emerge from the ground with a small seed in its mouth. He took the seed to his home, where his sister swallowed it and became pregnant. The issue of this unique conception was Channabasava. Uncle and nephews both presented the new doctrines, and in so doing encountered the hostility of the Jains, whom they ruthlessly persecuted. A revolution, the outcome of these religious factions, led to the assassination of King Bijjala and to the flight of Basava and his nephew. Basava is said to have been finally absorbed into the Itiha Sa Kudal Sangameswar, and Channabasava to have lost his life at Ulvi in North Kanara, a district in the Bombay Presidency, which was, as we shall presently see, the home of the Lingayats of the present day. Basava, who was born in the year A.D. 1150, and died in 1228, according to the writer Lingayats to the shrine of the latter at Ulvi takes place to this day.

Two important inscriptions bearing on these traditions of the origin of the Lingayats deserve consideration. The first was discovered at the village of Managoli, a few miles from Bagevadi, the traditional birthplace of Basava. This record (as also many others) shows that king Bijjala"
it. Mr. Karikasavashastri, Professor of Sanskrit and Kannarese in the State College of Mysore, contends that the Saiva sect of Hindus has always been divided into two groups, one comprising the wearers of the 
\textit{tung}, and the other those who do not wear it. The former he designates Virāśaiva, and declares that the Virāśaivas consist of Brāhman, Kṣatric, and Sudra castes, under the division of Manu. Quoting from the 17th chapter of the \textit{Paramanuvā daśma}, he declares that the Virāśaiva Brāhmans are also known as Sudha Virāśaivas, Marga Virāśaivas, Virāśaiva Vaiśyas as Miśra Virāśaivas, and the Śūdras of the community as Anteva Virāśaivas. In his opinion, the duties and penances imposed on the first of these classes are (1) the \textit{āśeṣamōraṇa} (see p. 70), (2) penances and bodily emasculation, and (3) the act of worship of Siva without sacrifice, (4) the recital of the Vedas. He further asserts that the Hindu \textit{aṭṭamā}, or conditions of life of brahmanātiri, grhaṇaṇa, and saṃsāra, i.e., student, householder, and ascetic, are binding on Virāśaivas, and quotes, from various Sanskrit works, texts in support of this view. He furnishes a mythical account of the origin of Lingayats at the time of the creation of the world. The importance of this summary of his views lies in the fact that it is completely typical of the claims that many members of the Lingayat sect have recently commenced to advance, in a sense, within the fold of orthodox Hinduism, with the mistaken notion of thereby improving their social standing. They endeavor to divide themselves into Manu's fourfold caste scheme of Brāhman, Kṣatriya, Vaiśya, and Śūdra, regardless of the fact that theirs is in origin a non-caste religion, and that Manu's scheme, which can only with great inaccuracy be applied to the more orthodox Hindu castes, is totally unsuited to the Lingayats. A sign of this movement towards Brāhmanic Hinduism among Lingayats is to be found in the organization made by certain Lingayats at recent censuses to enter themselves as Virāśaiva Brāhmans; and it seems probable that these claims to a great antiquity for their religion and for a caste scheme based on Manu's model are chiefly significant as signs of the social ambitions of the educated members, who are jealous of the precedence of the Brāhmans.

3. Lingayats and their Sects.—The results of investigations undertaken in the Bombay Presidency in 1900 by committees of Lingayat gentlemen entrusted with the duty of preparing a classification of the sects and divisions of the Lingayat community tend to show that the relation of these various groups to each other is one of some complexity. Broadly speaking, Lingayats appear to consist of three groups of subdivisions.

(1) The first, which for convenience may be named "Panchamalis with full \textit{āśeṣamōraṇa} rites" (see p. 70 above), contains the priests of the community, known as \textit{sūryas} or \textit{śaṅgirás}, and the leading trader castes, or \textit{bōjiga}. It is probable that this group is the nearest approximation to the original converts, who, it will be remembered, could interdine and intermarry without restriction. The seven subdivisions of this group may still divide together, but for purposes of marriage the subdivision of \textit{bōjiga} above the other, and it is permissible for a bridegroom of one subdivision to take a bride only from below him. The reverse process, namely, of a bride marrying a youth of the other division, is strictly forbidden. Members of the lower subdivisions of this group may rise to the higher by performing certain rites and ceremonies. The marriage of a girl to a boy above her is part of a system of isogamy and hypergamy, and is not at all uncommon in many Indian castes. It is a probable speculation that the early converts in course of time came to rank themselves as superior to the more recent converts, and the growth of this feeling would lead, in harmony with the ideas that prevail in all societies, to the early converts declining to wed their daughters to the newcomers, therefore rising in the scale of rank from the latter as socially inferior, if only slightly so. The Panchamalis, as they may be called for lack of a better name, are all entitled to the \textit{āśeṣamōraṇa} rites, and rank socially above the remaining groups. In BG xxiii. 218 they are described as "Pure Lingayats."

(2) The next group is that of the 'non-Panchamalis with \textit{āśeṣamōraṇa} rites.' This group contains over 70 subdivisions, which are functional groups, such as weavers, oil-pressers, bricklayers, dyers, cultivators, shepherds, and the like. It seems probable that they represent converts of a much later date than those whom we have styled Panchamalis, and were never permitted to interdine or intermarry with the latter. In this group each subdivision is self-contained in regard to marriage; that is to say, that any one of the \textit{śaṅgirā} or \textit{śaṅgirinā}, a \textit{pādīra} girl, a \textit{pādīdrī} girl, or a carpenter, may marry only a \textit{pādīdrī} girl, and so on, resembling in this respect the ordinary Hindu castes, which are usually endogamous. Members of one of these subdivisions may never pass to another. The names of the subdivisions are commonly indicative of the calling of the members, and it is of special interest to note here how the barriers erected by specialization of function have affected and altered the communal theories of equality which the Lingayats of early days adopted.

It is interesting to observe that considerable diversity of practice exists in connection with the relations of the subdivisions of this group to the parent Hindu castes from which they separated to become Lingayats. In most cases it is found that, when a portion of an original Hindu caste has been converted to Lingayatism, both intermarriage and interdining with the unconverted members are finally abandoned, and the caste is broken into two divisions, of which one only is to be recognized by the members wearing the \textit{tunga} and the other by their wearing the sacred thread of the twice-born. But in some instances, e.g., the Jeeras of the Belgaum district—the Lingayat members continue to take brides from the non-Lingayat section, though they all may marry their daughters to them; it is usual to interdine the bride with the \textit{tunga} at the marriage ceremony, thus formally receiving her into the Lingayat community. In other cases the Lingayat and non-Lingayat sections live side by side and dine together at caste functions, intermarriage being forbidden. In this respect, however, the former are much more often to perform their religious ceremonies, and the latter employ a Brāhman. The more typical case seems to be that of a caste subdivision given in detail in the \textit{INDIAN CENSUS REPORT, 1901. CIII. v. (p. 183). In the last century a Lingayat priest of Ujjain owned a number of weavers in the village of Tumharkat, Dharwar district, Bombay. These converts abandoned all social intercourse with their former caste brethren, and took their place as a new subdivision in the non-Panchamal group under the name of Kurnivasas.

This second group of subdivisions, therefore, differs essentially from the Panchamalis, though the members also have the \textit{āśeṣamōraṇa} rites. It is described in BG under the name of 'Affiliated Lingayats.'

(3) The third group of subdivisions is the 'non-Panchamalis without \textit{āśeṣamōraṇa} rites.' It contains washermen, tanners, shoemakers, fishermen, etc., which would rank as unclean castes among Brāhmanic Hindus. It is the practice among Lingayats of the present day to deny that the members of this third group are entitled to be called Lingayats at all. They maintain that, since the possession of the full \textit{āśeṣamōraṇa} rites is the mark of a Lingayat, these lower divisions, who at most can claim through one of their subdivisions, or the followers or servants of Lingayats, are only the followers or servants of Lingayats. The contention is not unreasonable; yet it seems that these lower orders would be styled Lingayats by the other three groups if permitted to do so, and would describe themselves as such. A classification of the Lingayat community would not there-
Lingayats

The specially Lingayat ceremonies described by Carr are:

(1) Birth.—It is customary for the female relatives attending a confinement to bathe both mother and child. On the second or third day boiled turmeric and water is applied to the mother, and a ceremony known as virada, or the worship of the afterbirth, is performed. The propitiation of the afterbirth by the offering of fruits, leaves, turmeric, and a coco-nut, is considered necessary for the safe suckling of the child. When the child receives the birth, or water in which the jaigaram’s feet have been immersed (see above, p. 70), the mother also partakes of it.

(2) Betrothal.—For a betrothal the bridegroom’s family come to the bride’s house on an auspicious day in company with a jaigaram. They bring a woman’s no, a jacket, two coco-nuts, five pieces of turmeric, five limes, and betel-leaf and areca-nuts. They also bring flowers for the sindoor (a cap of flowers made for the bride), gold and silver ornaments, and sugar and betel-nut for distribution to guests. The bride puts on the new clothes with the ornaments and flowers, and sits on a folded blanket on which fantastic devices have been made with rice. Some married women fill her lap with coco-nuts and other things brought by the bridegroom’s party. Music is played, and the women sing. Five of them pick up the rice on the blanket and gently drop it on to the bride’s face, nose, and head. They do this three times with both hands; sugar and betel are then distributed, and one of the bride’s family proclaims the fact that the bride has been given to the bridegroom. One of the bridegroom’s relations then announces that the bride is accepted. That night the bride’s family feed the visitors on sweet things; dishes made of hot or pungent things are strictly prohibited.

(3) Marriage.—The marriage ceremony occupies from one to four days, according to circumstances. In the case of a four-day marriage, the first day is spent in worshipping ancestors. On the second day rice and oil are sent to local priests, or to the village temple, and oil alone to the relatives. New pots are brought with much shouting, and deposited in the god’s room. A marriage booth is erected, and the bridegroom sits under it side by side with his betrothed female relative, and goes through a performance which is called surige. An enclosure is made round them with cotton thread passed ten times round four earthen pitchers placed at the four corners. Five pots are placed filled with water and wash off the oil and turmeric with which the bride and the bridegroom and his companions have been anointed. The matrons then clothe them with the new clothes offered to the ancestors on the first day. After some ceremonial the thread forming the enclosure is removed and given to a jaigaram. The surige being now over, the bridegroom and his relative are taken back to the god’s room. The bride and her relative are then taken to the pandal, and another surige is gone through. When this is over, the bride is taken to her room and is decorated with flowers. At the same time the bridegroom is decorated in the god’s room, and, mounting on a bullock, goes to the village temple, where he offers a coco-nut. A chaplet of flowers called bāśīnga is tied to his forehead, and he returns to the house. In the god’s room a paśchīkā, consisting of five metal vases with betel and ashes, has been arranged, one vase being placed at each corner of a square and one in the middle. By each kalūs is a coco-nut, a date and a betel-leaf, a small leaf, and one pie tied in a handkerchief. A cotton thread is passed round the square, and round the centre kalūd another thread, one end of which is held by the family guru and the other by the bridegroom, who sits opposite to him. The guru wears a ring
made of kula grass on the big toe of his right foot. The bride sits on the left-hand side of the bridegroom, and the groom ties her right and left hands respectively with kula grass. The joined hands of the bride and bridegroom are washed, and bilve (Egle marnelle) leaves and flowers are offered. The officiating priest then consecrates the neck ornament and the thread, ties the latter on the wrists of the joined hands. The thread is tied to the bridegroom, who ties it round the bride’s neck, repeating some words after the priest.

The tying of the tali is the binding portion of the ceremony. Before the tali is given to the bridegroom, who is passed round the assembly to be touched by all and blessed. As soon as the bridegroom ties it on the bride, all those present throw over the pair a shower of rice. The bridegroom places some curds in seed and sugar, on the bride’s head, and the bride does the same to the bridegroom. Small quantities of these articles are tied in a corner of the cloth of each, and the cloths are then knotted together. The bride worships the bridegroom’s feet, and be throws rice on her head. The newly married couple offer fruits to five jaygams, and present them with rice, etc. The bride and bridegroom wash their feet, and offer presents, and the proceedings of the day terminate.

On the third day, friends and relatives are fed. On the fourth day, the bridegroom ride in a procession through the village on the same bullock, the bride in front. On returning to the house they throw scented powder at each other, and the guests join in the proceedings. The bridegroom breaks fast, to which only the nearest relatives are admitted. The married couple worship jaygams and the elders, and take off the consecration thread from their wrists and tie it at the doorway. The five marriages were therefore given presents and dismissed, and the marriage is now complete.

In a one-day marriage the above ceremonies are crowded into the short time allotted.

The remarriage of a widow was one of the points on which Basava insisted, and was probably one of the biggest bones of contention with the Brahmans. Widow remarriage is allowed at the present day, but the authorities at Ujiru see fit to disregard this. They say that among jaygams it is prohibited, and that among the other classes of Lingayats it is the growth of custom.

The third day is that upon which the festival of Jahgam is celebrated. This festival, a day for the dead are buried in a sitting posture facing towards the north; but an exception is made in the case of unmarried persons, who are buried in a reclining position.

The ceremony called vibhati-velai is performed. He is given a bath, and is made to drink holy water in which the jaygam’s feet have been washed. He is made to give the jaygam a handful of jati with vibhāti (ashes), rudraksha (seeds of the bastard cedar), daskina (coin), and tambita (betel-leaf). This is followed by a meal, of which all the jaygams present and the relatives and friends of the patient partake. It appears to be immaterial whether the patient is still alive or not. It is stated that, if the invalid survives this ceremony, he must take to the jungles and disappear; but in practice this is not done. The death party resembles in some points an Irish ‘wake’, though the latter does not commence until the deceased is well on his way to the next world.

After death, the corpse is placed in a sitting posture, and the jaygam, who has received the offering before death, places his left hand on the right thigh of the body. The people present worship and use the usual distribution of coins and betel to the jaygam follows. The body is then carried in a vimān, or bamboo chair, to the burial-ground. The grave should be a cube of 9 feet dimensions, with a niche on one side in which the corpse is to sit. The linga is united and placed in the left hand, bilve leaves and vibhāti are placed at the side, the body is wrapped in an orange-coloured cloth, and the grave is filled in. A jaygam stands on the grave, and, after receiving the usual dawas, shouts out the name of the deceased, and says that he has gone to Kailass, or heaven.

Memorial ceremonies are contrary to Lingayat tenets; but in this, as in other matters, the influence of the Brahmans appears, and among some sects an annual ceremony is performed. The performance of śradātha, or the funeral ceremonies common to other Hindus, is unknown. Dubois tells us that a Lingayat is no sooner buried than he is forgotten.

The priest in the creed of the Śivās which appears to me to be most remarkable is their entire rejection of that fundamental principle of the Hindu religion, māryajana, or metempsychosis (p. 19).

From this it would follow that they do not believe in ghosts. But there is a generally accepted idea that evil spirits sometimes take possession of females. This may be a rude way of expressing the fact that they are in fright of marriage. It seems hard to please. ’Although the ceremony of śradātha is unknown, once in a year on the new moon day of the month Bhadrapada or in Asvina, they offer clothes andfood to (a) ancestors in general, (b) childless ancestors, and (c) men who have died a violent death.

Among Lingayats widow remarriage is common, and divorce is permissible. The custom of Hindus is followed in regard to inheritance. Lingayats regard their jaygams, or priests, as incarnations of Śiva, and will bathe their jaygams in the water in which the jaygam has washed his feet and is rendered holy. They have numerous superstitions regarding good and bad omens. Thus, it is lucky to meet a deer or a dog going from right to left, whereas the same animals passing from left to right will bring ill fortune, or bad omens.

The ceremony of the Lingayats is called pahchamrotya, or srajyana, or metempsychosis. The ceremony of the Śivās is called bhuriaj, and is said to be most remarkable in that, besides the rejection of the fundamental principle of the Hindu religion, māryajana, or metempsychosis, the priest in the creed of the Śivās which appears to me to be most remarkable is their entire rejection of that fundamental principle of the Hindu religion, māryajana, or metempsychosis.

establish a community on a basis of the equality of its members, irrespective of sex, by means of the purifying worship of the one god Siva. It seems clear that the movement found special favour in the latter part of the 12th century, when the Buddhism, which would have ranked, as Vaisyas, below both Brahmans and Vaishyas under the Hindu scheme of social precedence. The community encountered the hostility of the Buddhist Church, which remained uncowed, but showed, the most tenaciously to its simple faith in the worship of Siva, and in his emblem, the linga. We must assume the probability that the Brahmans, of whose existence we possess historical evidence, were tended by degrees to assert for themselves social precedence as logyas or jagamas, i.e. the priests of the community, for which position their knowledge and descent would give them special fitness. In time, indeed, they came to be regarded as the very incarnations of the god Siva, and thus they were holy, imparting holiness in a special degree to the water in which they had bathed their feet, known as thirtha, so that it plays a prominent part to this day in the Lingayat ceremonies. Once the original notion of universal equality of rank had yielded to the priests a precedence incompatible with the Gotra, viz., the way was prepared for the introduction of further social gradations, and the older members of the community commenced to claim over the latter converts a precedence modelled on that which the priests had established. In such manner the essential doctrine of equality became completely undermined, and in the end gave place to certain rites and ceremonies as the test of Lingayat orthodoxy. Thus, when the more recent cases of caste conversion occurred, a section of a Hindu caste became Lingayat, not, as the founders of the religion would have wished, by being admitted to the common ground of the worship of Siva and of his emblem the linga, but by investiture through certain rites and ceremonies with the linga, retaining their distinctive social status as a functional caste, with which other Lingayats would neither marry nor dine. It must be admitted that in the case of most of the Lingayat subdivisions the jagamas will take food in the house of the members, but here all trace of the original equality ceases; and the Lingayats of to-day present the curious and interesting spectacle of a religious sect broken in the course of centuries into social fragments, of which the older sects are entitled to call the modern the most ancient in origin possess the typical attributes of ordinary Hindu castes. As in the case of Christianity in some parts of Asia, the social barriers of caste have proved too strong for the communal basis of the orthodox religion.

R. E. ENTOVEN.

gLING CHOS.—The gLing chos (gLing-mythology), or gLing giu (gLing-song), is the mythology contained in Tibetan folk-lore, and is perhaps the most wonderful of all the facts of the period, the most ancient in origin possessing the typical attributes of ordinary Hindu castes. As in the case of Christianity in some parts of Asia, the social barriers of caste have proved too strong for the communal basis of the orthodox religion.

1. Is the gLing chos the ancient religion of West Tibet only or of the whole of Tibet?—Although the present writer's materials were collected exclusively in West Tibet, it is probable that the gLing chos was the ancient religion of the whole country. (1) We are informed by a lama of Tashil Humpho (in Central Tibet) that an endless variety of versions of the Kesar-sage (not the Kesar-epic, which belongs to the subject of Lamasim) are current, just as is the case in Ladakh (Western Tibet), where each village has one or even more versions of its own. (2) In the legends of Milarepa there are embodied several gLing giu. Milarepa seems to have been extremely clever in building a bridge from the gLing chos to Lamasim. He was a native of Eastern Tibet, Khang chen aBhuyang lags (or the Kanchanjanga) being his native country. But, even if the gLing chos can be proved to be, territorially, a real Tibetan religion, the question still remains whether it is the original property of the Tibetan (Indo-Chinese) race or belongs to the Mon and Bedha population, who are the principal preservers of Buddhism at the present day, and who are not of Indo-Chinese, but possibly of Aryan or Mundari, stock.

2. Cosmology of the gLing chos.—In all the sources mentioned below, in the Literature, three large realms are distinguished, as in the days of the earlier Indo-Aryan literature. (1) Sthang tsha, heaven, (literally, 'the upper gods,' or 'the gods above').—A king reigns in Sthang tsha called skyer rzung yangspa. He is also called dbangpo rgyalchub, and dbangpo rgyalpo. The name of his wife, the queen of heaven, is dbur dam dbangpo, and dbur dam dbangpo, and dbur dam dbangpo. They have three sons, one of whom is Don pod, Don pod, Don pod. The common ground of the worship of Siva and of his emblem the linga, but by investiture through certain rites and ceremonies with the linga, retaining their distinctive social status as a functional caste, with which other Lingayats would neither marry nor dine. It must be admitted that in the case of most of the Lingayat subdivisions the jagamas will take food in the house of the members, but here all trace of the original equality ceases; and the Lingayats of to-day present the curious and interesting spectacle of a religious sect broken in the course of centuries into social fragments, of which the older sects are entitled to call the modern the most ancient in origin possess the typical attributes of ordinary Hindu castes. As in the case of Christianity in some parts of Asia, the social barriers of caste have proved too strong for the communal basis of the orthodox religion.

gLING CHOS.—The gLing chos (gLing-mythology), or gLing giu (gLing-song), is the mythology contained in Tibetan folk-lore, and is perhaps the most wonderful of all the facts of the period, the most ancient in origin possessing the typical attributes of ordinary Hindu castes. As in the case of Christianity in some parts of Asia, the social barriers of caste have proved too strong for the communal basis of the orthodox religion.

R. E. ENTOVEN.

1 The term gLing chos was first employed by the present writer. Among natives of Tibet the name gLing giu ('songs of gLing') is in general use. In a hymn discovered in Upper Kasmir the words lha chos and lden chos are used for this type of religion.

2 This is the actual pronunciation. In literature the name is spelled bya brgya skyes (Sakyabri or Sakyabri).
eighteen agus (see below) take the part of human beings.

3. Yog klu, the under world (literally, ‘the night-colored’).—Like s'Tang lha, Yog klu is also a State. There is a king called Icogpo (probably Icogpo is meant), with his servants and his subjects, who are remarkable for the large number of their children. The klu, or nakpul (female nakpul or nangkuns are kept beneath them for their benefit, and Kesar is warned not to fall in love with them. For this reason, at the present day, the Ladakhi women still desire to look like klu, and wear the parag or berag, a feather strap set with turquoise. The parag represents a snake growing out of the neck of a human body, which, according to Indian Buddhist art, is the characteristic mark of klu.

3. The colours of these realms.—The most original system of colours seems to be contained in the Sheh version of the Kesar-saga. According to it, the colour of s'Tang lha is white—perhaps the colour of light; Bar btsan is red—perhaps on account of the reddish ground of the colour;1 and Yog klu is blue—this may be due to the deep blue colour of many Tibetan lakes. The klu generally live in caves.

According to the Lower Ladakhi version of the Kesar-saga, the colour system is as follows: s'Tang lha is white; Bar btsan is red; and Yog klu is black. A still more advanced stage is represented in the Sheh version (which is probably based on that of Tibet). Here s'Tang lha is white; Bar btsan is yellow; and Yog klu is black. The change from red to yellow has probably something to do with Yong-khun-pa and his reformation of Lamia.

4. The devil b'ud—Occasionally, to the three realms of the world a fourth is added, that of the devil b'ud. Then all the heavens are divided into two classes: the good and the evil. This is united in opposition to this new realm. The colour of the devil and of his realm is black (Sheh version) or violet (Lower Ladakhi version). It is situated in the north. The devil tries to carry away the goats of the gods. He is in possession of a beautiful castle, great treasures, and a girl who is kept in a cage. Near his castle is the well of milk and nectar. In size, appetite, and stupidity he closely resembles the giants of European mythology and folklore. There seems to be a close connexion between Yog klu and the devil’s realm, as they both appear to go back to similar ideas. But gradually the devil developed into a morally testable character, while the klu did not.

Other names of the devil b'ud are: dzhe lung btsan bog, Curudu, Singpo (‘ugro’), and sDigsu (‘sinfu’). Of a very similar nature is agu Zn. He is probably a mountain- or cloud-giant. He favours not only Kesar, but also sun and moon.

5. The seven and the eighteen agus.—Next to Kesar, the greatest heroes of the Kesar-saga are the eighteen agus. Kesar is their leader, and together with them they form a group of nineteen beings, in whom the present writer is inclined to see personifications of the twelve months plus the seven days of the week. Just as India had a group of seven adityas before there were twelve, we find occasionally a group of seven agus who act by themselves, the others being forgotten. There is a famous version where the seven agus, who are all mhsa dpon gongma, with an arrow-blade for a head.

6. Ali jug gongma is the king of the demons.

7. Aria dinar btsan, with a worm’s head.

8. Sinlgyi bzhung, with a cowcowl for a head.

9. Dlaba btsan, with a collar for a head.

10. Lag lag, with a hand for a head.

11. Rikage sTang, with a foot for a head.

12. Long rag dKarbu, with a donkey’s head.

13. Msba btsan, with a man’s head.

14. DPal buzhung, with an old man’s head.

15. N'ma yru rma athal, with a turquoise for a head.

16. Dlaba dmar dpa’, with a white shell for a head.

The following is the list of the seven agus: (1) dPalle, (2) dGani, (3) Gonqma bthuks, (4) I'ba miggi ralb, (5) N'ma yru rma athal, (6) DPal bza'ng gongma, (7) DPalmo astag.

Both lists are from the Lower Ladakhi version. Certain names will be found to differ in other villages. It looks as if there were not much hope of finding the clue to this ancient zoide.

6. The Lokapalas.—There is some likelihood that the gling chos has always had deities for each of the four cardinal points. It is quite possible that the Indian Amogasiddhi, Vajrasattva, Ratnasambhava, and Akshobhya were deities of the four quarters before they became Dhyanibuddhas. In close correspondence with them we find in the gling chos the following deities of the four quarters: Don yod grubpa, North; D'Torgi, East; I'ba dus bstan, South; S'angsha mtho’ yas, West. It is not necessary to assume that these deities were introduced from India together with Buddhism. It is more likely that the names represent an instance of mutual influence between pre-Buddhist Tibetan and Indian mythology. The name Don grub, which corresponds exactly to the Indian Siddhartha, was not necessarily introduced with Buddhism. Siddhartha was a common name in India long before Buddha’s time, and may belong to a deity similar to Don grub and Don yod grubpa of Tibet. There are also four kings of the four quarters, who correspond more closely to their Indian equivalents, and may therefore have received from India; but even these have nothing to do with Buddhism. To these the deities mentioned above, they belong to the four quarters, and to nothing else in the gling chos.

7. The Tree of the World.—It is called the ‘king-willow’, or the ‘far-spreading-willow’. It has its roots in Yefo (the moon), its middle in earth, and its top in s’Tang lha. It has six branches, and on each branch a bird with a nest and an egg. On the first branch there is the huge bird Kyung with a golden egg; on the second, the wild eagle with a turquoise egg; on the third, the bird ‘white-head’ with a pearl-white egg; on the fourth, the eagle ‘white-kidney’ with a silver egg; on the fifth, a snow-plumpous with a coral egg; and, on the sixth, the white falcon with an iron egg.

8. Outline of the Kesar-saga.—

(1) Prolegomena to the saga; the creation of the earth. The ‘boarfather and his wife’ sow some seed which grows into a huge tree, the fruits of which are gathered into a barn. There the fruits became changed into worms, which eat another until one huge worm is left. This worm becomes the child Dong yam mina. The child kills six agus with nine heads, and builds the world (gling) on top of the body in seven days. Long yam mina is married to eighteen girls, to whom are born the eighteen agus. The agus, eager to gain riches, start for the castle Pachal dpal dongs. Agu dPalle arrives there first of all, receives the riches, and bears the prophecy about what will happen in the course of the Kesar story.

(2) Birth of Kesar.—Agu dPalle assists the king of heaven in his fight with the devil, in the shape either of a bird or of birds. He is allowed to seek a boon, and asks that one of the three sons of the king of heaven may be sent to the earth for him. All the sons are asked, and Don grub, who is the oldest in spite of his youth, decides to go. He dies in heaven, and is reborn on earth as the giant Oog bzung lma. The name Kesar is spelt in full sge-yar, and is said to have been given with reference to this story; it means ‘reborn ones’; the conception arises from Oog bzung lma’s eating a hallucinate, and the child is born
through the ribs. It is a most ugly shape, but at pleasure exchanges this for a beautiful shape, with sun and moon as attributes. The tritower among the agus siru, and they are unceasingly affidavit to the throne of the agus, but Kesar wins his affection by their skill in games. His parents are disgusted when they see this woman's shape, and treat her with contempt. He runs away, and ábrugumra has to seek him. She is pleased to be called the youngest, but Kesar throws it all away and sends balls and rain. Her parents say that their daughter will be given to him who brings the skin of this huge yak Kur (Kur is a mountain). The girl brings a woe of the bird Nyima khyung hyung (this bird looks almost like a parrot, and only Kesar succeeds). Now he is accepted as son-in-law, and the wedding is celebrated. (Here Kesar is praised even in the Inventor of firearms.)

(1) Kesar's victory over the dragon. After religious preparations Kesar decides to start for the north to kill the devil. He opens and closes three of his own locks; there are also three locks accompanying him, but the queen of heaven sends her back. In the castle of the devil he finds a girl in an iron cage, whom he delivers. They have an enjoyable time together, until the devil returns. Before his arrival Kesar is hidden in a pit which is difficult to see and the trade of the smith. At a tournament, the first which presences the smell of a human being, and although his book of magic assures him of it, he is soon surrounded by the contrary of the book of magic. Then the dragon is dug out again and kills the devil. The girl gives Kesar the food and drink of the blettter, showing that, in consequence of this he found, three, the land of ábrugumra, and everything.

(2) Departure of the king of Hor.—Because Kesar does not return, the king of Hor starts to carry off ábrugumra. The tritower among the agus sits on the throne of ábrugumra, and the other parts of the castle are his电阻. The most plausible among the agus is the youngest, ÆBu dam lam cut. ábrugumra does not desire this, while she herself is quite a stable, but she is discovered and carried away. She begins to love the new lord and it is evident that the youngest dam lam cut makes an unsuccessful attempt to retake her, but he is killed through the treachery of ábrugumra and the tritower among the agus. (This is the Sigfried story.) Kesar sends two messages to his beloved women and leaves his adventure spring sets in.

(3) Return of the king of Hor.—The road to Hor, with its many cela, is full of vicissitudes. The First day is spent on a fox, then he gains the service of a dwarf. There is a door of rock which opens and closes of its own accord; there are stones flying about between heaven and earth; and the watchmen of Hor, who are killed in the same manner as Sasan killed the Philosophers in his castle, give him the address, and pretend to be the son of the smith of Hor. He is accepted after some difficulties, and the trade of the smith in the castle a tournament shows his superior powers, and gains the victory in every contest. He is therefore sent with a force against the approaching agus of gliding. He destroys his followers from Hor, and sends the agus home again. He compels the smiths to give him the fabrication of an iron chain, which is to be thrown on the top of the castle of Hor. When it is finished Kesar has the castle of Hor between the hands of his followers, and kills the king of Hor, and rages ábrugumra. On their way back to gling, ábrugumra's children, whom she had borne to the king of Hor, are offered to the door of gliding to induce it to open. In gling, ábrugumra is first punished for her treachery, then she is restored to her former position, and another wedding is celebrated.

(4) Kesar's journey to China.—(The Tibetan word for China—ropes say—means 'the black expanse'). Kesar preparations so entire until the castle of the king of China falls to pieces and the king of China becomes ill. Kesar is entreated to go to China and heal the king. He sends the tritower agus, Khram thung, in his place. Then he starts himself. The journey is one chain of obstacles (ice and snow, lakes, an ogre and an agus, etc.). All are overcome, and on Kesar's approach the king of China becomes better. Now he refuses to bear his word, and gives Kesar his daughter (Yui, dker mo chenmo). But the girl runs away with Kesar, who, in the end, is killed by the ogre. Then the ogre carries another girl, who is the second. ábrugumra begins to see that he does not mind much. He escapes in the shape of a fly, goes home and founds the land of China. In the leprosy (even apparently). The tritower among the agus has meanwhile gone back to gling, turned ábrugumra out of the castle, and seized the throne. He is chased, seduced, and turns happiness with his two wives. The leprosy in China is stopped by another journey to the same country, that is, to that country.

(5) Epilogue to the Kesar-saga; the story of Kesar's boy.—Kesar and ábrugumra have a boy by nature, born of the woman which was given to Pino (or Phymi?) yseram, but the ogre ábrugumra carries this girl off. ábrugumra has to seek a new wife, which he finds. He is now recognised, because the dogs, horses, and other domestic animals included in this way under him. Before the agus have succeeded in killing him, they are invited by Pino yseram to a feast. On this occasion the girl places nine fry-
even called, in historical works, a suitor to the white gālōma. (3) There can be hardly any doubt that the system of colours as we find it in the gāling chos has influenced the pantheon of Lamasism with its white, red, blue, green, yellow, and golden-faced occupants. Still, it cannot account for all the different shades of colours. Some of them were probably introduced from India. (4) Most of the deities of the gāling chos, dilānpo (dragons) included, have been incorporated into the pantheon of Lamasism, where they have to be satisfied with an inferior rank.

12. gāling chos and Bon chos.—The gāling chos was perhaps not such a pure religion of nature as it appears to have been from the preceding pages. It probably had its dark side of superstitions and sorcery. This dark side seems to have had its development down to the present day in the garb of the Bon chos.

13. Sacred numbers in the gāling chos.—Holy numbers in the gāling chos are 3, 7, 8, and 18. But it is remarkable that, whilst the first three of these numbers are quoted without a following number, the 18 is often followed up by 19; e.g., 'They dug a pit of 18, 19 yards.' There appear to have been from 16 to 18 such numbers in the pantheon, as the sun of 12-7, the months of the year plus the days of the week.

14. Animism in the gāling chos.—Here we may mention the following four gods: 1. Kyung gyung phor, the wind; stang char siltun, the rain; sengge dbarmon yul ralcan, the glacier; bya Kyung drung nyima, (apparently) the sun; byamno dbarmon, the moon; bya so mig damar, the morning-star; yom spirito living in rocks and trees. It is remarkable that several of these personifications are mentioned together with the representatives of the animal world. Some of such representatives are: umgang rager mig, for fishes; bya rgyag rgyado, for birds; fyang byung kiha dmar, for horses; srong byung roppo, for yaks.

15. Festivals of the gāling chos.—(1) The Lo rser, or New Year's festival. It is the festival of lamps and lights. Pencil-cedars are used for the decoration of houses. There are horse-races, and a goat is offered before a white tha tho (altar of the gāling chos). The heart is torn out of the living animal and offered to the tho. In the monasteries mask-dances are held, which were probably intended originally to show the victory of the coming spring over the winter. Only at Lhemis do the mask-dances take place in June, perhaps as a last remnant of a former festival to celebrate the highest point reached by the sun. (2) Storms pho chen. This is the spring festival of driving out winter. At Khaltset a clay figure of human shape is carried outside the village and destroyed there. At other places the spirits of winter and disease are banished into magic squares of sticks and strings (sdomo) and destroyed outside the village. (3) The Keser-festival. The festival is called 'Kesar-festival' only in Upper Kanawār. In Ladakh it is called māndha pho ni, 'arrow-shooting.' It is celebrated in spring. The gāling gods are played and sung; and the boys amuse themselves with arrow-shooting. There are processions round the fields to bless them, the tho tho (altars) are decorated with fresh twigs, and pencil-cedars are burnt. (4) The Ṣrub tho, or harvest festival. In Skyurubchan the boys dance with poles covered with fragrant alpine flowers. Offerings of grain are carried to the monasteries. The dates of all these festivals are fixed by the lamas, and the lamas take part in them.

16. The names of the gāling chos.—In the course of this article some of the names of the gāling chos are given with their English translation. The author has not ventured to translate all these names, because scholars are at variance with regard to the meanings of certain of them. In the names of the eighteen aqua there is always contained the distinguishing mark of the aqua which forms its head; thus in no. 4, kha rgyan means 'old month,' i.e. a month surrounded by a white beard; in no. 1, ru skyes means 'horn-producer,' or goat. As for the group of seven aqua, there is always contained the word 'heroes of such folk-lore as, e.g., 'Sōchhe kommen durch die ganze Welt,' in the name of no. 4 the ability to see clearly is indicated; in the name of no. 5, the ability to hear clearly is expressed as well. There are certain names occurring in the gāling chos which are not of Tibetan origin; thus in the word sengge in the name sengge dbarmon, 'glacier,' we have the division into the turquoise locks, the personification of the glacier has something to do with the Indian word sīňha. In the name of the smith Hemis, who teaches Keser, the first part hem seems to be the Indian word hema, 'snow.' We find the word hem in the sense of 'snow' also in the name Hembas, which means 'snow-falling,' and such Indian words as rākṣesha, 'monster,' Sīṭāram, Sītā and Rāma, and Indra occur occasionally in the gāling chos—which shows what an important part India has played in the shaping of certain tales of this ancient religion.

LITERATURE.—It must be admitted that all the following publications are not found in the present author's hands. It may, however, be pointed out that in no case did he, with the text or translation of a native; he always employed natives to record them from the dictation of such other natives as were famous for their knowledge of this ancient literature.

LITANY.—A litany, according to the modern use of the word, may be described as a devotion consisting of a number of short petitions or invocations, to each of which a response is made by the people. It may be either said or sung. In either processional or stationary, it may be liturgical, i.e. connected with the celebration of the Holy Eucharist, or independent, and it may be for regular use or used only on special occasions. Proces- sional psalmody which is not of the responsive form is not now usually called a Litany, but at one time the word was applied to anything sung in procession. The modern use of the form is the result of a long and somewhat complicated history. It is especially necessary to trace the growth of two forms of devotion which were originally distinct, but which have coalesced to form the modern litany. These are the liturgical responsive prayer and the procession.

1. Earliest use of the word.—The word ārāveda is not common in classical Greek, and it seems to be used in the quite general sense of a supplication. The earliest mention of the word in connection with Christian services appears to be by Basil (c. A.D. 375; Ep. civ, "ad Cler. Neoces. [Opera, iii. 311 D].")

Objections had been raised to some particular words that had made. 'These things were not,' the objector says, 'in the days of the great gāling glu' (Ep. Gregorii, Aen. ix, 12). 'Neither,' replies Basil, 'were the litany which you now use. And I do not say this by way of accusing you; for I would that you all should live in tears, and in continual repentance.'
These litanies were, therefore, prelatical devotions of some kind, but there is nothing to indicate their precise character. The word ῥυγατίον was used in a similar general sense in the West.

2. The Liturgical Litanies. The earliest description of Eucharistic worship is that contained in the Apologies of Justin Martyr (A.D. 148). Here common prayers are spoken of 'for ourselves . . . and for all, in place,' immediately before the Kiss of Peace and the Oeclectory, and therefore after the lessons and homily (Apok. i. 65). Whether these already took the form of the later litany there is nothing to show, and the response 'Lord have mercy' was the earliest. And there is no further detailed information about the form of service until the liturgies which date from about the end of the 4th century. Here, however, the liturgical litany is found in the Donian, which has preserved in the Eastern Church ever since. It consists of a number of short petitions offered by the deacon, to each of which the people respond 'Kyrie Eleison,' and the usual place for it is after the Gospel, but this is not invariably. Some litany of this kind appears to be almost universal in the Eastern liturgies. Many examples will be found in litanies of Byzantine and Western, esp. pp. 4, 471, 521 for the most ancient forms, all belonging to the 4th cent.). The usual name for these devotions in the East is ινθεταί, but καιτημπάς (lit. 'stretched out,' i.e. the earnest prayer), or καιτημπάς λογία (the earnest prayer) show when Kyrie Eleison was first used in the services of the Church, but as its use is almost universal in the Eastern liturgies it must have been very early, and the expression is so natural, and would be so easily suggested by passages of the OT, that no explanation of its introduction is necessary. It was also in use among the heathen, as was pointed out by O. Gamurrini, (Ep. x. 12, 1888), p. 47; and it mentions the Kyrie as the response made at Jerusalem to the deacon's list of names, and it appears in the litanies mentioned above as belonging to the 4th century.

3. The Liturgical Litanies in the West.—It is probable that the Western liturgies originally contained litanies closely similar to those of the East. This was certainly the case, as far as can be judged from the liturgies, of the Gallican (or non-Roman) type. The extant forms bear the closest resemblance to the Eastern litanies, and may in some cases be translations from the Greek (see some examples in L. Duchesne, Christian Worship, pp. 192-201; F. E. Warren, Liturgy and Ritual of the Celtic Church, p. 229). There is little doubt that there was originally a litany of the same character in the Roman liturgy also, and that the Kyries at the beginning of Mass are a relic of it. There is also another place in the service which should be noted. After the Gospel the priest says 'Oremus,' but no prayer or response follows; and this was so late as the 8th cent., as appears from the Ordines Romani. Some prayers had evidently fallen out of the service even at that early date, and these were undoubtedly the Prayers of the Faithful, which occur in this place in the Eastern liturgies, and which are still preserved in the Roman rite in the prayers used on Good Friday. Probably these prayers dropped out of use because they were transferred, in substance at least, to the litany which came at the beginning of the service. St. Gregory the Great (Ep. ix. 12), when speaking of the use of the Kyrie, mentions other devotions that accompanied it, and which were no doubt a litany. In the present service only the Kyrie remains, and this is curious because the Kyrie was probably an addition made to the original litany from the East, so that it would seem that the original prayers have disappeared, whilst the Kyrie remained. There is nothing to show when the Kyrie was first used in Rome. It was not used, as in the East, as the regular response to the petitions, but at the beginning and conclusion of the Mass. It was associated with Christe Eleison, which was never used in the East. Gregory says:

'We have neither said nor do we say Kyrie Eleison as it is said among the Greeks, because the Greeks say it together, but with us it is said by the clerks and the people respond; and Christe Eleison is said as many times, and this is not said at all among the Greeks' (loc. cit.).

The Kyrie was, therefore, in use in Rome in Gregory's time, but for how long before that we do not know. The Council of Yavnin (c. iii. (A.D. 519)), in ordering its use in the province of Arles, implies that it had been introduced into Italy at a not very distant date. The rest of the liturgical litany disappeared, as has been said, from the Roman service at some unknown date, but that the Kyrie was still regarded as part of a litany is shown by the fact that in the 8th cent. the Kyrie was omitted in liturgy, and the expression "Kyrie Eleison" was added to the responses of the palms, and the people gathered together. Thus there arose a double derivation of the word 'collect' (q.v.).

4. Processions of the Early Church.—Processions became common in the Western Church at about the same time as in the East, but their origin appears to have been independent. They were probably at first transformations of pagan processions, the Roman festival of the Obonalia, intended to secure the crops from blight, was kept on the 25th of April, and the procession called the Litania Major, which took place on the 14th of May, seems to be a direct descendant of this. The other actual routes of the heathen and the Christian processions were nearly the same. The institution of the Greater Litany of St. Mark's Day has been generally ascribed to Gregory I., but it was prob-
ably earlier, and perhaps dates from the pontificate of Liberius (352-366). The Litany ordered by Gregory on St. Mark's Eve, A.D. 490, in order to avert a pestilence, seems to have been distinct from the Litany Major. Another ancient Roman festival, the Ambarvalia, was observed on three successive days in the month of May, and also had the fertility of the fields as its object. There was a close resemblance to the Rogation processions on the three days before Ascension Day. These are said to have been instituted by Mammert, bishop of Vienna, at an early date, and were revived in the occasion of various public disasters (Sit. Apoll. Ep. xiv. 14, v. i. 1; Gregory of Tours, Hist. Franc. ii. 54); but such processions had probably been practised at an earlier date, and were only revived on this occasion. These rogations or litanies, called Litanies Minoræ to distinguish them from those of St. Mark's Day, spread rapidly through Gaul, and were adapted and reorganized at Rome by Leo III. (795-816). Both the Greater and the Lesser Litanies were ordered to be used in England at the Council of Cloveshoe (A.D. 747 [A. W. Haddan and W. Stubbs, Councils and Ecclesiastical Documents relating to Great Britain and Ireland, Oxford, 1869-71, iii. 305]), it may be noted that in the decree of this council, and elsewhere, rogatio and litania are regarded as equivalent terms ('litanie, id est, rogationes'), and that both embrace all the invocations connected with those days. There is no allusion to responsive prayer, and the only reference to processions is a mention of reliefs being carried about. The words 'litany' and 'rogation' were still used in quite a comprehensive sense.

6. Medieval litanies.—Hitherto the liturgical litanies in the Mass and processions have been regarded as distinct. But it is easy to see how things would coalesce. There were various kinds of singing which had always been used in processions, but that particular form of responsive singing in which the people answer with an unvarying refrain was so naturally adapted to the processional, owing to the ease with which the refrain could be taken up by a moving crowd, that litanies of the type of the Eucharistic etene came to be very commonly used in processions not only in the Mass, but on all sorts of occasions. And so the word 'litany' came to mean a form of prayer with a response, either processional or stationary, and either regular or occasional. As usual, the most conspicuous and popular, the procession litany came to be used as almost an equivalent term, and the book which contained the medieval litanies was called the Processional. The litanies in most common use also assumed a regular structure. They consisted, as a rule, of the following parts: (1) the Kyrie Eleison, alternated with Christe Eleison; (2) a number of invocations of saints by name, with the response 'Ora pro nobis'; (3) a series of short prayers against various evils, called Deprecations, with the response 'Libera nos Domine'; (4) prayers on behalf of various people and for various objects, called the Supplications, with the response 'Audi nos Domine'; (5) the Agnus and the Kyrie, and a collect. Such litanies became very popular, and Cardinal Baronius estimated in 1601 that there were at least 200 different forms in use. The invocations of the saints just mentioned formed a conspicuous part of most of these litanies. It is not clear when these invocations were first introduced; it was certainly before the 8th cent.; they are to be found in the Stowe Missal, and in a litany which probably belongs to the 8th cent. printed in Warren, Lit. Obit. Ch. (p. 178), but they may be much older. Some of the later litanies contain a string of allusions to the saints, and it has been suggested that these lists of saints originally grew out of a heathen formula recited by the Pontiff Maximus, but there appears to be little or no evidence for this.

It has been noted that litanies, in the sense of responsive prayers, were often, though not necessarily, sung in processions, and so were commonly called processions. On the other hand, devotions sung in procession were often called litanies even though they were not prayers. Psalms and anthems were also frequently sung. For instance, Bede says (III. i. 25) that at the first meeting of St. Augustine with king Ethelbert the missionaries approached the king in procession, bearing the image of our Lord upon the Cross, and singing litanies; and then he specifies what they sang, and it was clearly an anthem, and not a litany in the usual modern sense. Again, the processions before High Mass on Sundays began during the Middle Ages, a very popular and conspicuous devotion, but the psalmody was not usually in form a litany. In the 8th cent. at Rome it was so, or it was regarded as such; for, when there was a procession, as has been mentioned, the Kyrie at the beginning of Mass was omitted. Later on the Kyries became a fixed part of the service, and the processional psalmody took a different form. From the 12th cent., however, there was a tendency to use the term 'procession' of whatever was sung in procession, and to confine the term 'litany' to the Kyrie, the Greater and Lesser Litanies of St. Mark's Day and the Rogation Days, and other similar forms.

7. Litanies in the Roman Church.—As has been mentioned, a large number of litanies came into use in the late Middle Ages, and the decree of the Holy Office, dated 6 Sept. 1601, Clement VIII., forbade the use of any litany except that usually known as the Litany of the Saints, which had been included in the full rite of Mass, and the Litanies of Loreto had already been sanctioned in 1587. All others were forbidden to be used without the approbation of the Congregation of Rites. It is probable that this decree was never very strictly enforced, but it was renewed in 1727 and in 1821. A decree, however, of the Congregation of Rites, dated 23 April 1890, allowed the private use of litanies sanctioned by the Ordinary. The Litany of the Blessed Virgin or of Loreto mentioned above was probably used in some form at a very early date at Loreto, but in its present form it perhaps dates from the early 15th cent., and the earliest printed copy known is dated 1476. Another popular litany was that of the Most Holy Name of Jesus. This was perhaps also composed in the early 15th cent. It was not included in the decree of 1601, but later on it received some sanction from the Congregation of Rites, and it was finally allowed by Pius IX. in 1852 for certain dioceses, and for universal use by Leo XIII. in 1886. The Litany of the Sacred Heart was sanctioned in 1899.

8. The Anglican litany.—As the procession was a popular form of devotion, it was natural that it should be one of the first parts of the public services to be translated into English. The Prayer Book of the 15th cent., books of devotion for lay people, commonly contain a litany in English. The form now used in the English Church appeared in 1544, and it is no doubt the work of Cranmer, and perhaps the happiest example of his liturgical style. The occasion of its production was given by public calamities. In 1543 the harvest was bad, and Henry VIII. wrote to Cranmer to desire that "regations and processions" should be made. In the following year there was war with France and Scotland, so that the English Litany was produced in similar circumstances to those of the early litanies mentioned above. It was a string of appeals intended for regular use, and was printed in the Prayer Book of 1545 and in the first English Book of
Common Prayer of 1549. This litany was constructed with great care, and several sources were used. The chief portion was taken from the Sarum Rogationtide litany, and the main structure of this was adhered to, but the invocations of the saints were greatly shortened, being reduced to three clauses, which were themselves omitted in the First Prayer Book. Passages were also introduced from a Sarum litany for the dying, called Commendatio Animae (also omitted in the First Prayer Book), and parts of the Western litany. Supplications were taken from a medieval German litany which was revised by Luther in 1529, and published in German and Latin. This litany was included in the Consultatio of Archbishop Hermann of Cologne, and so came to England, and it was used for the litany in Marshall's Prymer of 1535. It must be noted that the English litany falls into two main sections: the first ends with the collect that follows the Lord's Prayer—a collect being the natural ending of a litany. What follows is a translation of suffrages which were added to the Sarum litany in time of war. The reason for their insertion was no doubt that war was going on in 1544, but they were appropriate for use at other times, and were retained. These suffrages are preceded by the antiphon and Psalm verse which have been set to music and printed for the first Sunday in the month. Unfortunately, the accidental omission of the Amen at the end of the collect has led to the ridiculous custom of using the antiphon ("O Lord, arising in great compassion to the collect.") until 1601 the conclusions of most of the collects were not printed in the Book of Common Prayer: in the revision of that year the A men were printed, but most of the endings were omitted by mistake.

Although in his adaptation of the old litanies Cranmer added little or nothing of his own, he made a noticeable change in the rhythm: the old petitions were short and simple; Cranmer, either with a view to compression or, more probably, because he preferred sonorous periods, grouped several petitions together, and enriched them with epithets and synonyms. For instance, the Deprecations of the Sarum litany begin thus:

* From all evil—Deliver us, Lord.

From the crafts of the devil—Deliver us, Lord.

From thy wrath—Deliver us, Lord.

From everlasting damnation—Deliver us, Lord.

In the revision this becomes:

* From all evil and mischief; from sin, from the crafts and assaults of the devil; from thy wrath, and from everlasting damnation—Deliver us, Lord.

At about the same time Cranmer intended to translate other processional hymns, such as 'Salve Festa Dies,' for he wrote to Henry viii. in 1545 to say that he did not intend to do so. The attempt was probably relinquished because he became aware that he did not write so skillfully in verse as he did in prose.

The English litany has remained substantially unchanged since its first appearance in 1544. In 1549 the invocations of the saints were omitted, and in 1559 a petition about 'the tyranny of the Bishop of Rome.' 'The grace of our Lord' was added at the end in the same year. In 1601 the words 'and rebellion,' 'and schism,' were added, and 'Bishops, Pastors, and Ministers of the Church' was changed to 'Bishops, Priests, and Deacons.' The collection of collects at the end of the litany was altered more than once, and most of them were removed to other places in the Book of Common Prayer. This litany was intended to be used for all the purposes for which the ancient litanies were employed. It was issued for occasional use at a time of distress, and was sung in procession in the usual manner. Later on royal injunctions ordered it to be sung kneeling before Mass, and this became the usual, but not universal, practice. The present rubric allows either the stationary or the processional use. It was also related to the Rogationtide processions, being derived mainly from them, and it took the place of the Eastern mystery as a preparation for Mass. It was ordered from the first to be said on Wednesdays and Fridays, the ancient 'Station' days, on which especially Mass was anciently said, and, although its use on Sundays was not specified in the rubric until 1552, this was probably taken for granted from the first. Unfortunately, this special characteristic of the litany as a preparation for Mass was obscured later on, partly by the placing of the 'O Lord, arising in great compassion to the collect.' of 1601, which directs it to be said 'after Morning Prayer.' This made no practical difference so long as Matins, Litany, and Mass continued to be said in processions in their natural order. In recent years it has caused the litany to be regarded as a sort of appendage to Matins, and in many churches has led to its being altogether separated from the Mass. Lutheran practice, as described above, Luther published a revised edition of a mediæval litany in German and Latin in 1529. The original edition does not appear to be extant, but the litany was printed in the Psalms-books, and it was used in both languages for some time. The use of the Latin form seems to have died out in the 17th cent., and the German form, although it continued to be used on various occasions in North Germany, never became a popular form of devotion. The Calvinistic bodies objected to this form of service altogether, and the litany was one of the parts of the English Book of Common Prayer which were most disliked by the Puritans.

LITERATURE (American).—The literature of the aborigines of America may conveniently be treated under two topics, viz. purely autochthonous literary expression, and works produced under Caucasian influence. 1. Autochthonous literature.—This group in-
LITERATURE (American)

In the Iroquoian creation myth, there is a somewhat subtle humour in the description of the fall of Tiitawentitash, from the Sky-world to the chaos of watery waters:

'So now, you must be contented to fail. Her body was falling, some time before it was emerged. Now, she looked, seemingly, that there was light below, of a blue color. She looked, and then seemed to be at a lake where she expected she was falling. There was nowhere any earth. There she saw many ducks on the water, all of them, one and all, of all their kinds, floated several about. Without interruption the body of the woman-being continued to fall.'

Now, at that time there was a waterfowl called the Loon shouted, saying:

'Do ye look, a woman-being is coming in the depths of the water, her body has got through the surface it is even so.'

Now, verily, in a short time the waterfowl called Bittern said:

'It is true that ye believe that her body is floating up from the depths of the water. Do ye, however, look upward.'

All looked upward, and all, moreover, said:

'Verily, it is true.'

With this may be contrasted a fragment of the Navaho myth of the erection of the sun (RBEW [1898–97], pp. 275–277), which is not without a touch of prudence:

'The people then said, 'Let us stretch the world'; so the twelve men at each point expanded the world. The sun continued to rise as the world expanded, and began to shine with bright heat, but when he reached the meridian the heat became great and the people suffered much. They crawled everywhere to find shade. Then the voice of Darkness went four times around the world in the sun at the cardinal points to go on expanding the world. 'I want all this trouble stopped,' said Darkness; 'the people are suffering and all is burning; you must continue stretching.'

The more civilized Indian peoples of Mexico, Central America, and Peru show a corresponding advance in the degree of consciousness. The Aztec records written by B. Sahagun (Historia general de las cosas de Nueva España, Mexico, 1529) are dignified and ornate, and often imbued with a sombre and haunting beauty. The assemblage of these more advanced people has comprised a considerable body of legends, chronicles, oracles, spells, calendrical computations, laws, etc., which are preserved from the fragments which are preserved, while the existence of a peculiar literary literature is probable. Brinton is of the opinion that the Central Americans possessed an autochthonous dramatic art (see Library of Aboriginal American Literature, no. III, ‘The Glieregis, a Comedy Ballet in the Nahual-Spanish Dialect of Nahuaquen, Philadelphia, 1885’); and Clements Markham regards the 'Ollanta' as an example of a pre-Spanish dramatic literature (see Markham, The Incas of Peru, London, 1910, which contains a translation of this drama). For this literature of the semi-civilized nations see the art: ANDREAS, CELIAN BALDWIN, EDDIE BULLOCK.

2. Literature produced under white influence.—This class consists of (1) works in the native languages, and (2) works by American Indian authors in the European languages. Some of the first type include translations of the Bible and other works by white missionaries and teachers, and native records of native ideas made after a system of writing had been acquired. Of the latter, perhaps the most notable instance is the Cherokee literature in the native alphabet invented by Sequoyah. A large number of periodicals—some under native, some under missionary, editorship, some in the native tongues exclusively, some part English, some wholly English—have appeared or are now appearing for the expression of American Indian ideas. For the growing body of aboriginal records—chiefly myths, rites, and tales appearing in the Reports of the American Bureau of Ethnology and elsewhere special modifications of the Roman alphabetic signs have been invented and systematized for the expression of the native tongues.

(3) A certain number of Indians or part-Indians have distinguished themselves in their literary mastery of European tongues. The names of Garcilasso de la Vega, Lucio Sarmiento de Acosta, Fernando de Alva Ixtlilxochitl, descendant of the caciques of Teesco, are notable as authors for the native customs and histories of Peru and
LITERATURE (Babylonian).—Our knowledge of Babylonian-Assyrian literature has been gained chiefly by excavations. Only a few monuments are known that contain cuneiform inscriptions of the Achaemenian kings, from the study of which the decipherment of the Babylonian script and language started. The names of the kings and their deeds are inscribed on slabs, prismoids, cylinders, and various smaller objects of art inscribed with Babylonian legends are, as far as hitherto disinterred, not very numerous in comparison with the thousands of clay tablets which served the ancient Babylonian and Assyrian priests to record the deeds of the rulers of those Empires, to chronicle their historical events, to fix the common prayers, incantations, and religious rites, to place the emblems of their superstitious belief in certain systems, and to transmit very ancient myths and legends to posterity.

As a matter of fact, these documents are not thoroughly perceived in the main language of Babylon, the Semitic tongue. It is now well known that in the third millennium before our era the fertile alluvial plain of the twin rivers enclosing Mesopotamia, the Euphrates and the Tigris, was inhabited by a non-Semitic race called the Sumerians, to whom must be attributed the primitive culture of that country, the building of its earliest cities, the first works of art in Western Asia, and the invention of the cuneiform script. Some months by order of the king, all those important are the documents of a correspondence carried on in the middle of the second millennium between Sumerian territory, and how the process of amalgamation between the two races developed, cannot be yet explained.

In comparison with other documents, the Babylonian-Assyrian literature is entirely preserved, and the Cuneiform inscriptions are carefully preserved and handed down to posterity, just as in medieval and modern times the Latin language is treated and used as the language of the Church.

Sumerian literature is dealt with in this art, in so far as it forms part of the Babylonian-Assyrian incorporated therein. Babylonian literature actually begins in the time of Hammurabi, whose inscriptions (with one exception, and whose famous collection of laws (see LAW [Babylonian and Assyrian]) are conceived in pure Semitic Babylonian. Before entering into a detailed enumeration of the various branches of the literature, attention must also be called to the fact that the difference between the Babylonian and the Assyrian languages consists merely in dialectic varieties, so that Babylonian and Assyrian literature, practically speaking, are to be considered as identical, and are differentiated only by the respective time of their origin during one of the great monarchies of Western Asia—the Old Babylonian Empire, the Assyrian Empire, and the Neo-Babylonian Empire.

The history of the ancient East can now be authentically reconstructed from the historical inscriptions of the Babylonian-Assyrian literature. To the great kings of those monarchies the gaining of immortality by means of a careful tradition of their exploits, their successful campaigns, and the building operations appeared most desirable, and so they caused the records of those deeds to be inscribed on a number of clay prisms, on cylinders and tablets, and on the animal colossi at the entrances of their palaces. The great extent of such texts is illustrated by famous bilingual tablets on which the events of a single year (714 B.C.) are recorded so minutely that an English translation of the text would fill five columns of the London Times. Long prayers supplement the historical contents of these inscriptions, interspersed with the enumeration of the titles and abilities, virtues and religiousness, of the royal personages therein glorified. As a rule, the contents are arranged according to the years of reign or the campaigns, in chronological order, followed by an account of the building operations and, in some cases, of the hunting matches of the royal kings, while at the end of the inscriptions, the blessing of the great gods is invoked upon a successor preserving the document, and their wrath upon its destroyer. To the historical documents must also be assigned the branch of the Sumerian literature dealing with public affairs. It is from an extended correspondence between Hammurabi and one of his highest officials that an exact knowledge of the reign of the first Semitic ruler in the united Babylonian kingdom is gained. It is his personal care for the welfare of his vast dominion, the building of cornhouses and dykes under his auspices, the regulation of the temple-taxes, and the use of intercalary months by order of the sun, that make the importance of the documents of a correspondence carried on in the middle of the second millennium between

Mexico respectively. To these might be added the names of Tezozómoc, Chimalapaal Quauhtlehuanitzin, Nahua Pachac, and the Missouri Hernández Arana Xahilis, Mexican and Central American post-conquest chroniclers of native history (see respectively E. K. Kingsborough, Antiquities of Mexico, 9 vols., London, 1875-79; E. C. Simons, Anales de San Antonio Munon Chimalapaul Quauhtlehuanitzin, Paris, 1889; D. G. Brinton, Library of Aboriginal American Literature, 1: 'The Ojibway Ethnology,' 2: 'Mexican Indian Lore,' 3: 'The Calchiques'). In N. America, George Copping (Kaggeyega, 1818-63) was the author of several books, dealing chiefly with his own people, the Ojibwa, while Charles A. Eastman (Oniyes, b. 1853) is the author of essays and stories portraying the native life and ideals of his Siouan kinsfolk.

H. B. ALEXANDER.
the Pharaoh of Egypt, then rulers of the whole civilized world, and the kings of Western Asia, including Palestine, the Phoenician ports, and the island of Cyprus, which have become generally known as the Tell el-Amarna find. Letters, proclamations, petitions, accounts of building operations, and short notes accompanying requisites for war were in constant use down to the end of the Neo-Babylonian Empire, and are of a historical value similar to that of the royal inscriptions mentioned above and various so-called ‘epigraphs’ which were added to the numerous bas-reliefs on the walls of the palaces, illustrating the kings’ campaigns and other achievements.

Assyrian literature in the narrower sense of the word has become known chiefly from the documents preserved in a great Royal Library founded at Nineveh by Ashurbanipal, the last great king of the Assyrian Empire, who reigned from 680 to 626 B.C. and was called Sardanapalus by the Greek writers. This Library, generally known as the Konyunjik Collection, the various portions of which have been studied since the middle of last century for the Trustees of the British Museum by Sir Henry Rawlinson and other English scholars, consists of copies and translations of Babylonian and Semitic Sumerian works, and deals with every branch of wisdom and learning then appreciated by the Assyrian priests, who, by command of their royal patron, collected and catalogued, as it were, and reproduced various texts which had been gathered from the oldest cities and temple archives of the whole land. Recent excavations have in some instances also brought to light a number of hymns and prayers, certain original copies of few fragments of inscriptions which must be attributed to an earlier period than that of Ashurbanipal, and apparently belonged to the mass of original documents from which the copies in the Konyunjik Collection were made; and the same may be said of certain collections of the Neo-Babylonian times, in which, again, copies from the Konyunjik Collection have been found. An exact idea of the literary achievements of the Babylonian-Assyrians, however, can be formed only by a perusal of the contents of the Library itself. Such a perusal yields the following results.

Apart from the epistolary literature, a few drafts for inscriptions, and numerous commercial texts—the last extending from early Babylonian times down to the beginning of our era—Assyrian literature was devoted chiefly to superstitious and religious subjects, the incantations and prayers, and, in close connexion with both branches, to medicine, astrology, and philology.

A large proportion of the documents here concerned deal with the appearance and actions of various animals, and it has been justly remarked that in these inscriptions survivals may be seen of a very ancient animal-cult—reminding one of certain parallels in Egypt—which in later times seems to have been superseded by an exquisitely astral religion. Closely connected with these animal compositions are numerous so-called systematically arranged texts bearing on monstrosities and other unusual features of births, as well as the large collections of documents dealing with the inspection of the liver of an immunolised wether. The movements of various birds, the actions of dogs and pigs, the hissing of a snake, and the invasion of locusts were especially observed for the compilation of such omens.' Another means of divination used by the Babylonians was purification with water, into which a small quantity of sesame-oil was poured, so as to produce the well-known interference-colours, re-discovered by Newton, and certain structures of rings and bubbles, from which the events of the future were predicted. The link between these forecasts and the religious texts must be sought in the medical prescriptions, which were laid down and redacted into a kind of pharmacopoeia. Various diseases, arranged according to the limbs and members attacked, are enumerated in these collections, and the draughts, decoctions, and other therapeutics are described in detail. Mental disorder was attributed to the influence of evil spirits, and on this account the medical texts are frequently interspersed with incantation formule which otherwise constitute a class of literature by themselves. Three or four ‘series’ of tablets containing such incantation-texts, accompanied by directions for the respective ceremonies, have become known to us. They are chiefly directed against the pernicious actions of witches and sorcerers, supposed to be neutralized by destroying the images of these witches, mostly by burning. In the majority of cases the text of these incantations is in the interlinear bilingual style, i.e. in Assyrian and Sumerian; and in several instances it can be proved that the Sumerian original has been taken over from ancient sources, portions of which still exist. On the other hand, it can hardly be denied that the Assyrian Assyriologists have introduced such interlinear texts, using the Sumerian language, then long extinct, in much the same way as medieval monks used Latin. Moreover, even pure Sumerian texts are found. Such Sumerian version are preserved in Ashurbanipal’s Library—a fact from which it may be concluded that such incantations even at his time were recited in the old sacred language. And the same holds good of the psalms also of Israel and Assyria, which are written either in Sumerian only or accompanied, in Assyrian times, by a Semitic version.

Whilst the incantation-texts, however, are mostly preserved as parts of certain literary compositions or ‘series’, the prayers and similar religious documents stand for the most part isolated, and only by their style can they be recognized as belonging to various classes. Of such prayers, for instance, after the ‘lifting of the hand,’ the hymns exhibiting a parallelism of members, the litanies addressed to certain deities, and the compositions showing acrostics may be mentioned as some of the best.

Of special interest among the religious texts are the legends and myths, of which a number of ‘series’ have been discovered. A few of them, as, e.g., the Babylonian Creation Legend and the Deluge Story, have indeed come into the OT, and can be proved to reach as far back as the Old Babylonian period. It cannot be ascertained at present, however, at what time the account of the Deluge was incorporated in a great national epic, the so-called Gilgamesh Epic, which is founded on astral religion and seems to refer to the life in the other world. Similarly the ‘Descent of the goddess Ishtar to Hades,’ an isolated poem preserved in Ashurbanipal’s Library only, appears to depict nature’s death in the autumn and its resurrection in the spring, and the story of Nergal, the lord of tombs, is by his consort Ninkishbandi, Ereshkigal, likewise contains a description of the abode of the dead. Immortality was not granted to mankind, as we learn from another myth, the story of a pious man called Adapa, who, being misled by chance, partook of the fruit of life and the water of life, which were offered to him in heaven.

As has already been remarked, it may be concluded from the Gilgamesh Epic and from other mythological texts that in the Assyrian time at least an astral religion was reigning in the valley of the Eniprates and Tigirs. This appears to be borne out by another branch of Babylonian-Assyrian
literature, viz. the astrological texts. A large composition, comprising at least 70 tablets, is devoted to observations of the movements of the celestial bodies, including atmospheric phenomena, such as thunder-storms, hurricanes, and earthquakes, and to the forecasts taken from such observations and referring to the welfare of the king, the devastation of temples and palaces, the growth of vegetation, and the increase of cattle and the granaries. According to a text of the 1st century B.C. these astrological documents were parallelled by purely astronomical texts, dealing with the heliacal risings and the eclipses of luminous fixed stars and constellations, while of the Neo-Babylonian time documents with astronomical observa-
tions and calculations have been found which bear witness to the highly developed facilities of the later Babylonians for determining the velocity of the sun and moon, the length of the year, and the revolution of the five planets then known.

An equally high standard was attained by the Babylonian and Assyrian priests in grammar and lexicography. These sacred Sumerian incanta-
tion-texts, hymns, and prayers must have early prompted the protectors of religious traditions to collect helps for studying the extinct sacred tongue, and to found a grammar-school for the necessity involved in studying the Semitic native language of these priests as well. Paradigms of verb-forms, lists of synonyms and antonyms, and, above all, large collections of Sumerian ideographs explained according to phonetic principles, comprising hieroglyphic hieratic and thus had been handed down. And the numerous lists of names of animals, stones, plants, and wooden objects, of stars, temples, and deities, afford a clear insight into the wisdom and work of the philolo-
gists, by whom the oldest colleges on earth were founded and literary tradition was first carried on.

Babylonian literature was deeply influenced, as has been shown, by the Median sister, the Assyr~rions, in developing it, so as to have played a rôle similar to that played in later cen-
turies by the Syrians who conveyed Greek learning to the nearer East. On the other hand, the cuneiform Babylonian script spread all over Western Asia, and the Hittite and Mitanni nations, the Chaldean tribes, and the Canna~anites appear to have adopted it in one or other form, and certainly be-
came familiar to some extent with the literary documents of the Babylonian people. Babylonian legends found their way to the ancestors of the Israelite tribes, and similar Babylonian documents were also included in the circle of the sacred millennium by the learned priests of the Egyptian Pharaohs. Finally, the late Assyrian omen and astrological texts wandered to the East as far as China, left remarkable traces in the Indian literature, and were transmitted to Greece, where actual transl-
atm of such texts have been found. In this way also Babylonian literature has in the last instance influenced Christianity, and has left its marks throughout medi eval times down to the present day.

LITERATURE (Buddhist).—The sacred canon of Buddhism has been handed down in two forms. One, written in Pali and preserved in Ceylon, Burma, and Siam, contains the doctrine of the older school, called Hinayana ('Little Vehicle'; see art. HINAYANA), the chief aim of which is to attain arhat-ship or the release of the individual from suffering. It is the canon of one sect only. The other, the Sanskrit canon, was worked out later, is extant in any complete example, but is known only from fragments found during recent years in Central Asia by M. A. Stein, A. Grünwedel, and A. von le Coq. The latter is mainly in the Buddhist Sanskrit texts, as well as from Chinese and Tibetan translations. The chief texts of the Sanskrit Maha-sarvastivadins, who belonged to the older Buddhism, were translated from Sanskrit into Chinese in the years 700-712. This canon agrees largely with the Pali canon both in wording and in arrangement. But there are also various divergences. These are to be explained by the process of handing down a common original in the Magadhi dialect, from which the Pali canon was derived in one part of the country, and the Sanskrit canon, later, in another. While the other sects had no complete canon, each regarded as specially sacred one or more texts, which either incorporated parts of or replaced a theoretically acknowledged canon. The great bulk of these Sanskrit Buddhism texts belong to the sect of the Madhyamika or Mahayana ('Great Vehicle'; see art. MAHYANA), the chief aim of which was the attainment of the condition of a Bodhisattva, or future Buddha, who brings nirvana within the reach of the entire human race.

The forms of Buddhism preserved in Pali and in Sanskrit have commonly been called 'Southern' and 'Northern' respectively because the former prevails in Ceylon, Burma, and Siam, and the latter in Nepal, Tibet, China, and Japan. While this distinction is thus made is misleading, since all Buddhist canonical literature arose in the Northern countries, and has been brought to the South, and the term 'Northern' confusingly refers to the erroneous implication that it excludes the older school of the Hinayana. It is, therefore, more appropriate to speak of 'Pali Buddhism' and 'Sanskrit Buddhism.' The languages in which these texts were composed require to be more precisely defined. Pali is the sacred language common to the Buddhists of Ceylon, Burma, Siam, and Cambodia, but Pali MSS are written in the four different alphabets of these countries, while it has become the regular practice to print European editions of Pali texts in Roman characters. The Pali language in which the texts have been handed down cannot be identical with the dialect in which the canon of the 3rd cent. B.C. was composed; the latter could only have been the language of Magadha (Bihar), in which Buddha first preached and which must have been used by the neophytes of Pataliputra who put together the canon. Traces of such a Mahajata' canon may be found in the Pali texts. In this connection it is necessary to note that the titles or designations enumerated in Aloka's Baitar inscription appear in a Mahajata form. But Pali MSS from the Magadha region are never, from inscriptions, literary works, and grammarians, nor is it identical with any other dialect. It is, in fact, an exclusively Buddhist literary language, which, if anything, is the result of a mixture of dialects. Its basis is, however, in all likelihood Magadhi, a conclusion supported by the fact that even identifies Magadi and Pali. The language of the other canon is either correct Sanskrit or a Middle Indian dialect which, approaching to Sanskrit, is best termed 'mixed Sanskrit' (formerly as a rule called the 'Gauda dialect').

No work of Buddhist literature goes back to Buddha's time, but much contained in the canon may very well hand down the words spoken by the Master, such as the famous sermon of Benares, especially if we consider the tenacity of the verbal memory in Indian tradition. Almost the whole of the earliest Buddhist literature consists of short collections containing speeches, sayings, poems, tales, or rules of conduct, which are included into larger collections, called Pitaka, or 'basket,' in a manner somewhat analogous to the formation of the sandhi-ta of the Vedas (cf. Hymns [Vedic]). Three such aggregate collections, called the Tripitaka, form the Pali canon.

The canon and commentaries in Afghanistan design must have undergone appreciable changes between then and the time when it was fixed in the 1st cent. B.C. in Ceylon. But thenceforward it has been handed down with great care. Some modifications, indeed,
must have taken place even after the 1st cent., because it is otherwise difficult to account for the numerous contradictions appearing in the canon. Taken as a whole, however, the Pāli Tipiṭaka may be regarded as not very different from the Magadhī canon of the 3rd cent. B.C. For the quotations occurring in the Asoka inscriptions diverge only slightly from the extant text, while the titles of seven texts mentioned in one of these inscriptions and not preserved in the canon might conceivably be those which are found in the extant Sutta-piṭaka. Moreover, the sculptures and inscriptions of the monuments at Sāfāchi and Bhāghat (c. 200 B.C.) afford correlative evidence of the existence of a collection not unlike the extant Sutta-piṭaka. But the earliest direct evidence that the Tipiṭaka as a whole had already assumed its present form is furnished by the Māṇḍāesa-piṭaka, which dates from the 1st cent. A.D. The age and authenticity of the Pāli tradition are confirmed by the Sanskrit canon, which, as already stated, is so closely allied to it as necessarily to be derived from the same original. The texts which the sacred literature comprises will now be summarily described in regard to their chief contents.

1. THE PĀLI CANON.—1. Vinaya-piṭaka.—The first of the three main divisions is the Vinaya-piṭaka, the ‘Basket of Discipline,’ which supplies the regulations for the management of the Order (sangha), and for the conduct of the daily life of monks and nuns. It includes rules for reception into the Order, for the periodical confession of sins, for life during the rainy season, for housing, clothing, medicinal remedies, and legal procedure in cases of schism. Here and there are also to be found stories, some of which contain the oldest fragments of the Buddhist legend, while others are valuable for the light that they throw on the daily life of ancient India.

2. Sutta-piṭaka.—The second ‘basket’ is the Sutta-piṭaka, our best source for the dhamma, or religion of Buddhism and his earliest disciples. It contains, in prose and verse, the most important products of Buddhist literature grouped in five minor collections named nikāyas. The first four of these consist of suttas, or ‘lectures,’ being either speeches of Buddha or dialogues in prose occasionally mixed with verse. They are also to be regarded as the oldest fragments of the Buddhist legend, while others are valuable for the light that they throw on the daily life of ancient India.

(a) The Dīgha-nikāya, or ‘Collection of long lectures,’ consists of 34 suttas, each of which deals fully with one or more points of Buddhist doctrine. The very name of this division, Dīgha-nikāya, or ‘Lecture on the Brāhmaṇ net,’ is of very great importance for the history not only of Buddhism, but of the whole religious life of ancient India. The very name of this division, Dīgha-nikāya, or ‘Lecture on the Brāhmaṇ net,’ is of very great importance for the history not only of Buddhism, but of the whole religious life of ancient India. The very name of this division, Dīgha-nikāya, or ‘Lecture on the Brāhmaṇ net,’ is of very great importance for the history not only of Buddhism, but of the whole religious life of ancient India.

(b) The Majjhima-nikāya, or ‘Collection of (lectures of) middle (length),’ consists of 152 sermons and dialogues dealing with almost all points of Buddhist religion. Thus Buddha is represented as admitting that a man may obtain nirvāṇa even without being a monk, or may commit suicide if he acts solely for the purpose of obtaining release; and as refuting the claim of Brāhmans to be the only pure human beings, and asflipping the ascetics.

(c) Of the 36 divisions into which the Sānkhāyuttanikāya, or ‘Collection of combined lectures,’ is divided, the last is most noteworthy, as treating of the four truths—mode of suffering, cessation, path, results. Of the last sutta in one of its sections some contain a large admixture of stanzas, while others consist entirely of verse forming short ballads of great poetic merit.

(d) The Aṭṭhakathā-nikāya, or ‘Collection of lectures arranged according to increasing number,’ consists of over 2300 suttas in 11 sections, so arranged that in the first are treated objects of which there is only one kind, in the second those of which there are two kinds, and so on. Thus the second deals with the two kinds of Buddhas. In this collection are found a large number of suttas and stanzas which occur in other texts of the canon, and which here even sometimes appear as quotations. This alone points to a late date. But internal evidence also shows that it was composed at a time when Buddha was already regarded as an omniscient semi-god, if not an actual deity. (e) The Khuddak-nikāya, or ‘Collection of small pieces,’ is a late compilation added after the previous ones were complete. Its contents date from very different times; for, while several of its parts belong to the latest stratum of the Pāli
canon, some go back to the earliest period. It is composed for the most part in verse, and, in fact, contains all the most important works of Buddhist Indian poetry. Of the works which it embraces the following may be mentioned. The Khudda-
pātha, or 'Short reader,' comprises nine brief texts to be used by the novice or as prayers in the Buddhist cult. The first is the Buddhist creed; the second gives the ten commandments enjoined on monks; and the ninth is the line ṛtu-sutta, in which kindness towards all creatures is praised as the true Buddhist cult. The Dhamma-pada, or 'Books of religion,' and the Sutta-nipāta, or 'Songs of monks and nuns,' are poems of great literary merit exalting mental calm as the religious ideal, and describing the value of Buddhist ethical doctrines from personal experience. It is quite possible that here may be included poems composed by some of the earliest disciples of Buddha, but several are much later, since they represent a Buddhist cult like that of the Mahāyāna. The Jātaka is a book consisting of about 350 stories of former births of Buddha in the character of a Bodhisattva, or future Buddha. It consists partly of poetry and partly of prose, but only the verse portions have canonical value. For a discussion of the work see art. JĀTAKA.

3. Abhidhamma-pitaka. — The Abhidhamma-
pitaka, or 'Basket of higher religion,' treats of the mind, in contrast to the subject matter of the Sutta-pitaka, one of the texts of which, the Anguttara-nikāya, may be regarded as its precursor. Its first beginnings seem to have been certain lists called matikas, which are already mentioned in the Vinaya-pitaka.

While the Pāli canon (apart from additions) was entirely composed in India, the non-canonical literature was the work of monks in Ceylon. There is only one important exception, the Mūlinda-
pātha, which must have been written in the north-west of India. It represents a dialogue supposed to have taken place between a Bud-
dhist teacher and a Hindu, and the Greek dominion came to an end soon after Menander, he could hardly have been remembered for more than a century. That the original portion of the work, books ii. and iii. with parts of i., is thus old as the beginning of our era is supported by the fact that it bears comparison with the very best dialogues in the Sutta-nipāta. Books iv.-vii., besides differing in character from the rest, are wanting in the Chinese translation made before A.D. 317 and 420. These and the other spurious parts are the work of learned monks in Ceylon.

II. Sanskrit Buddhist Literature.—While one ancient school of monks enjoined the Pāli canon, various later sects produced a Buddhist literature in pure or mixed Sanskrit, of which many extensive works have been preserved, though others are known only through the Chinese translation made before the 4th cent. A.D. The great bulk of this Buddhist Sanskrit literature belongs to, or has been greatly influenced by, the later Mahāyāna school. That school, though acknowledging that the Tāvadvāda, or 'Doctrine of the Elders,' went back to Buddha, regarded it as inadequate, because it made nirvāṇa attainable to the few only through the life of a monk. In order to bring salvation to all humanity, the Mahāyāna taught that every man could aim at being born as a Bodhisattva (q.v.); and any ordinary man, even a Pariah, could attain salvation by the practice of virtue and by devotion to Buddha. The earliest extant works are the Jātaka, written the beginning, their earthly life and their nirvāṇa being nothing but an illusion. The Buddha preachers Gautama, instead of being six, are now believed to be thousands or even millions of millions in number. Hence the Bodhisattvas are revered as having made the salvation of mankind refined from entering nirvāṇa. For the Buddha under the influence of Hinduism a new mythology grew up in which a number of Hindu deities were added to the Buddhás and Bodhisattvas, and a much stronger devotion to Buddha, analogous to that of the Brahman Bhagavad-Gītā (q.v.) to Kṛṣṇa. Brāhmaṇ doctrine influenced the development of Mahāyānism on the philosophical side also. For, while the old Buddhism denied the existence of the ego only, the Mahāyāna doctrine also denied the existence of everything (expressed by the formula svayam kāla-yāna, 'everything is void'), either as complete nihilism or as ideal nihilism (vijñāna-vāda, or 'doctrine that nothing exists except in consciousness'.

1. Hinayāna. — The large realist sect of the Sarvāstivādins ("followers of the doctrine that everything is"), besides having an extensive literature, possessed a Sanskrit canon, of which, however, only fragments, differing from that collection only in being more scholastic. It is composed chiefly in the form of question and answer, like a catechism. The starting-point of this collection appears to have been the Sutta-
pitaka, one of the texts of which, the Anguttara-
nikāya, may be regarded as its precursor. Its first beginnings seem to have been certain lists called matikās, which are already mentioned in the Vinaya-pitaka.

While the Pāli canon (apart from additions) was entirely composed in India, the non-canonical literature was the work of monks in Ceylon. There is only one important exception, the Mūlinda-
pātha, which must have been written in the north-west of India. It represents a dialogue supposed to have taken place between a Bud-

ally a Buddha biography of the Sarvāstivāda, has been extended in the sense of the Mahāyāna, of which it bears all the characteristics. It is a continuous narrative in Sanskrit prose, which long metrical pieces in mixed Sanskrit. Containing old and new elements side by side, it is valuable for the development of the Buddha legend from its earliest beginnings to the dedication of Bodhisattva gods above all, especially Avalokitesvara. The Buddha-era, or ‘Life of Buddha,’ is an epic composed in pure Sanskrit. It is the work of Āvaghoṣa (q.v.), a genuine poet, who, as one of the pioneers of the Mahāyāna and a contemporary of Kaniska, must have composed it about 100 A.D. Originally a Brāhman, he joined the Sarvāstivādins sect, but laid great stress on devotion to Buddha. His epic, however, contains no pronounced Mahāyāna doctrine.

Another work of the same school, dating probably from the 4th cent. A.D., is the Jātaka-mālā, or ‘Garland of birth stories,’ by Anāśāra. It is composed in a mixture of verse and prose, conforming to the style of classical Sanskrit literature. It contains 34 jātakas, illustrating the pāramāsīta, or ‘perfections,’ of a Bodhisattva, and nearly all occurring in the present day. Cognate with the preceding works are a number of collections of avadānas, or ‘stories of great deeds,’ being practically jātakas in which the hero is the Bodhisattva Buddha’s descent of the earlier ones also still belong to the Hinayāna, though attaching special importance to the veneration of Buddha. Such is the Avasāna-kātaka, or ‘Century of great deeds,’ which, dating probably from the 2nd cent. A.D., contains pieces from the Sanskrit canon of the Sarvāstivādins, and nothing connected with the cult of Bodhisattvas or with Mahāyāna mythology. Dating from about a century later, but including very old texts, is the Divyāvāsāna, or ‘Heavenly avadānas,’ which often mentions the Sanskrit canon and quotes individual canonical texts, besides having several legends in common with the Pali canon. Most of the stories are written in good simple Sanskrit with occasional gāthās, but others show the elaborate metres and long compounds of the artificial classical style.

Mahāyāna.—The Mahāyāna, not representing a homogeneous sect, possesses no canon. But there are nine dharmas, or ‘religious texts,’ which, composed at different times and belonging to different schools also called Mahāyāna sūtras. The most important and most characteristic work of the Mahāyāna school is the Saddharma-puṇḍarīka, or ‘Lotus of good religion.’ It contains matter previously expounded in the philosophical systematized by Śāntarakṣita and by gāthās in ‘mixed Sanskrit.’ Its original form dates perhaps from about A.D. 200. Sākyamuni is here no longer a man, the mendicant of the Pāli suttas, but a god above all gods, who has lived for countless ages and will live for ever. His doctrine is that every one can become a Buddha who has heard the preaching of Buddha, performed meritorious works, and led a moral life. Even those who adore relics, images, stūpas, or make Buddha images obtain the highest enlightenment (see LOTUS OF THE TRUE LAW).

A whole sūtra, the Kāraṇḍāvyuha, akin in language to the earlier A.D. 400, is devoted to the exaltation of Avalokiteśvara, the ‘Lord who looks down’ with compassion on all beings, here the typical Bodhisattva who, in the exercise of infinite pity, refuses Buddhahood till all beings are saved. The teaching for salvation has probably never been more powerfully expressed than in the figure of Avalokiteśvara (q.v.). The cult of this Bodhisattva is known to have spread to the date A.D. 400. More mythological is the Sukhavati-vyuha (c. A.D. 100), or ‘Detailed account of the Land of Bliss,’ which is devoted to the praise of the Buddha Amitābha (‘unmeasured splendour’). The Gagana-uyāha (a still earlier dhāraṇī) celebrates the Bodhisattva Mañjuśrī (q.v.), who occupies a prominent position in Mahāyāna cult and art.

Other Mahāyāna sūtras are of a philosophic and dogmatic character. The Lankāvatāra-sūtra (a dhāraṇī) describes a visit to Lanka by Rāvana in Ceylon by Buddha, who answers a number of questions of religion according to the doctrines of the Yogāchāra school (founded by Avalokiteśvara). The tenets of a number of philosophical schools are also discussed here. The Dārabhāmisāvata (a dhāraṇī) represents a lecture by Buddha in Indra’s heaven, about the ten stages by which Buddhahood is to be reached. It dates from before A.D. 400, when it was translated into Chinese. The Samādhi-rāja (a dhāraṇī), or ‘King of meditations,’ is a dialogue in which Buddha shows how a Bodhisattva can attain the highest enlightenment by various stages of contemplation. The Suvarṇa-prabhāsā (a dhāraṇī), dating not later than the 6th cent. A.D., is partly philosophical, partly legendary, and partly ritualistic in its conception. The Hindu gods Śiva and Mahādevi are introduced, and magical formula and Tantra practices are dealt with. The Rājaśāla-sūtra (before A.D. 600), besides containing a Buddhist message, introduces the Mahāyāna Bodhisattva, introduces a number of jātakas. Its main interest lies in its prophecy of the future decay of religion; for its realistic descriptions must largely reflect the lax morality of the Buddhist monks of the 6th century. The most important of all the sūtras of the Mahāyāna are the Prajñā-pāramitā, or sūtras on the ‘perfection of wisdom.’ They deal with the Mahāyāna doctrines of a Bodhisattva, especially with the highest, prajñā, ‘wisdom,’ the knowledge of the doctrine of nothingness, which denies not only being, but also not-being. The doctrine of the Mahāyāna sūtras was expounded by Nagarjuna, originally a Brāhman who flourished about A.D. 200 and founded the Madhyamika school, one of the main branches of the Mahāyāna. In order to remove the otherwise insoluble contradictions of complete nihilism, he lays down in his Madhyamika sūtras that the doctrine of Buddha rests on two kinds of truth. The one is the conventional truth of everyday life (which the Brāhmaṇa sāstras call the higher truth, the pundya sūtras). This distinction resembles that between the higher and the lower knowledge in the Vedānta system of the Brāhmans (see MADHYAMAKA, MADHYAMIKAS).

Nagarjuna cannot be regarded as the originator of the Mahāyāna doctrine itself. There must have been teachers and texts of that doctrine more than a century before his time; for Mahāyāna texts were translated into Chinese in the 3rd cent. A.D., and the Gandhāra type of Buddhist art, which represents the Mahāyāna doctrine, came into being about the beginning of our era. Asanga (q.v.), the eldest of the three sons of a Brāhman from Peshāwar, probably flourished in the first half of the A.D. 400. Northwestern adherent of the Sarvāstivāda school, he became the main exponent of the Mahāyānist Yogāchāra school, which recognizes existence in consciousness (svāttāna) only, denying the reality of the phenomenal world. The only absolute entity is truth (bodhi), which is manifested in the Buddhas, and which is attainable solely by those who practise yoga in ten stages. Yoga (q.v.) was thus brought into systems like Huayan, the Mahāyāna doctrine. Asanga expounds the tenets of this
school in his Mahāyāna-Sūtrālankāra, a work consisting of memorial verses (kārikās) in various metres and a commentary written by himself. Asāṅga’s brother, Vasubandhu, one of the most important figures in Buddhist literature, distinguished himself by the great powers of independent philosophic thought, is remarkable as having written authoritative works representing both the great divisions of Buddhism. His most important work, belonging to the earlier and Hinayāna period, was his Abhidharma-kosa, which deals with ethics, psychology, and metaphysics, but is known only through a Sanskrit commentary and Chinese and Tibetan translations. In later life he was converted by his brother Asāṅga to the Mahāyāna doctrine, when he composed a number of commentaries on various Mahāyāna sūtras, which have, however, been preserved in Chinese and Tibetan translations only. The most important of the later Mahāyānists was Sāntideva, who probably lived in the 7th cent. and was the author of the two works. The first, Sīkṣā-samuccaya, or ‘Summary of the Doctrine,’ is a manual of the Mahāyāna teaching, consisting of memorial verses (kārikās) and a commentary. The other is the Bodhicaryavatāra, or ‘Entry into the practice of enlightenment,’ a great literary merit, inculcating the pursuit of the highest moral perfection. The aim in both works is the attainment of enlightenment as a Bodhisattva by means of the practice and the veneration of Buddha, the highest wisdom being the belief in nothingness (śānyāda). An indication of the decay of Buddhism in India is the approximation of its later literature to that of Hinduism. Thus the Mahāyāna sūtras show striking resemblances to the Brāhmaṇic purāṇas, containing, like these, māhāmyas, or glorifications of particular localities, and stātras, or hymns addressed to various deities. There are also separate sūtras, like those addressed to Viṣṇu and Śiva; many of them glorify the goddess Śārā, the female counterpart of the Bodhisattva Avalokiteśvara. A further sign of degeneracy is the increasingly important position which the dhārānas, or ‘spells,’ begin to occupy in Mahāyānist literature. They appear to have existed from the 3rd cent. A.D. They were probably in their earliest instance light sermons to sustain Buddhist doctrine, but unintelligible mystic syllables gradually began to prevail as the ‘kernel’ of magic powers. Finally, under the influence of the Saivite tantras they became a separate and essential element into the Buddhist tantras. The Tantras (q.v.), which probably date from the 9th to the 11th cent., and are composed in barbarous Sanskrit, represent the final stage in the degradation of Indian Buddhism. They are treaties partly concerned with ritual (śrīyogā-tantra) or rules of conduct (charṣyā-tantra) partly with the esoteric doctrine of the yogā (yogapatantra). The former class is a revival of the old Brāhmaṇ ritual of the Gṛhyaśūtras, and the mystical syllables contained in them are addressed not only to Buddhists and Bodhisattvas, but also to Bhūtas and any other created beings, while, however, are connected with yoga, starting from the mysticism of the Mādhayamika and the Yogācāra schools. The yogā here aims at the highest knowledge of nothingness (śānyātya), not only by asceticism and meditation, but by magical rites, hypnotism, and other expedients. The teaching and practice of these yogas are a mixture of mysticism, sorcery, and gymnastics. Nothing of Buddhism remains in them, for they differ in no respect, except in being described as ‘promulgated by Buddha,’ from the Saivite sūtras, inculcating as they do the worship of the kingsa and Śaivite gods, and introducing numerous female deities into their cult.

LITERATURE (Chinese).—The vast mass of Chinese literature is divided by Chinese scholars into four classes—classics, histories, writings of philosophers, and belles lettres. The term king translated ‘classic,’ means originally any branch of a web, and by metaphorical extension comes to mean what is invariable, a rule. The Chinese classics are, therefore, those books which are regarded by the Chinese as canonical. Hence Buddhism as well as Confucianism have their classics; but in speaking of the Chinese classics one has in view the books of the Confucian canon only. If we speak of the Chinese classics in the sense in which Buddhism and Confucianism have their classics, we expose ourselves to misleading associations. We do, indeed, meet with the phrase Sheng King as designating the Confucian canon, where Sheng is the word which is used in philosophy, in which the idea of holiness. Originally, however, it refers to perfection of wisdom (‘sage,’ ‘sagely’), and does not of itself suggest any relation to the divine. Of the perfect Sage it is said: ‘It is seen, and the people all reverence him; he speaks, and the people all believe him; he acts, and the people all are pleased with him’ (Ddict of the Mean, xxi. 3). The authority of the classics is due not to any special inspiration, but to their connexion with sages or sagely men who possessed this ideal development of human nature. Degrees of authority are recognized; Mencius, e.g., in some of his pronouncements is held to have fully part of the perfect balance of Confucius. In so far as education was founded on and almost confined to the classics, their influence has been enormous. Less legitimately their connexion with the sages has given them a pre-eminent share in that reverence, passing into superstitition, with which all written and printed paper is regarded by the Chinese. Among the commentators on the classics, Shu Hsi (A.D. 1150-1200) has long been considered to be the standard of orthodoxy. The number of books and the number of editions has increased somewhat, the Imperial edition of the T’ang dynasty included thirteen books. The present canon, taken in the strictest sense, includes the Five Classics and the Four Books.

1. The Five Classics.—[1] King, ‘The Book of Changes.’—The term of this is the Eight Triograms, further elaborated into sixty-four, alleged to have been copied by Fu Hsi, a legendary ruler of early China, from the back of a mysterious creature which appeared from the waters of the Yellow River. The diagrams are combinations of whole and broken lines, and are supposed to correspond to the powers of nature—heaven, earth, fire, water, etc. From this idea, Wang Wanger added his ‘Definitions’; Chou King supplemented these with his ‘Observations’; and, finally, Confucius added ‘Ten Chapters of Commentary,’ and the classic was complete. As being the joint work of these four sages, it enjoys a great reputation. It is a compound of obscure and fanciful speculation and of a system of divination. But with regard to its meaning and origin, whether it is native to China or may be connected with Babylon or elsewhere, various opinions have been held by scholars.

(2) Shu King, ‘The Book of Historical Documents.’—We read of a canon of one hundred
historical documents, ascribed on inadequate evidence to Confucius, with a preface the Confucian authorship of which is even more doubtful. What most wikis is this claim that eight books of the LLI documents, the tradition of which is traced back to two scholars, Fu Sheng and An Ku. The twenty-five books which rest on the sole authority of the latter are gravely suspect. The whole collection of books in such a disordered history falls into five divisions—the books of T'ang, of Yu, of Hsia, of Shang, and of Chou. The oldest documents refer to a period about 2000 B.C., the latest to 627 or 624 B.C. Whatever be the admixture of legendary matter, the documents are of much historical interest. As a record of early moral and religious ideas their value is a great deal. The political ideal is a benevolent autocracy, and sovereignty is conferred or withdrawn according to the righteous judgment of God, who raises up the instruments of His providence.

(3) Shi King, "The Book of Odes."—This comprises three hundred and five odes, with the titles only of six more, traditionally said to have been selected by Confucius from the numerous pieces extant in his time. This account greatly exaggerates his share in defining the classics. Confucius attached great educational value to the odes. He claims that their design is summed up in this: 'Have no depraved thoughts'; but, while these may be the fives of titles, they are not the substance, speaking from irrational passion. The subject-matter of the odes is various—praise of virtuous kings and ministers, and of chaste and submissive wives; lamentation for departed friends, and the joy of reunion; the griefs of neglected officers and forsaken wives; complaints of injustice, remonstrances with careless or wicked rulers; celebration of State banquets and sacrifices, and record of official changes in chronological order, but in four classes: (1) 'Lessons from the States,' 15 books of odes from various feudal States; (2) 'Minor Odes of the Kingdom,' 8 books; (3) 'Great Odes of the Kingdom,' 3 books; and (4) 'Odes of the Temple and the Altar,' 3 books. The earliest odes date from the Shang dynasty (1765-1122 B.C.), and the latest from the time of King Ting (685-585 B.C.) of the Chou dynasty. Much can be gathered from the odes illustrating early Chinese civilization.

(4) Li Ki, "Collection of Treatises on the Rules of Propriety or Ceremonial Usage."—Of the "Tris Ki," the last only has a place among the Five Classics. It is a collection condensed from a larger group of documents in the 1st cent. B.C., and augmented and finally fixed in the 2nd cent. A.D. The various treatises, which are not arranged in any logical order, cover a great variety of subjects—birth, naming, marriage, death, mourning, sacrifices, education, and intercourse between persons of different ages and grades. There is much wearisome detail, but it is from this classic that we learn the genius of the Chinese race as embodied in religious and social usages.

(5) Ch'un Chiu, "Annals."—Ch'un Chiu, lit. 'Spring and Autumn,' a common name for annals, is the only one of the Five Classics ascribed to Confucius himself; but it falls so far short of Mencius's estimate of the "Ch'un Chiu" that he knew that double—not supported by other evidence—has been expressed as to whether our Ch'un Chiu is indeed the Sage's work. It seems to be founded on oral reports, merely borrowed and is from the annals of Lu, Confucius's native State. It is an absolutely bald record of such things as the beginnings of the seasons, State-covenants, wars, deaths of persons in the line of succession, and periodic sacrificial ceremonies. The notices of eclipses are important as affording chronological data. The record runs from 721 B.C. to the 14th year of Duke Ai, when Confucius's work ends, and is supplemented by his disciples up to the time of his death, 16th year of Duke Ai (475 B.C.). Even Chinese scholars admit that the record is not of great value, and is gloomy and unpalatable. The most unfortunate cloud thus rests on the character of its author. The best known commentary on the Ch'un Chiu is the Tzu Chuan, which supplements the chronicles and brings us to 407 B.C., with one entry of a slightly later date.

2. The 'Four Books.'—(1) Lun Yu, "Analects."—These were probably compiled by Confucius or his disciples of the second generation. Conversations with Confucius and disconnected sayings of his, mostly quite brief, form the staple of the work; but bk. 19 contains sayings of disciples only, and these occur also in other books. The main themes are ethics and government. In spite of the general failure even to seek after righteousness, it is maintained that human nature is made for virtue, which is a life-long task. For the attainment of virtue there is sufficient strength, if only it is exerted. Hence the importance of moral culture, though some may be incapable of it. The ideal man (Ch'an Tze) is depicted, and such topics as filial piety, friendship, and 'Reciprocity'—not to do to others what one would not have done to oneself—is the highest moral rule. There is intentional reticence on extra-ordinarily many topics, and the idea of a government is emphasized, as is also the influence of a virtuous ruler over his subjects. Bk. 10 contains many particulars as to Confucius's deportment and habits. More important are the scattered estimates of Confucius by himself.

(2) Tu Hsieh, "The Great Learning," is so called with reference either to the importance of its matter or to the age of its students. The text appears to be fragmentary. In one recension it forms a section of the Li Ki; but as usually printed it is arranged by Ch'u Hsi, though without authority, into text by Confucius and comment by Tsung Tze. The book professes to trace the development of morality from investigation of things, through extension of knowledge, sincerity of the thoughts, and rectification of the heart, up to cultivation of the person (which is the central idea); and then on to regulation of the family and tranquilizing of the empire. The work, though not without some excellent moral ideas, falls far short of the Li, and the Li Ki, the last only has a place among the Five Classics. It is a collection condensed from a larger group of documents in the 1st cent. B.C., and augmented and finally fixed in the 2nd cent. A.D. The various treatises, which are not arranged in any logical order, cover a great variety of subjects—birth, naming, marriage, death, mourning, sacrifices, education, and intercourse between persons of different ages and grades. There is much wearisome detail, but it is from this classic that we learn the genius of the Chinese race as embodied in religious and social usages.

(3) Chung Yang, "The Doctrine of the Mean" (probably rather 'Equilibrium and Harmony'), is ascribed to Kung Chi, grandson of Confucius, commonly known as Tzu Shih. The translation of the Ta Hsieh, forms a section of the Li Ki. Human nature, as given by heaven, is the source of morality. In its original state it is 'equilibrium'—as developed into right action it is 'harmony.' The beginnings of this development lie at hand in ordinary duties and virtues, particularly in 'reciprocity,' which is here developed positively (=the Golden Rule; cf. ERE vi. 311). Such development of nature is exhibited in the sages. When it is so developed that fact and ideal coalesce, we have 'sincerity.' Some have this sincerity by innate endowment; some attain to it by moral cultivation, and others, which is also a transforming influence on things and men. Confucius is enlivened extravagantly, though perhaps not precisely identified with the ideal man who is father of heaven, the Ta Hsieh.

(4) Mencius (571-598 B.C.).—Seven books of his teaching remain, which are creditably ascribed to Mencius himself in collaboration with his disciples. The main topics are social and extra-ordinary. Human nature is predicated for righteousness. This original constitution is the child-heart which good
men. Mencius maintains the disinterested nature of the affection, and asserts as according to nature the subordination of the passions to moral control. Nature in ordinary men and in the sages is one and the same, but for its development consciousness is requisite. The 'passionate nature' is not to be suppressed but disciplined. If nature does not evince its goodness, it is only as a hill constantly grazed on appears bare of verdure. Unnatural feelings are expressions of unrighteous things. Nature, regarded as divine discipline. Repentance so puges a man that he may even worship God. Mencius's views on politics are mostly developed in conversation with contemporary rulers, with whom he uses, on the whole, an admirable frankness. Government should be benevolent and righteous. Such a government inevitably prospers. Its main concerns are agriculture and education. Above all the people, who are of the first importance in a State, must have a stable livelihood. If a monarch be utterly unworthy, it is not rebellion to depose him; but this must be done in accordance with the decrees of Heaven and the popular mind. Mencius acutely criticises the heretical views of his time. In iv. ii. 26 he recommends observation of phenomena as the source of knowledge. Without such an effort is required. The 'passionate nature' is abundant and mostly apt, and the dialectic keen. He has popularised and given a tone of his own to the doctrines of Confucius, to which his work is the most authoritative.

P. J. MACLAGAN.

LITERATURE. (Dravidian).—Dravidian literature is the record of the best of the thought of those peoples of South India who speak languages designated by Kumārila Bhaṭṭa, in the 7th cent. of our era, as Andhā Drāvīḍa. The four principal literary Dravidian languages are now Telugu, Tamil, Kanarese, and Malayālam. According to the Census Report of 1911, Telugu is spoken by 231 millions of people, Tamil by a little over 19 millions, Kanarese by 104 millions, and Malayālam by 63 millions. That the Sanskrit-speaking Aryans who moved in with S. India and at an early period is evident from the mention of the Andhras by the grammarians Pāṇini (probably c. 350 B.C.), but Aryan immigration into the South came at so late a period that the southern Dravidian languages retained, with but few exceptions, their own characteristic grammatical structure. Their vocabulary was, however, enlarged by the inclusion of Sanskrit technical terms and words or their corruptions. So widely did this Aryan influence on the literature of the South spread in course of time that J. Vinsan says: 'Not cos Telugu, Kanarese, or Tamil book now in existence is independent of Sanskrit... Writing was not applied to vernacular languages before the 4th century. It was the Aryan Brahmans or Jainas or Buddhists who first having learned the verbaeaeals used them for literary purposes and then taught the Dravidians the way to use them in their compose works. The preliminary or Jain period must have lasted two or three centuries.' (Sīdhasānta Dīpikā, August 1865).

The southern inscriptions of Assoka show that writing must have been familiar to the people by the 3rd cent. B.C. The present southern scripts are, however, all derived from the Andhra alphabet, as the Tamil and Kanarese alphabets date from the 5th cent., while the oldest Tamil cursive writing comes from the 7th century. Previous to any writing or written records the folk-songs of the people, their moral aphorisms as well as their lyrical outbursts of love and war, set as they were to music, were handed down by memory from generation to generation. P. Sundaram Pillai states that more than 19,000 lines of the hymns of the early poet Sambandhar, written in 632, and later in date than the 7th cent., are still extant: 'Most of them appear to have been uttered improvised, and all of them being set to music, the original melodies are now mostly forgotten. They were lost in the later ages introduced by Aryans migrating south.' (Some Milestones in the History of Tamil Literature, p. 6.)

The intruding Aryan influence so blended with the indigenous Dravidian element that the Aryan lutes (sings) completely ousted the primitive Dravidian musical instrument (yild), no reliable description of which remains on record. Similarly, the old grammars and the grammars of the Pāṇinian and Andhāra school of grammarians have been superseded by the now standard authority for all classic compositions, the Nān Nīl, composed by a southern Jain grammarian, Pavanand, about the beginning of the 13th century. The Nān Nīl lays down the rule that 'to reject the old and obsolete usage and to adopt new and modern usage is not an error but a yielding to the necessities of time and circumstance' (G. U. Pope, Third Tamil Grammar, Madras, 1859, or 1910). Standing on this salutary rule, Dravidian prose and poetry are considered worthy of commendation by the learned only when they are as different from the spoken vernaculars as Ancient to modern English. They hold themselves aloof from the colloquial language of the time and people, and the more they are swathed in archaisms, the more they merit the praise of pandit. The earliest, and therefore the purest, Dravidian literature, as free from Aryan influences, lies enshrined in works dating from about the 2nd cent. of our era. Collections known as the Nine Classical Poems are assigned to a very early date; these were succeeded by Eight Compilations of various authors. Eighteen shorter stanzas, including the moral aphorisms of the Kūral of Tiruvalluvar, followed, and the four hundred quatrains of the Nāladiyār, said to have been composed by a Jain poet of about the 8th century. The latter quatrains show strong Aryan influences, dealing as they do with the ordinary topics of Indian metaphysics—the pain of existence, transmigration of the soul, and release therefrom. Some of the quatrains are mere translations from such Sanskrit epics as the Mahābhārata, and Pope, who translated and annotated the Nāladiyār in a scholarly edition, described it as 'The Bible of the Cultivators of the Soil.' Its style, however, is so classical that no cultivator of the soil could understand the meaning of the verses unless explained to him in the language that he is accustomed to speak. The moral epigrams of the Kūral and Nāladiyār, in couplets and quatrains, have been acclaimed as the highest achievements of Dravidian literature. Pope (Kūral, p. xiv) truly says of the Kūral (and the same applies to the Nāladiyār) that a line 'is often little else than a string of crude artifices artfully fitted together.' Stories such as this, framed on Sanskrit corrupt compounds, can hardly claim the title of literature, however epigrammatic or moral the underlying and hidden thought may be. The Nāladiyār is, nevertheless, well suited to fit its present role as a literary puzzle for Tamil students at the Madras University, or for Honours candidates at other Universities. To the same period, from the 2nd cent. to the 5th cent., are attached the twelve Tamil romances—the Maī Tikkālai, the Siṭṭāppadīthi Kāram, and the most perfectly constructed and the most untranslatable, on account of its open erotic sentiment, of all Tamil romances, the
Jivakoshitamani. These poems, amid a surrounding of love and romance, give a vivid view of early Jain and Buddhist life in S. India and reliable accounts of the doctrines of the Jain and Buddhist teachings. These poems were translated into English to make them available for historical purposes. No translation could possibly convey the peculiar charm of the stately and leisurely style of the original or the grand and harmonious sequences of sound, and the subtility of its quaint and involved conceits of metaphor. J. Vincent (Manuel de la langue tamoule, p. xlv) has given a valuable and balanced judgment regarding the comparative value of the best of Dravidian literature.

Malgré tout, cependant, la littérature tamoule est secondaire. A part peut-être les recueils de sentences morales, il n'est pas un poème de quelque importance dont une traduction complète puisse être la sans fatigue par des Européens. Ses descriptions y sont diffuses, monotones, pleines de mauvais goût et d'exagérations choquantes, conformes d'ailleurs à un type uniforme donné. Ses poèmes d'amour ne sont pas plus variés, et les poèmes de guerre sont tous, ce sous proprement des jeux d'esprit, des amplifications de rhétorique sur une formule générale et sur un casus minutieusement réglé. L'invention et l'imaginerie ne peuvent s'y exercer que sur les détails, les expressions, sur la mesure, sur la forme extérieure ou un mot.

This Aryan influence on the religious literature (see Dravidians (South India) and even on the indigenous folk-tales of the Tamils) has had the result that without a previous knowledge of Sanskrit much is almost unintelligible. According to C. E. Gover (Folk-Songs of Southern India, p. 14), who gathered together folk-songs from the varied peoples of S. India,

"the foreign element permeated till almost the whole written literature of the country became Brahmanic. Indigenous poetry fell into unfashionable disrepute, and what was possible, was edited so unapproachably that the original was hidden under a cloud of corruption."

This Aryan influence so permeated the whole spirit and vitality of indigenous literature that Appakavi, a grammarian of the 17th cent., contemptuously declared that Telugu adaptations from the Sanskrit were merely for the use of women and Sādānas. The distinguished Dravidian scholar, G. V. Râmamūrti, who quotes the above in his Monograph on Modern Telugu (Madras, 1912, p. 3), further states that, should a Brahman read the Rāmāyana for religious merit, he reads the Sanskrit original and not a Telugu adaptation. The same writer, who is an ardent advocate for a reformed pure Dravidian literature, freed from Sanskrit corruption, states only the truth when he says:

"A Sanskrit original, whether it is the Rāmāyana or Mahābhārata, is a masterpiece in style and language than a translation of it" (op. cit. p. 6).

Nevertheless, the simple peasant values these Telugu, Tamil, Kāramo, or Malayalam imitations of the Sanskrit epics, and purāṇas. Read as they are by professional reciters under the village tree during the long star-lit evenings, they hold the simple folk in spellbound wonder and awe as they listen to a running translation and commentary in the current vernacular. They teach the village folk the simple story of life, of the rewards and joys of those who had faith in the gods and thereby gained salvation through the grace of the deity, of the triumph of good over evil, and, above all, the loved stories of widely devotion and patient suffering under unmerited calamities.

R. W. Frazer.

LITERATURE (Egyptian).—The great bulk of extant Egyptian sacred literature may be grouped in three divisions: (1) the Pyramid Texts; (2) the Book of the Dead, with its related group of books, the Book of Am Duat (or of knowing that which is in the underworld), the Book of Breathings, the Book of Gates, etc.; and (3) miscellaneous writings, embracing a number of hymns to various gods, Ra, Osiris, Hapi, Amen, such writings as the Lamentations, and the Festival Songs of Iah (or Yah), and the Lamentations of Seker, and a number of legends concerning the gods and their relations to mankind.

I. The Pyramid Texts.—These constitute by far the most important body of Egyptian sacred writings known to us, not only because they exhibit the religious beliefs of the nation at a very early period in its history, but also because the remains of primitive traditions embedded in them enable some of the Egyptian beliefs to be traced back even to pre-historic times, and because the development manifest in the later versions of them shows how gradual but important changes were happening in Egyptian religious belief within a definite period.

The great pyramids of the IVth dynasty have no interior inscriptions, and it was supposed that this was true of all other pyramids. In 1880 Mariette's workmen at Saaqara managed to effect an entrance to the pyramid of Pepy I. of the Vth dynasty, and later on to that of Merennu of the same line, and found that both contained lengthy hieroglyphic inscriptions, hewn in the rock and coloured green. Eventually inscriptions were found in five pyramids, of which the oldest is that of Unas of the Vth dynasty, and the others are those of Teti, Pepy I., Pepy II., and Pepy III. of the VIth dynasty. The inscriptions thus cover a period of about 150 years, from 2225 to 2175 B.C., or, on Petrie's Sinaï dating, from 4210 B.C. onwards. Immediately after their discovery the texts were edited by Maspero, and the attention devoted to them has been steadily increasing. The best edition at present available is that of Sethe (Die egyptischen Pyramidentexte, Leipzig, 1898-1901).

These texts are, then, the oldest body of religious literature extant in the world, and a great deal of the material embodied in them carries us back to very much earlier times than their own sufficiently early date, referring to primitive customs and conditions of life which had long been extinct by the time of the Vth and VIth dynasties. The later versions show traces of editing, which was undertaken in order to meet the needs of the new developments of religious thought arising in a period of 150 years. Broadly speaking, the object of these writings is to secure blessedness in the after life to the king on the walls of whose tomb they are inscribed; for there is as yet no trace of any idea that the immortality postulated for the Pharaoh may be also the property of the common people. The whole contents of these texts are directed towards the one purpose of securing entrance to the abodes of bliss for the dead king, and unification with the gods when his entrance is secured. These contents fall under the following divisions: (1) funerary inscriptions and ritual of mortuary offerings, (2) magical charms, (3) ancient ritual of worship, (4) ancient hymns, (5) fragments of ancient myths, and (6) prayers on behalf of the dead king.

The material is arranged in sections, each of which is headed by the words 'Utter (or recite) the words. Of these sections the pyramid of Unas contains 228, of the other pyramids make up the number to 714. The amount of material is thus considerable, as may be judged from the fact that in Sethe's edition it fills two quarto volumes with over 1000 pages of text. It is arranged in the most haphazard manner possible, the scribes..."
spendable for the various versions having made (as usual in Egyptian religious writings) not the slightest attempt to group together the various types of matter enumerated above. The hymns scattered through the collection already exhibit a familiar poetic arrangement, in the form of contents showing parallelism in the ordering of words and thoughts; and the texts are not devoid of a certain wild and rude power of imagination which entitles them to rank as literature. Thus, when the dead king rises to the vault of the heavens,

'Clouds darken the sky,
The Stars rain down,
The bows [a constellation] stagger,
The bones of the hell-bounds tremble,
Then exist silent,
When they see king Unas
Drawing as a soul.'

And there is some power of fancy in the passage which pictures the king, after he has passed the lily-lake and drawn near to the gates of the sky, being challenged by voice after voice, out of the world of the dead, 'Whence comest thou, son of my father?' until, at last, when answer has been duly made to all the challengers, they fall silent, and the dead Pharaoh enters unopposed upon his heavenly kingdom.

The Conventionality which the Pyramid Texts contemplate has already ceased to be that which we may take to be the earliest form of the Egyptian conception of the life after death—that of sojourn as and about the deceased king's realm in the sky, and, moreover, in the east of the sky—this in absolute contradiction to later belief, which always placed the abode of the blessed dead in the west. In the sky the king may develop either of two destinies: he may become a star, or he may be associated with Ra, the sun-god, finally becoming identified with him. These two destinies no doubt represent two different strata of earlier belief, which have been slumped together according to the regular Egyptian custom of associating incompatibles without attempting to reconcile them.

The earliest form of belief represented in the texts is solar; the deceased is constantly identified with Ra, and the Osrian belief is referred to in terms which show that it was held to be incompatible with, or even hostile to, the solar form. Certain peculiarities in the pyramid texts and its temple against the intrusion of Osiris; and other passages show that 'to the devotee of the solar faith, Osiris once represented the realm and the double life of the deceased.' The following of Re was not delivered up' (Breasted, Development of Religion and Thought in Ancient Egypt, p. 140). Gradually, however, and, as the texts show, even within the Pyramid Age the Osrian faith began to assert its power and to appropriate part of the place which the solar religion had formerly occupied. In doing so the Osiran conception of the life after death, originally one of an under world, becomes more or less solarized, and the two faiths interpenetrate to some extent; but, on the whole, the Pyramid Texts present us with the picture of the gradual assertion of superiority on the part of the Osiran faith over the earlier solar creed. It would appear that in this transformation we witness the triumph of popular over State religion, as it is evident that, to start with, the solar faith was the State theology, while the cult of Osiris was always a popular form of religion.

On the whole, there is no more interesting body of religious literature in the world than this, the most ancient of all, and the one with its own intrinsic value alone, but also to the fact that it takes us nearer than any other religious writing to the primitive ideas of mankind as to the modes of life in the world after death. Passages such as those which describe how the dead king in the other world lassos and disembowels the gods, cooking them in his kettle, and eating them,

'Their great ones for his morning meal,
Their middling ones for his noon meal,
Their little ones for his night meal,'

so that 'their magic is in his belly,' have their own value as literature for the wild power and vigour of imagination which they reveal; but they are still more valuable as a period in the Egyptian, whom we have never seen save in the decent, ordered civilization of the dynastic period, was actually an unregenerate savage, with beliefs on the same intellectual level as those of other uncivilized races.

2. The Book of the Dead.—Next in importance to the Pyramid Texts comes the collection of sacred writings which has for long been regarded as representative of Egyptian religious literature, and is most widely known by the totally erroneous title of The Book of the Dead. The only justification for the use of this title is that the texts more or less regularly used in the collection were, like the Pyramid Texts, entirely designed for the advantage of deceased persons in the other world. The Egyptians themselves called the collection 'The Chapters of the Two Ways,' or 'Ascending Day' (or 'Ascending by Day'), a title whose significance is somewhat obscure, though the contents of the chapters suggest that it may be to do with something to which the knowledge of them conferred upon the deceased to go in and out from his tomb, and to live an unfettered life in the other world. Concerning the early history of the Book of the Dead we have no certain information. In fact, there is practically no literature extant from the period between the Vlth and the Xlth dyn. to show the development of religious thought. In the middle kingdom, however, under the Xlth and XIIth dynasties, there begins to appear a series of texts which are regarded by some as an early recension of the Book of the Dead. These texts are written no longer on the walls of tombs, but on the inner surface of the cedar coffins in which the well-to-do people of the period are buried. They are generally written in black ink, and are ornamented with coloured borders representing the usual funerary offerings to the deceased. No other one-half of material thus preserved is taken from the Pyramid Texts, the other half consisting of material which is met with later in the genuine Book of the Dead; so that, really, the material occupied a middle position between the old texts, whose object was the service of the king alone, and the later book, which was a popular compilation intended for the use of all and sundry. It might be useful, therefore, to distinguish these Middle Kingdom texts by some such title as that of 'Coffin Texts,' which Breasted employs to denote them. The writing of these texts is marked by the same carelessness and inaccuracy which characterize the latest versions of the Book of the Dead. The scribe's sole object was to cover the prescribed surfaces as rapidly as possible; it was never extended for the use of all and sundry. It might be prejudicing the safety of his patron in the other world did not worry the Egyptian scribe.

The Coffin Texts are intermediate in character, as in time, being late, not to its own intrinsic value alone, but also to the fact that it takes us nearer than any other religious writing to the primitive ideas of mankind as to the modes of life in the world after death. Passages...
intrusion of the essentially Osirian idea of an under world into the old solar idea of a celestial heaven. Breasted epigrammatically sums up the dualism of ideas that that period coincided with the Osirian side by the remark that in the Pyramid Texts Osiris was lifted skyward, while in the Coffin Texts Ra is dragged earthward (p. 277).

The idea of a Western Elysium, in contradistinction to the Eastern idea of the deceased appearing, and the character of the Elysium begins to approximate to that of the Sekhet Aaru, 'Field of Bulrushes,' as found in the Book of the Dead. Thus one of the chapters of the Coffin Texts is concerned with 'Building a House for a Man in the Nether World, digging a Pool, and planting Fruit trees.' Already the Coffin Texts exhibit instances of the desire, which reaches full development later, of furnishing the deceased with words of power to enable him to assume various transformations. Various texts enable him to transform himself into 'the blazing eye of Horus,' into an 'ebet-bird,' or into 'the servant at the table of Hator'; and along with this development comes another which reaches an extraordinary pitch in the Book of the Dead—that of charms to protect the deceased from the dangers of the underworld. Thus there are charms for preventing the head of a man from being taken from him, for repulsing serpents and crocodiles, for preventing a man from sinking head downwards, and so forth. This kind of rubbish, towards which the Egyptian mind had an extraordinary inclination, increases steadily in amount until the really valuable portions of the Book of the Dead is almost choked under its senseless bulk.

The Book of the Dead, properly so called, makes its appearance with the New Empire in the 16th and 17th centuries B.C., and with the XVIIIth and XIXth dynasties. The change from inscriptions on tomb-walls to inscriptions on the inner surfaces of coffins is now followed by a further change; the texts which form the new compilation for the use of the dead are now written on rolls of papyrus, and placed in the coffin. The various versions extant from the XVIIIth to the XXIInd dyn. have mainly been derived from tombs near Thebes, and therefore the Book of the Dead of this period is known as the Theban Recension. It cannot be too clearly understood that there never was a standard text, or anything even remotely approaching to a standard text. Any particular man interested in preserving the body from decay or the ravages of certain animals—e.g., ch. xxvii., 'Of driving away Apsuhot' (the beetle or cockroach), and ch. xliv., 'Of not suffering corruption in the under world'; chapters providing charms against the serpent Apepi, the serpent Rerek, and the crocodile that comes to take away the charm from the deceased; chapters 'Of not letting a man be burnt or scaled in the under world,' and 'Of not eating filth or drinking filthy water in the under world, and saving us.'

Generally speaking, it may be said of these chapters, and of many others of similar import, that they are somewhat melancholy reading. Allowed had it been possible to persuade us that they are full of allusions to a mythology the knowledge of which has almost absolutely perished, and that these allusions may have been full of signification to the Egyptian, though they are meaningless to us, however, that very early the sense of a number of the references had
already been lost, as there are several chapters which contain glosses on the various allusions, and these glosses do not always agree. Very often the chapters do not rise above the level of mere vulgar interpretation. Sometimes they consist simply of an endless series of names supposed to have magical power; sometimes they are merely ludicrous—e.g., ch. xxxii., 'Of repulsing serpents in the under world.'

'Hail, thou serpent Berik; advance not hither! Behold Sob and Shu, Stand still now, and thou shalt eat the rat which is an abominable thing unto kâ, and thou shalt crush the bones of a sticky cat.'

The most important chapter of the book is xxxv., which embodies the Egyptian conception of the judgment of the dead. It consists of three parts: the introduction, the famous 'Negative Confession,' and a concluding text, and is fully discussed in art. Confession (Egyptian), and Ethics and Morality (Egyptian).

The fundamental religious idea of the Egyptian mind was that of immortality, and it is to the Pyramid Texts and the Book of the Dead that we owe our knowledge of the extraordinary development which this idea had reached in Egypt at the earliest historical period. It is a remarkable peculiarity with which it was maintained and worked out into almost endless detail, and, most of all, of the strange resemblances which the Egyptian conception of resurrection and immortal life presents to the Christian doctrine. The Book of the Dead is not to be taken as in any sense a complete statement of Egyptian belief—a thing which as yet is conspicuously lacking. The name sometimes given to it, 'The Egyptian Bible,' is a total misnomer. But in the working out of its central theme it affords unquestionable evidence of the fact that the conception of immortality and resurrection held by the ancient Egyptian was such as no other religious system of antiquity ever approached.

Little is told us of whether any intercourse was expected in the other world with the souls of those who had been known on earth, but it is, ex., and cxxix, at least, that the deceased looked forward to recognizing and being protected by the spirits of his father and mother.

The other sacred books related to the Book of the Dead may be briefly dismissed. The Book of the Overthrowing of Apepi contains fifteen chapters treating of the various methods of destroying this enemy of souls in the under world. Its text is nearly all in verse. The Book of the Dead (Papyrus of Nesi-Amsu, British Museum).

The Book of Knowing that which is in the Duat contains a description of the twelve parts of the under world through which the bark of the sun journeyed during the hours of night. It tells the names of these divisions, of the gates and gods belonging to each, and states the advantages to be derived from a knowledge of these names.

The Book of Breathings is largely a compilation from the Book of the Dead, and in the later periods was buried with the dead, being placed under the left arm, near the heart.

Miscellaneous writings.—Under this heading are to be included numerous hymns of Ptah, Osiris, Hâpi, Ptah, and other gods (cf. art. Hymns [Egyptian]); the Festival Songs of Isis and Nephthys; the Literary Admonitions of Isis and Nephthys, and other similar works.

The Festival Songs and Lamentations are poems dealing with the Osirian myth, and supposed to have been recited by the two goddesses with a view to effecting the resurrection of the dead Osiris. The ancient Legends of the Gods and their relations to mankind are found in inscriptions in several tombs (notably in the tomb of Seti 1.), and in various papyri, and have been frequently translated.

In addition there are several books which do not strictly come under the heading of 'sacred,' but have yet a semi-religious character. Among them may be mentioned the Precepts of Ptah-hetep, of Iseh, of Betsweba, and of Khensu-hetep, writings essentially of the same character as Proverbs, while the Lay of the Harper (or Song of King Antef) may be compared with Ecclesiastes, and a remarkable comment on the social and moral condition of the land in the Middle Kingdom is found in the Admonitions of Ipuwer.

LITERATURE.—(Indian Vernacular).—The literature of the modern vernaculars of India may be divided into two main classes—that written under Musalmán, and that written under Hindó influence. The former dates from the Mogul conquest, and was composed mainly in the Urdu form of Hindostáni. Up to the introduction of printing at the beginning of the 19th cent., it was largely in verse and was confessed to be the earliest in Persian models and in Persian metres. The earliest works date from the 16th cent. A.D., but the standard of composition was set by Waut of Aurangábád and by Deenán, who flourished at the end of the 17th cent. who was known as 'the Father of Rekht,' Rekht being the technical form for the name of Hindostáni used by these poets. From the Deean the taste for this literature spread to Delhi, where Waut found numerous successors, and thence to Lucknow. The most celebrated of the Delhi poets were Rafúr-Suádá, best known for his satires, and Mír Taqí, famed for the purity of the language in which his Gházals and Múthakqáns were expressed. Both these flourished in the 18th century. Among the Lucknow poets the most celebrated was Mír Hassan, who is described as the father of Hindostáni prose, and who has been specially successful in the department of fiction. The novels of such authors as Rúm Náth Sáshár and 'Ab'dú'lláh Khálm Sháh are worthy of a wider circle of readers than that to which they are
condemned by the language in which they are written.

Although the above literature grew up under Musalman auspices, its language has been successfully adopted by many educated Hindus, some of whom are looked upon at the present day as masters of an exceptionally pure style. It is a matter of regret that the collection of the modern vernaculars were religious. In the North, up to about the 16th century A.D., the language of religion was Sanskrit; but, in the South, vernaculars were employed at once, and their writings are, therefore, to be regarded as the earliest and the most valuable of the modern literature. There is a great collection of Saivite texts in Tamil, said to go back to the 2nd or 3rd century. The more important of them are described in the art. DRAVIDIAN (South India). To these can be added a long list of Vaishnavite works in the same language dating from before the time of Râmanâtha (12th cent.). The most noteworthy of these are referred to by A. Govindâchârya in two papers in the JRAS (1913, p. 565 ff., and 1911, p. 925 f.). The Dravidian doctors employed both Sanskrit and Tamil for their writings. As a rule, it may be said that the Vadagalais, or Northern Tamils, wrote in Sanskrit, while the Bengalis, or Southern Tamils, wrote in Tamil (cf. Govindâchârya, in JRAS, 1912, p. 714).

In Northern India vernacular religious literature is of enormous extent and, considered merely as literature, may be said to have originated at the time of the spread of the Vaishnavite Bhakti-Marga under Râmanânda and his followers (see art. BHAKTI-MARGA, vol. ii, p. 539 ff., esp. 545). All the great writers of this early period belonged to humble ranks in life, and were born at the village at which they were raised and educated. Each therefore wrote in his own vernacular.

The greatest of all the moderns, Tulsi Dâs, although a man of the village rather than of the town, is infected by the spirit of the old village poet, and was perhaps the first to make a serious attempt to write in a language more suited to the requirements of his time. His writings fall into two groups—that devoted to Râmâcharita, and that devoted to Kṛṣṇa (Krishna). In both cases it includes not only devotional works, but all branches of literature ancillary thereto.

In the art, BHAKTI-MARGA (vol. ii, p. 543) it has been pointed out that the foundation of the religion is the belief in the fatherhood of God. This is more or less literally true as regards literature in which Râmâchandra is regarded as the perfect presentation of the Deity, and on this idea is based some of the most lofty poetry that India, ancient or modern, has produced. In the Ganges valley, Kâbir (15th cent.) preached the doctrine in wise and pithy sayings that are still household words in Hindostân. An offshoot from his teaching was the Sikh religion, whose sacred book, the Adi Granth, is a collection of hymns by various authors formed by degrees in the course of the 16th century. See art. GRANTH, SIKHIS. Both Kâbir and Nânâk (the founder of Sikhism) were masters of their teaching. A greater man than either, but the founder of no sect, was the famous poet Tulsi Dâs (16th-17th cent.), the author of the religious poem of the same name, the Râmâcharita-mânas, or 'Lake of the Gentes of Râma,' and of at least eleven other important works. His influence down to the present day over the people of Hindostân cannot be overrated. Tulsi Dâs was a native of Awadh (Oudh), and so this collection of the language and the life of Râmâchandra's early life and of his latest years. The poet, therefore, wrote in the Awadhi dialect of Eastern Hindi, and this form of speech has ever since been the popular standard of the language employed for celebrating the deeds of Râma-

1 G. A. Grierson, in JAS II, 418.

chandra, and, indeed, for epic poetry of every description.

In Hindostân proper, numerous followers and imitators of Tulsi Dâs have narrated the story of Râmâchandra, and the same subject has also, though to a less extent, attracted writers in other parts of India. In Bengal there is the 16th cent. Kâmâyudga or the Bhakti-Marga of Kesâ or, who, in the beginning of his life, was an imitator of Tulsi Dâs, but, in the later years of his life, has written the Ramayana in the 11th cent., a Malayalam Râmâ-charita of the 13th or 14th cent., and a Kannarese Râmâyana by Kumârâ Vâlmiki, said to be one of the oldest works in that language.

The literature based on the presentation of Kṛṣṇa as the Deity differs from the Râma-literature in one important particular. The love of God is represented, not as that of a father to his child, but as that of a man for a maid. The soul's devotion to the Deity is pictured by the self-abandonment to Kṛṣṇa of his queen Râdhâ, and the hot blood of Oriental passion is encouraged to pour forth one mighty torrent of prayer and praise to the divine Lover. The whole idea is based on sexual relations; and, though the mystics who first wrote of it did so in all purity of conscience, in later years erotic poetry of a character too gross for description.

It is natural that most of the literature of this school should take a lyric form. According to tradition, Kṛṣṇa's earliest exploit centred round the town of Mathurâ, and Kârâ, from this locality that his worship in the Ganges valley spread to other parts of Northern India. Hence, just as the Râma-literature is couched in Awadhî, so the Kṛṣṇa-literature of Hindostân is mainly recorded in the Braj Bhâkhâ dialect spoken round Mathurâ. Its most famous writer was Sûr Dâs (16th cent.), the blind bard of Agra. His Sûra-sâgara, or The Ocean (of songs) of Sûr Dâs, and the epic of Tulsi Dâs are considered to have exhausted between them all the possibilities of Indian poetry—no later poet could write anything original. In spite of this dictum, one later writer in Braj Bhâkhâ, Bihârî Lâl of Jaipur (17th cent.), composed the Sat Sai, or 'Seven Centuries' of verses, a collection of seven hundred masterpieces in dainty miniature painting of scenes in the life of Kârîm, or Kârîm, the master of writers connected with this phase of religion followed Sûr Dâs in the Ganges valley. In Bihâr, to the east, he was preceded by Vidîyâpâti Thâkur (15th cent.), who, however, wrote in his own language, an old form of Bihârî. He was the first of the old master-singers of Eastern India, and was followed and imitated by Chattânya and other religious lyric poets in Bengali. Assam, further east, and, in the west, Râjâpâtânâ, Kashmîr, Gujurât, and the Marâthâ country have all been prolific in this style of composition, the most famous writers being Mirâ bâî, the queen poetess of Mâwây (17th cent.), and Tukârâm (17th cent.), the Marâthâ. In the south of India we have the great Tamil hymnology, the Nâlâyirâ-prabandham, some of the contents of which are said to date from the 12th cent., and, in Telugu, the Damarla Ramâcharits of Râmânâma Marâthâ, which ranks as a classic. There are also several works in Kannarese.

Reference has already been made to the Saivite literature of S. India. There is a considerable literature devoted to the worship of Siva in the north. The best known is that of Bengal, where the worship of Durgâ, the śakti, or energetic power of Siva, is very popular. There were numerous writers who dealt with the worship of the goddess. The best admired is probably Mukunârâma Chakrâvarti (17th cent.), author of the Śrîmanta Sâudâgâr,
or 'Adventures of the Merchant Šārumanta,' and the 1 Chaupā, a poem in praise of the goddess Durgā. Extracts from the latter have been translated into English verse by E. B. Cowell (JASBE Ixxi. [1902], extra no.). There is also a considerable literature in the vernacular of Bombay, also in the Marāthi country. The name of the earliest and most famous of the latter, the Śākhīvīlī Rasōm of Chand Bārdāt (12th cent.), is familiar to students of J. Tod's Rajasthān (London, 1820-32, frequently reprinted), in which the poem is freely quoted. A semi-historical work, the Tarikh-i-Bahi of Mīhān Muhammad, is an epic poem in Awadhī of considerable merit.

The technical study of poetics gave rise to a large literature, to a certain extent ancillary to the literature of religion. Its main field was in Northern India was Kēśav Dās of Bundelkhand (16th cent.), who wrote in Brāj Bihākhā. The introduction of printing into India has given an impetus to the writing of books. It is impossible to deal with the results of this great increase in the mass of reading matter, good and bad; it must suffice to say that, so far as Hindu literature is concerned, it has furnished more and more to follow English models. The only writer in the vernacular who has gained a high reputation in both Europe and Asia on the grounds of originality and imagination is the modern Bengali poet Rabindra Nāth Tagore.

LITERATURE.—The only work attempting to deal with the vernacular literature of India as a whole is R. W. Frazer, A Literary History of India, London, 1882. G. A. Grierson in IGI, vol. ii. (Oxford, 1906), ch. xi., may also be consulted. Brief and incomplete accounts of the literatures of most of the literary languages of S. India have appeared in such periodicals as IA and in prefaces to grammars and dictionaries. For Marāthi literature the English student will find the most accessible account in the preface to J. T. Moleworth, Maratāḥ Dictionary, Bombay, 1857. For Bengali see Divesh Chandara Sen, History of Bengali Language and Literature, Calcutta, 1914, the only work on the subject. In his book, however, the author has been but a modest scholar (c. 1840), and it is impossible for him to deal with the results of this great increase in the mass of reading matter, good and bad; it must suffice to say that, so far as Hindu literature is concerned, it has furnished more and more to follow English models. The only writer in the vernacular who has gained a high reputation in both Europe and Asia on the grounds of originality and imagination is the modern Bengali poet Rabindra Nāth Tagore.

LITERATURE (Jewish).—The term 'Jewish literature' is used to cover those writings of the Jewish people which were composed after the completion of the Biblical (OT) canon, and which are devoted to the discussion or exposition of Judaism—its teachings, its history, and its documentary sources—and designed primarily for Jewish readers. This definition excludes all such works of Jewish authorship as, though written in Hebrew and meant for Jewish readers, deal with matters of general learning or literature.

THE TRANSITION FROM ORAL TRADITION TO WRITTEN RECORDS.—Between the completion of the Hebrew canon and the rise of Jewish literature there is an interval of several hundred years, and the reason why the literary activity of the Jews was so long in abeyance is that they regarded it as unlawful to commit their teachings to writing. The Scripture, as the Book par excellence, could suffer no other book to approach it; all supplementaries must be taught orally (vāhām; Deut. 4:9); 'to set down the oral teaching in writing is forbidden.' Thus even the Biblical Apocrypha were regarded as śāhīvīlī rasōm, 'extra-traneous books.' The idea that the production of new works was unlawful must have been prevalent by the time of the elder Sirach, and hence his collection of proverbs could not be received into the canon; an author who wished to reach the public by a polemacical edition of his ancient and venerable name, such as Daniel. That the Alexandrian Jews were at that time displaying a remarkable literary fertility did not affect the Jewish authorities in Palestine as all, for the works of the former were written in Greek, and could, therefore, make no claim to canonicity. Thus all the creations of the Jewish mind in this epoch remained unwritten; translations of the Bible, prayers, academic and popular instruction, the development of law and custom, of ethics and religion—all these were carried on by oral instruction only. Apart from letters and fugitive notes relating chiefly to ancient pedagogues, there is only a single document that has come down from ancient times in a written form, viz. the roll of festivals (mizh. 172), a list of joyous memorial days of the Jewish nation (JTh S, ṣe'ut im ṣe'ut lepaḥ)—that remarkable Aramaic calendar which stands as a monument of Jewish national pride, though it is extant only in a revised form with relatively late additions.

It would appear that as regards the Haggâdāh the interdict upon written communication was somewhat relaxed soon after the fall of the Jewish exiles from the Persian Empire, and the Babylonian Talmud, which was brought there, was probably put into writing by Hebrew scholars soon after its compilation (c. 427 B.C.E.). By the time we reach the redactions of the Babylonian Talmud, however (c. A.D. 500), the ancient prohibition must at length have been set aside, the change being necessitated, indeed, by the exigencies of the period—the repeated interference of the Persians and the rise and development of the scribes in their traditional ways—and also by the enormous growth of the material, which had now become too great a load for the human memory. In view of these facts, the last generation of the Amoraim and the Saboraim found it necessary to break with the past by committing the Talmud to writing, and they thereby cleared the ground for the growth of a Jewish literature.

Once the ban against writing had thus been lifted from the Hâlākhāh—that important domain where the interdict had been observed most rigorously—Jewish scholars formed the resolution, hesitatingly at first, but with time ever the more confidently, to write down and make more generally known the facts of their people's life and doctrine.

II. LITERARY PERIODS.—Jewish literature, in the fifteen centuries of its development, has passed through a variety of phases. To the period from c. A.D. 500 to 1000 we must assign its initial stages, in which the various branches of literature had to be evolved and wrought into form. The body of knowledge of every kind was contained and indiscriminately massed together in the Talmud, special departments were now gradually disengaged from the mass, and were dealt with in monographs and treatises. These were then collected into a number of literary and theological works. The average reader was Joseph (A.D. 892-942; see art. SAADAYA) begins...
the distinction of having been the first to treat of the most widely varied branches of Jewish theology in special works, and thus to have laboured as a pioneer, so that he has been rightly named 'the chief of the speakers in every place.' From A.D. 1000 to 1200 Jewish literature passed through its medieval period of fertility in two ramifications, viz. a Hispano-Arabic, which displays a powerful tendency towards the introduction of systematic exegesis, and a Franco-German, which in more characteristic fashion further elaborated the traditional materials of knowledge. The period from 1200 to 1500 can be considered as one of profound decline, during which the literary activity of the Jews was mainly confined to Poland and the East; but, from the advent of Moses Mendelssohn (p. q.c. 1729-56), Jewish literature, now in contact with the spirit of European culture, experienced a fresh revival which, mainly under the influence of Leopold Zunz (1794-1856), developed into a scientific treatment of Judaism, i.e., a methodical and critical discussion of the text, its language, and its nature. We cannot here trace Jewish literature throughout its various epochs and in all its phases; it must suffice to examine the chief departments in which it was specially active, to indicate the tendencies and changes which are traceable, and to search for the reasons that led to the success of this or that particular work. A characteristic feature of Jewish literature, as contrasted with the literatures of other peoples, is that with regard to the Bible it was not mere a product of the scholars, but the product of the whole Jewish people, the individual and the community, the written and the unwritten, the oral and the written, the learned and the unlearned, the religious and the secular, the rationalistic, the grammatical, and the exegetical. The Midrash, hag-Gadôl, a compilation of the 13th cent., written in Yemen, to piece the remains together, and obtain an approximate idea of the form of the ancient Midrashim. The Haggâdah Midrash is of vast extent; much of it is included in the Talmud, but it is found also in special collections. Leaving out of account the immense number of smaller Midrashim in (JE xii. 57 ff.), it is possible now to make a list of the following great compilations: the Midrash Rabbî or Midrash Rabbôth to the Pentateuch and the Five Megillôth, to Esther, Ruth, Song of Solomon, Lamentations, and Ecclesiastes, the Midrash to the Pentateuch, and the Midrash to the Psalms, Proverbs, and Samson; but, while all these continuously follow the order of their respective texts, the Psôqîth collections deal only with selected portions of the Bible, such as the feast days and holidays or special Sabbaths. Mention should also be made of the two great Midrashic compilations known respectively as the Yalqût Shimôn, which probably took shape in Germany during the 12th cent. A.D., and embraces the entire Bible, and the Midrash hag-Gadôl of Yemen already referred to, which is confined to the Pentateuch (ob. 557 ff.). The Haggâdah Midrash, after the Midrashiic period, is the reach of contemporary scholarship by the monumental works of Wilhelm Bacher, Die Agada der babylonischen Amorîter, Strassburg, 1878, Die Agada der Tannaiten, d. i. Die Agada der p. r. Amorîter, d. 0. 1892-90.

The Midrash frequently gives simple explanations of the words and meaning of the Scripture text, but this is by no means its primary interest; in the main it is a devotional work of a didactic and devotional ends. Jewish scholarship did not evolve a rational exegesis of its own—exegesis in the scientific sense—till the time of Saûdah, who was a pioneer and wrote independent commentaries upon, as also a translation, of the whole Bible. In his exegeses he, too, writes with a religious purpose; but, on the whole, his chief concern is the rationalistic, grammatical, and lexical exposition of Scripture. The movement which he initiated owes its further development in the main to European scholars. In Europe there arose two great exegetical schools, one in Spain, the other in N. France. The Spanish school was largely influenced by Arabic learning, and its most prominent representative was Abraham ibn Ezra (1095-1168), whose works superseded those of all his predecessors (cf. JE vi. 253 ff. and art. IBN EZRA, § 1). His commentaries had an extraordinary popularity; they have come down to us in various MS copies, and were applied to the first printed edition in 1478. The Northern French school, again, while it certainly lacked the scientific bent, the philological foundation, and the general culture of the Spanish, yet by its devoted study of the Bible, and its sympathy with the spirit of the written word
did a large amount of highly meritorious and exemplary work for the discovery of the verbal semantics of the most eminent of its representatives, who—particularly Samuel b. Meir (c. 1055-1174)—have, in fact, been re-discovered by modern scholarship; but the favourite and most exalted work of the Middle Ages was the work of Solomon b. Isaac of Troyes, called Rashi (1040-1105), who combined the old method of the Midrash with the effort to ascertain the plain meaning; and consequently, though he certainly gives the dry details of exegesis of this period, has found in his work passages of an attractive and edifying character. His commentary eclipsed all others in general esteem; from the outset to the present day it has been widely read, and has formed a subject of study by itself; while in the course of centuries it has drawn itself over a hundred special commentaries, and ranks in the popular mind as ‘the commentary’ or goyge (cf. J.E. x. 324 f.).

A blending of the characteristic tendencies of the Spanish and Northern French schools appears among the scholars of Provence, from whose midst sprang David Kimhi (1160-1235; cf. J.E. vii. 494 f.), whose exegetical works on the Prophets and the Hagiographa were specially prized. The re-discovery of the predecessors and successors of the exegetes named, as also the historical or the dry details of exegesis of the second period, has been the work of modern scholarship. In Kimhi's comments we find a new type of exegesis—the philosophical, which soon passed into the mystical. Of the works that favor this type, those especially which were able to light their more stubborn materials into a popular and generally accessible form attained a great vogue. These include the long-popular commentaries of Don Isaac Abravanel (1437-1508; cf. J.E. i. 126), and also those of the so-called Biturists (J.E. iii. 232), dating from the age immediately after Moses Mendelssohn. On the whole field of exegetical literature cf. J.E. iii. 162-176.

Closely associated with the exegesis of Scripture were the works dealing with Hebrew philology. Linguistic study among the Jews was but rarely regarded as an end in itself, but, as the science of the language in which the Scripture was written, was pursued mainly as an adjunct to Biblical investigation. The literary treatment of Hebrew grammar and lexicography was practically performed by the Hispano-Arabic school, the masterly works of which, however, were composed in Arabic, and accordingly, even when translated into Hebrew, were too little noticed; the philological writings of Judah b. David Hayyuj (b. c. 930; J.E. vi. 577 f.) and Abû al-Walid Marwân ibn Jânân (early 11th cent.; ib. vi. 534 fl.), important as they are, were re-discovered only recently. The works of Abraham ibn Ezra enjoyed an enormous vogue, as did also, and even in a still greater degree, the grammar and dictionary of David Kimhi, which have in many quarters retained their pre-eminence until recent times. From the 15th cent. onward, however, a marked decline in linguisitc studies began; in proportion as mysticism prevailed, interest in the exact investigation of Hebrew fell away; the works of Elijah Levita (1488-1549; cf. J.E. viii. 40) attracted much less notice in Jewish than in Christian circles. Philology remained in a state of neglect until it was restored to its rightful position by the Mendelssohnian group; the manuals of J. B. Beil-Zeeb (1784-1811; J.E. iii. 683 f.) were widely studied until they were superseded by more modern and more competent works. The revival of Hebrew philology was due in a very special degree to Mendelssohn, whose best works were supplied, first, to the Jews who had been initiated into the peculiar nature of its dialect, and, moreover, the language of the Bible, like their general conditions of life, underwent in process of time

date, and soon, indeed, explanatory notes seem to have been
attached to the text and transmitted with it ; thus we find
writers o( the 10th cent, quoting verbatim from comments
dating from the 6th.i On the other hand, what we may call an
expository literature was not evolved till a much later day, for
it was the a"6nim of the 10th cent who first felt constrained to
supply written comments— first of all in the form of explanations of words ; and these, again, were the germs of the comprehensive dictionaries, of which the most celebrated was the
radical changes,

Kome

JJi ix. ISOff.).
The first commentaries in the ordinary sense, however, were produced in N. Africa c. a.d. 1000 besides explaining words, they
gave short notes elucidating the context. The most important
of these N. African commentaries is that of B. yananel b.
Hushiel of Kairwan (990-1050 ; ct. JE vi. 206). In Spain little
progress was made in the composition of commentaries,
although it was in that country that the most influential
Mishna commentary ot the Middle Ages was coinposed, viz.
that of Moses Maimonides ([g.c] 1135-1204 ; cf. JE ix. 73 ff.),
written originally in Arabic, but afterwards translated into
Hebrew, and from the time that it was first printed (1492) to
the present day regularly embodied in editions of the Mishna
or the Talmud. The most notable contributions to the exposition of the Talmud were produced in Germany and France.
Talmudio learning, carrying with it the earliest commentaries,
spread by way of Italy to Germany. R. Gershom b. Judah,
the Light ot the Exile (t 1040 cf. JE v. 638 f.), who taught
in Mainz, gave the impulse to a new method of Talmudio exposiHis school not only dealt in the most thorough manner
tion.
with details, but attached great importance to bringing out
the connexion of thought and from that school emanated the
most notable of all commentaries on the Talmud, that of Rashi
mentioned above. Its greatness lies in the fact that its author,
with the self-restraint of genius, surrenders his mind wholly to
the text, suppressing his own opinions, and bent only upon discovering and exhibiting the thought of the original writer.
Rashi never introduces superfluous matter ; nor, again, does he
ever gloss over a difliculty he either gives a solution of it or
modestly confesses that he has none to suggest The work
came to be used as an indispensable auxiliary to the study ot
the Talmud; it superseded all previous commentaries, and
threw all the later into the shade. While much of the expository literature of that age was buried in oblivion until the
modern period, Rashi's work was frequently conjoined with
the MSS of the Talmud, and it has been bound up with the
printed editions from the first; even at the present day, indeed, it is regarded as an essential adjunct to the study of the
Talmud, and no less as a work on the whole unrivalled in its
method- The French schools sought to supplement Rashi they
occasionally felt the need of a more dialectical mode of exposition, and thought that the text of the Talmud should be
furnished with decisions of the questions proposed and with
references to practical life ; and, finding none of these things
in Rashi's work, they wrote supplementary notes, tCsdfdth,
which, however, did not run continuously with the text, but
here and there supplied comments of the desiderated type upon
particular passages. Of these Tdsaflsts numerous schools arose
in Germany and France during the 12th and 13th centuries
the works which they produced were much studied in the
Middle Ages, and afterwards, from the tune when the Talmud
was first printed in its entirety (Venice, 1520), a number of
them, selected for purposes of study, were issued in conjunction with it (cf. JE xii. 202 ft.). A peculiar development
novels
of the expository literature appears in the so-called
(MddmMm), which, taking their pattern from the works of

finally

degenerated into mere empty dialectic, and this was specially
the case in Germany and Poland from the 15th century.
As regards the Palestinian Talmud, the Middle Ages scarcely
produced a single commentator, and the modern period not
even one, who deals with it from beginning to end. The best
known and most widely circulated commentaries to it are the
Qirban hd-'MdhS. of David Frankel, the teacher ot Moses
Mendelssohn, and the Pni Mishe of Moses Margolioth (c. 1700).
For the literature ot the commentaries see JE xii. 28 ff.
(6) Compendta.— While the Talmud was regarded as the
standard to which all religious institutions must conform and
by which all questions of law must be solved, it was, nevertheless, but ill adapted to facilitate consultation for the decisions that were often required in practical life. Apart from
the fact that it was a work of vast compass, such as scarcely
a single individual could completely master, it confined itself
almost wholly to the discussion of the questions which it raised,
and hardly ever gave a decision as to which of the opinions
which it presented should be regarded as authoritative. Furit
ther, its matter is not always sj'stematically arranged
frequently' passes abruptly from one theme to another, so that
its discussions of a single question have often to be sought for
and examined in widely separate places. In order to remedy
these detects, Yehudai, Gaon in Sura, had (o. a.d. 750) drawn up
a compendium of luUdkhith, which was subsequently revised,
enlarged, and, as the H/Udkhdth G'dhdldth, given a place in tne
religious literature by Simon Qayyara (o. 850), from whose time

the Tdsafists ; his compendium is generally given in the printed
editions of the Talmud.

Another mode of epitomizing the matter of the Talmud was
to arrange it under the Six hundred and thirteen commandments and prohibitions,' an arrangement which is first found as
an introduction to the HdldkhOth G^dh6l6ih^ and was subsequently often reproduced in comprehensive forms. The most
important work of this class is the Sefer ham^Mifwdih ot Moses
Maimonides, which, originally written in Arabic, was several
times translated into Hebrew, and found many opponenta and

ff.).

The most important and practically most serviceable type of
compendium, however, was the Code in the narrower sense
of the word. Here, too, Maimonides stands supreme his Mishne
T6rdk, written in Hebrew c. a.d. 1180, is the most systematic
book in all Jewish literature ; with masterly skill he arranges

the theological sections, but also what chiefly
because of its very structure. Codification was a process that
was never greatly favoured among the Jews, who were dispoP«»d
to fear that it might supersede the study of the sources txd
with regard to the work in question, consisting as it did of
abstractly formulated paragraphs, and giving no references to
sources or to the learned champions of particular views, they
thought it well to guard specially against that danger. Nevertheless, the admirable structure of the Mishne Tirdh, and the
veneration in which its author was held, made it a standard
work; and the writings designed to elucida,te or criticize it
constitute a literary aggregate of vast proportions.
Maimonides, in importing the entire material of the Talmud
into his Code, took no account ot the question whether it still
apphed to the conditions of his age thus, e.g., he dealt also
with the laws regarding the Temple, the sacrifices, etc. About
the year 1340, however, Jacob b. Asher drew up a new code,
entitled Arbd'd fuHm, in which he passed by such subjects as
were no longer of practical significance, and took cognizance of
views and decisions that had meanwhile come to the front
moreover, unlike Maimonides, he dealt with the various themes
in treatises, not in separate paragraphs, and, in particular, he
gave expression to the views of scholars who had lived in the
centuries immediately preceding. The Arbd'd filrlm came to
be a work of the utmost significance in the following period.
Joseph Qaro (1488-1675 ct. JB iii. 585 ff. and art. Qaro, Joseph)
wrote a voluminous commentary to it, the Betk Ydse/.trom
which he afterwards compiled an abstract entitled Shulfydn
'Arukh. The Shulhdn 'Arukh follows the arrangement ot the
Arbd'd furlm, and, like that work, is divided into four parts.
It deals only with the laws that had been in force from the
tall ot the Temple, but it departs from its model and reverts
to the method ot Maimonides in giving rules only, short paragraphs, and in making no reference to its sources or to th&
advocates ot particular views. In systematizing power and
candour of thought, however, Joseph Qaro is signally inferior
to Maimonides; he was strongly influenced by the mystical
tendency in the theology of the period of decadence. The
Shulhdn 'Sritkh was at first slighted, being regarded al f mere
book lor the ignorant,' and its eventual fame was du* Sc :tl
critics, who gave expression to their opposing vievs in commentaries and supplements to it. To begin with, Moses Isserles
(1620-73 cf. JE vi. 678 ff.) published a series of supplements
to the Beth Y6se/ under the title of Darkhe Mishe, and afterwards re-issued them aa glosses to the Shulhdn 'Arukh ; here,
on the basis of the Talmudio tradition then dominant in Germany, he frequently modified the decisions ot Qaro. It was in

and an active correspondence by letter had been carried on between the teachers of the Talmud in Palestine and those in Babylon. In this respect, as in many others, the Jews became more and more dispersed, correspondence became more and more necessary; and it was for the purpose of obtaining these communications that increases in the number of responses; from that period itself, indeed, no fewer than fifteen more or less voluminous collections of responses were published. Nor, where the privilege of Jewish life was transferred to Europe in the Middle Ages, did the intercourse of the scholars diminish either in quantity or in vigour. Thousands of opinions and legal pronouncements by certain eminent rabbis of medieval times have been preserved, and their works are an important source of information. The number of works embodying such responses is so enormous that it cannot be content to name only the most extensive and the most generally consulted: from the Middle Ages we have those of Meir b. Baruch of Rothenburg (1333-69), Samuel b. Joseph (c. 1570), and Solomon b. Meir, Rabbi Beriah (1253-1320), and that of Isaac b. Sheshet (1309-1468), all belonging to Spain; from the dawn of the modern period, those of Joseph Isaac b. Joseph ibn Adrets (1640) and Joseph Joseph (c. 1650), as also that of David b. Abba Shem (c. 1700); and from more recent times those of Hirsch ben Hail (1760) and Moses Sofer (1839). On the literature of the responses cf. also J. S. 240 ff.

(d) Systematic works. Mention must be made, lastly, of that branch of the literature which deals with the problems of the Talmud in a methodical and systematic way—a mode of treatment but little regarded in the earlier period, and, indeed, never strenuously applied till modern times. The earliest work aiming at systematic treatment is the Tencer Zedem Talmud, dating from the 13th century; the next works of the kind to appear were the Middor ha-Talmud of Tamid (c. 1320); (extant copies are printed in all editions of the Talmud) and the Meaflafla of Nissim b. Jacob, both of which were prepared by the great medieval authority, R. Eliezer ben Yehuda of Acre (c. 1350). The Yehudim ha-Levi of Rabbi Joseph ibn Tibbon (c. 1360); the latter has been drawn around 13 monuments, and has often been printed. A new epoch in the treatment of Talmudic study was ushered in by S. J. b. Rapport (1799-1867) (cf. J. E. x. 222), who, in various Hebrew periodicals, as also in his disciple, the Rabbinic, dealt with the whole of the Talmud in a scientific way, at once systematic and critical. This new epoch in the treatment of Talmudic study was followed by Z. Frankel (1801-75) (Ob. v. 482 ff.) in his Darkeh ha-Midrash and his Middor ha-Talmud, and by Abraham Geiger (1810-77) (Ob. v. 589 ff.) in his Middor ha-Talmud. The last-named work was continued by H. Wein (1816-1895) (Ob. xii. 495 ff.) in the historical work named below.

3. Historical literature. The post-Biblical historiography of the Jews took its rise as an element in the systematic treatment of the Talmud. The majority of the earlier works in this field were written chiefly with the object of re-constructing the chain of tradition and of determining as accurately as possible the genealogies of eminent families and the chronicle of learned men. The germs of Jewish historical literature are found in the Talmud itself, and these furnished the pattern for the earliest developments. The chronology of the Talmudic period from its legendary foundation to the destruction of the Second Temple is given in the Seder Olam, the nucleus of which was the work of Joseph b. Halafta (c. A.D. 180). An annalistic work, though not an annalistic history, is the Sefer Yehudim, which is found in the Seder Olam Zuta, a genealogical register, which cannot have been drawn up before the 7th century A.D., and which assumes a disparaging attitude towards the exilarchs of the day. The biographical annals of scholarship, again, are represented by the Seder Tanan'm ve-Amarim (c. 880), and the Epistle of Sherira (957), the latter being our principal source for the period between A.D. 600 and 950. The work that belongs also to the Sefar haq-Qaddab, composed in 1161 by Abraham b. David of Toledo, who is chiefly concerned to exalt the continuity of learned tradition down to his own time, though he has not more detailed information regarding the Jews in Spain of the two preceding centuries, yet even there his manifest purpose is to trace the development of learning, and recognized authority. The work of Abraham Zacuto (1451-1506) is of great importance for a period of astronomy and chronology in Salamisca, but after the expulsion of the Jews from Spain settled in the East, was upon similar lines; his Sefar haq-Qaddab (1504) contains a detailed study of most of the Talmudic authorities, and also a chronology brought down to his own day. For centuries this work was known only in a form containing a series of supplements, and was first made accessible in its original shape (1577). Nehemiah Haberkorn wrote his Seder haq-Doroth (c. 1700) solely for the purpose of supplementing the data of Zakuto and bringing the Rabbinical genealogies down to his own times.

A further incentive to the writing of history was provided by the peculiar fortunes of the Jewish people, and in particular by the sufferings and persecutions with which they had to contend, often without intermission during the Middle Ages. These oppressions are chronicled in a vast number of fragmentary records, both in prose and in poetry, but there are very few connected and continuous accounts. We shall enumerate here only the more extensive compilations of this type still extant. A narrative of the persecutions which harassed the Jews, chiefly in the Iberian country, in connexion with the Crusades is given by A. Neubauer and M. Stern in their Hebraische Berichte über die Zerti-Verfolgungen während der Kreuzzüge, Berlin, 1892. In those days of incessant persecution it was the practice to record biographical particulars concerning the roll of those who had perished as martyrs; so-called memorial books were drawn up in the various communities, and were constantly added to. The most famous of these was published by S. Salfeld under the title Der Martyro-Logism des Nürnberger Memorbuches, Berlin, 1898. The earliest connected account of the persecutions was composed by the notost astronomer Judah ibn Verga (c. 1450), whose Sheshet Yehudah was supplemented by a younger relative named Solomon and another writer named Joseph, and published in its enlarged form. The best-known account of the Jewish martyrs in the Middle Ages is from the hand of the physician Joseph hak-Kohen, who lived in the 16th century, and resided in various Italian cities; his 'Emeq haq-Bakkah describes with accuracy and graphic power the persecutions and banishments suffered by the Jews from the destruction of the Second Temple. A strange combination of martyrology and the history of learning is found in Gedaliah ibn Yahya's Shalahed hak-Qabbal (c. 1550), which, although much of it was shown at an early date to be untrue and even incredible, enjoyed an extraordinary popularity, and was again and again issued in printed editions.

The Jewish history of the Middle Ages had little aptitude for intelligently grasping or portraying their people's history. The Book of Josippone, a reproduction of the Latin Hegesippus (c. E.R. vii. 573) in fluent Hebrew, composed in Italy in the 10th century, stood long alone; by reason of its vivid and interesting style it has always been held in great esteem, and has been not only frequently edited in Hebrew, but also translated into many other languages. Even more rarely, if possible, do we find medieval Jewish writers attempting to write profane history in Hebrew. A work of later date deserving of mention is Joseph hak-Kohen's Tiferet haq-Qaddab (c. 1530), written in 1553, while a few decades afterwards, David Gans († 1613, in Prague) published, in his Semak Davudh (Prague, 1552), records, first of Jewish, and then of universal, history from their respective beginnings to his own time; this work appeared also in a Latin translation. In general, however, Jewish writers restricted themselves to the composition of popular narratives of particular episodes.

It was not until comparatively recent times, indeed, that Jewish history was treated in a coherent and orderly manner. In 1820 L. M. Jost began the publication of a history of the Jews in
many volumes and in various forms, in which he
was primarily concerned to recount the political
fortunes of his people, discussing their sociological
development in an appendix. Leopold Zunz, while he
wrote nothing of the nature of a systematic
work on Jewish history, furnished in his Zur
Geschichte und Literatur (Berlin, 1845) copious
materials for all branches of that history, and
suggestions as to the time of treating them. The
best-known and most widely circulated work of
this class, the Geschichte der Juden by H. Graetz
(2nd ed., Leipzig, 1853–70), aims chiefly at exhibiting
the development of Jewish religious and political
thought, and is a literary companion to the
political position and the martyrs suffered by them, while A.
Gaiger's Das Judentum und seine Geschichte
(Breslau, 1871) deals solely with their religious
development. I. W. Weiss, in his Heb. Der Dor
we-Doršaw (Vienna, 1871–91), is likewise concerned
primarily with the development of Judaism on its
spiritual side. On the historical literature cf. also
M. Steinheil, Die Geschichte der Juden, i. (Frankfort, 1898), and art. ' Historiography' in JE vi. 423 ff.

An important source of information regarding the
development of Jewish thought itself to the end of the Middle Ages is
found in the copious narratives of the numerous Jewish travellers and wayfarers. The most
teresting of such books of travel is the Maṣṣaṭh of
Benjamin of Tudela (c. 1165) a journey from Spain to Egypt and Babylonia, and it is
noted down in a racy style 'all that he had seen or heard.' In
the edition of the Maṣṣaṭh prepared by A.
Asher (London, 1840), Zunz has given a detailed
account of all the geographical literature of the Jews. ii. 250 ff.

4. Systematic theology.—A great part of the
Talmud and the Midrashim is devoted to the
religious teaching of Judaism; the Haggadot in particular is concerned mainly with
the problems of theology—dogmatic and ethical ideas. No more than the Bible itself,
however, does this Jewish literature give a
systematic presentation of theological doctrine. It was, in fact, only under the influence of Muslim
theology that Jewish writers first essayed to deal
systematically with the doctrinal fabric of their
religion, and to support it by arguments. Their
works were, to begin with, written in Arabic, but
were soon all translated into Hebrew—largely through the efforts of the family of Ibn Tibbon,
into this theology secret of the Jewish
world. The earliest speculative theologian among the Jews was Sa'adya Ga'on, who, in his Emtorot
we-Doréth, written in 323, sought to bring the
doctrinal teachings of Judaism into relation with
contemporary philosophy. Bahya b. Joseph (first
half of 11th cent.; JE ii. 446 ff.) won an extraordinary success with his Ḥubbah ḥad-Dorāhāh, which treats chiefly of the moral teachings of
Judaism; the book was read far and wide, and
was in its day perhaps the most popular work of
general philosophical literature among the Jews. Joseph ibn Gikatilla (c. viii. 346 ff.; see also art. Halevi), in his Ḥakham ben Ya'akov, wrote
in the style of the Platonist Dialogues, enjoyed a
great vogue. By far the most eminent work in this
field, however, is the Meroth Nóḥaim of
Moses Maimonides, which, like his Mishn Tôrāh
commentary, is divided into IV parts, each for its
rigorous systematic structure and for the keenness and independence of its thought. Although
the book, with its free handling of Jewish doctrine,
aroused hostility on many sides, and was even publicly burned at the instance of Jewish
accusers, yet in influence it stands supreme; all later study of Jewish philosophy revolves around the
Meroth, and the most outstanding Jewish thinkers, such as
Spinoza, Moses Mendelssohn (q.v.), and Solomon
Maimon, found in it the incentive to the
construction of their own systems. The Meroth marks
the culminating point of Jewish philosophical
literature in the Middle Ages. Of writers belonging
to the time of treating the
Levi ben Gershon (q.v.), c. 1350; JE viii. 26 ff.,
who, with his Milḥamot Adonai, was the first to
make a stand against the authority of Aristotle;
Judah Crescas, and Menahem ben Solomon ibn Aḥdān, was drawn upon by Spinoza as an
important source; and Joseph Albo (c. 1415; ib. i. 324 ff.), whose Zekhārin was an enormously popular book.
The period after Maimonides was, however, on
the whole one of profound decadence in philosophico-
theological studies, which were, in fact, regarded as
positively unlawful. The enlightened philosophy
of Maimonides brought forth a counterpoise in
the composition of the Qabbālā (see KABRĀLA), a
peculiar medley of speculative ideas and curious
fantasies which was put forward as an esoteric
doctrine of ancient origin, and sought to attach
its authority to the authority of other systems. It
indeed did not scruple even to disseminate writings
purporting to be the work of the most venerable
personages, including Moses and the Patriarchs.
The most notable branch of such secret mystical
science was the Zohār, which was put into circula-
tion c. 1300 by Moses de Leon, and passed off as
the work of Simon b. Yohai, a writer of the 2nd cent. A.D. It takes the form of a commentary to the
Pentateuch, and is a medley of various systems, and
incoherent, it is very difficult to describe
them in terms of literary science.
It was not until comparatively recent times that
Jewish thought brought forth various
systems, not one of which, however, can be said to
have come into general favour. The modern
Judaism of Western countries, in fact, has been
powerfully influenced by the prevailing philosophy
of the age. Likewise Haskins dealing with
Jewish theology we would mention only K.
Kohler, Grundzüge einer systematischen Theologie
des Judentums, Leipzig, 1910, and S. Schechter,
The ideas embodied in the theological literature
were given to the wider Jewish public by means of
popular writings, including not only the many widely circulated pamphlets and tracts, but in
numerous books of morals, which, it is true, lack
more emphasis upon ethics than upon the
speculative verification of the faith. The most
excellent of the books of Maimonides produced in the Middle Ages is the Sefer Ḥokhotot, of Judah b. Samuel of
LITERATURE (Jewish)

Regensburg († 1317;JE vii. 535 ff.), a work of high critical value, which, though not free from the superposition of its time, is pervaded by an admirable spirit of piety and an earnest desire to foster the mutual love of men. The books of mysticism in which the thought of Solomon is transplanted into the language of the country in which they arose, and they form a large part of the Judaeo-German, Judaeo-Spanish, and Judaeo-Arabic literatures. From the time of their composition they have had an enormous influence upon the present, and the most widely read and systematic work on Judaism is the Ethik des Judeautens of M. Lazarus (Frankfort, 1888, 1911).

The theology of the Jews also involved the work of pointing out the lines of demarcation between their own religion and other creeds. The Jews, who from an early period formed but a sparse minority among the adherents of other faiths, had abundant occasion for such procedure. As might be expected, all their writings which deal with theological matters are concerned also with apologetics and polemics, but the systematic treatment of the questions at issue was a relatively late development. The works in this field which were given to the public and still survive are but few in number; from fear of the dominant religion, indeed, often religion itself was at any rate not issued in printed form. Jewish polemical works consist either of explanations of Biblical passages which had been interpreted in a Christological or Gnostical sense, or of systematic treatises on the cardinal doctrines of Christianity or Islam. Of writings directed against Christianity the 'Torathoth Peha' (on which see ERE vii. 535 f.) was not used so much by Jews themselves as by Christian controversialists. Of Jewish polemical works that created a considerable stir, mention may be made of the Na'ghosh of Lipman-Mühhausen, a resident of Prague (c. 1400), who in that work brought forward three hundred and forty-six passages of the OT as telling against Christianity, and the Hasidiot Emlam, in which Isaac Troki, the Qaraite, made a systematic attack upon Christian doctrine (c. 1580). Both of these works were translated into various languages, and many attempts were made to refute them by Christian theologians. On the polemical literature cf., further, JE x. 102 ff.

The aim of this polemical activity was likewise directed against the Qaraites and other Jewish sects, but for the most part it finds expression incidentally in more general writings, and we are unable to specify any monograph of importance in this smaller field.

5. Liturgical and secular poetry.—The worship of God supplied the most powerful impulse to the post-Biblical development of Hebrew poetry, which, now termed piyyut, was revived with a view to enriching the liturgy. All instruction in and laudation of Jewish history and religion, which in the olden time had been the work of the preacher, fell, from c. A.D. 600, to the function of the pašîn. It was under the influence of the Arabs that Jewish religious poetry sprang into life, and it was from them that it borrowed its artistic forms, but it retained its direct and intimate character. The most important of all the Hebrew language to its own end—a process which has occupied the whole of modern efforts, was at length brought to full realization in Spain. The most distinguished paitan of the Middle Ages was Eleazar b. Jacob ha-Qalîr, who lived probably c. A.D. 750 in Palestine; he composed over two hundred well-known poems, which have found a place in the Jewish prayer-books of nearly all countries, though we must note the exception of Syria, which had many famous figures in this field, and where medieval Hebrew poetry attained its highest level between 1040 and 1140. The most outstanding names here are those of Solomon ibn Gabirol, Judah Ben Solomon ben Ezra, and Judah Halevi (qq.v.). Poems by these writers are found in all prayer-books, but such compositions form only a small part of their poetic work; they also wrote voluminous 'divans,' which, it is true, soon fell into neglect, and have come down to us only in recent times; a number of them still await publication. On the piyyût cf. JE x. 65 ff.

While liturgical poetry occupied the place of supreme regard, other branches of the poetic art were by no means neglected. Of these the most widely cultivated was the didactic, which was turned to account in every department of knowledge. The piyyût itself sometimes assumed a didactic form; but, in addition, we find disquisitions in verse relating to the calendar, philology, and Biblical study, the Halâkha, the laws of religion, Talmudic jurisprudence, philosophy and polemics, history, medicine, astronomy, etc., and poems in all these branches of study are extant in large numbers (cf. JE x. 98 f.). Of more importance, as being more closely in touch with the poetic spirit, the didactic post-Biblical poetry, once more, was a great extent lyrical. But the earliest development of the lyric in the ordinary sense, i.e., the poetry that finds its themes in love, wine, and lament, sprang in Spain, where the supreme master of this form was Moses ibn Ezra, where Judah Halevi won renown by his occasional poems and his poetical descriptions of nature, and where Abraham ibn Ezra and Judah al-Harizi (early 13th cent.) found recognition as keen satirists. The greatest Jewish secular poet, however, was Immanuel b. Solomon, of Rome—the contemporary, perhaps a personal friend, of Dante—who combined Oriental fantasy with Italian eroticism, and gave expression to them in highly polished Hebrew verse, writing, indeed, with such audacity that the Shabbat Ârâb could never come up with the Sabbath, while even in our own time Graetz has accused him of having profaned the Hebrew muse. Another lyric writer worthy of mention in Israel was Mendel of Nagara (c. 1830), who, while he sings of God and of Israel, works upon a basis of love-songs and their melodies, and writes with such intensity of passion and such daring anthropomorphism that he too incurred the censure of the Rabbis. Moses Hayyim Luzzatto (1707–47) deserves mention as a writer of great emotional power, and as the first who composed epic poetry in the Hebrew language.

Jewish poetry, like Jewish literature in general, passed through a long period of barrenness, which lasted, indeed, until it was vitalized by the modern renascence of intellectual interests. The majority of the more distinguished poets of the present age are of Russian origin, the most eminent of all being Judah Loeb Gordon (1831–92; cf. JE vii. 471 f.), whose achievement, however, lies more in the field of satire than in that of the lyric. Of living poets special reference is due to H. N. Bialik, whose lyric poetry has already met with the highest appreciation, and whose compositions have already been translated into nearly every European language.

The last few decades have witnessed the rise of a glorious Hebrew literature of general interest.

LITERATURE (Pahlavi).

1. Translations of Avesta texts.—These translations are combined with running commentaries, sometimes of considerable length, but they are handicapped by failing to understand the original, especially in its grammatical relations, since the inflected type of the Avesta language had yielded, long before the translations were composed, the Middle Persian or of which we have any indication, to the analytic type present in Pahlavi, whose grammar differs only in unimportant details from that of Modern Persian and Modern Iranian dialects. At the same time, the Middle Persian translations of the Avesta possess a real value and must be considered in any attempt to decipher the original, particularly in view of the allusions, etc., preserved by Iranian tradition (see, further, Art. INTERPRETATION [Vedic and Avesta]).

2. Texts on Zoroastrian religious subjects.—Of these the longest and most important is the Dinkart (Acts of the Religion), dating from the 9th to the 10th centuries, and the chief varia in this regard is the elucidation of Zoroastrianism and Manichaeanism (qq.v.), since it explains and supplements the data contained in the Avesta (q.v.) and adds materially to the scanty documents of Manichaean literature, besides giving fragmentary renderings of Christian texts. The religious material in Middle Persian falls into three categories: translations of Avesta texts, original compositions on Zoroastrian religious subjects, and Manichaean and Christian literature.

LITERATURE (Pahlavi)

105

The Dinkart as a source for knowledge of the religious philosophy of the Sassanid Zoroastrians (and, like the larger work, doubtless embodying a large amount of older material) is what may be termed response literature. Some of these offerings, which we have considered elsewhere in this series, might provide a new province of extreme interest and value. The decipherment of the MSS found by this explorers has only begun. Here it must suffice to say that we already possess Pahlavi versions of somewhat extensive portions of Manichean literature—a fact the more important since this religion had hitherto been known only from the writings of its enemies. The most important collection of these texts thus far is that of F. W. K. Müller (with German translation), *Handschriften-Reste in Estrangelo-Schrift aus Turfan*, *ABW*, 1904; revised ed. C. Salemann, *Manicheische Studien, i.* *Mem. de l'acad. imp. des sciences de St. Pétersbourg*, viii. 10 (1908); Müller, *Zepheliath ann einem manich. Hymnentuch*, *AB A W*, 1913. In the closely allied Sogdian dialect are numerous important portions of NT, perhaps from the 9th or 10th cent. (Müller, *NT Bruchstücke in sog. Sprache*, *SBA W*, 1907, pp. 260–279; *Sog. Texte, i.*, *ABW*, 1913; cf. L. H. Gray, *Ezra*, *Z*, 1913, 53–73, 242–253).

3. Manichean and Christian literature.—Until comparatively recently it was supposed that Pahlavi literature was exclusively Zoroastrian; but the discoveries made in Central Asia by A. Stein, A. Grünwedel, A. von Le Coq, and P. Pelliot have revealed a new province of extreme interest and value. The decipherment of the MSS found by these explorers has only begun. Here it must suffice to say that we already possess Pahlavi versions of somewhat extensive portions of Manichean literature—a fact the more important since this religion had hitherto been known only from the writings of its enemies. The most important collection of these texts thus far is that of F. W. K. Müller (with German translation), "Handschriften-Reste in Estrangelo-Schrift aus Turfan," *ABW*, 1904; revised ed. C. Salemann, *Manicheische Studien, i.* *Mem. de l'acad. imp. des sciences de St. Pétersbourg*, viii. 10 (1908); Müller, *Zepheliath ann einem manich. Hymnentuch*, *AB A W*, 1913. In the closely allied Sogdian dialect are numerous important portions of NT, perhaps from the 9th or 10th cent. (Müller, *NT Bruchstücke in sog. Sprache*, *SBA W*, 1907, pp. 260–279; *Sog. Texte, i.*, *ABW*, 1913; cf. L. H. Gray, *Ezra*, *Z*, 1913, 53–73, 242–253).

4. Pāzand and Sanskrit versions.—The special problems of the Pahlavi language cannot be discussed here (see F. Spiegel, *Gram. der hōzdīrčerī Barmashen*, Vienna, 1881; P. Sanjana, *Gram. der Pahlavi Lang.*, Bombay, 1871; C. de Harlez, *Manuel de Pahlavi*, Paris, 1880; Darmesteter, *Etudes tran.*, do. 1883; Salemann, *Mittelpersisch,* *GrIrP* i. (1901) 322; E. B. Fisch, *Etudes de gr. pahlavi*, Paris, n.d. (1905); it must suffice to say that, when the Semitic words (or logograms) in Pahlavi are written in Iranian (e.g., ahān bāh, "king of kings," instead of malkūn mukhā), the language is termed Pāzand (Spiegel, *Gram. der Pāzarsprache*, Leipzig, 1851). Many Pahlavi texts already listed are found in Pāzand as well. The great majority of the religious writings of this type are of the 9th cent. (K. E. Kangas, *Inscr. Pahlav.*, *J. Modii, Bombay, 1908, have been edited by E. K. Antia (Pāzand Texts, Bombay, 1909). The Šīkand gānānī-Vijār defends the doctrine of dualism, and in this connexion polarizes in very interesting fashion against Judaism, Christianity, Manichaeism, and—necessarily quite guardedly—Muhammadanism (cf. artt. JESUS CHRIST in ZORASTRIANISM, JEWS in ZORASTRIANISM); the Jāmpād-nāmāk gives a summary of Iranian cosmology, history, and future fortunes of the Iranian religion. Among the texts edited by Antia are dādā (benedictions recited on various occasions), māins (charms, often connected with ethnography), and Jamāṣṭīd, or *Dubt-dāstān ‘Explanations’* (cf. examples with Modii, *Anthropological Papers*, Bombay, 1911, pp. 48, 125–129; K. E. Kangas, in *Canao Mem. Vol.*, 142–145, patēts (confessions); and of texts not included in this collection mention may be made of *A Father instructing his Son and Andarj-dāstān Mart*.

A number of Pahlavi (and Avestan) treatises are found in Sanskrit as well as in Pahlavi and Pāzand versions. Many of these (ed. and trans. in *SBE* and other Pahlavi texts enumerated above, but we must also note the ed. of Nersessian's version of the Yasna by Spiegel (Leipzig, 1861) and the series of Collected..."
Sanskrit Writings of the Parsis, ed. S. D. Bhaurocha (Bombay, 1911)."  

5. On Parsi-Persian literature. — Apart from Persian translations of Avesta and Pahlavi texts, there is a large amount of Zoroastrian literature in Persian, which, for the most part, still awaits study. The Zend-Avesta, the oldest part of the Avesta, is so far only partly as translated into English (West, SBE xxiv. 255-361) and Latin (T. Hyde, Hist. religions veterrum Persarum, Oxford, 1706, pp. 433-488). A different work, although along the same general lines, is the Saddarband-i-Hud (or Sud-sar Baudhānī; ed. B. N. Dhabhar, Bombay, 1909). Of worth for study of the methods of Zoroastrian polemic against Muhammadanism is the Utvān-i-Islām, which is found in two recensions, the shorter of which has been edited and translated (ed. J. Mohl, Fragmenta relatīva ad religionem Zoroaster, Paris, 1829; tr. J. Vullers, Fragmenta über die Religion des Zoroaster, Bonn, 1831; Blochet, RHE xxvii. [1885] 23-49). A particularly valuable collection of Parsi-Persian literature in the original language is published in the MS. Bu 39, belonging to the University of Bombay, the second volume of which has been edited by M. N. Unvala (not yet published) and analyzed by Rosenberg (Notices de l'éd. persan, Petrograd, 1906). It contains a large number of śaṅgīta (religious triters) and letters on the most diverse subjects — ritual, cosmogony, exegesis, etc. — the longer recension of Vaisnavī-zādān (pp. 72-80), from the Ābōn-i-Jāmsār (containing the horoscopes of Zoroaster, Moses, Alexander the Great, Christ, Mazdak, etc., as well as cosmology and eschatology, pp. 111-130), Vagī-i-Ambedkarin (tributes of the Ambedkar family, pp. 111-129), Aghāzay-i-dāštān Mazdak va-Sāh Nāthākī' [Ādīl] (on the heresiarsh Mazdak, pp. 214-230), six parables connected with the Barhām cycle (pp. 306-327; cf. art. JOSPHAT, BARLAAM AND), and questions asked of Zoroaster by Jāmsār (pp. 417-422). Among other Parsi-Persian texts, not yet edited, may be mentioned a Discussion on Dualism between a Zoroastrian, and a leading Parsee, and the Sāngvant-nā маршрут, or Book of Oaths.  

The interesting secular works in Pahlavi, Pāzdān, and Parsi-Persian, such as geographical matter, social rules, and tales, do not come within the sphere of religion.  

Finally, it may be mentioned that translations of the Avesta have been made not only into Persian (for specimens see, in addition to works cited above, Darmesteter, Etudes iraniennes, ii. 262 ff.), but also, from the 15th cent., into Gujarati, the vernacular of the Indian Zoroastrians (see the Prolegomena to K. Goldner's ed. of the Avesta, Stuttgart, 1896, pp. vii-xi; Darmesteter, Zend-Avesta, i. p. xxii); and the modern religious literature of the Parsis is chiefly written either in Gujarati or in English.  

LOUIS H. GRAY.  

LITERATURE (Vedic and Classical Sanskrit). — I. The language. — The name 'Sanskrit' (sauktā, 'spoke,' and kārta, 'made') is ordinaril applied to the whole ancient and sacred language of India. It belongs more properly to that dialect which may be defined more exactly as Classical Sanskrit, the language which was treated by the Hindu mutuans, Pāṇini and his followers. For more than 2000 years, until the present day, this language has led a more or less artificial life. Like the Latin of the Middle Ages, it was, and is, even today, to a very large extent, the medium of communication and literary expression of the priestly, learned, and cultivated classes. The more popular speech upon which it was based is known as bhāṣā (speech, 'language'); it has no direct record. Sanskrit is distinguished more obviously from the phonetically later, decayed dialects, Prākrit and Pāṇi, the second of the two having the language of the canonical writings of the Southern Buddhists. The relation of the Prākrit and Pāṇi dialects to Sanskrit is closely analogous to the relation of the Romance languages to Latin. On the other hand, Sanskrit is distinguished, although much less sharply, than the oldest forms of Indian speech, preserved in the canonical and wholly religious literature of the Veda (Skr. vedā, 'knowledge,' from ved-, 'to know,' connected with Gr. ἴδω 'I know,' Lat. videre, Old English wēdā, 'I know,' Gothic wēd, 'I know,' Old High German wēszen, Germ. wēsen, Eng. wēt, 'to know').  

These forms of speech are in their turn by no means free from phonetic and chronological differences; yet they are comprised under the name Vedic (or, less properly, Vedic Sanskrit), which is thus distinguished from the language of Pāṇini and other Sanskrit epics, whose proper designation is Sanskrit, or Classical Sanskrit.  

Vedic differs from Sanskrit about as much as the Greek of Homer does from that of the New Testament. The Vedic apparatus of grammatical forms is much richer and less definitely fixed than that of Sanskrit. The latter has lost much of the wealth of form of the Vedic language, supplying the proper substitutes for the lost materials. Many case-forms and verbal forms of Vedic have disappeared in Sanskrit. The subjunctive is lost; a single Sanskrit infinitive takes the place of about a dozen very interesting Vedic infinitives. Sanskrit also gave up the most important heiron which the Hindu language has handed down from pre-historic times, namely, the Vedic system of metres. For the last few years the recorded Vedic accents have proved to be of paramount importance in the history of the Indo-European languages. Vedic, however, notwithstanding to a less extent, by somewhat under the form of its archaic character, is not a strictly popular dialect, but a more or less artificial 'high speech,' handed down through generations by families of priestly singers. Thus both Vedic and Sanskrit, as is indeed the case more or less wherever a literature has sprung up, were in a sense caste languages, built upon popular idioms. The grammatical regulation of Sanskrit at the hands of Pāṇini and his followers, however, went beyond any academic attempts to regulate speech recorded elsewhere in the history of civilization.  

Older forms lying behind the Vedic language are reconstructed on the side of Classical Philology. The Vedic people were immigrants to India; they came from the great Iranian region on the other side of the Himalaya mountains. The comparison of Vedic (and to a less extent, Sanskrit) with the oldest forms of Iranian speech, the language of the Avesta and the cuneiform inscriptions of the Achaemenian Persian kings, yields the rather startling result, that the intransitive paradigms and collectively mere dialects of one and the same older idiom. This is known as the Indo-Iranian or Aryan (in the narrower, and proper, sense) language. The reconstructed Aryan language differs
LITERATURE (Vedic and Classical Sanskrit)

less from the language of the Veda than Classical Sanskrit does from Prákrtik and Páli. The language of the Iranian Avesta is so much like that of the Veda that entire passages of either literature may be converted into good specimens of the other by merely eliminating the ground-bound changes which each has evolved in the course of its separate existence. And the literary style, the metres, and above all the mythology of Veda and Avesta are closely enough related to the theory of either, to some extent directly dependent upon the other. In fact, the spiritual monuments of the Avesta as well as the stone monuments of the Achaemenian kings became intelligible chiefly by the aid of the Vedic language. Since the revival of classical learning there has been no event of such importance in the history of culture as the discovery of Sanskrit in the latter part of the 18th century. There is at present no domain of historical or linguistic science untouched by the influence of Sanskrit studies. The study of this language gave access to the primitive Indo-European period, and originated the science of Comparative Philology in all its bearings. Linguistic Science, Comparative Mythology, Science of Religion, Comparative Jurisprudence, and other important fields of inquiry form the nucleus only by which we owe their very existence to the discovery of Sanskrit or were profoundly influenced by its study.

3. The Veda as a whole.—The word 'Veda' is the collective designation of the ancient sacred literature of India, or of individual books belonging to that literature. At an unknown date, which is at the present time conventionally averaged up as 1500 B.C., but which may be considerably earlier, the Aryan tribes (clans, vid), from which is derived the later name of the third, or agricultural, caste, Váisyá (see Váisyá) gathered to migrate from the Iranian highlands. The better part of the Aryan race migrated into the north-west of India, the plains of the river Indus and its tributaries. The non-Aryan aborigines, called Dasyu, in distinction from Arya ('whence the word 'Aryan'), the name of the conquerors, were easily subdued. The conquest was followed by gradual amalgamation of the fairer-skinned conquerors with the dark aborigines. The result was a not altogether primitive, semi-pastoral civilisation, city kings, and priestly schools rivalling the interests connected with cattle-raising and agriculture. From the start we are confronted with a poetical literature, primitive on the whole, and to which is still clinging its crudeness when compared with Classical Sanskrit literature, yet lacking neither in refinement and beauty of thought nor in skill in the handling of language and metre. That this product was not entirely originated on Indian soil follows from the above-mentioned close connexion with the earliest forms of Persian literature. Vedic literature in its first intention is throughout religious. It includes hymns, prayers, and sacrificial formulæ offered by priests to the gods in behalf of lay sacrificers; charms for witchcraft and medicine, manipulated by magicians and medicine-men; expositions of the sacrifices, illustrated by legends, in the manner of the Jewish Talmud; higher speculations, philosophic, psycho-physical, cosmic, and theosophic, gradually growing up in connexion with these and finally rules for conduct in everyday life, at home and abroad. This is the Veda as a whole.

At the base of this entire literature of more than 100 books, not all of which have as yet been exhaustively studied, lies the ground-work of the Vedas in the narrower sense. These are the Rigveda, the Yajurveda, the Sávávēda, and the Atharvaveda. These four names have come from a somewhat later time; they do not correspond exactly with the earlier names, nor do they correspond completely with the contents of the texts themselves. The earlier names are rahas, 'stanzas of the liturgy,' yajus, 'sacrificial,' yajusmi, 'sacred,' sánmati, 'melodies,' and atharvasváyavasah, 'blessings and curses.' The collection which goes by the name of Rigveda contains not only 'stanzas of the liturgy,' but also 'sacred curses,' as well as most of the stanzas which form the basis of the sánman-melodies of the Sávávēda. The Atharvaveda contains rahas and yajusmi, as well as blessings and curses. The Yajurveda also contains many blessings in addition to its main topic, the liturgy. The Sávávēda is merely a collection of a certain kind of 'stanzas of praise' which are derived with some variants and additions from the Rigveda, but are here set to music which is indicated by musical notations.

3. The Rigveda.—The Rigveda is on the whole the most important as well as the oldest of the four collections. A little over 1000 hymns, equaling in bulk the surviving poems of Homer, are arranged in ten books, called manadās, or 'circles.' Six of them (ii.—vii.), the so-called 'family books,' are considered to form the nucleus of the entire, owing to their importance to the discovery of Sanskrit or were profoundly influenced by its study.

The non-Aryan aborigines, called Dasyu, in distinction from Arya ('whence the word 'Aryan'), the name of the conquerors, were easily subdued. The conquest was followed by gradual amalgamation of the fairer-skinned conquerors with the dark aborigines. The result was a not altogether primitive, semi-pastoral civilisation, city kings, and priestly schools rivalling the interests connected with cattle-raising and agriculture. From the start we are confronted with a poetical literature, primitive on the whole, and to which is still clinging its crudeness when compared with Classical Sanskrit literature, yet lacking neither in refinement and beauty of thought nor in skill in the handling of language and metre. That this product was not entirely originated on Indian soil follows from the above-mentioned close connexion with the earliest forms of Persian literature. Vedic literature in its first intention is throughout religious. It includes hymns, prayers, and sacrificial formulæ offered by priests to the gods in behalf of lay sacrificers; charms for witchcraft and medicine, manipulated by magicians and medicine-men; expositions of the sacrifices, illustrated by legends, in the manner of the Jewish Talmud; higher speculations, philosophic, psycho-physical, cosmic, and theosophic, gradually growing up in connexion with these and finally rules for conduct in everyday life, at home and abroad. This is the Veda as a whole.

At the base of this entire literature of more than 100 books, not all of which have as yet been exhaustively studied, lies the ground-work of the Vedas in the narrower sense. These are the Rigveda, the Yajurveda, the Sávávēda, and the Atharvaveda. These four names have come from a somewhat later time; they do not correspond exactly with the earlier names, nor do they correspond completely with the contents of the texts themselves. The earlier names are rahas, 'stanzas of the liturgy,' yajus, 'sacrificial,' yajusmi, 'sacred,' sánmati, 'melodies,' and atharvasváyavasah, 'blessings and curses.' The collection which goes by the name of Rigveda contains not only 'stanzas of the liturgy,' but also 'sacred curses,' as well as most of the stanzas which form the basis of the sánman-melodies of the Sávávēda. The Atharvaveda contains rahas and yajusmi, as well as blessings and curses. The Yajurveda also contains many blessings in addition to its main topic, the liturgy. The Sávávēda is merely a collection of a certain kind of 'stanzas of praise' which are derived with some variants and additions from the Rigveda, but are here set to music which is indicated by musical notations.
philology as difficult as it is important. In any case, it is known to justify the statement that the keynotes of Rigvedic thought is the nature myth.

4. The Vajuraveda.—The Vajuraveda represents the exceeding growth of the ritualistic, or ascetic, religion. Its jāraṇī, "liturgical stanzas and formulas," are in the main, though not wholly, of a later time. They are partly metrical and partly prose. The narrative hymns are fully developed in them, secondary changes of expression, and without regard to the original purpose and order of their composition. The main object is not a longer devotion to the gods themselves; the sacrifice has become the "centre of the eight"; its mystic power is conceived to be a thing per se, and its every detail has swollen into all-importance. A crowd of priests (seventeen is the largest number) conduct a vast, complicated, and painstaking ceremonial, full of symbolic meaning even in its smallest minutiae. From the moment when the priest seat themselves on the sacrificial ground, strew with sacred grass, and proceed to work out the altar (veda) on which the sacred fires are built every act has its stanza or formula, and every utensil is blessed with its own fitting blessing. Every flaw is elaborately explicated. These ceremonies are often referred to as prayers, not that they, that may, or may not, succeed, but as inherently coercive magic. If the priest chants a formula for rain while pouring some sacrificial fluid, rain shall and must come; if he makes a sacrifice according to this formula, or by means of an enemy, that enemy is surely destroyed. In fact, and in brief, the Vajuraveda means the deification of the sacrifice in its every detail of act and word.

The Sāmaaveda is the least clear of all the Vedas as regards its purpose and origin. Its stanzas, or rather groups of stanzas, known as sāmāṇi, "melodies," The sāmaṇi-system is indirectly derived from the Rigveda, as ordinary poetry, accented in the same way as other Vedic poetry; (2) in the Sāmaaveda itself in a form called śākhati, a kind of libretto composed of a special collection of stanzas, most of which, though not all, occur also in the Rigveda (see above); here also there is a system of accents, peculiar in its notation, but apparently with reference to the mango-stanza (6) in the third section of the pāthas, or songs-books, we find the real sung sāmaṇa; here not only the text but the musical notes are given. Still this is not yet a complete sāmaṇ. In the middle of the sung stanza an exclamation, usually syllables are interspersed—the so-called stobhas, such as oh, hau, hau, hoyi, or hūhi; and at the end of the stanza certain concluding syllables—the so-called niṭhānas, such as adha, di, tu, and sūk. The Sāmaaveda is devoted chiefly to the worship of Indra, who is a blustering, braggadocio god and who has to beseech himself with soma in order to slay demons. It seems likely, therefore, that the sāmaṇa are the civilized version of savage shamanism (the resemblance between the two words, however, is accidental), an attempt to influence the natural order of things by shouts and impersonal divinities. The treatises called kṣatavas, the sāmaṇ, and the Sāmaaveda, are in the main, written in the kind of stanzas of the older hymns called sāmaṇas; it is an ancient and sacred name, a holy charm, or "blessings," the latter with "witchcraft charms," or "curses." In addition to this name, and the more conventional name Atharvaveda, there are two other names, practically restricted to the ritual texts of this Veda: bhāgavatagyān, that is, "Burgus and Angirasas, the ancient family of holy men, the principal fire-priests, take the place of the Atharvans; and Brahmanas, probably "Veda of the Brahmas, or holy religion in general." As regards the latter name, it must be remembered that the Atharvaveda contains a large number of theosophic hymns which deal with the brahma in the sense of the Ne-Patonic ὅλος, as a kind of pantheistic personification of holy thought and its pious utterance. The Atharvaveda is a collection of 789 hymns, containing some 6000 stanzas.

7. The Vedic schools.—The redactions or collections of these four Vedas are known as smāhikas; each of them is handed down in various schools, branches, or recensions, called charasya, sādhā, or bheda, the term sādhā, or 'branch,' being the most familiar of these terms. These "branches" represent a given Veda in forms differing not a little from one another. The school differences of the Rigveda are unimportant, except as they extend also to the other Vedas. The Sāmaaveda is represented by two schools, the Sāmaavedas of these two, the Sānaikyatys and Paippālādas, are published, the latter in an interesting chromo-photographic reproduction of the unique manuscript of that text in the library of the University of Tübingen. The Yajurveda, especially, is handed down in recensions that differ from one another very widely. There is in the first place the broad division into the White Yajurveda and the Black Yajurveda. The most important difference between these two is that the Black Yajurveda schools intermingle their stanzas and formulae with the prosaic compositions of the Brāhmaṇa (see below), whereas the White Yajurveda schools present their Brāhmaṇa in separate works. The White Yajurveda belongs to the school of the Vajasaneyins, and is subdivided into the Madhyadhivas and the Paippālādas. The important schools of the Black Yajurveda are the Taittiriyas, Maitrāyaniyas, Kāśayas, and Kāśayas. Sometimes these schools have definite geographical locations. For example, the Kāśayas of Madhyadhiva were located in the region around the lower course of the river Nar-madā; the Taittiriyas, at least in modern times, are at home in the south of India, the Deccan.

8. The Brāhmaṇa.—The poetic stanzas and the ritualistic formulae of the Vedas collectively go by the name of mantra, 'pious utterance,' or hymn.' These were followed at a later period by a very different literary type, namely, the theological expositions (Brāhmaṇa) of the Vedas. The Hebrew Talmud. The Brahmaṇas are exegetical and informative, bulky expositions of the sacrificial ceremonial, describing its minute details, discussing its value or reason, speculating upon its origin, and illustrating its potency by ancient legends. Apart from the light which these texts throw upon the sacredness of ancient India, they are important because they are written in prose, and thus are the most accessible of all Indo-European speech. They are especially important for syntax; in this respect they represent the oldest Indian stage even better than the Rigveda, owing to the restrictions imposed upon the
latter by its poetic form. The Brāhmaṇas also were composed in schools, or recensions, of the various Brāhmaṇa recensions of one and the same Veda differ at times even more widely than the Samhitās of the mantra. Thus the Rigveda has three Brāhmaṇas, the Rigveda Brāhmaṇa, or Sāṅkhâyana. The Brāhmaṇa matter of the Black Yajurveda is given together with the mantra of that class (see above); on the other hand, the White Yajurveda has Brāhmaṇas matter which is inextricably mingled with extraordinary fullness, in the famous Satapatha Brāhmaṇa, the ‘Brāhmaṇa of a Hundred Paths,’ so called because it consists of a hundred lectures. Next to the Rigveda and Atharvaveda Samhitās this work is the most important production in the whole range of Vedic literature. Two Brāhmaṇas belonging to independent recensions of the Sāṃvaveda have been preserved entire, that of the Tāpālins, usually designated as Pañchiśvāvīsaka Brāhmaṇa, and that of the Talavākāras or Jaiminīyas. To the Atharvaveda is attached the very late and secondary Gopakṣa Brāhmaṇa; its contents harmonize so little with the spirit of the Atharvāna hymns that it seems likely to have been produced in imitation of the ‘school’ conditions in the other Vedas.

9. The Aranyakas and Upaniṣads.—A later development is given by the Aranyakas, or ‘Forest Treatises.’ Their later character is indicated both by the position which they occupy at the end of the Brāhmaṇas and by their partly theosophical contents. Their position in the Atharvaveda is not altogether clear. Either these works were recited by hermits living in the forest, or, owing to the superior sanctity of their contents, they were taught by teacher to pupil in the solitude of the forest rather than in the profane atmosphere of the town or village. The two important Aranyakas are the Aitareya and the Taitleryā, belonging to the two Vedic schools of that name. The chief interest of the Aranyakas is that they form in contents and tone a transition to the Upaniṣads, the older of which are either embedded in them or form their concluding portions (see art. AṆAYAKAS, UṆṆIṆAD).

10. The Srauta-Sūtras, or manuals of the Vedic ritual.—Both mantra and brāhmaṇa are regarded as revealed (śruti, or revelation); the rest of the Vedas are called Shruti. The Sāṃvaveda school is divided into the Vāsishṭha and the Manuṣya, the latter being the oldest. Of this literature there are two Srauta Sūtras, corresponding to its two Brāhmaṇas. The first is the Aśvalyāya to the Aitareya Brāhmaṇa, and the Śāṅkhâyana or Kashāstikin to the Brāhmaṇa of that name. The White Yajurveda belongs the Srauta Sūtra of Kātyāyanī, closely agreeing to the Satapatha Brāhmaṇa. There are no fewer than six Srauta Sūtras belonging to the Black Yajurveda, but only three of them are published, of which two are composed by the Aṣṭādhyāyins and Baudhāyana, belonging to the schools of the Taittiriya, and the Mānvas, belonging to the school of the Mātirāyānīyas. The Śāṃvaveda has two Śrautas, those of Lāṭyāyana and Drāhyāyana, belonging respectively to two schools of the Kā vítinīyas and the Śāṅkhānyāyas; the Atharvaveda has the late and inferior Vātānā.

11. The Gṛhya Sūtras, or ‘House Books.’—Of decidedly greater importance is the second class of Sūtras, the Gṛhya Sūtras, or ‘House Books.’ These are treatises on home life, which deal systematically and piously with the events in the temporary existence of the individual and his family. Though composing essentially a late Vedic period, they contain practices and prayers of great antiquity, and supplement most effectively the contents of the Atharvaveda. From the moment of birth, indeed from the time of conception, to the time when the body is consigned to the funeral pyre, they exhibit the ordinary human activity in the aspect of a devot and virtuous adherent of the gods. All the important events of life are sacramental, decked out in practices often of great charm and usually full of symbolic meaning. For etymology and the history of human ideas the ‘House Books’ are of unexcelled importance. These manuals are also distributed among the four Vedas and their schools, each of which is theoretically entitled to one of them. More than a dozen are now known to scholars. The Rigveda contains only the Gṛhya Sūtras of its two schools, that of Aśvalāyana and Śāṅkhāyana; the White Yajurveda that of Pāraskara; the Black Yajurveda a large number, as those of the Brāhmaṇa, Aṣṭādhyāyin, Baudhāyana, and Katha schools; the Śāṃvaveda has the Gōhila, Kuḍārī, and Jaiminīya. To the Atharvaveda belongs the unique Kawśika Sūtra, which, in addition to the domestic ritual, deals with the magical and medicinal practices that specially belong to that Veda.

12. The Dharma Sūtras, or ‘Law Books.’—The third class of Sūtras are those Dharma Sūtras, or ‘Law Books.’ They deal also to some extent with the customs of everyday life, but are engaged for the most part with secular and religious law. In one department of law, that of expiation, these are supplemented by the Yajurveda. The Law Sūtras, in their turn also, are either directly attached to the body of canonical writings of a certain Vedic school or are shown by inner criteria to have originated within such a school. The oldest Law Sūtras are those of the Aṣṭādhyāyins and Baudhāyana, belonging to the Black Yajurveda schools of that name; the Gautama belonging to the Śāṃvaveda; the Vaisū leading to the Katha school of the Black Yajurveda; and the Visājīya of less certain associations. The earliest metrical law-books, the so-called Dharmaskārās, written in Classical Sanskrit, seem also to be based on lost Sūtra collections of definite Vedic schools. The most famous of these, the Manuva Dharmaskāra, or ‘Law Book of Manu’ (see LAW [Hindu]), may be founded upon a lost Dharmasūtra of the Manuva or Mātrāyānīya school of the Black Yajurveda, while the briefer ‘Law Book of Yajñavalkya’ is unmistakably connected with some school of the White Yajurveda.

English readers may obtain ready insight into the contents of Vedic literature in all its important aspects through the series of translations edited by Max Müller in SBE (Oxford, 1879 ff.). Paix of the Sāṃvaveda are translated by himself (vol. xxxii.) and H. Oldenberg (vol. xxxi.); the Atharvaveda by M. Bloomfield (vol. xxxii.); the Satapatha Brāhmaṇa by E. Gelling (vol. xxxii.); the Gṛhya Sūtras by Oldenberg (vol. xxxiii. and xxxiv.); the older Dharma Sūtras SBE, XIII. (Bühlcr and J. Buckel, 1915); the Āyur Veda, B, by Max Müller (vol. xxxi. and xxxiv.); and the Law Book of Manu by Bühlcr (vol. xxxi.).

13. Vedic and Sanskrit literature contrasted.—
The form and style of Sanskrit literature differ a good deal from those of the Vedas. As regards the language, it is to be noted that prose in Vedic times was developed to a tolerably high pitch in the Yajurvedas, Brāhmaṇas, and Upaniṣads in Sanskrit, apart from the strained scientific language (śāstra) of philosophy or grammar, or the diffuse and inorganic style of the commentators, prose is nowhere presented itself in genuine literature only in tales, not in romances, and partly in the drama. Nor has this prose improved in literary and stylistic quality, as compared with the earlier variety. On the contrary, it has become more and more literary and ornamental and flabby, long awkward compounds, gerunds, constructions in the passive voice where the active would do, and other artificialities. As regards the poetic medium of Classical Sanskrit, it also differs from the Veda. The bulk of Sanskrit poetry, especially the Epic, is composed in the śloka metre, a development of the Vedic anusṭubha metre of four syllables lines, of essentially banal cadence. But numerous other metres, usually built up on Vedic prototypes, have become steadily more elaborate and strict than their old originals; in the end they have also become more artistic and beautiful.

Notwithstanding the wonderfully unbroken continuity of Hindu writings, the spirit of Sanskrit literature also differs greatly from the Vedic. The chief distinction between the two periods is that the Veda is essentially a religious collection, whereas Sanskrit literature is, with rare exceptions, such as the Bhagavata-Gītā, or the metrical Law Śatapatha, prose. Of the Veda, lyric poetry as well as legendary and expository prose are in the service of prayer and sacrifice; in Sanskrit epic, lyric, didactic, and dramatric forms are all for the purpose of literary panegyric and aesthetic, or moral instruction. In Sanskrit literature, moreover, with the exception of the grand compilations of the Mahābhārata and the Purāṇas, the authors are generally definite persons, more or less well-known, whereas the Vedic writings go back to families of poets or schools of religious learning, the individual authors being almost invariable anachronisms.

14. Epic literature.—Sanskrit literature may be divided into epic, lyric, didactic, narrative, and scientific. In epic poetry there is the important distinction between the free, narrative, or ‘ancient legend,’ and the artistic or artificial epic called kavya, ‘poetic product.’ The great epic, the Mahābhārata, is by far the most important representative of the former kind. Of somewhat similar free style are the eighteen Purāṇas (see below), of much later date than the Mahābhārata. The beginnings of the artistic style are seen in the other great Hindu epic, the Rāmāyana. But the finished style of the kavya is not evolved until the time of Kālidāsa about the 6th cent. A.D.

The Mahābhārata, or ‘Great Bhārata Story,’ the greatest of Hindu epics, is a buoyant, authorless compilation for which tradition has devised the name Vyās, ‘Redaction,’ as author. It is written for the most part in the epic metre, the śloka, and contains altogether about 100,000 stanzas of four lines each, about eight times the length of the Homeric poems.

The kernel story of the epic, which is interruped by many episodes and romances of themselves, tells how the ancient and wicked dynasty of the Kuru was overthrown by the piece Pandīthas and Pāṇḍus. At a gambling-match depicted in the next vivid language, Duryodhana, the king of the Kuru, cheats the Pāṇḍu princes, robs them of their kingdom, and exiles them from their homes. But this is but the preparation for the final war, or eighteen days’ battle, between the opposing royal houses and their allies. In this the Kuru are finally overthrown and destroyed.

The heroic story is not only interrupted by episodes, but is in general made the pivot around which philosophical (religious) and ethical discussions of great length revolve. Thus the work has assumed the place in Hindu literature of an encyclopedia of moral and religious instruction.

A Bhārata and a Mahābhārata are mentioned as early as the Katha-Upaniṣad (see 3622). The later Vedic literature, but all dates assigned to the original simple epic which preceded the encyclopedic poems in its finished form are mere guesses, except that it is probably present form in the 4th or 5th cent. of our era.

Among the episodes of the Mahābhārata, the Bhagavata-Gītā, ‘The Song of the Divine One,’ or ‘Song Celestial,’ is the most important and valuable. It is in some respects the most interesting and important book in post-Vedic literature.

When the rival armies of the Kuru and the Pāṇḍu are drawn up against each other, Arjuna, the leader of the Pāṇḍus, ponders over the heroics, hesitates to enter upon the slaughter. Then Krishna, one of the incarnations of Vishnu, acting as Arjuna’s charioteer, sends his scuffles by pointing out that action, which is the performance of duty, is the obligation of man in the world, although, finally, abstinent devotion to the Supreme Spirit alone leads to salvation. The poem is conceived in the spirit of ascetic Hindu philosophy or philosophy. The bottom is the Śāktya doctrine of dual master and spirit, and this is tinged with monistic Vedantic pantheism (see Brahma-Gītā).

It is not likely that the poem is the original ‘Bhārata Story,’ but there is no information as to its date and authorship. The Mahābhārata has been translated into English prose at the expense of Pratāpa Chandra Rāy (Calcutta, 1889), and by M. D. N. Dutt.

15. The Rāmāyana.—The Rāmāyana, the second of the great epics, is in the main the work of a single author, Valmiki. Though all parts are not from the same time, however, they are not haphazardly free from digressions, it tells a connected story of great interest in epic invention of the highest order. It is to this day the favourite poem of the Hindus.

The central heroes are Rāma and his devoted wife Sītā; the main event the conquest of Lāṅkā (probably Ceylon).

Dārakāra, the mighty king of Oudh (Ayodhya), having grown old, decided upon Arjuna, his eldest son, as his successor, but his infatuated second queen, Kālēki, succeeded in changing his mind in favour of her son Bharata. Rāma, banished for fourteen years, retires with Sītā to the forest. Upon the death of Dārakāra, his son Bharata refuses to usurp Rāma’s throne, but seeks him out in the forest in order to conduct him back to the throne in his capital city. Rāma in turn refuses to cross his father’s decision, and he offers his gold crown to his son, as a token of his resignation of the throne. But Bharata, on returning, places the crown upon the throne, and holds over him the yellow parasol, the symbol of royalty; his son stands by as the king’s plenipotentiary. In the meantime Rāma makes it his business to procure demons who under the auspices of the forest in their holy practices. Rāvana, the king of the demons, who lives in Lāṅkā, ensnare and kidnaps Sītā. Then Rāma forms an alliance with Hanumān and the other kings of the monkey, who build for him a wonderful bridge across the mainland to Lāṅkā. Rāma twice visits Rāvana, is resisted with Sītā, returns home, and, conjointly with Bharata, rules his happy people, so that the golden age has come again upon the earth.

The story, notwithstanding the fact that it presents itself outwardly as a heroic legend, lies under the suspicion of containing one or more mythic roots. Certainly in the Veda Sītā is the personified furrow of the field, the beautiful wife of Indra or Parājanya (see Vedic Religion). Hence Rāma certainly continues the qualities of Indra, the slayer of demons. The story also seems to typify the advance of Brahmanical civilization southward towards Ceylon.

The Rāmāyana consists of seven books, in about 14,000 stanzas. It exists in three recensions, which differ one from the other in their readings, the order of the stanzas, and in having each more or less lengthy passages passages added from others. The best known and most popular recension has been translated by the Anglo-Indian scholar R. H. Griffith in five volumes (London, 1875).
The word *purāṇa* occurs frequently in the prose texts of the Veda as a designation of the Veda's own cosmogonic and legendary lore; the name is also applied to the *Mahābhārata*. In its most distinctive and the world of primitive beliefs and the Hindu triad—Brahmā, Viṣṇu, and Siva—is recognized, nevertheless the Vaisnavite *Kurma Purāṇa* does not hesitate to say: *Viṣṇu is the divinity of the gods, Siva of the devils.* To Brahmin alike refer only in a perfunctory fashion. According to ancient tradition, the ideal *purāṇa* is divided into five parts: (1) primary creation, or cosmogony; (2) secondary creation, or the reordering of the worlds; (3) genealogy of the gods and patriarchs; (4) manusvātaras, or periods of reigns of the Manu; (5) the history of the dynasties of kings. Through no exact *purāṇa* is so divided, yet their subject-matter roughly follows that order. The entire type of composition is of secondary importance; it borrows its themes very largely from the epic literature, and represents religious belief, practices, and the nation in an exaggerated and often disordered fashion (see Pūrāṇas).

17. The 'artistic epics.'—The Hindus consider six *kāvya*, or 'artistic epics,' entitled to the epithet 'artistic': or, better, artificial, character removes them in reality from the sphere of genuine epic, they are, however, interesting on account of their wealth of descriptive power and delicacy of illustration; they are deficient in the portrayal of strong character or stirring action. Moreover, they are commingled more and more with lyric, erotic, and didactic elements, as well as with bombast and play on words. Nevertheless, no less a person than Kālidāsa, the universal poet and dramatist, is the author of the two best known artistic epics, the *Kumārasambhava*, or 'Birth of the War God,' and the *Raghuvaṇa*, or 'Race of Raghu.' The former consists of seventeen cantos, the first seven of which are devoted to the courtship and wedding of the deities Śiva and Parvati, the parents of the youthful god of war. The real theme of the poem appears only towards the end, in the account of the destruction of the demon Tāraka, the object for which the god of war was born. The *Raghuvaṇa*, in nineteen cantos, describes the life of the famous Kúśāna dynasty. Then in the next six cantos comes the story of Ráma himself, the same theme as that of the *Rāmāyaṇa*. The remaining cantos deal with the twenty-four kings who ruled as Ráma's successors in Ayodhyā. The remaining *kāvya* deal for the most part with themes from the *Mahābhārata* and *Rāmāyaṇa*.

18. Lyric poetry.—Every form of artistic Sanskrit literature, whether epic, dramatic, or conversely, has a strong lyric cast. At the bottom these three kinds, in the Hindu poet's hands, are but thematically differentiated forms of the same poetic endowment. Ornate figures of speech, varied and varied into literary composition from the gorgeous climate, flora, and fauna of India, subtle detail-painting of every sensation and emotion—these are the common characteristics of Hindu artistic poetry. Lyric poetry can hardly do more than emphasize or specialize these conditions, yet it has its individual traits, the most important of which is the fact that it borrows, from the epic, a part of its underlying composition from continuous composition. In form and name these strophes are infinitely elaborated and varied. In no other literature have poets endeavoured so strongly to harmonize the sentiment of a stanza with its metrical expression. The most elaborate continuous lyrics of India are the *Megha-dīta*, or 'Cloud Messenger,' and the *Ittivikhyākāra*, or 'Cycle of Seasons,' both by Kālidāsa.

The theme of the *kāvya* is a pakṣa, or else, exiled from heaven. The messenger is a passing cloud which shall report to the pakṣa's wife, again, scenes located upon her couch through the dark branches of the night. The pakṣa, or exiled husband, may the cloud, after delivering his message, return with reassuring news, and never himself be separated from his lightning spouse. The *Cycle of Seasons* is famous for its descriptive depiction of India's tropical nature, matched all along with the corresponding human moods and emotions.

The bulk of lyrical poetry, however, is in single miniature stanzas, which suggest strongly the didactic sentiments proverb poetry which the Hindus also cultivated with great success. In fact the most famous collection of such stanzas, that of Bharthari, consists of lyric, didactic, and philosophical poems. Bharthari, who lived in the 7th cent. A.D., is perhaps the most remarkable Hindu poet next to Kālidāsa.

His stanzas, 300 in number, are divided into three centuries— the 'Century of Love,' the 'Century of Wisdom,' and the 'Century of Reconciliation.' There is no action in these stanzas Ever and again, within the narrow frame of a single stanza, the poet pictures the world for what it is, the whole universe is summed up in woman, from whose glowing eyes there is no escape. But, after all, her woman's profession, the stanza finally declares that he has become an altered man. Youth has gone by; his thoughts, freed from infatuation, are all for contemplation in the forest, and the whole world he accosts but as a wise and straw.

The second master of the erotic stanza is Amara, author of the *Vinyūlaka*, or 'Collection of Love Stanzas.' Amara also is a master at depicting all the moods of love: bliss and dejection, anger and devotion. None of the Indian lyricists treats love from the romantic or ideal point of view. It is always sensuous love. But a certain delicacy of feeling and expression, as well as a sensitive appreciation of those qualities of love which attract irresistibly, only finally to repel, lifts their stanzas above the mere *minne-song,* and *minne-strophe,* or 'Way of the Love,' flavoured with the universal, though rather theoretical, Hindu pessimism.

19. Didactic poetry.—Even in erotic lyrics the Hindu's deep-seated inclination towards speculation and reflection is evident. This has not only been the basis of that which is best and highest in their religion and philosophy, but it has assumed shape in another important product of their literature, the gnomic, didactic, sententious stanza, which may be called the 'Proverb.' O. von Böhtlingk (Ind. Sprichw., Petrograd, 1870-73) collected from all Sanskrit literature some 8000 of these stanzas. They are grouped under the titles of the eight *Veda* and are particularly common in the moral essays of the *Veda* literature. Their keynote is again the vanity of human life, and the superlative happiness that awaits resignation. The mental calm of the saintly anchorite who lives free from all desires in the stillness of the forest is the resolving chord of human unrest. But for him who remains in the world there is also a kind of salvation, namely, virtue. When a man dies and leaves all behind him, his good works alone accompany him on his journey into the next life (nirāmâyâ). Hence the practical value of virtue almost over- rides the pessimistic view of the world as the total human action. These gnomic stanzas are gathered up into collections such as the *Sànti-sataaka*, or 'Century of Tranquillity,' or the *Moха-mudgâr*, or 'Hammer of Fool'; but the ethical saw is really at home in the fables of the *Pâtëchântarâ* and *Higapadesâ*. These works are paralleled by Buddhist compositions (see below). In fact, a Buddhist collection of this kind is the *Phâneputra-pada*, or 'Way of the Law,' contains perhaps the most beautiful and profound words of wisdom in all Hindu literature.

20. The drama.—The drama is one of the latest
yet one of the most interesting products of Sanskrit literature. With all the uncertainty of literary dates in India there is no good reason to assume for this class of works a date earlier than the 6th or 5th century. Certain religious hymns in dialogue are all that the early periods of Hindu literature suggest as a possible partial, yet very doubtful, basis for the drama. The Sanskrit word 'nāṭaka' is nāṭaka, 'a dance,' nāṭa, 'to dance' (whence 'naïve, girls,' etc.). The word therefore means literally 'ballet.' It is not doubtful that dances contributed something to the development of the drama. In various religious ceremonies of earlier times dancing played a part; at a later time the cult of Siva and Vīṣṇu, and especially of Siva's incarnation Kṛṣṇa, was accompanied by panomorphic dances. These panomimes reproduced the heroic deeds of these gods, and were accompanied by songs. Popular representations of this sort, the so-called vāyūras, have survived to the present day in Bengal. They are not unlike the mystery-play of the Christian Middle Ages, and their modern continuation, the passion-play. The god Kṛṣṇa and Rādā, his love, are the main characters, but there are also friends, rivals, democracies of the music, dancing, song, and improvised dialogue, while unquestionably in some way connected with the origin of the drama, are nevertheless separate, and very highly prized. The earliest product of the nāṭaka as it appears in such works as the Sauktalā of Kālidāsa, or the Mṛchhakāti, 'Clay Cart,' of Śūdraka.

The most question, whether Western (Greek) influence, particularly the New Attic Comedy of Menander (as reflected in Plautus and Terence), has not in some measure contributed to the Hindu drama. It is known that Greek actors followed Alexander the Great through Asia, and that they celebrated his victories with dramatic performances. After the death of Alexander Greek kings continued to rule in North-Western India. Brick commerce was carried on between the west coast of India and Alexandria, the later centre of Greek literary and artistic life. Greek art and Greek astronomy certainly exercised a strong influence upon Hindu art and science. The chief points of resemblance between the Hindu drama and the Greek comedies are as follows. The Hindu drama is divided into acts (from one to ten), separate episodes of time; the curtain proper are preceded by a prologue spoken by the stage manager (ṣṭrāthākara). The stage was a simple roof, not shut off from the auditorium by a curtain, but, on the contrary, the curtain was in the background of the stage; it was called yavānākā—that is, 'Greek curtain' (karpē). The characters of the Hindu drama resemble in some respects those of the Attic comedy. There are courtesans and parasites, braggarts and cunning servants. Especially the standard comic figure of the Hindu drama, the vidīqaika, the unfrocked hero of the comic, compares well with the co-religion, the Sophocles of the Greek Roman comedy. The vidīqaika is a lunch-bounded, bald dwarf of halting gait, the clown of the piece. Though Bāhāman by birth, with maliciously humorous look, he does not speak Sanskrit, but the popular dialect, Prakrit, like the women and the inferior personages of the drama. He plays the unfeeling realist, intent upon every form of bodily comfort, especially at a good dinner, to the hero's sentimental flowery romanticism. Although it is just possible that one or the other feature of the Hindu drama may find its outside echo, the inner matter is certainly national and Indian. The themes are, for the most part, those of the heroic legend in the epics, or they move in the sphere of actually existing Hindu courts. The themes, at any rate, are not different from that of other Hindu literature. They show no foreign admixtures. It must not be forgotten that the great general coincidences between the drama and the theatre of different peoples are due to common psychological traits; hence genuine historical connexion in such matters requires the most exacting treatment.

The chief dramatic writer is Kālidāsa, the incomparable Hindu poet, master at the same time of epic and lyric poetry (see above). Three dramas are ascribed to him: the Sauktalā, the Uruśā, and Mālavākāṃśitra, or Mālavīkā and Agnimitra. From a time somewhat earlier than Kālidāsa comes the drama Mṛchhakāti, the 'Clay Cart,' said to have been composed by king Śūdraka, who is praised ecstatically as its author in the prologue of the play. Similarly, during the 7th cent. A.D., a king named Harṣa is said to have composed three existing dramas: the Bihāvā, or 'String of Pearls'; the Nāgarā, whose hero is a Buddhist, and whose prose in praise of Buddha; and the Priyārdācara. From the 8th cent. A.D. date the dramas of Bhavabhūti, a South Indian poet, and the lesser gṝpoṣṇaka, composed by Śūdraka to Kālidāsa and Śūdraka. His most celebrated compositions are the Mālavākāṃśitra, or Mālātī and Mālinā; and the two dramas Mahāvṛtta-charita and Rāmacarita. The latter are connected with Rāma, the hero of the Rāmāyana. Finally may be mentioned Viśākhadatta, the author of the Madhāvās, the 'Seal of the Minister Rākṣasa,' a drama of politics in prose, whose composition also dates from the 8th century. It is a question whether Western (Greek) influence, particularly the New Attic Comedy of Menander (as reflected in Plautus and Terence), has not in some measure contributed to the Hindu drama. It is known that Greek actors followed Alexander the Great through Asia, and that they celebrated his victories with dramatic performances. After the death of Alexander Greek kings continued to rule in North-Western India. Brick commerce was carried on between the west coast of India and Alexandria, the later centre of Greek literary and artistic life. Greek art and Greek astronomy certainly exercised a strong influence upon Hindu art and science. The chief points of resemblance between the Hindu drama and the Greek comedies are as follows. The Hindu drama is divided into acts (from one to ten), separate episodes of time; the curtain proper are preceded by a prologue spoken by the stage manager (ṣṭrāthākara). The stage was a simple roof, not shut off from the auditorium by a curtain, but, on the contrary, the curtain was in the background of the stage; it was called yavānākā—that is, 'Greek curtain' (karpē). The characters of the Hindu drama resemble in some respects those of the Attic comedy. There are courtesans and parasites, braggarts and cunning servants. Especially the standard comic figure of the Hindu drama, the vidīqaika, the unfrocked hero of the comic, compares well with the co-religion, the Sophocles of the Greek Roman comedy. The vidīqaika is a lunch-babeled, bald dwarf of halting gait, the clown of the piece. Though Bāhāman by birth, with maliciously humorous look, he does not speak Sanskrit, but the popular dialect, Prakrit, like the women and the inferior personages of the drama. He plays the unfeeling realist, intent upon every form of bodily comfort, especially at a good dinner, to the hero’s sentimental flowery romanticism. Although it is just possible that one or the other feature of the Hindu drama may find its outside echo, the inner matter is certainly national and Indian. The themes are, for the most part, those of the heroic legend in the epics, or they move in the sphere of actually existing Hindu courts. The themes, at any rate, are not different from that of other Hindu literature. They show no foreign admixtures. It must not be forgotten that the great general coincidences between the drama and the theatre of different peoples are due to common psychological traits; hence genuine historical connexion in such matters requires the most exacting treatment. The chief dramatic writer is Kālidāsa, the incomparable Hindu poet, master at the same time of epic and lyric poetry (see above). Three dramas are ascribed to him: the Sauktalā, the Urušā, and Mālavākāṃśitra, or Mālavīkā and Agnimitra. From a time somewhat earlier than Kālidāsa comes the drama Mṛchhakāti, the ‘Clay Cart,’ said to have been composed by king Śūdraka, who is praised ecstatically as its author in the prologue of the play. Similarly, during the 7th cent. A.D., a king named Harṣa...
designed as the Jātakas, which seems to mean 'Birth Stories.' Buddha is made to appear in every one of them as the wise or successful person or hero of the fable: he himself points the moral (see JĀTAKA). The two most important Sanskrit collections are the Pañcatantra and the Hitopadeśa. The Pañcatantra, or 'Five Books,' the title is explained as that of this sort, existed at least as early as the first half of the 6th cent. A.D., since it was translated by order of king Khruṣv Anūdhivāna (531-579) into Pali, then into Chinese, and at last into Sanskrit. The Hitopadeśa, said to have been composed by Nārāyaṇa, states that it is a part of the Pañcatantra and 'other books.'

The collection of fairy tales is the most extensive Kathāsrāyās, or 'Ocean of Rivers of Stories,' composed by the Kāshmiri poet Somadeva, about a.d. 1076. This is in verse; three or four shorter collections are in prose. The Subhasya, or 'Seventy Stories of the Parrot,' tells how a wife whose husband is away, and who is inclined to solicit herself with other men, is for several nights severely entertained and deterred by the story-telling parrot, until her husband returns. The Vēlā pañchavimśi, or 'Twenty-five Tales of the Vampire,' is known to English readers under the name of Vikram and the Vampire. The fourth collection is the Siṣkārāna-dāvidhrīshā, or 'Thirty-two Stories of the Lion-seat' (throne), in which the throne of king Vikrama tells the stories. A noteworthy feature of the Sanskrit collections of fairy tales, as well as of the fables, is the insertion of a number of different stories within the frame of a single narrative. This style was borrowed by other Oriental peoples, such as the Arabs and Persians, who influenced the Arabian Nights. A few prose romances of more independent character may be mentioned in this connexion. The Daśakumāra-charita, or 'Adventures of the Ten Princes,' a story of commercial life and a very corrupt society, reminds one of the Simplicissimus of Grimmelshausen. Its author is Dasādīn, and it probably dates from the 8th cent. A.D. The Vīsānadatā by Subandun, and the Kādambarī by Bāpa, are highly artificial romances; the latter narrates, in stilted language and long compounds, the sentimental love-story of an ineffably noble prince and the equally ineffably beautiful and virtuous fairy princess Kādambarī.

These works are known as charita, 'narrative'; the same name is also used for chronicles or quasi-historical literature of inferior grade. The nearest approach to this kind of literature is the Kālidāśa, or the Rājataurangāini, or the Chronicle of Kashmir, by Kalhana, from the middle of the 12th cent. A.D.

22. Scientific literature.—India abounds in all forms of scientific literature, written in colorful but good Sanskrit, even to the present day. One of the characteristics of the Hindu mind is that it never drew the line between literary creation and scientific presentation, so that it is not easy to mark off from one another books letters and scientific literature. The ancient legal books of the Veda (see above) continue in the more modern poetic Dharmasastras and Smṛti. Of these the Law Books of Mann and Yayāvalikya (see above) are the most famous examples; Mann specially enjoys great authority among Hindus. The texts of the Upaniṣads are the śātras, or rules, of the six systems of Hindu philosophy, and their abundant expositions. Grammar, etymology, lexicography, prosody, rhetoric, music, and the like, form a technical literature of wide scope and importance, and the treatment of most of these shows a surprising tendency to assume metrical form. The earliest works of an exclusively phonetic character are the Vedic glosses of Yāsaka, the so-called Naighanyakas and the Nirukta, and the Pratīkākhyas, or phonetic treatises pertaining to the treatment of Vedic text in a given school or Śākha (see above). Later, but far more important, is the Grammar of Panini, one of the greatest grammarians of all times, and his commentators Kātyāyana and Patañjali. Mathematics and astronomy were cultivated from very early times; the so-called Arabic numerals came to the Arabs from India, and were designated by them as Hindu numerals. Indian medical science must have begun to develop before the Christian era, for one of its chief authors, Charaka, was the head physician of king Kaniska in the 1st cent. A.D. The germ of Hindu medical science reach back to the Arabian Bower Manuscript, one of the oldest of Sanskrit manuscripts (probably 5th cent. A.D.), contains passages which agree verbally with the works of Charaka and Charaka, the leading authorities on this subject.

The bibliographical notes at the end of the book are a safe guide to more extensive study. Readable and popular in style is K. W. F. Fraser's Literary History of India (London, 1898). Max Müller's History of Ancient Sanskrit Literature (London, 1898) deals only with the Vedic period, and was important in its day, but is now antiquated. A. Weber's History of Indian Literature (from the German by T. Zacharias, London, 1875) is a learned and technical work, not at all adapted to the wants of the general reader; it represents the state of knowledge of a quarter of a century ago. The German work of L. v. Schröder, Indische Literatur und Cultur (Leipzig, 1867), contains a fuller, very instructive, and readable account of Hindu literature; copious translations and digests of the texts themselves render this work very useful. The more recent treatises are H. Oldenberg, Der literarische Stil der alten Indier (Stuttgart, 1898), and V. Henry, Les Littératures d'Inde à l'époque du Bouddha (Paris, 1895). The study of the literature of the Vedic period has continued after his death by F. Erdmann and others (Strassburg, 1895-8), covers the entire domain of Indo-Aryan antiquity, and contains exhaustive and multiform tables and indices of all the authorities and problems of Sanskrit literature.

MAURICE BLOOMFIELD.

LITHUANIANS AND LETTS.—1. Ethnography.—The Lithuanians and the Letts belong to the Aryan family of peoples, and together with the Borussians or Old Prussians, who became extinct in the 17th cent., form a distinct ethnological group. This group, now generally called the 'Baltic,' had already ramified into its several divisions in its pre-historic period, and its unity is now seen only in the word, in the Indo-European family, and in the sphere of language—as regards which, however, the Lithuanians exhibit a much more archaic type than the Letts. The original head of the Lithuanian or Baltic race was probably the land of the lower Niemen, and, as that district is virtually coterminous with the Lithuania of to-day, while the Letts are found in Courland, the adjacent Prussian Rational, the southern half of Livland, the Polish Electoral, and the government of Livonia, it would appear that the Lettish branch had reached its present location.
by migrating to the originally Finnish districts of Courland and Livonia, and that, on the other hand, the Lithuanians remained fast upon their ancestral soil.

A distinguishing, neither member of the group is of great account, nor is it likely that either was ever important. The Lithuanians number some one and a half million, about 120,000 of them being in Latvia. Lettis is rather than mere—towards the east, moreover, they are almost without exception limited to a small state, the area of which is about 19,200 square miles. In size and population, the Lithuanian part of the region, as estimated from various sources, and 20,000,000. In a physical respect both branches are mixed, though the mixture has been in a way detrimental to them, since many individual Lithuanians and Letts still exhibit all the characteristic marks of pure Aryan descent, while the rest, men and women alike, are generally self-reliant and sympathetic, well-formed, and often even handsome.

2. Political history.—The historical fortunes of the two peoples have run in quite distinct courses. (a) Lithuanian.—The history of the Lithuanians opens in the 11th cent. with prolonged frontier wars with Russia, from which, however, they emerged so successfully, and with their integrity still so far complete, that one of their princes, Mendowg (recognized by Pope Innocent IV as king of Lithuania, thus created the foundation of a united Lith-Russian State. This design, however, was frustrated by Mendowg's death (1263) and by internal embroils. Nevertheless, it was tactically efficient, and was followed by the governmental establishment of the Grand-duke Gedymyn (+1341); and then, under the leadership of his sons, Olgiert (whom his brothers recognized as sovereign Grand-duke) and Keistut, the young kingdom extended its sway from the Baltic to the Exunie, and from the Polish Bag to the Ugra and the Oka, though it did not include the western districts (Nadranen, Schalauen, and Sudauen), which the Teutonic Knights had brought under their control during the years 1274-83.

At the death of Olgiert, in 1277, his place was taken by his favourite son, Jagiello, who, however, soon quarrelled with Keistut (+1282) and with his son Witawt, the outcome of the disension being that the latter became the real lord of Lithuania, although nominally the sovereignty of Jagiello was not legally infringed. Jagiello had shortly before (1286) married Hedwig, queen of Poland, thus opening the way for a political alliance between Lithuania and Poland which seriously threatened the independence of Lithuania; for, when, in 13th century, the Telnites, who, the latter thus adding the domain of the former to its own. Taking as its model the Prussian State, in which it alone held the reins of sovereign authority—the bishops themselves being subordinate to it—the Teutonic Order sought to curb the other great powers, and it was all the more successful in this policy as it managed to subjugate the hitherto unconquered heathen districts. The process of subjugation, so far as the Lithuanian portion concerned, was virtually completed by 1290. The Order, nevertheless, did not thereby win reasure, but had constantly to field the against unfriendly neighbours, and, as the fortunes of war was on the whole unfavourable to it, while its powers were sapped by internal dissensions, and the secularization of its Prussian territory in 1625 isolated its Livonian domain, its authority in the latter also was at length completely shattered. In 1629 Livonia became a Polish province, while Courland, as a hereditary feudal duchy of Poland, came into the power of the last Master of the Livonian part of the Order. Gotz, now all the more ready to assume the crown of Lithuania, which, indeed, the Emperor Sigismund, with a view to the complete severance of that country from Poland, had already in 4 years before Jagiello, who, as Queen Hedwig's consort, had at her death (1309) become king of Poland.

In the succeeding period the Lithuanians gained a resolution to assert their independence in relation to Poland, but the Polish kingdom, although it had embraced that faith at his marriage with Hedwig,
and strove with all the zeal of a new convert to propagate it among his own people of Lithuania; they became more and more closely bound to Poland, and the Church of 116

name, and we must be the more cautious in connecting such beings with the ancient religion because many of the divine names of the Lithuanian-Lettish mythology rest upon the misconceptions or fabrications of later times; there is adequate evidence, however, for an early belief in a number of demonic beings, such as the žmonės (‘fairies’) and the paltis (‘goblin,’ ‘flying dragon’), and it is equally certain that the Lithuanian-Lettish religion was dominated from primitive times by the conception of a devil (Lith. Welniešas; Lett. Welns). While that conception never became perfectly distinct, it nevertheless formed so definite an antithesis to the idea of ‘God’ that we cannot doubt the presence of a dualistic element in the Baltic cult. Corresponding to the belief in demonic beings, superstition of a more general kind was, and still is, very prevalent. It manifests itself in a belief in witches (vėjagala, ‘seeress’), in the practice of casting lots (Lith. būrė; Lett. burtī), in notions regarding countless occurrences of daily life, and not least in the idea that the spirits of the dead (Lith. vilčiai; Lett. voltī) continue to move about among the living—an idea that is undoubtedly very ancient, as it is attested not only by distinct historical evidence but also by the modern folk-songs (as, e.g., the notion that disembodied spirits marry), and, above all, by graves dating from heathen times, which often contain the remains of both rider and horse, and are furnished, and are furnished, with weapons and implements, thus pointing conclusively to the belief that the dead continue to exist in a condition not unlike that of their earthly life. As the majority of these graves contain skeletons, not ashes, they likewise show that the Lithuan-Lettish peoples believed in the resurrection of the body. As to the situation of the Lithuanian-Lettish abode of the dead, there seems to have been no general agreement, some data suggesting the sky, others a nether world. In various localities we find traces of a doctrine of metempsychosis. Whether the cult had a special class of priests cannot be made out. It had certainly no temples in the proper sense, and the ‘edes sacre’ of which we hear should probably be regarded as slight erections in which fire was kept burning. Sacrifices were common, and were offered not only by way of petition and thanksgiving, but also as propitiation; to judge from the Lithuanian designation, fedė (‘blossoms’), the offerings would seem to have consisted originally of flowers and fruits, but we have historical evidence that the Lithuanians, like the first other kinds of sacrificial gifts, while, if not among the Letts, yet among the Lithuanians and Borussians, we find traces even of the practice of human immolation.

4. Early religion.—The religion which prevailed among the Lithuanians and Letts prior to the introduction of Christianity was a developed nature-worship. Besides the worship of gods and women, of trees, stocks, and stones, of fire and household snakes, we find a belief in the personality of the heavenly bodies, especially the sun, as also in the existence of a number of divine beings who control all created things. Pre-eminent among these divine beings was ‘God,’ designated by the primitive Aryan name deva (Lat. deus). He was regarded generally as the highest supramundane power, but sometimes, like Zeus in Homer, he was a distinct mythological figure, and as such probably identical with Perkūnas (Lett. Pērkoņains), the thunder-god, who presided over the heavenly bodies, and was regarded as armed. An ancient folk-song tells us that, when the moon was unfaithful to his wife, the sun, and became enamoured of the morning star, Perkūnas cut him in pieces with a sword. According to Lithuanian belief, Perkūnas washed the weary and dust-covered sun, who was once called the daughter of God, and who herself had sons and daughters; in popular songs these play a great part as mystic powers, but are always represented as human in all respects. We hear frequently also of the ‘children of God,’ and it would seem that the mythological imagination did not distinguish between the latter and the ‘children of the sun.’ The sun, nevertheless, was not regarded as the wife of deva (or of Perkūnas), as appears not only from what has been said, but also from a Letts folk-song which tells how, when Perkūnas set out to find a wife beyond the sea, he was attended by the sun, bearing a dowry-chest. The Letts, again, believed that Perkūnas was a polygamt, and in another of their folk-songs he is said to have as many wives as are leaves of the oak, while none of them plays an independent part in Lithuan-Lettish mythology.

We need have no hesitation in assuming that the ancient religion of the Lithuanians and of the Letts was a compound of various divine beings, and the way in which these are associated shows that they originated in the observation of nature and human life. But, with the exception of Poland, the countries of Lithuania come down to us under a common Lithuan-Lettish

name, and we must be the more cautious in connecting such beings with the ancient religion because many of the divine names of the Lithuanian-Lettish mythology rest upon the misconceptions or fabrications of later times; there is adequate evidence, however, for an early belief in a number of demonic beings, such as the žmonės (‘fairies’) and the paltis (‘goblin,’ ‘flying dragon’), and it is equally certain that the Lithuanian-Lettish religion was dominated from primitive times by the conception of a devil (Lith. Welniešas; Lett. Welns). While that conception never became perfectly distinct, it nevertheless formed so definite an antithesis to the idea of ‘God’ that we cannot doubt the presence of a dualistic element in the Baltic cult. Corresponding to the belief in demonic beings, superstition of a more general kind was, and still is, very prevalent. It manifests itself in a belief in witches (vėjagala, ‘seeress’), in the practice of casting lots (Lith. būrė; Lett. burtī), in notions regarding countless occurrences of daily life, and not least in the idea that the spirits of the dead (Lith. vilčiai; Lett. voltī) continue to move about among the living—an idea that is undoubtedly very ancient, as it is attested not only by distinct historical evidence but also by the modern folk-songs (as, e.g., the notion that disembodied spirits marry), and, above all, by graves dating from heathen times, which often contain the remains of both rider and horse, and are furnished, and are furnished, with weapons and implements, thus pointing conclusively to the belief that the dead continue to exist in a condition not unlike that of their earthly life. As the majority of these graves contain skeletons, not ashes, they likewise show that the Lithuan-Lettish peoples believed in the resurrection of the body. As to the situation of the Lithuanian-Lettish abode of the dead, there seems to have been no general agreement, some data suggesting the sky, others a nether world. In various localities we find traces of a doctrine of metempsychosis. Whether the cult had a special class of priests cannot be made out. It had certainly no temples in the proper sense, and the ‘edes sacre’ of which we hear should probably be regarded as slight erections in which fire was kept burning. Sacrifices were common, and were offered not only by way of petition and thanksgiving, but also as propitiation; to judge from the Lithuanian designation, fedė (‘blossoms’), the offerings would seem to have consisted originally of flowers and fruits, but we have historical evidence that the Lithuanians, like the first other kinds of sacrificial gifts, while, if not among the Letts, yet among the Lithuanians and Borussians, we find traces even of the practice of human immolation.

4. Early religion.—The religion which prevailed among the Lithuanians and Letts prior to the introduction of Christianity was a developed nature-worship. Besides the worship of gods and women, of trees, stocks, and stones, of fire and household snakes, we find a belief in the personality of the heavenly bodies, especially the sun, as also in the existence of a number of divine beings who control all created things. Pre-eminent among these divine beings was ‘God,’ designated by the primitive Aryan name deva (Lat. deus). He was regarded generally as the highest supramundane power, but sometimes, like Zeus in Homer, he was a distinct mythological figure, and as such probably identical with Perkūnas (Lett. Pērkoņains), the thunder-god, who presided over the heavenly bodies, and was regarded as armed. An ancient folk-song tells us that, when the moon was unfaithful to his wife, the sun, and became enamoured of the morning star, Perkūnas cut him in pieces with a sword. According to Lithuanian belief, Perkūnas washed the weary and dust-covered sun, who was once called the daughter of God, and who herself had sons and daughters; in popular songs these play a great part as mystic powers, but are always represented as human in all respects. We hear frequently also of the ‘children of God,’ and it would seem that the mythological imagination did not distinguish between the latter and the ‘children of the sun.’ The sun, nevertheless, was not regarded as the wife of deva (or of Perkūnas), as appears not only from what has been said, but also from a Letts folk-song which tells how, when Perkūnas set out to find a wife beyond the sea, he was attended by the sun, bearing a dowry-chest. The Letts, again, believed that Perkūnas was a polygamt, and in another of their folk-songs he is said to have as many wives as are leaves of the oak, while none of them plays an independent part in Lithuan-Lettish mythology.

We need have no hesitation in assuming that the ancient religion of the Lithuanians and of the Letts was a compound of various divine beings, and the way in which these are associated shows that they originated in the observation of nature and human life. But, with the exception of Poland, the countries of Lithuania come down to us under a common Lithuan-Lettish
times. It was, in fact, only when the Christian Church began to make use of texts written in the native languages—long after the invention of printing—that literary documents were at length produced. A Lithuanian and a Latvian translation of the Lutheran Catechism—the former by Martin Mosvidius, subsequently a clergyman, and published at the latter by Ignatius Pitkîlevicz (1589), are the earliest known writings in the Lithu-Lettish languages. Like most of this earlier literary work, the further development of Lithu-Lettish literature was long due to clerics, and thus, naturally enough, that literature, even when it is not of a distinctively religious character, is in its earlier stages largely pervaded by Christian feeling and moral earnestness. Among the Letts the most outstanding feature of the earlier secular literature was Pastor G.F. Stender (1714–96); among the Lithuanians, Pastor Christian Donalius (1714–80), the distinguished author of a poem entitled 'Das Seeleum.' As contrasted with this earlier stage, contemporary secular literature is entirely modern in its point of view, as it not only bears the impress of the social revolutions of last century, but is formed on the spirit of a national consciousness, and aims at the independence and enlightenment of the Lithuanian and Lettish peoples. This progressive movement, which proceeded at first but slowly, has within recent decades become very vigorous, and alike in the field of politics and in that of letters has produced great, if not always good, results. Not a little of the poetic production of Lithuanian and Lettish writers is worth the attention of foreign readers. Yet even the best of it is not to be compared in poetic quality with the lyrical survivals of the earlier eras, falling far short of the beauty of many Lithuanian folk-songs (dainas), and also of the charm of the countless Lettish lyrics in quatrains (affreesans).

LITURGIES.—See WORSHIP.

LOCKE. 1. Chief dates in his life.—John Locke was born on 29th August 1632, at Wrington, Somersetshire. Brought up at home till the age of fourteen, he was then sent to Westminster school, from which he passed in 1652 to Christ Church, Oxford. He found little satisfaction in the scholastic kind of training then given. In 1662 Locke went to Leiden, where he devoted himself to scientific studies. To him, however, this medical practice happened in 1669 to bring him into contact with the French-speaking people of Leiden, who figured so prominently in the politics of Charles II. He went to the University of Göttingen, where he figured so prominently in the politics of Charles II. He then called to the University of 1895, and the following year Locke went to London to take the double capacity of confidential adviser to Shaftesbury himself and tutor to his son, while he was also engaged in political work and held some appointments. Shaftesbury was dismissed from office in 1673, for his part in the Popish plot, and he retired to his health. He remained abroad for four years, staying chiefly at Montpelier, Paris, and in 1677 he returned to England. Shaftesbury once more. The two years that intervened before the statemen packed, and in 1685 Shaftesbury was again imprisoned, but was released in 1689. The two years 1689–90 saw the publication of the great Essay and two others of his principal works, and thus constitu- the whole life of Locke, and it is a shrewd estimate of its reach as a human faculty. Moreover, although Locke was so eminently representative and exercised an immense influence on European thought, he cannot be ranked very high as a philosophical thinker. His thinking, though patient, laborious, and candid, is fatally deficient in the two qualities of thoroughness and system. The deficiency is partly, but not wholly, due to his occupation with practical affairs, which interfered with continuous philosophical reflection. Yet, despite this, Locke may be regarded as the direct practical aim of much of his writing; but the practical aim of his aims is itself characteristic. Locke's 'discontinued way of writing' goes also to explain his great faults of style. All his words are not always repetitions with which he wears his readers. In the 'Epistle to the Reader,' with which he prefaced the Essay, he admits frankly that he has not been at great pains to correct the faults, and at times he certainly seems to let his pen run on almost as it pleases. But his faults are not unconnected with real virtues—his interest in expressing his whole thought fully and clearly, his desire to drive home his point and to gain the full assent of the reader. When he writes with any care, his plain style is as excellent as it is appropriate, and, when he is moved to earnestness, he writes with frankness and real impressiveness. His faults are seen at their worst in his controversial writings. Although he professes his eagerness to be shown his errors, he seems in point of fact to have been rather shy to have his errors shown to him. He is too much taken up with exposing the misunderstandings and misrepresentations of which his critics have been guilty to try to penetrate to the real motives of his errors. He is too much taken up with the work of others to do much harm in the way of criticism. Locke can do much harm much further, even when as polemics they have their defects. For, although Locke can be very effective both in direct retort and in irony,
he is too apt to weaken his case, not merely by over-elaboration, but also by an insistence on the letter of his own and his critics' statements which the reader feels to be petty and unprofitable.

3. The Essay concerning Human Understanding (1690).—In the preface 'Epistle to the Reader' Locke tells us how he started upon the line of inquiry which resulted, after some twenty years of interrupted labour, in the publication of the Essay. He was driven into it, not with a few friends on a subject which he does not specify, but which we know from another source to have been 'the principles of morality and revealed religion' (see Fraser's ed. i. p. xvii.). The baffling character of the difficulties which arose in the course of the discussion caused Locke to ask himself whether, before entering upon such subjects, it was not rather 'necessary to examine our own abilities, and see what objects our understandings were, or were not, fitted to deal with.' He took up the task of this examination, and found it expand far beyond his first expectations. The aim of his whole inquiry, however, remained the same throughout, viz. that determination of the certainty, extent, and degrees of human knowledge which is the theme of bk. iv. of the Essay, and to which Locke is more than once referred.

But before this theme could be dealt with effectually certain preliminary matters had to be cleared up. To know is to have ideas about things—this is the premiss of all ideas. If we arrive at right conclusions about the scope of knowledge, we had best begin by examining this medium in which alone it exists; i.e., we had better try to take stock of our ideas, and see how we come by them. To Locke it was plain that we come by them only through experience. To convince the reader that our knowledge and our ideas have no other source, Locke devotes bk. i. of the Essay to showing that there are no 'innate' principles or ideas, unless we understand the term 'innate' in some sense which makes the assertion of such innate knowledge either insignificant or misleading.

If there are no such innate ideas, then we must look to experience and experience only for the origin of all our ideas, and must try to trace them back, one and all, to their source therein. It is easy to underestimate the importance of this point, but it really constitutes one of his claims to be regarded as the founder of modern psychology.

Yet it was hardly as a psychologist that Locke has been regarded, if indeed he has been regarded in the source and origin of our ideas; it was rather because he thought that, by seeing how, and at what point, our ideas emerge or are formed in the course of experience, we should be better able to measure the knowledge which we get by means of them. We should know, in short, what the actual experience is from which the ideas are derived, and on which, therefore, the knowledge which we have by means of the ideas is based. The results of Locke's stock-taking of our ideas in bk. ii. can be here only summarized.

He finds that all our ideas may be traced back to three sources: sensation, which gives us the ideas involved in our knowledge of the external world, and 'reflexion,' which is the perception of the operations of our own mind, and which gives us concepts such as those of reason, believing, willing. The ideas derived from (one or both of) these sources may be either simple—such as the ideas of yellow, thinking, pleasure, unity—or complex. The complex ideas are subdivided (ii. ch. xii.) into ideas of modes, substances, and relations. By 'modes' are meant 'such complex ideas which, however compounded, contain not in them the supposition of subsisting by themselves, but are considered as dependences on, or affections of substances: such as are the ideas signified by the words triangle, gratitude, murder.' They may be either simple (= unmixed) or mixed, according as they are merely variations or combinations of one simple idea, or of such diverse simple ideas; e.g., the different numbers are simple modes of number or unity, whereas ideas like gratitude and murder are mixed modes.

Under the above heads Locke proceeds to survey and examine the most important ideas or classes of ideas that enter into our knowledge. The classification is open to criticism in various ways, but where it principally fails is in dealing with the more abstract and general categories, such as existence, power, unity, substance. The first three of these are said in ch. vii. to be simple ideas derived both from sensation and from reflection. But it is obvious that they are not really comparable with simple ideas like yellow or hot; they are not sensible qualities. Locke himself speaks of the ideas of existence and unity as 'suggested to' the mind by an 'organic' principle; in ch. xxi. the idea of power seems to be reached by a process in which inference, as well as direct experience, plays a part. The general idea of substance seems to be arrived at as a result of inference, if we are to give that name to a process and a result which Locke describes in terms so halting and dubious that it is not surprising that his critic Stillingfleet took offence at them. This mind, we are told (ch. xxiii. § 14), takes notice that its simple ideas go constantly together in groups (the qualities that make up a single thing), and, not imagining how these simple ideas can subsist by themselves, we accordingly suppose some substratum wherein they do subsist, and from which they do result; which therefore we call substance. So that if any one will examine himself concerning his notion of universal, in general, he will find he has no other idea of it at all, but only a supposition of he knows not what support of such qualities, which are capable of producing simple ideas in us.

It was the analysis of ideas into something like power and substance that gave an opening for Hume's sceptical criticism. Throughout the long analysis of ideas which occupies bk. ii. the modern reader, who is accustomed to the provinces of logic, psychology, and metaphysics, is perplexed by the difficulty of giving any one consistent interpretation of Locke's procedure. The analysis is not simply a logical dissection of ideas into their simplest constituents. Yet it is too much influenced by the point of view of logical analysis to be a truly genetic or psychological account of the growth of our ideas. Finally, both interests are crossed by the further interest in the knowledge-value of our ideas, though the last point of view takes us over to the theme of bk. iv. Thus the discussion of primary and secondary qualities, and the dissection of ideas into substance, and identity in the chapters so named, are as definitely concerned with the knowledge-value of our ideas, and with the nature of the realities known by means of them, as any part of bk. iv.

In bk. iii. ('Of Words') Locke applies his analysis of ideas to the interpretation of words by which they signify. The most striking feature of the book is the way in which the distinction of real and nominal essence is applied to the names which signify mixed modes (e.g., moral ideas) and substances respectively. When we define man as a rational animal, we lay down a certain abstract definition of what a man thinks, by reference to which our application of the term 'man' is determined. This abstract idea is the 'nominal essence' of
man. The nominal essence, then, is for Locke nothing more than the statement of the meaning in which we intend to use the general name, whereas the 'real essence' of a thing is the real quality or constitution of the thing itself. Now Locke's view is that the ideas of mixed modes are ideas which we ourselves through a process of thought create for ourselves. Therefore, so far as they are concerned, nominal and real essence coincide, and there is nothing, unless the complexity of the ideas prevents us from realizing their essence exactly and completely. But in the case of substances we are dealing with things which have a real essence, and, since in Locke's view their real essence is not known to us, we have in their case no guaranty by which we can draw by means of our abstract ideas or nominal essences will truly represent the real lines of division among the things themselves. In fact, by assuming the notion of essence at all we are assuming that there is a real division of things into species, and this assumption is liable at any point to turn out untrue. The lines of division which we suppose to exist may be found to break down. Hence Locke concludes that in the case of substances our general names express merely the nominal essence.

'The boundaries of species are made by men,' though, of course, we are guided in making them by those superficial likenesses among things which nature presents to our view.

In bk. iv. we come at last to those conclusions regarding the nature and extent of knowledge—or, where knowledge fails, of probability or probable judgment—to which the rest of the work had been subsidiary. Knowledge is defined by Locke as 'the perception of the connexion of and agreement, or disagreement and repugnancy of any of our ideas.' It is not less than this; he distinguishes four sorts: (1) identity or diversity (e.g., 'blue is different from yellow'), (2) relation (e.g., geometrical equality), (3) co-existence (of a man and a horse), and (4) real existence 'agreeing to any idea' (e.g., 'God is'). Further, our knowledge of the agreement and disagreement of our ideas has different degrees of evidence. It may be (a) immediate or intuitive, and all certainty goes back to such intuition—or (b) demonstrative, i.e., reached by a series of steps, and therefore in Locke's view not quite so clear as immediate intuition, even though each step has, or ought to have, intuitive evidence. Lastly (c), there is 'sensitive knowledge,' our knowledge of the particular existence of external things when they are actually affecting our senses. The last degree of knowledge Locke regards as inferior to the other two, though not open to serious doubt. Whatever falls short of these short degrees of evidence is matter, not of knowledge, but at the most of probability. From these preliminary determinations Locke proceeds to a series of dimensions in which three problems are intertwined in a way that is rather confusing to the reader: (1) the problem how the things which is real in the sense of being authentic or valid, and not a mere imagination, (2) the problem how far this real knowledge is also general or universal, (3) the problem how far knowledge which is real in the first sense is also real in the further sense of being a knowledge of real existence, i.e., a knowledge of things which have a substantive existence or reality. The clue to Locke's answer to all three problems lies in the sharp opposition which he makes between our knowledge, e.g., of mixed modes, where we are dealing with (complex) ideas which are 'archetypes of the mind's own making,' and our knowledge of real existence, where our ideas refer to archetypes beyond themselves. In the former case our knowledge (of relations among our ideas) can be at once real (in the sense of Locke) and true (in the language of logic); in the latter case, however, we can have what is real and not further claim to be a knowledge of real existence (or things) or co-existence (or attributes in things). In the latter case our knowledge makes this further claim, and is therefore more restricted. Our knowledge of the properties of a triangle or of the wrongness of murder is real and general, even though no perfect triangle could be drawn or no murder had ever been committed. But our knowledge of real existence and co-existence can never be thus general. As regards real existence, we have, according to Locke, an intuitive knowledge of our own existence, a demonstrative knowledge of God's existence, and a sensitive knowledge of that of external things.

That this knowledge is a knowledge of existence and not of substance, for on Locke's view we do not know the inner nature either of spiritual or of material substance. In fact, he offered his orthodoxy рецептum to which, as we may believe, we cannot know, that the soul (of man) is immaterial. The inner nature (or real essence) of material bodies he assumes to consist in a certain atomic constitution free and, since he regards this as inaccessible to our knowledge, he denies the possibility of physical 'science,' in the strict sense of the term 'science.' Such 'knowledge' as we have of material bodies is only of the co-existence of their superficial properties, and does not go beyond probability, though it may be extended and improved by experiment.

The subsequent development of philosophy and science has made many of Locke's positions seem strange to us. Our confidence in physical science is far greater, our reliance on abstract demonstrations of the existence of a God, culminating in his laws. Above all, we are all the more careful about the relation of 'ideas' to real existence and less ready to separate and unite them alternately as suits our convenience. The weaknesses of Locke's compromise between rationalism and empiricism have been made so abundantly evident by later criticism that it is hard to be fair to his merits. And yet it is to the suggestiveness of his treatment of the problem of knowledge that later criticism owes the advance that it has made on his positions.

4. Ethics and politics.—Locke's contributions to ethics are scanty and of little value, unless we credit to him the discussion of the problem of evidence, which he put in the chapter on power (bk. ii. ch. xxv.). Certain this discussion, in spite of the perplexities which Locke candidly reveals to the reader, is full of interest and instruction alike for the moralist and for the psychologist. But in ethics proper his notion that morality is no less capable of demonstration than mathematics is an eccentricity, which can be explained only by his theoretical views about our knowledge of mixed modes, which certainly matches ill with his doctrine of moral obligation, which recognizes no higher motives than those of pleasure and pain, reward and punishment.

Nowhere is the whole of Locke's thought displayed more characteristically than in his political doctrine. Published early in 1690, the Two Treatises of Government had a direct reference to current politics. The first was a refutation of Filmer's plea for the unlimited (paternal or hereditary) right of kings, the second a defence of the Revolution. Concerned only about the right of the people to resist oppressive and arbitrary rule, Locke is more than usually careless about thoroughness and system. He accepts with easy credulity the literal truth of a social compact, with the subsidiary doctrines of a state of nature, natural rights of the individual, real existence of mixed modes, and, it certainly matches ill with his doctrine of legislative, yet that the legislative being only a fiduciary power to act for certain ends, there remains still in the people a supreme power to remove or control it. He denies the legislative act contrary to the trust reposed in them.' He tells us (xi. § 134) that the legislative is 'sacred and unalterable in the hands where the community have once placed it,' yet admits that, as a result of historical changes, the legislative
may cease to be representative and may therefore stand in urgent need of reform (xiii, §167). And then, to complete the reader’s confusion, he assigns the task of reforming the legislative to that royal prerogative whose arbitrary exercise he elsewhere denounces. In view of such incoherences we must be content to take Locke’s treatise primarily as a pamphlet for his own time; it has all the weight and authority which history ascribes to forms of worship, so he condemns those who ‘upon pretence of religion’ arrogate to themselves any peculiar authority in civil concerns: ‘I say these have no right to be tolerated by the magistrate’ (p. 46). But it seems strange that, with the recent history of his own country in view, he should not have recognized that an assertion of authority in civil concerns was almost certain to be made by the dominant religious sect, whatever it might be. The magistrate who was not to tolerate such ecclesiastical pretensions would hardly be able to avoid meddling in matters of religion. Nor was it to be expected that any religious sect, whether Catholic or Puritan, which was firmly convinced that it alone taught the true way of life and that its rivals were spreading pernicious errors would quietly acquiesce in its exclusion from the use and the control of the civil power. As in other cases, so here, Locke’s argument makes a great show of robust common sense, but does not go very deep, and involves large tacit assumptions.

5. Toleration.—Locke’s writings upon toleration serve as a link between his political and his religious doctrines. In 1680 he published in Holland a Latin Epistola de Tolerantia, which was translated into English in the same year. Criticisms (attributed to one Jonas Proast of Queen’s College, Oxford) drew from Locke A Second Letter concerning Tolerance and A Third Letter for Tolerance in 1690 and 1692 respectively, and twelve years later he had even begun a fourth, of which, however, only a fragment was written. The original letter is a businesslike piece of argument, the second is longer, the third is very long and very tedious. Locke can see nothing at all in his critic’s arguments, and it must indeed be admitted that the people with whom he was asked to defend were anything but strong—viz. that, in the case of those who will not embrace the true religion, the magistrate ought to employ force, in the shape of measures and laws, to prevent such from considering the error of their ways. Against this position Locke shows again and again that compulsion can produce only outward conformity, not inward conviction, that what was punished was therefore really dissimulated rational submission, that any end which justified moderate penalties would equally justify the severest persecution where moderate penalties failed, that ‘the true religion’ must for practical purposes mean the magistrate’s own religion, and that the arguments by which the critic sought to escape from these conclusions were either circular or question-begging. The practical force of Locke’s argument lies in this, that in matters of religion there is no certain (or demonstrative) knowledge, and that we must be content with ‘a persuasion of our own mind, short of knowledge’ (Works, vi. 144). But he says, and this is characteristic of the religious ground that it is ‘in the inward and full persuasion of the mind’ that ‘all the life and power of true religion consists’ (p. 1). ‘I cannot be saved by a religion that I distrust, and by a worship that I abhor’ (p. 28).

It can hardly be said, however, that the constructive argument of the original letter is in itself satisfactory. It is based on Locke’s narrow conception of the State as concerned with little but the security of life and property, and as limited in its functions by the supposed consent of the individual. His argument is qualified, too, in ways which make its consistency doubtful. Thus it refutes toleration to atheists, because ‘promises, covenants, and oaths, which are the bonds of human society, can have no hold upon an atheist’ (p. 47), and, in effect, to Roman Catholics, because their religion requires them to submit themselves to a ‘foreign jurisdiction’ (p. 46). And this refusal does not square very well with that ‘absolute liberty of conscience equal and impartial liberty,’ which, the reader was assured at the outset, ‘is the thing that we stand in need of.’ Locke wants to separate sharply and completely the spheres of the civil power and the Church. As both the magistrate and the Levellers had a right to preserve articles of faith in forms of worship, so he condemns those who ‘upon pretence of religion’ arrogate to themselves any peculiar authority in civil concerns: ‘I say these have no right to be tolerated by the magistrate’ (p. 46). But it seems strange that, with the recent history of his own country in view, he should not have recognized that an assertion of authority in civil concerns was almost certain to be made by the dominant religious sect, whatever it might be. The magistrate who was not to tolerate such ecclesiastical pretensions would hardly be able to avoid meddling in matters of religion. Nor was it to be expected that any religious sect, whether Catholic or Puritan, which was firmly convinced that it alone taught the true way of life and that its rivals were spreading pernicious errors would quietly acquiesce in its exclusion from the use and the control of the civil power. As in other cases, so here, Locke’s argument makes a great show of robust common sense, but does not go very deep, and involves large tacit assumptions.

6. Religion.—One of these assumptions, no doubt, was that latitudinarianism of his own religious views which found expression later in his Reasons of Civil Government. Locke’s own religious views are perhaps less consistent than is generally supposed, but he does not seek to show, by a great array of Scriptural evidence, that the one and only gospel-article of faith is this, that Jesus is the Messiah, the promised Saviour. To prove this he must consider the circumstances of the time, and the religious dissents which were spreading, and which, he says, ‘are to be found in the preaching of our Saviour and his apostles.’ Locke anticipates the objection that belief, on the strength of reported miracles, in the statement that Jesus is the promised Messiah is merely a historical, and not a saving, faith; but it can hardly be said that he sees the real force of the objection. He speaks, it is true, of the ‘oblation of a heart, fixed with dependence on, and affection to God’ as ‘the foundation of true devotion, and life of all religion,’ and describes faith as ‘a steadfast reliance on the goodness and faithfulness of God’ (Works, vii. 129, 131), but he does not explain sufficiently how this religious faith arises out of the historical belief. He insists on the inability of plain people, ‘the day-labourers and tradesmen, the spinsters and dairy-maids,’ to follow abstract reasoning, and objects to the use of authority in matters of religious belief, and to the ‘simplified Christianity, or is even quite consistent with it, is not so clear. Among other advantages of an authoritative revelation he speaks of the support which it affords to morality, and he leaves us in no doubt as to the kind of support he has in view.

‘The philosophers, indeed, showed the beauty of virtue; they set her off so, as drew men’s eyes and approbation to her; but leaving her undowered, very few were willing to espouse her. The general consent could not be accounted for by any commendation; but still turned their backs on her, and forsak her, as a match not for their turn. But now there being put into the scales of the moral weight the “supernatural weight” of the grace of God; interest is come about to her, and virtue now is visibly the most enriching purchase, and by much the best bargain’ (p. 100).

It has to be remembered, however, that appeals to self-interest—‘the favourite passion,’ as Butler calls it—were characteristic of the age.

7. Education.—Locke’s views on this subject are contained in his Thoughts concerning Education (1693) and the posthumous Conduct of the Understanding. The Essay, and was originally designed to form a
chapter of it. It has been highly praised, but, like other writings on the general education of the intellect, seems often to be elaborating truths of a somewhat obvious kind. Perhaps its main value, after all, lies in the mere illustration which it affords of Locke's own intellectual attitude and temper of mind. The other work makes a much more definite contribution to the art of education. The method of reasoning is clearly emphasized by Locke himself, viz. to set forth "how a young Gentleman should be brought up from his infancy." As a medical man he does not disdain to give detailed advice as to bodily training. The characteristic feature, however—and the conspicuous merit—of the book is the paramount importance which it gives to the training of character.

That which every Gentleman . . . desires for his Son, besides the Estate he leaves him, is contained (I suppose) in these four Things, Virtue, Wisdom, Breeding, and Learning (§ 12).

The order expresses Locke's deliberate estimate of the relative importance of the qualities named, and this estimate governs his treatment of the subject consistently throughout the book. No reader of the Thoughts is likely ever to confuse educational questions generally. In the age of intellectual education itself, Locke insists, in his Conduct of the Understanding, that the business of education—in respect of knowledge, is not, as I think, to perfect a learner in all or any one of those sciences, but to give his mind that freedom, that disposition, and those habits, that may enable him to attain any part of knowledge be shall apply himself. Locke is careful to go into details, of course, expose himself to criticism. Locke's advice as to bodily training is in some points certainly not such as medical authority would give, and some of his views on moral training are at any rate open to question. But there can be little question about this, that Locke is at his best in dealing with such matters. His fresh and independent judgment on his subject, his steady insistence on character as all-important, his own kindness and affection for young people, and his practical common sense combine to make him an admirable exponent of the spirit in which the educator should go about his work.

LITERATURE.—The best ed. of Locke's works is, according to A. T. Cross, that of the Royal Society, 1877. The references in the text are to Works (vols., London, 1859). The Essay has been edited by Fraser, 7 vols., Oxford, 1844. The Life is by Bourne, 7 vols., London, 1855. There are short accounts of Locke's life and philosophy by Fraser, Edinburgh, 1855; by Bower, London, 1857; by A. S. Alexander, The Life of Locke, 1865; and B. Fechter's John Locke: ein Bild aus dem geteilten Königreich Englands im 17ten Jahrhundert, Stuttgart, 1855, is a work of similar character. In addition to the histories of philosophy, the chapters on Locke in the following works may be referred to: H. Adamson, The Development of Modern Philosophy, Edinburgh, 1903, i. 1; L. Stephen, History of English Thought in the 18th Century, London, 1897, both vols.; The Cambridge History of English Literature, Cambridge, 1907-15, viii. ch. xiv. (W. R. Sorley). Of more special works those of G. von Hertling (John Locke und die Schule von Cambrio, Freiburg, 1892), G. Geil (Ueber die philosophischen Lehren Locke's von Descartes, Strassburg, 1893), and R. Sommer (Locke's Verhältniss zu Descartes, Berlin, 1897) deal with the difficult question of Locke's relation to his predecessors; that of J. A. Martin (Die Logik Johns Locke's, Berlin, 1914) with the philosophy proper.

H. BARKER.

LOCKS AND KEYS.—Before the invention of bolts or later, of locks and keys, a variety of devices were in use to secure safety. Many peoples at a low level of culture live in shelters or huts, one side of which is quite open (Tsamians, Seminoles, Indians of Guiana, etc.), and others live in a house only for occasional purposes—sleeping, birth, sickness, death, etc.—so that the house is not inhabited in other instances, even where no doors exist, attempts

are made to render the entrance secure. The huts of the Eskimos are approached by a narrow winding passage along which one must creep on all fours. Kumi villages are stockaded, and the house is approached by a door which is quite open (Canadians, Seminoles, Indians of Guiana, etc.), and others live in a house only for occasional purposes—sleeping, birth, sickness, death, etc.—so that the house is not inhabited in other instances, even where no doors exist, attempts

are made to render the entrance secure. The huts of the Eskimos are approached by a narrow winding passage along which one must creep on all fours. LOCKS AND KEYS

(cf. § 3 (d)). A conqueror in Egypt sealed the doors of the temple of Rē after having bolted them.1

1. Primitive locks and keys.—In some of the instances cited above a bar set against the movable door, without a bolt or lock, of various names is found. Doors and gates swinging on hinges were also held with bars of wood, bronze, or iron, set across from one doorpost to the other, the ends being set in holes in these (cf. § 5, No. 27). Is 45, Jg 16). In the temple of Ptah (Babylonia, Egypt). In Homer, Il. xii. 455 ff., two bars are pushed out from square holes in the doorposts and meet in dovetailed fashion in the centre. A bolt or wedge keeps them in position. The primitive bolt, at first of wood, then of metal, slid into a staple on the doorpost.2 Where folding doors were used, probably a vertical bolt above or below held one leaf, and a horizontal bolt fixed both in the centre. The bolt might be shot backwards or forwards by means of a cord from outside, secured to a catch by a series of knots. Or such a cord might lift a latch, the bar of which turned on a wooden pin.3 Before the use of locks and keys a simple method of sliding a bolt was used in Greece as well as in central and northern Europe, in the shape of a bent lock or sickle-shaped rod. This was passed through a hole and driven into the bolt or on a projecting knob. Such "keys" have been found in archaeological remains. A similar key about 2 ft. long made of iron with a broad blade at one end and a narrow end, is known in India as the "chief's door-key," is in use in N. Nigeria.4 Another method was to hold the bolt in place by means of a peg also worked from outside by means of a string. A further development, implying the use of a key, consisted in using pegs which fell from an upright into corresponding sockets in the bolt. These pegs might be fitted in different ways according to the type of lock in use. In one type two pegs fell into notches in the bolt when it was pushed home, and held it in place. To raise these a T-shaped key was used.5 It was pushed vertically through a hole in the door, given a quarter turn, bringing the arms into a horizontal position, and then pulled slightly back so that the returns of the T fitted into holes in the pegs, which could now be raised. The bolt was then pulled back by means of a string.6 In the second type a number of small pegs drop into holes in the bolt and are then flushed with its lower surface. The key consists of a rod bent at a right angle with teeth cut about one end.7 When inserted below the bolt, the teeth raise the pegs flush with its upper surface, and the bolt can then be pushed back by the key. Innumerable varieties of this type of lock are known, and the key is probably that known as "Laconian" with three teeth, the invention of which was attributed to the Laconians. Locks and keys of this type were used in Egypt, among the Romans (often of an elaborate pattern), Greeks, Scandinavians, and possibly the Celts.8 Both of these locks are of the,tumbler, type, as is also the third, the tumbler being a "bolt of a bolt." In this the pins drop into holes in the bolt and are collared, until they are flush with the upper side of the hole in which the bolt could be pulled back. In this case the key, which is sometimes of very large size, was put through a hole in the door large enough to let the hand pass through with it, but in some cases the lock is fixed on the outside. This type of lock was used in Egypt (perhaps not earlier than Roman times), and is still common there, in Oriental countries generally from early times—Syria, Arabia, Palestine—in Scandinavia, in Scotland, where it is still found in remote parts of the W. Highlands, among the Negroes of Jamaica, in British Guiana (where it may have been introduced by settlers), and among the Zulus (perhaps of Moorish origin).9

1 The first of these types is supposed to be the kind of lock which Peneleos opens in Odyssey, xx. 46 ff. Diels, however, regards the strap as fastening the lock to the door with a latch, which loosens it (probably it was tied by a secret knot) then through a hole in the door she inserts a bar of metal bent twice at a right angle; its end strikes the bolt, driving it out of its staple. If there were two bolts, both, connected together, could be shot at once. A large key of this kind is often represented on monuments as a hieratic survival, carried by priestesses.10 It is akin to the sickle-shaped key already described. In Benin a key and bolt working somewhat on this principle are in use. The bolt has a knob; the key is a metal rod, to the end of which is attached another piece bent twice at a right angle; at the other end is a ring-shaped handle. This key is inserted through a hole in the door, the keyhole being at a height above the bolt corresponding to the size of the key. The end of the key impinges on the knob, and, when a turn is given to it, the bolt is slid along. The bolts in the king's palace were of carved ivory.11 Locks and keys more or less of this type, but of other wood, are used by the Wamba of British Central Africa. The key has teeth of 2 or 3 inches in length. When it is turned, it moves a wooden bolt into place.12 Among savage tribes generally civilized influences are introducing the use of European or American locks and padlocks—e.g., among the Barangon and elsewhere in Africa.13

1 Amsch. Them. 41 ff.; Diels, p. 144; Wilkinson, l. 354; Brit. Mus. Guide to . . . Cer., and Rom. Life, p. 163 f. A key of this type might consist simply of a bent rod to lift one peg. This kind is used in Egypt, Persia, India, Turkey, etc. (Pitt-Rivers, p. 9).

10 Du Chaillu refers to native locks used for chests and doors in Gombe, Equatorial Africa, but does not describe them. Among savage tribes generally civilized influences are introducing the use of European or American locks and padlocks—e.g., among the Barangon and elsewhere in Africa.
LOCKS AND KEYS

In another type, used mainly in padlocks, the key thrust into the lock compresses springs, thus permitting the shackle to be withdrawn. Such padlocks were used in Egypt, and are still known in W. Africa (possibly of Egyptian origin). They were also known by the Romans, and are still extant in China and India (the so-called puzzle padlocks). The Romans had flat keys for raising latches, similar to those in use to-day. Both the Greeks and the Romans had the lock with wards through which the key passes, thus moving the bolt backwards or forwards. Keys of a simple type to suit such locks are represented on vases. More elaborately keys are often small circular or oval, a part of finger-rings, the key lying flat upon the finger. False keys were also used by Roman robbers.

While locks of the primitive types here described were used in different parts of Europe and are indeed still used in remote districts, the ward system, with obstacles to prevent any but the proper key from turning the bolt, was much used during the Middle Ages. The principle of the tumbler lock was applied to locks during the 16th century. Roman keys terminated in a flat or perforated handle; others were of an open lozenge, ovate, or round shape. Until the 13th cent. keys bore a handle as late as the 15th to 16th centuries they terminated in a lozenge, trefoil, or quatrefoil. After this, and especially in the 16th cent., they had elaborately decoration and became wondrously complicated. The tumblers forming the stem were often filled with ornament, the stem itself was ornamented or took the form of an animal or human figure, or stem and bow took the form of a female Even the webs were sometimes ornamental.

2. The key as symbol.—The importance of the key, as that by which doors guarding treasure, stores, etc., are opened, was marked in ancient times. This doubtless originated in the period when locks and keys of a primitive type were first invented and their value made plain to all.

(a) Frequently the wife as Hausfrau bears the household keys symbolically. She is the key-bearer for her husband. Among the Romans the newly-married wife was given the keys of the storerooms. The divorced wife was to surrender the keys; hence the formula in the Twelve Tables signifying divorce:—claves ademit, exspect. The wife who separated from her husband sent him away with these words:—claves ademit, exspect. Among the Centaurs and Scandinavians the bride was decked with keys at her girdle. Here also at divorces she had to give up the keys, and 'taking away' or 'giving up the keys' became a formula of divorce. Among the Greeks a widow placed keys and girdle on the corpse of the dead husband as a sign of renunciation in participation of goods—a custom found elsewhere, and also signifying that the widow was free of obligation. Slaves carried keys of various parts of the house, and the janitor bore the house-key. In the Christian Church the church-treasurer who carried the keys of the treasury was called key-bearer. Is 22:2 laying the key of the house of David upon his shoulder signifies transference of the supremacy of the kingdom, and the imagery is taken from the large keys opening tumblers locks carried on the shoulder in the East. In Equatorial Africa, as chests containing treasure are a synonym for property, and as they are kept locked with either native or American locks, the richer a man has the richer he is. Hence keys in large numbers are worn as a symbol of wealth.

(b) Since many divinities were key-bearers, their priestesses bore keys symbolically, signifying that the divine powers were theirs, or that they were guardians of the sanctuary of the gods. Priestesses are often represented carrying on their shoulder a large key of the rectangular type, already alluded to as an archaic survival; a key represented on a grave-stone signifies the burial-place of a priestess.

Iphigenia is called ἀλέθεας ('key-bearer') of Artonia, and Ιο ηλιόδορος of Hera. Cassandra bore the keys of Hecate, and in the mysteries of the goddess the priestess was κλείσιδος, while the priestess of Ceres was κλείσιδος ιυκίδας.

(c) As has been shown in the art. Door (vol. iv. p. 851 ff.), heaven and the underworld were believed to be regions or abodes with doors and gates. These doors and gates had bars and bolts as well as locking or opening devices. The doors and gates made to the heavens and attached secure bolts to them. Some is said to open the bolt of the bright heaven, and to Ishtar's supremacy is said to belong the opening of the gates of the district, whether its seven gates has also bolts. Over these dust is scattered, and Ishtar threatens to break the bolts when she descends thither. The gates of Pluto's realm are closed with iron bars and bolts. The Hebrews had similar conceptions. Sceol has bars (Job 17:7; cf. Ps. 107:16; Hades and the Abyss have locks and keys (Rev 14:8; 20:9). These conceptions were still retained in the Christian Church. Cybele is represented with a key—that of earth, which is shut in winter and opened in spring. Eros has keys of sea and earth as well as of heaven, and has a key with which he has kept his own presses (πτερνον θεον). The Egyptian Sarapis has keys of earth and sea.

In Hebrew thought the sea has doors and bars, and the earth has bars. In Breton folklore is found the curious idea that menhirs are keys of the sea. Should they be lifted, the sea would rush in. They are also keys of hell. Fairlyland likewise has its doors with locks and keys, and the key is sometimes given to a favoured mortal in order that he may obtain treasure.

(d) It is not surprising, therefore, that some gods were represented with keys, those of the region which they guarded. Is 2:7. Is 22:2 laying the key of the house of David upon his shoulder signifies that that key was a symbol of power—the power which was represented in the opening or closing of doors. Is 22:2 laying the key of the house of David upon his shoulder signifies transference of the supremacy of the

LOCKS AND KEYS

The power of keys as an element of religious belief has long been recognized. In Greek and Roman mythology, the keys were symbolically associated with various divine powers and aspects of the afterlife. The names of the keys were often used as passwords or amulets, believed to possess magical properties.

1. **Sacred Keys**
   - **Pindar** refers to three keys: the keys of fate, love, and the divine keys. The act of guarding the gates of heaven with keys reflects the importance of these keys in religious contexts.
   - **Celsum** mentions the closing of doors with keys, indicating the symbolic and practical use of keys in maintaining order and protection.

2. **Historical Context**
   - In ancient Greece, keys were used to symbolize the protection of the divine realm. The keys of Hades, held by **Pluto**, were associated with the underworld and the afterlife.
   - The key of **Hecate** was said to possess magical properties, allowing access to the underworld.

3. **Magical Uses**
   - The ritual of the **Keys of the Universe** is depicted in the work of **Carvaccio**, symbolizing the power to control the spiritual world.

4. **Divine Keys**
   - **Thesmophoria** and **Festivals** were occasions when keys were used to open and close gates, reflecting their importance in religious rituals.

5. **Locks and Keys in Culture**
   - The use of locks and keys has persisted throughout history, serving various religious, magical, and ritualistic purposes.

6. **Rabbinic Literature**
   - **Rabbinic texts** highlight the association of keys with the Afterlife, emphasizing the importance of these symbols in religious practice.

7. **Historical Significance**
   - The use of keys and locks in religious contexts is paralleled in other cultures and time periods, reflecting a universal human tendency to utilize symbolic objects for protection and control.

In summary, the power of keys and locks is deeply ingrained in human culture and religious tradition, symbolizing control, protection, and access to the divine.

LOCKS AND KEYS

In the island of Zaeithyos a key is placed on the breast of a corpse, because, being of iron, it will scare away evil spirits, though the popular explanation is that it will open the gate of paradise. According to a belief in Poitou, when a wervol is struck between the eyes with a key, the enchantment ends, and the human form is resumed.

(c) Another magical use is the silver and key. A large key, sometimes an ancient or hereditary key, is placed flat between the leaves of a Bible, which is then closed and bound with cord. The handle of the key projects and is held in the hand or on the fingers of one or two persons, while some formula is being said. At the psychological moment it twists and turns, thus indicating whatever is desired to be discovered. This has superseded earlier methods—e.g., with a silver—

but Reginald Scot already mentions the use of a psalter and key. (1) They are used as a cure for nose-bleeding. Here the patient turns the Bible and key round, while the wise man repeats a charm. Then the latter removes the key and places it down the patient’s back, while the patient holds the Bible. This is supposed to cure the bleeding entirely. The latter part of the charm is often used, but seldom now in a magical way. A similar use of Bible and key is for the purpose of **unwitching** a patient. (2) It is also used in divination, usually by making the cimereion (see below). The names of the suspected persons are repeated with the formula, ‘Turn Bible, turn round the key, turn, key, turn, and show the name to me.’ At the right name the key twists and the Bible drops from the hand. Within recent years such a use is known to have actually led to an arrest. (3) The Bible and key (or the key alone) are used in E. Anglia to divine with, and also to help a vessel entering or leaving port. To assist it to enter port, the key is turned towards oneself, and, to leave port, away from oneself.

(4) The keyhole, as an opening by which fairies, spirits, and the like may enter the house, is often magically protected. Thus in the Sporades it is stopped with a skin of flax to prevent vampires from entering. They would require to count all the threads in the skin before going so. In Cyprus, on locking up, the cross is signed with the key over the keyhole. (5) In Germany the keyhole is stopped up in order to outwit the Mar (‘nightmare’) which enters thereby to say, ‘In the name of God, the Compassionate, the Merciful,’ when locking a door, as a protection against genii. The door cannot then be opened by them. (6) In Aude a vase is filled with boiling water, placed before the door to prevent visits from a spirit, and in Savoy a watch-glass. The spirit broke the latter and then left in disgust. Stables, cow-houses, etc., are sometimes protected by tying charms to the key—usually a perforated stone (the key-stone which keeps off the demon Mara) and a horn. (7) In Babylonian demons were said to slip into houses through bolts, etc., ‘gliding like snakes,’ and it may have been to prevent this that libations were poured over these ($ r$; for other precautions taken see Door, vol. iv. p. $40^b$).

(7) In Babylonian demons were said to slip into houses through bolts, etc., ‘gliding like snakes,’ and it may have been to prevent this that libations were poured over these ($ r$; for other precautions taken see Door, vol. iv. p. $40^b$).
4. The key-flower.—Medieval legend and later story had much to say regarding certain mysterious or magical properties of the Locust flower. It could neither make locks fly open nor cause a rock to move in a mountain to swing open and so admit the seeker to obtain treasure hidden there. The flower was blue, red, or white, and was said to resemble the flower of the Lobster (Sclatulatumblume); similar properties were also ascribed to the *Springforsiel*, or ‘explosive root,’ usually obtained from a woodpecker whose nest had been closed up with a wooden block. She flies off to seek the root, returns with it, and applies it to the bung, which is forced out with a loud noise. It is then taken by the treasure-seeker, who uses it as the flower is used in other instances. 2

Alian and Pliny knew of this legend, but speak of a plant, and the latter elsewhere refers to a herb by which all things closed can be opened. 3 This is the shadim of Rabbinitic legend, a kind of worm or stone in possession of a magician. 4 In connection with these stories of mountain treasures obtained by the wonder-flower, there are usually mysterious white ladies who guard the secrets of these flowers. She is given a bunch of keys which also give access to the treasure. 5

There is a German belief that where the rainbow touches the earth a golden key falls, which gives its name to the flower. 6 In the story of ‘Ali bābā, the rock that would not open, the hero obtains a bunch of keys which also give access to the treasure.”

2. Among the miracles of the Christian world is the ability of the Locust flower, formerly classified as *Acridium pergrinum*. *Pachypus migratorius*, formerly *Eipodopa migratoria*, also appears in the Levant. They belong to the family of the Grasshoppers, the other important species of which are inhabitants of Africa. 7 The locust-like insects of entomologists are the European grasshoppers. The OT has nine different names; it is improbable that these refer to different species. That most often employed by them was *râbâh*, probably connected with נַרָע, multiply. 8

1. The larva, not the perfect insect, is the destructive form. This blackish larva, which moves by hopping, resembles the imago very closely, but the wings are immature. The perfect insect walks until after a sixth change, when it is able to fly. Three to four inches in length, the larva, as it advances to the imago, passes from black to brown and green.

While we must distinguish the absolutely destructive larvae from the relatively harmless winged insects, some accounts of the flights of the latter are collateral, having been brought together in the popular imagination. It is curious that modern observers have described the march of the larvae, as terrible in its completeness of destruction as that of the vultures of Africa. But possibly such OT writers as Joel were familiar with the phenomenon, however vaguely they may refer to it. As will be seen from the account cited, it is far more impressive than the flight.

2. The locust flight.—Darwin’s account has a typical value:

*... a ragged cloud of a dark reddish-brown colour. At first we thought that it was smoke from some great fire on the plains; but we soon found that it was a swarm of locusts. They were flying ... at a rate of ten or fifteen miles an hour. The main column filled the air from the height of twenty feet, to that, as it appeared, of two or three thousand above the ground. The swarms were 'like a turbid cloud' when seen from the rigging of the ship. They were not, however,  

1. OED, s.v.: ‘Lobster’ and ‘Locust’. Old Cornish has *logost*, and Fr. langouste: cf. Triv. Coll. Brit. 2(230 a.): ‘wild life of the sea and in the land, and in the woods and in the mountains’. The word appears to mean originally the ‘springer’ (the ‘grass-hopper’; cf. also Fr. sauterelle; sauter), and to be connected with Gr. άναλογον, Leech *.sauter*; spring. (A. W. W. Lat. etymology, Wettstein, 1610, p. 438 f.) The Beers term their ‘locust’ *vögtezburger*; this is the larva, and is called in the Portuguese by the Italians *scaglieri*, and by the Italians *scaglieri*, with which Gr. *Hippokratos* may be compared. Cf. 224, and *stier* 251 repeat this analogy of form and movement with the locust.

4. G. E. Post, art. ‘Locust’ in *HDB*.  

LOCUST

so thick together, but that they could escape a stick waved above them. Indeed, they were so thick and the wind so
powerful as to resemble the patterning of a heavy rain—
towards midnight they light— they often break the branches
of the trees, and even large houses are overwhelmed by its
flight as soon as the sun has warmed a little—it has not time to
destroy all the vegetation.1

In 1888, a swarm over the Red Sea occupied 2000
square miles; its weight was calculated at 42,550
million tons.2

Mauro, writing of locusts in S. Africa, states that, when
driven into the sea, they may 'lie on the beach as
a bank from three to four feet thick and from fifty to
one hundred yards in length, and the stench from the corruptions
of their bodies, it is affirmed, is sensibly perceived for a
hundred and fifty miles inland.3 He describes the movements of
the flying locusts as 'curious, interesting, and pretty.'

All observers agree with the Psalmsman (Ps 10530)
that locust swarms follow the course of the wind.

18. A few species of flying insects do injure here and there...
but they do not destroy everything before them, like
the army of the larval stage or jumpers.4

3. The locust march.—After the flight
the females lay their eggs in the soil, each oviseous
containing about a hundred eggs.

When the tiny creatures issue from their nest... the
very dust of the ground which was so still before, now
seems to weigh as much as the earth itself, a process of twisting
or rolling over one another, so that for the first few days
they receive the name of swimmers (South Africa).

Within eight or ten days, however, can numerously jump four or
five times, and at the age of three or four weeks a new characteristic
makes its appearance to the dismay of all who come
in contact with these insects. The whole company moves in a body
in one general direction, and more or less in a straight line, as if
by some common instinct, without apparently having any recognised
leader or commander.5

Marching thus over the country, they eat every-
thing that comes in their way, even the bark of
trees; they enter houses and 'eat the very clothes
and curtains at the windows'; they even eat the
wood off the sheep; and, 'last stage of all that
enters the locust army,' they eat one another.

When the very gangers are on their way, they
resemble and receive from the Boers the name of
an 'army on the march.'

It is in this marching stage that the very gangers do enormous
damage and eat every edible thing in their path, and completely
destroy the valuable trees and crops.6

The passage is eloquent testimony of the
size and destructive power of these insects.7

The tree is covered, the leaves and flowers are eaten,
and the locusts are disposed to leap with a perfect
harmony; but when the larvae hatch out, in
fifteen or twenty days, they enter the trees or, if they can,
are carried off by the wind.8

The only successful method of exterminating locusts was adopted in
Cyprus in 1881. Since 1900 the island had been
a wilderness. Matthew, conversant with the habits of
the larvae, erected an insurmountable wall of
carob and leather round the main area. Unable
to pass the smooth leather, the locusts fell into the
trench dug beneath. At the same time 3,000 tons of
eggs were destroyed. The plague has been ob-
soluted ever since.

4. Supersition and metaphor. —Among the
Dravidians of Mirzapur, when locusts threaten the
gardens, the natives catch one, decorate its head with
red lead (in accordance with ceremonial customs
there), and let it go. The whole swarm is then believed to depart.9

Similarly in Syria, when caterpillars invade a vineyard or
field, a certain number of them are gathered, and the head of the
caterpillars

was taken and a girl made its mother. Then they bewailed
and buried it. After it was buried, it came to the place where the
caterpillars were, consoling her, in order that all the caterpillars
might leave the vineyard.10

It is not unlikely that the 'caterpillars' mentioned in this account
are the locust larvae. The concordant method of expelling pests and vermin
is a fact well attested, and Shaftesbury, in his
adduced by Frazer to explain such titles of Greek
deities as Locust Apollo, Locust Hercules, and
Muse Apollo.1

Such worship were originally addressed, not to the high
as the protectors of mankind, but to the beneficent
things themselves, the mics, locusts, midge, and so forth, with
the intention of flattering and soothing them, of obtaining feet
malignity, and of persuading them to spare their worshippers.12

In Hebrew literature, and thence to a certain extent in European,
the locust is a symbol of de-
structive agencies.13 The OT also employs it to
illustrate number and combination.14

5. Locusts as food. —Since the time of Herodotus
the use of locusts as food has been known.

Thomson limits it to the Bedawin of the frontier, and
observes:

'Locusts are always spoken of as a very inferior article of food,
and regarded by most with disgust—to be eaten only by the
very poorest people.'15

They are roasted and eaten with butter, after
the head, legs, and wings have been removed.

They are also dried and then beaten into a powder,
as a substitute for flour.16 According to Burckhardt,
they were roasted and kept in sacks with salt.
He says the Bedawin never used them as a dish,
but would take a handful when hungry.17

Van Lennep states that they resemble shrimps in
flavour. Horses and camels are often fed with
them, and they are exposed for sale in the markets of
Baghdad, Medina, and Damascus.18

The Law forbade Israel to eat 'creeping things';
'yet may ye eat of all winged creeping things
that go upon four, which have legs, four
in number, that leap upon the earth.'19

The exception includes the locust. The gospel account of locusts
forming part of the diet of John the Baptist is
accepted by most writers.20 But Cheyne argues in
favour of the ancient tradition that the ἄρμπα is
the beans or pods of the carob tree. This is a
definite meaning of the words ἄρμπα and 'locust,'
and the latter is even applied to the similar bean of
the cassia tree. The resemblance between the insect
and the bean is the reason for the identity of
name. The carob beans are the 'husks' referred
to as food for swine in the parable of the Prodigal
Son, and they are still sold for food in Syria.21 In
medieval literature these beans are St. John's
bread. In ancient Palestine there was a proverb,
'Israel needs carob beans to do repentance.'22 They
were a type of the food of the poor, and the
connexion is between poverty and repentance, the

LOGIC

LOGIC.—I. DEFINITION.—Exceptional difficulties lie in the way of a general description of logic, because the definite increment of knowledge which is undertaken by primary sciences is not claimed here in a sense that is comparable. In logic we merely 're-traverse familiar ground, and survey it by unfamiliar processes. We do not, except accidentally, so much as widen our mental horizon' (B. Bosanquet, Essentials of Logic, p. 2). And exceptional pains may be necessary in explaining how it is possible to make no unfamiliar objects amount to knowledge and science.

A knowledge of knowledge cannot be proposed with quite the same assurance as a knowledge of specialized natural sciences, and, even, of beauty or goodness. Some writers have proposed an art, rather than a science or even a philosophy; and others, a science of a special kind of mental processes, or a method of relations of our personality to the universe. Mansel collects the following varied descriptions of the subject (Introd. to Aldrich, Artis Logicae Compendium, p. 316).

Logic is a part of philosophy (the Stoics). It is not a part, but an instrument (Peripatetics). It is both a science and an art (Petrus Hispanus and others). It is neither science nor art, but an instrumental habit (Greek commentators). It is a science and not an art (Albertus Magnus and others). It is an art and not a science (Ramus and others). It is the science of argumentation (the Aristotelians), of the operations of the mind so far as they are dirigible by laws (Aquinas), of the syllogism (Scotus), of the directions of the cognitive faculty to the knowledge of truth (C. Wolf), of the universal and necessary laws of thought without distinction of its objects (Kant), of the processes of the understanding concerned in the estimation of events (J. S. Mill). It is the art of thinking (P. Gassendi, Arnauld), of reasoning (J. Amyot), of the art of reason (J. Clauberr, Watts), of dissertation (Ramus), of teaching (Machmuth), of directing the mind to any object (George Beaumont), of forms of instruments for the discussion of the facts (Burgersdijk, E. Sanderson, Aldrich).

Underneath such summary phrases as 'laws of thinking', 'forms of knowledge', which have become common in the more modern definitions, there still lie very varied suggestions as to scope and method.

The following are influential examples:

"A collection of precepts or rules for thinking, grounded on a scientific investigation of the requisites of valid thought" (Mill, System of Logic, 1843, p. 487).

"If we analyse the mental phenomena with the view of discovering ... the laws by which our faculties are governed, to the end that we may obtain a criterion by which to judge or to explain their procedures and manifestations ... we have a science which we may call the Psychology of Mind. Pure Logic is only an artificiate development of the various modes in which they [the primary conditions of the possibility of valid thought] are applied and as such, the whole of our logic (Hamilton, Lectures, Edin. and London, 1859-60, 1122, 1123, 1124).

"The conditions under which thought can arrive at propositions which are certain and universally valid. ... and the rules to be followed accordingly" (C. von Sigwart, Logic, Eng. tr., London, 1888, § 3.1).

1. The doctrine of the regulative laws, on whose observance rests the realization of the idea of truth in the theoretical sciences. The primary distinction is that of 'the true' and of the 'false' (op. cit. and Encyclopædia of the Philosophical Sciences, Eng. tr., i, 11); or in co-ordinating cognitive life with

1 Cheyne, art. 'Husks' in E.B.
other moments of cosmic existence, that the "value" which is the object of philosophical Logic is logical reality and fact itself." (J. Croce, ib. p. 203). Logical consciousness reinforces this similarity, though the doctrine is essentially neither description of the experience nor discrimination of the faculty nor perspective of the event, but expression of the aim.

3. Independence—in analogy with Kant's celebrated criticism of knowledge, that it all begins with experience, but does not all spring from experience, we can say that logical consciousness begins with knowledge, but does not spring from it, or wait for a licence from it in the same way that empirical science has to wait for its special data. Even the borrowings from psychology and metaphysics are not for the purpose of conferring authority on logic, but are methodical devices for making it precise, for "unfolding an inward conviction," as Butler claimed to do in regard to conscience. The logical rule is neither more nor less nor there is conscience in science. It is indifferent to the manifestations of personality in feeling or action, and even in so much of cognition as escapes control.

4. Discipline—Thus the motive of logic is not furnished by the world of objects, but by the aims of personality; if an art, it is a cognitive art, if a science, a disciplinary science; and it is sustained by our solidarity for intellectual self-government. The historical beginnings of logical theory are to be found in those racial dispositions and social conditions which gave occasion for the deliberate control of our trains of thought. In India it appears to have originated with rules in ceremonial gatherings:

"From the Brahmanic decisions on disputed points arising in the theory of individual intellectuality there is no arguing with him" (Windelband, loc. cit. i. 25). All we can do is, in the words of Kant, to "make the rule followed by the understanding a separate object of thought" (Introd., § 7).

5. Disciplined—Thus the motive of logic is not furnished by the world of objects, but by the aims of personality; if an art, it is a cognitive art, if a science, a disciplinary science; and it is sustained by our solidarity for intellectual self-government. The historical beginnings of logical theory are to be found in those racial dispositions and social conditions which gave occasion for the deliberate control of our trains of thought. In India it appears to have originated with rules in ceremonial gatherings:

"From the Brahmanic decisions on disputed points arising in the theory of individual intellectuality there is no arguing with him" (Windelband, loc. cit. i. 25). All we can do is, in the words of Kant, to "make the rule followed by the understanding a separate object of thought" (Introd., § 7).

And with Gotama the inwardness of logical concern has outworn its ceremonial form.

"The end proposed is the escaping from liability to transmigration, and the attainment of tranquil and eternally un-interrupted bliss" (Aptratna, tr. J. B. Ballantine, Introd. p. 25).

In Greece it originated with canons of public debate and scientific instruction; the propaganda of plausibility by the Sophists, the challenges to the complacency of popular beliefs issued by Socrates, the polemics of Zeno.

Some of Aristotle's predecessors, he records, 'had given natural, others interregna, discourses to learn—since they imagined that they should instruct their pupils by delivering, not logic but the effects of art' (Soph. Elench. ch. 31). The art which constituted deepening belief—Gotama's, into pure reflection and self-consumption, for 'dialectic (the art of discussion), being investigative, holds the way to the principles of all methodical thought' (Topics, i. ch. 2, Soph. Elench. ch. 3.2).

But in the Greek, unlike the Hindu, logical illumination, reflection fastened upon conviction at the point of intellectual intelligence, is essential neither to the intelligence of humanity at large—just as in Greek ethics the good of the individual merges in that of the State. The Greek forms of proposition and syllogism serve to symbolize a world of intelligences, where a common record of conviction can be main-

tained amid determinations of experience and fore-sight varying and changing with the individuals; the Greek analysis of demonstrative science idealizes the inner coherence of such a record, whereby it demarcates the individual intellect, while the Greek dialectic is the interplay through which vitality, welling from the latter, streams into the record.

The motive of logic being disciplinary, its method must be adjusted to the intellectual forces which are permanently constitutive of civilization; and its general scope cannot change to the extent to which other sciences change, where any advance may open up new vistas of inquiry. Kant is able to say:

"Since Aristotle's time Logic has not gained much in extent, as indeed it is never at home in that department of knowledge which we are now discussing, and which is comprehended under the name of the demonstrative sciences. The mediator of this transition, which has only been propagated step by step, is the history of the human mind, and the kind of synthetic ideas that it has produced [as well as the like]." (Kant, Critique of Pure Reason, B. 1000).

Nevertheless, it must share the vicissitudes in fortune of civilization as a whole. And the more influential of these, since Aristotle, have been the period set on the range of free judgment during medieval centuries, the value set upon personality by modern man, and the scientific regulating progress of physical sciences in the most recent times—three influences which have some connexion with a certain exaggeration in value which has been the lot of the three departments of doctrine successively in scholastic, modern, and recent years, and has transformed at least the dialectic almost beyond recognition. For the contrasts and controversies between the historic schools are questions of emphasis and balance in what might be called the 'dimensions of logical discipline, to borrow a conception from geometry; or in the fundamental 'ideas' used in forming our conceptions, to borrow from Whewell's philosophy of all scientific discovery whatever.

In almost every science 'controversies' have turned upon the possible relations of Ideas, such questions as 'the actual relations of Facts' (Phiilosophy of Discovery, p. 265).

The dimensions or ideas in which the historic schools have formed conceptions for logical value may be distinguished as explicitness, consistency, relevance, and system.

II. PRINCIPLES—Parallel with what Whewell says as to the progress of physical sciences, we have the sentence: "the critical science requires at this time: that it is to be able to reduce the objects and events of the world to a conformity with ideas which we have in our minds—i.e. the Ideas, for instance, of Substance, Numerical Composition, and the like . . . the Idealization of Facts," (Whewell, as cited in the preceding).

We may expect for logic also that:

'the exhaustive solution of the great aggregate of logical problems can only grow out of the union of all the different methods of treatment to which logic has been subjected in virtue of the inner essential multiplicities of its nature' (Windelband, loc. cit. i. 9). But the different 'methods' must be such as are grounded, if not in the systematic continuity of a philosophical theory of knowledge, as Windelband requires, still in the unity of dimensions in consciousness of logical value. The 'principles' of logic must be these dimensions.

1. Explicitness.—The earliest of such dimensions to be utilized in the formation of logical conceptions was that of explicitness. We must be conscious of the definite germinal organization within our judgments or inferences, whenever occasion arises to make an individual sentence, or propositions as 'the only postulate of Logic which requires an articulate announcement . . . to be allowed to state explicitly in language all that is implicitly contained in the meaning of a proposition.' (Gott.). And Gotama inaugurated the history of the science by detailing sixteen conceptions for our guidance in the analysis of this 'content,' as 'standards of right notion.'

'Proof (ie. the faculty of a right notion): the object of a
right notion; doubt; motive; familiar fact; scholastic tenet; sophisms; hypotheses; fallacies; controversy; fallacies; discursive fallacies; the truth in regard to these (sixteen things), there is the attainment of supreme good. 

The logical consciousness became more sensitive to the contact of individual thinking with this 'static formulation' of the theorems and theorems. Most essential for forming conceptions suitable to the spiritual emergency is that of consistency. It is not the consistency between thought and thought which in modern times became the ideal of Hamilton and the subjectivity formal, logicians, but that which makes possible the allegiance of individual intellects, with varying perceptions, memories, and premonitions, to common formulations of knowledge.  

(a) Interpretative.—In recent psychology the paradoxical tenet is held, that while a 'permanently existing idea' appearing in consciousness 'at periodical intervals' is a mythological entity, 'the mind can always intend...to think the same.' (W. James, Text-book of Psychology, London, 1882, chs. xi. and xiv.). Similarly, we may say that, while a judgement identical in many respects to the mind is mythological, varying acts of judgment may give allegiance to the same spiritual truth, and join in the same inferential trend. It is such truth and trend, and not any range of individual experience and foresight, that allow Aristotle to postulate: 'the proposition of the same thing about the same thing' (de Interpretatione, vi. 1), and the continuation of the same section within the same collection, of actual or possible objects of thought. The actual variability within this mythical identity is veiled by the indefiniteness of the form of proposition named 'particular'; and the actual poverty of human foresight, by the human proposition, distributing possibilities, as though on a more chart, to an infinite range. That 'some men die willingly' cannot be the same thought for you and for me, and that 'all men die' is beyond the intellectual concern of either of us. Yet we consent that death is not the supreme terror, and we foresee it widespread as far as our imaginations can have any concern. Aristotle's Prior Analytics must, be translated from the logical into the other kind of logical, or, the way to express, the 'idea' (b) (the question, or predetermined void in the system of our knowledge, which brings faculty and reality into the co-operation in the inferential synthesis; there must be (a) the probandum, defined by doubt and motive; (b) the reason, appealing to a sign; (c) the example, verifying a principle of signification; (d) the application, investigating the reason with the significance of the example; and (e) the conclusion, establishing the probandum as a sign. 'Shall I not die, seeing that I am but human, as my fathers died because they were human? For I am as human as they, and consequently I, too, must die.' It is the transition from the problematic to the assertory phase of thought that sunders the application and conclusion from the reason and probandum—a transition which disappears in all the Western schemes of explicitness, because it disappears in proofs and static formulations, as distinct from the processes, of knowledge. The remainder of the sixteen topics are adjustments imposed on a conviction by its entrance into an environment of other convictions on the same question, by its encounter with convictions current in the world of other persons, and by the entrance of its motive into a manifold practical nature, an organism where cognition, after all, is only one of the forces constituting its life.

2. Consistency.—Under the more complex social and intellectual conditions of life in Greece, the logical consciousness became more sensitive to the contact of individual thinking with this static formulation of the theorems and theorems. Most essential for forming conceptions suitable to the spiritual emergency is that of consistency. It is not the consistency between thought and thought which in modern times became the ideal of Hamilton and the subjectivity formal, logicians, but that which makes possible the allegiance of individual intellects, with varying perceptions, memories, and premonitions, to common formulations of knowledge.
according to order of terms (Kant); and pursile that inductive conceptions should be referred to their own list of instances (Bacon) ; and an error that syllogism is an estimate of evidence (Mill); and a refutation that the formalities of deduction should be limited to syllogistic, and to propositions with two terms only, and to terms that are clearer than others, and to relations, and to the logical relation only of inclusion and exclusion (L. Couturat, in Ensev. Philos. Sciences, i. 167-169).

(b) Conceptual.—A second direction in which consistency is sought is when the thought of the moment and an identity or permanency of personal knowledge, hardly distinguishable from 'meaning the same,' as described in psychology, but quite distinguishable from the impersonal truth or universally human trend assumed by Aristotle.

The mythological world of the super-personal is replaced by an equally mythological content of the personal microcosm, a static conceptual structure to which our ever variable thoughts conform. The 'subjectively formal' or 'conceptual' logic is the canon for the stability of this. It originated with Kant's discrimination between the section of his Critiques, the Critique of Pure Understanding which he named 'Transcendental Logic,' where the 'forms' of knowledge appear as contributions of the mind to the constitution of its objects, and the 'General Logic' in which 'academic' reasonings are relations of cognitions to each other (Critique, bk. ii. Introd. § 2, Logic, Introd. § 1). Once more, then, as in the Hindu discipline, knowledge is referred to personality; but personality comes back not as an isolated centre of itself, but as disciplined for its high destiny, but as a realm of mere abstracts, namely cognitions outside the world of natural sciences, yet factiously evolved through the course of transcendental reflection. Kant himself, not forgetting of this origin, found in knowledge a dimension of 'relevance' as well as one of consistency. In the living thought he found an interplay corresponding to the revealed formations of the transcendental 'object'. And, while accepting the law of non-contradiction as the principle of such inference as is merely possible, he added a law of reason and consequence, for the cogency of any actual inference (Logic, Introd. § 71); and in applying this second law we encounter transcendental distinctions, such as between 'logical' or a priori universe, and 'quasi-logical' or inductive. And the neo-Kantian school of logicians better their instruction by re-introducing the detailed conceptions of intellectual synthesis framed in transcendental logic. To others, however, still following the disciplinary motive, and unconfined with the origin of the new realm commended to them for study, only the dimension recognizable independently of every physical or primary object, in which cognitions could be related to each other, appeared to be consistency.

The stricter followers of the Kantian logical idea, e.g., Mansel and Spalanzani, recognize, as sole principles which can be invoked universally in the action of thought, the laws of identity, non-contradiction, and excluded middle, and in their hands logic becomes merely the systematic statement of these laws, and the exposition of the conditions which they impose upon notions, judgments, and reasonings'' (Anderson, p. 15).

(c) Symbolic.—More recently, a third direction in which consistency might be followed has been taken, which seems to presuppose, if not the fact, the abstracts of transcendental logic, yet still the reflective valuations of general logic. Given there a number of data, relations and relations between them, algebra renders a similar service to arithmetical, but without raising any doubt as to the scientific priority of the latter. Symbolic logic is a less elastic kind of consistency when we make logical reflexions. Whether it is also a direct discipline in scientific knowledge, as the older formal logic is, and so may supersede or absorb it, is as yet controversially obscure.

But on the hypothesis of consistency, however judiciously its pretensions may be restricted, one critical comment may be made: 'I do not deny the scientific convenience of considering this limited particular system as the smaller Logic, which only concerns itself with the conditions of consistency, ought to be the last, at least, study, preceding another which embraces all the general conditions of the ascertainment of truth (Mill, Essays, of Sir W. Hamilton's Philosophy, p. 177).

3. Relevance.—The larger logic was inaugurated by Aristotle through the addition of his Posterior Analytics to the Prior.

No demonstrative proposition (e.g., about numbers or ideas) is taken to mean a 'universal' or 'universal.' He would say "or any straight line you may know of," but to the entire subject—to every possible number or line (Post. Anal. i. 2).

Relevance is that in the things we know of, which we possess or receive a demonstration, relieves us from the need of similarly "knowing of" the entire subject. It is what Bosanquet describes as "an intimate character" of the content of knowledge, 'as revealed by the structural relations in which it is found capable of standing' (Essentials, p. 40). Aristotle conceives relevance as embodied in the "formal" or "universal" logic of the school of logicians (Digna, Divákara [c. A.D. 630], and Nandi [c. A.D. 800]) taught the intervention of 'secondary ideas' or 'abstract conceptions' in the process of inference, and authorizes the syllogism for self in which this dispensed with the analogy between 'example' and 'application' still required in the syllogism for instruction." But Aristotle elevated this secondary idea into an authoritative 'principle,' dominating our knowledge, whether personal or racial. The authority was conferred by the faculty of reason.

From experience, or from the entire universe which is retained in the soul, the single unit apart from the manifold of sense, which is identical in all particular cases, comes the elementary basis of the art of science and of logic. As we look at the world, we see the world as it is in itself, and this is the object of our interest, as Plato's metaphysics might imply, but inferential. 'It does not follow, if demonstration is to exist, that there must be ideas,' says the Unity outside the experience, but it does follow that some unity must be truly predicable of the many" (Post. Anal. i. 19).

The universal as a principle assures applications that might escape the 'secondary idea.' 'Man is mortal,' therefore 'I, too, must be mortal,' although men instinctively may 'think all men but themselves.' The inevitability was not objective, as Plato's metaphysics might imply, but inferential. 'It does not follow, if demonstration is to exist, that there must be ideas,' says the Unity outside the experience, but it does follow that some unity must be truly predicable of the many" (Post. Anal. i. 19).

The predicable unities appear in judgment as predicates that are 'genera' and 'definitions,' and as subjects that are 'second substances'; and in demonstration as the 'essences' of the things which we seek to explain, the 'natures' of the things whose destiny we wish to forecast, the 'reasons' for what we experience, and the 'causes' for what we infer. And, although these conceptions in the dimension of relevance still influence the texts of modern logic, philosophical progress has displaced the static, self-sufficing constitution, which seems to spring arbitrarily from the flat of reason. The achievements of reason must themselves become conscious under the guidance of logical conceptions more liberal, such as 'conditions of a rule,' 'laws of connexion' between attributes (Mill), 'coherence' of conceptual content (Lotze), or 'identity' of relational system (Bosanquet). Two distinct operations of reason must be traced: that which explains the comparison, the classification, the precision, the 'equivalence of terms' of and formulae of equivalence between them. Algebra renders a similar service to arithmetical, but without raising any doubt as to the scientific priority of the latter. Symbolic logic is a less elastic kind of consistency when we make logical reflexions. Whether it is also a direct discipline in scientific knowledge, as the older formal logic is, and so may supersede or absorb it, is as yet controversially obscure.

The definite logic of the first begins with the art of arithmetical, and that of the second with Bacon. The interest of modern mathematicial
science supplied to Descartes the 'doubt' and 'motive,' to use Hindu logical conceptions, which brought to an end the Aristotelian superstition of 'second substances,' and suggested a scheme of rational constructiveness, proceeding from which Lotze afterwards named 'first universals' to a vast Platonic hierarchy, the 'world of ideas.'

These natures which we call composite are known by us either because they are presented to us, or because we ourselves are responsible for their composition ('Rule xii.). . . . The signs which are presented to us are pure and simple sensations, existing per se, not as depending on any others ('Rule vi.); essences which are presented to us are more distinctively known ('Rule xii.). . . . Intuition is the unclouded conception of an unclouded and attentive mind; . . . it is more certain than deduction itself, in that it is of primary, or by virtue, for example, 2 and 2 amount to the same as 4 and 1 ('Rule iii.). . . . Deduction proceeds by the continuous and uninterrupted action of a mind that has a clear vision of each step in the process ('Rule vi.). . . . It is presented to us (as a complete movement) by itself, and is not clouded by the name of enumeration or induction (when it is complex), because it cannot then be grasped as a whole at the same time by the mind, and its certainty depends to some extent on the memory ('Rule xii.); Descarte's Works, tr. E. S. Haldane and G. R. T. Ross, vol. i., Cambridge, 1811, pp. 7-14).

(b) Inductive.——It was a parallel but slower development of the scientific spirit, in observation and experiment, that inspired a complementary scheme of rational insight as to 'the experiments shows the natures that are composite.' The field for unclouded intuition is here fenced off by the indefinite multiplicity of constituents in an actual experience, and, however complete and simple may be the 'ultimate essences,' the steps in their synthesis are beyond either complete intuitive penetration or memory. All that Hindu logic here had achieved was to classify the 'constant associations' between form and signification, as, in our word, the names of Nandi, the 'signs' are either positive or negative, perceptible or imperceptible; and are related to their significates (a) constitutively, (b) as results, (c) identically, (d) in a primary, or by virtue, simple, or by plurality, or by simplicity, or by sequence, or by simultaneity (Vidyabhusana, p. 30 f.).

Aristotle, in his Topics, when not presupposed by the conception of second substances, moves more deeply into the indicia of relevance, by suggesting comparative analysis of instances that are exceptional towards each other or contrary in their consequences, or are negative, reverse, privative, or relational to each other, or are homogeneous in what is part, or vary methodically in quantity, time, place, or other relation. But these broken lights still left darkness of principle over the plans of manifestation for an 'essence' or 'nature,' and how to classify it into the indications. It is in this indication which Bacon appears to have been first in conceiving. The Baconian conception is:

Observation presents to us complex natures which are the results of simpler or more general forms or causes. . . . The form which is sought can be detected only by examination of cases in which the given complex effect is present, in which it is absent, and in which it appears in different degrees or amounts; . . . a process of exclusion or elimination. The method of exclusion can never be perfectly carried out; but all additional aids have significance only as supplying in part the place of exhaustive enumeration (Advances, p. 80).

Thus, were our experience divined precisely on the perfect plan of reason, we should, in the words of Descartes, 'know what these natures are,' though we could not regard their constitution. J. S. Mill articulated the principle of exclusion or elimination in five experimental methods, with symbols and canons, and explained these as a primary method for inductive research. In his complete survey of logical doctrines is intended to commend and defend. But the ideal plan for the manifestation of universals in experience is as much the work of a priori reason as is the unclouded intuition of the Buddhists. Experiments are to be avoided, and the march of merely experiential sequences eternally withholds that definiteness and exhaustiveness of constituents which might thus be more purely the issue of relevancy. The non-Kantian logicians can accept the canons of elimination as living expressions of the aspirations of thought, in such an intellectual nature as displays the 'categories of relation,' substantiality, causality, and reciprocity. But the rationalism of any given experimental sequence must be approached through a further dimension of logical value—that of system. In this we may conceive the 'additional aids' which transform aspiration into accomplished science. Relevance is a selective principle, system a comprehensive.
have been done upon them, from the Jain scriptures, that an unwritten and unelaborated body of normative principles and methods of thought had long existed in India. The early medieval logics are exogenic, expounding and elaborating the logical categories applied in earlier works. These categories included classifications of propositions, doctrines of terms and propositions, methods of induction, fallacies, etc., possibly, in the Jain. Of the later categories themselves the early works say little or nothing. These works are the expression of the greater or constructive stage of the Buddhist and Jain movements. The Buddhist logic-mongers try to correct the misuses of the field, rather than the principles and methods of deduction and induction of their day.

Two passages in the Suttas afford an apparent exception to this assertion. In these, certain matters are declared to be 'not in the sphere of takka,' rendered by A. Ksya Davis and R. Otto Franke 'more logic' *(tarka-dhara, or rules of thought),' one of the technical Indian terms for logic. And logic-mongers (takka) and pedants (*vimana-mano), failing to grasp them, are said to arrive at false conclusions. The Buddhist, at any rate, offers no criterion of the merits of a religious doctrine, the Buddha is said to have excluded such criteria as authority, tradition, etc., and both *takka and *rayana. These again, belong to the 'categorical' or anachronistic conception of the two Suttas quoted above, in the light of the sober intellectual method prevailing in the great majority of the Suttas, brings us to a very different conclusion. In the latter passage the soundness of any ethical doctrine or gospel is held to be rightly tested, not by metaphysical dialectic, but by a utilitarian calculus. In the former passage the 'logic' that is condemned as inadequate is as much as often finds critics among ourselves, when we 'feel' rather than discern that deductions are being made from outworn, outgrown terms, from wrong data, from words analogously used. Only at a later period, has a logic of recreated inductions will condemn such misuse of deduction as 'mere logic.' It is one of the penalties induced by such effect: reasoning that the noble formulation of right thinking should, in popular usage, incur reproach, as if it had failed in general.

The Buddhist Sutta and Abhidhamma Pitaka afford uncontestable evidence of (1) the existence of a current logical doctrine, (2) misuse of the same by dialecticians or 'sophists,' deducing from confused terms and wrong premises, and (3) a constant faith in the appeal to judgment and argumentation, i.e., to logical faculty, and to logically premissed. The Suttas, or discourses, were in great part addressed to relatively immature minds—to the 'man in the street' and to the average bhikkhu or siddha (learner in the Order). But the proportion of discourses filled by categorical assertions is very small. Most of them seek to capture thelistener by argument. No sentence occurs oftener than *Tana *kissat *hetu. This is the reason of the deductive method of the Buddha in his replies to

1 Diya *Nikaya, l. 12; 2 *Rajha *Davidia, Dialogues of the Buddhist, Oxford, 1899-1910, l. 53; 3 *R女士, Dialogues of the Buddhist (in Aus-

interlocutors is one of gentle 'reasonableness' (to ad
datory, 'mountain'). And  
and the word in the oldest Indian logical works, is used 
ne, 'truth', and forms 'intellect' and kusa (good'), the threefold foundation on which the perfect man should be established.2 In 
the somewhat later collection called Abhidhamma Pi\(\mathrm{k}\)as\(\mathrm{a}\), where doctrines, put forward ad 
Aristotle rated the (Greek) laws of thought, so for the 
its materialities discounted, present so varied an 
its age the distinction is not 
lished if one result of the propagation of Buddhist culture was to yield a harvest, not only of psychological, but also of logical, analysis and systematization. A still greater field of material for the history of logic will possibly be opened up when (1) the original Jain scriptures are all edited, and (2) the Chinese and Tibetan translations of Buddhist Sanskrit treatises on logic, as well as (3) the orthodox Therav\(\mathrm{a}\) philosophical works in Sinhalese and Burmese MSS, become accessible. A comparison of the conclusions gleaned from these sources, and from the \(\mathrm{P}\)\(\mathrm{i}\)\(\mathrm{k}\)\(\mathrm{a}\) materials as yet accessible, with the conclusions from logical investigations of deeper philosophical importance than may appear likely to those who see in logic only an academic exercise. By intellectual procedure, according to the norms of logic is the interpreter rather than the "footnotes." The two important early classics, the M\(\mathrm{i}\)\(\mathrm{l}\)\(\mathrm{n}\)\(\mathrm{a}\)-\(\mathrm{p}\)\(\mathrm{a}\)\(\mathrm{h}\) (see \(\mathrm{M}\)\(\mathrm{i}\)\(\mathrm{l}\)\(\mathrm{h}\)\(\mathrm{n}\)\(\mathrm{a}\)\(\mathrm{h}\)\(\mathrm{a}\)\(\mathrm{n}\)\(\mathrm{a}\)\(\mathrm{n}\)\(\mathrm{a}\)) and the Nett\(\mathrm{j}\)\(\mathrm{o}\)\(\mathrm{h}\)\(\mathrm{a}\)\(\mathrm{k}\)\(\mathrm{a}\)\(\mathrm{h}\)\(\mathrm{a}\)\(\mathrm{n}\)\(\mathrm{a}\)\(\mathrm{k}\)\(\mathrm{a}\)\(\mathrm{h}\)\(\mathrm{n}\)\(\mathrm{a}\)\(\mathrm{n}\)\(\mathrm{a}\)\(\mathrm{n}\)\(\mathrm{a}\)\(\mathrm{n}\)\(\mathrm{a}\)\(\mathrm{n}\)\(\mathrm{a}\)\(\mathrm{n}\)\(\mathrm{a}\)\(\mathrm{n}\)\(\mathrm{a}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{n}\)\(\mathrm{r}\)
Logos, the least satisfactory, perhaps, of the three. The word has a history both in Greek philosophy and in Jewish-Alexandrian theology. But, whereas in Greek philosophy the word means the divine Reason regarded as immanent in the cosmic process, the authors of the Septuagint felt it to translate the Hebrew Memra and its poetic synonymus, which mean primarily the spoken word of the Deity.1 Hellemized Jewish thought attempted to fuse these two formally distinct Deity-words; and so arose the Christian use of the word as a name for the Second Person of the Trinity, incarnated in Jesus of Nazareth. It will be convenient to consider in succession the growth of the idea in Greek philosophy, in Jewish-Alexandrian theology (the use of Memra in the Hebrew sacred literature hardly belongs to our subject), and in Christian theology.

In Greek philosophy.—The history of the Logos-idea begins with Heraclitus of Ephesus (c. 535–475 B.C.), who, as F. M. Cornford has rightly maintained,2 represents a mystical reaction against the materialism of the Ionian philosophers. For him the visible world is a symbolic system which half conceals and half reveals the reality. This truth or reality is the divine soul of the world, whence proceeds all the endless cycle of birth and death, of becoming, change, decay, and renewal. There is one Logos, the same throughout the world, which is itself homogeneous and one with its own in actu, and is at the same time searching within us all: "it is open to all men to know themselves and be wise." The divine soul is 'Nature,' the cosmic process; it is God; it is ψυχή, the life-principle, which is Logos, the divine law, or will of God. All human laws are fed by the one divine law. It prevails as much as it will, and is sufficient and more than sufficient for all things. This Logos is the immanent reason of the world; 'it existeth from all time; yet men are unaware of it, both before they hear it and while they listen to it.' The Logos, like Wordsworth's 'Duty,' keeps the stars in their courses. It is the hidden harmony which underlies the discord and antagonisms of existence. There is no trace in Heraclitus of a transcendent God, whose reason or will just the Logos could be. The system is rather a form of pantheism. However, there is a strong mythological element. Anaxagoras, however, the Logos, or νοῦς (he preferred the latter term), is intermediate between God and the world, being the regulating principle of the world and the divine intellect. In Plato, though he was the founder of a philosophy in which the Logos-idea was to find a congenial home, there is but little that bears directly on our subject. The world, he says in the Timæus (p. 29.4.), is created by a fusion of mind and necessity; it is itself a living and rational organism, the 'only-begotten (μωροτέρώ) son of God,' itself a God, and the 'express image' (εἰκῶς) of the Highest.

In Stoicism the philosophy of Heraclitus received a new life and fresh developments. Like Heraclitus, the Stoics regarded Fire as the primordial substance, the material principle of the divine. Endowed with various different products of activity, it is the 'seminal Reason' (λόγος σπερματικός) of the world, which manifests itself in all the phenomena of nature. These phenomena, or, rather, the active principle which creates them, are often called λόγος στηρίγματος, in the plural. Christian writers like Justin Martyr laid hold of this doctrine to connect Greek philosophy with their religion, and so it was brought into the universal Reason, which he identifies with the Johannine Logos which 'lighteth every man.' Accordingly, he argues,3 beheaths like Heraclitus and Socrates, in so far as they lived μετά λόγου, may be claimed as Christians, and may be saved. The seminal Logos of the Stoics, when spoken of as a single Power, is God Himself as the cosmic principle, the thing which He brings into beings, and by which He directs to a rational and moral end. This power is not present in all creatures equally; only man participates in it so fully that he may be regarded as a real offspring of the world, a being which is distinguished between the λόγου ἐκδότων, the potential, unmanifested Reason, and the λόγος συμπληρωμάτων, the thought of God expressed in action. This distinction led to a new emphasis being laid in other meanings of λόγος, as 'word' or 'speech'; and in this way Stoicism made it easier for Jewish philosophy to identify the Greek λόγος with the half-personified 'Word of Jehovah,' Words and thoughts, according to the Stoics, were the very same things regarded under different aspects. The same λόγος which is Thought as long as it resides in the breast is Word as soon as it comes forth. The distinction between ἐκδότης and συμπληρωμάτων, often used by Philo and the Greek Christian Fathers, is really identical with that drawn by Aristotle between ἡ λόγος λόγος and ἡ λόγος τεχνή. The seminal idea in the Stoic doctrine that, since the one Logos is present in many human souls, men may have communion with each other through participation in the same Logos, Christ might be expounded Stoica as the indwelling revealer of the Father, with whom He is one; as the vital principle of the universe; as the way, the truth, and the life; as the inspirer of the highest morality; and, last but not least, as the living bond of union between the various members of His 'body.' The world, for Stoicism, is simple and unique (εἷς ἦς μονετίς); it is homogeneous (οὐκ έξ οὐκοίκτος). The Spirit (δύναμις) goes through all things, formless itself, but the creator of forms. The Logos, as World-Idea, is also single and simple (εἷς ἔστιν ὁ λόγος), though it assumes manifold forms in its plastic self-unfolding. It is identified with Fate (οἰκουμένη); and Stoikus says:

1. Fate is the λόγος of the κόσμος, or the λόγος of those things in the universe which are directed by providence (οἰκουμένη). 2. The world, in which the Logos is present, is the supreme God, for the Stoics hold God in the second place. But the opponents of Stoicism are too harsh when they say that the Stoics bring in God only in order to be in the fashion. It was their religious need that made them bring Him in. Perhaps they could not consistently find room for any God above the Logos, but in fact they did ascribe to the Deity more personal attributes than could properly belong to their Logos. They were certainly able to feel enthusiastic devotion to the Logos as the principle of law and righteousness. This is shown by the famous hymn of Cleanthes:

"Thee it is lawful for all mortals to address. For we are Thine offspring, and all things created came to life and walk the earth moulded in the image of the All. Therefore I will ever sing Thee, and celebrate Thy power. All this universe, rolling on around the earth, obey Thee. And to Thee alone is every Thy command. . . . O King most high, nothing is done without Thee, neither in heaven nor earth, nor in the wicked do in their foolishness. Thou makest order out of disorder, and things that strive find in Thee a friend; for Thou dost sustain all things, and bring good and evil into order with one Reason (λόγος) that hast for ever. But the wicked fly from Thy law, unloving ones, and though they desire to possess what

3 Apol. 1. 46. 7. Anab. Post. 1. 10. 76.
is good, yet they see not, neither do they hear, the universal law of God, ... But O God, giver of all things, who dwellest in dark clouds and rulest over the thunder, deliver men from their foolishness, and grant them to obtain wisdom, for by wisdom dost Thou rightly govern all things. For as we have been created, we may regard nothing with honour, unless Thy works without ceasing, as we ought to do. For there is no greater thing than this, for mortal men or for gods, to actualize the essence of universal law in things.

In fact, this conception of a germinative principle of Reason which manifests itself in the universe, and which is the unique being in members of a universal community, prepared the soil on which a world-religion might grow. And at the same time the individual was brought into a closer relation with the divine than had been contemplated in any earlier system of religious teaching.

2. In Jewish-Alexandrian theology.—Hebrew thought about the 'Word of the Lord' does not enter the subject of the present article until the tendency arose to personify the self-revealing activity of Jahweh. The earlier books of the OT connect theoperations of the Memra with three ideas—creation, providence, and revelation. God spake the word, and the worlds were made; then at once His spirit, or breath, gives life to what the Word creates, and renewes the face of the earth. The protecting care of God for the chosen people is also associated with the activity of the Memra. Besides this, the 'Word of the Lord' inspires prophecy and imparts the Law. The tendency to personify the activities of Jahweh is seen in the expressions used about the Angel, the Name, the Word, the Light, the Logos, and the Memra. Similar language about the Word is found in the frequent phrases 'the Word of the Lord came unto me,' and in such passages as Ps 147:4, Is 55:12, Ps 33:6, Jer 23:28. Nevertheless, the personification is throughout poetic rather than metaphysical, except in writers completely under Greek influence. On the whole, in the later books the conception of Wisdom has been developed out of this—'a change which really brings the Jewish idea nearer to the Greek.' Wisdom in Job is the hidden purpose which God is working out in man's existence—the grand secret of life known only to God. In Proverbs Wisdom is the cardinal virtue; she stands at the corners of the streets, and invites men to walk in her ways. God created or prepared her before the world was made; she was by His side when He was preparing the world-order; she was daily His delight, rejoicing always before Him. Therefore He assures those who listen to her of life, blessedness, and the favour of God. In Ecclesiastes, Wisdom, being hoaxed, and Wisdom is immanent in God, belonging to the divine essence, and yet existing in quasi-independence side by side with God. Wisdom was the active principle of the Wisdom of Solomon, selecting among the divine ideas those which were to be actualized in the created universe. She is an emanation from God, pervading all things, and passing 'more rapidly than any motion' among them. The teaching of Wisdom, that the teacher is not only of every virtue and of all theological knowledge, but of all the human arts and sciences.

The identification of 'Wisdom' with the Greek Logos is almost explicitly made, as is the identification of Wisdom with the Holy Spirit of God. This book, in fact, marks a transition from the OT doctrine to that of Philo, and is of much importance in the history of Jewish-Alexandrian thought.

Philo not only blends Greek and Jewish ideas about the Logos; he achieves a syncretism of divergent Greek conceptions. His Logos is a combination of the two main ideas of universal causality. He takes over the main Stoical conceptions, but detaches it from materialism, and tries to harmonize it with the Platonic theory that visible things are only types of realities laid up in the intelligible world. His Logos is much like Plato's idea of the Good, except that it is regarded as creatively active. Philo found this conception useful, because he wished to conceive of the divine activity Hellenically, without ceasing to believe in the OT Jahweh. Jewish thought had been in danger of separating the Creator so completely from His creation as to produce an intolerable dualism. This tendency had been mitigated by poetical personification. Philo fixed these poetical symbols, and turned them from poetry to metaphysics by identifying the Memra with the Stoical Logos Platonizing and giving the Jewish idea of the Word, Philo's Logos is an intermediary between God and the world; he is the principle of revelation. Philo is fertile in forms of expression to convey the relation of this principle of revelation to the Logos, respectively. In the former aspect, the Logos is declared to be the first-born Son of God, the first of the angels; in the latter, He is the Man who is the immediate image of God, the prototype of man in whose image all other men are created. The Logos dwells with God as His vice-gerent; He is the eldest son of God, and Wisdom is His mother. In contrast with Wisdom, he is the idea of ideas, the whole mind of God going out of itself in creation. He represents the world before God as High Priest, Intercessor, Paraclete. He is the Shekinah, or glory of God; but also the darkness or shadow of God, since the creature half conceals and half reveals the Creator. He is the intelligible world, the archetypal universe of the Platonists, or of the heavenly order; and the real like of the world-order. Philo expresses the type of the Logos, the 'second Deity'; no mortal could be formed in the likeness of the supreme Father of the world, or ever brought into comparison with Him. But elsewhere the Logos appears to be only an attribute of God. As an orthodox Jew (or one who wished to pass for orthodox), Philo cannot have thought of affirming two divine agents. And yet the Platonic doctrine of a transcendental unknowable God required a divine vice-gerent, while the Stoic Logos had been an independent immanent world-principle, very different from the Hebrew Jahweh. The amalgamation of these divergent philosophies in Philo is rather external and superficial. The Philonic Logos is a dynamic principle, but also a cosmic principle, who accounts for the existence of the world. The latter is all the more tolerable in Philo seems to suggest that the Logos is 'the God of us the immediate', as if from the highest point of view the Logos were only an appearance of the Absolute. So in a thoroughly Platonic passage he says: 'God appears in Him, without His being perfect; and having transcended all multiplicity, not only the multiplicity of numbers but even the void which is nearest to unity, passes on to the unity which is unmixed, simple, and complete in itself' (De Abrahamo, 2).
But this is not a common line of speculation in Philo.

In the NT the technical use of the word Logos is found in the Fourth Gospel (unless we should add John 1:1 and Rev 19:13) only. But it is important to observe that St. Paul, especially in his later Epistles, gives us almost the whole of the Logos-doctrine which we read in the Prologue to the Fourth Gospel. The conception of Christ as a cosmic principle is even more emphasized in Colossians 1:15, where we read of Paul the Pauline Christ that He is the image (skê) of God, that in Him the Pleroma of the Godhead dwells in bodily form, that He was the agent in creation, and the immanent Spirit—"through whom all things," that He pre-existed in the form of God, that He is the first-born of all creation, in whom and through whom to whom are all things, that all things are summed up in Him, that He is all in all, that His reign is co-extensive with the world's history, that He is life-giving Spirit, abiding in the souls of His disciples, forming Himself in them, and transforming them into His likeness, enlightening them and uniting them in one body with Himself, it does not seem that a candid criticism can deny that the elements of a complete Logos-theology are to be found in Paul in Titus and in 2 Corinthians. Without assuming any direct influence of Philo, it is perhaps improbable that the Jewish-Alexandrian Logos-philosophy had a great and increasing influence upon St. Paul's doctrine of the Person of Christ. In proportion as the apocalyptic Messianism which we find in Thessalonians lost its importance for him, he approximated more and more to the type of Christology which we associate with the Gospel of St. John. It must not be supposed that this statement stands or falls with the authenticity of Colossians and Ephesians. The Epistles to the Corinthians contain similar language.

The large obligations of the author of the Fourth Gospel to the Philonian school cannot reasonably be denied, though they have often been questioned. It is clear from the tone of the Prologue that Philo's conception of the Logos, or something akin to it, was already familiar to those for whom the Evangelist wrote. No explanation of the word Logos is contained in any verse in the Prologue might be paralleled from Philo. Technical terms from Philo (σφραγίς and παρακλήτος are examples) abound in the Gospel. Indeed, the whole treatment of the Evangelist that he knew of the Jewish-Alexandrian philosophy of religion, and would be unintelligible without it. Nevertheless, it is true that the identification of the historical Jesus with the Logos, and of the Jewish Messiah with the Logos, makes a great difference. Philo had never thought of identifying the Logos with the Messiah—a figure in whom he took very little interest. The chief differences (which have often been exaggerated) between the Philonian and Johannine Logos are these: (1) the Evangelist defines far more clearly the relation of the Logos to God, as a second Person in the Godhead, than Philo allows Him to be; (2) the notion of God as the Father as a transcendent unapproachable Being, to be known only through an intermediary, is foreign to the Gospel, in which God the Father acts directly upon the world; it is in consequences of the activity thus attributed to God the Father that the creative function of the Logos loses its interest and is not referred to after the Prologue; (3) in the Gospel the conception of the Logos is more than that of a Wisdom, because of the greater unity of Logos with God; (4) the Logos-Christ is the complete revelation of the character of God rather than of His nature; (5) the revelation of the Divine as self-sacrificing love is an idea not to be found in Philo; (6) it follows that the conception of life, which implies growth, change, and development, has an importance for the Evangelist which it could not have for Philo; (4) could Philo have accepted the Incarnation? The difference between the two writers here has often been magnified by orthodox critics. Philo believed in theopoeiancs, and could have easily accepted a docetic theory of the Incarnation. The Fourth Evangelist is no docetist; but for him it seems that we read of the Johannine Christ as a fleshly being that we might 'behold his glory,' and learn what could only thus be taught. But a real Incarnation of the Logos would no doubt have been inconceivable to Philo, for whom no historical event seems to have any importance as such. The Logos-doctrine of the Prologue may be briefly summarized as follows. From all eternity, before time began, the Logos was. He is supra-temporal, not simply the Spirit of the World. He did not become personal either at the Creation or at the Incarnation.1 The Logos was 'turned toward' (προσώπον) God. The proposition indicates the closest union, with a sort of transcendental subordination. The Father alone is the πρωτόσωμα. The opening words of the Prologue do not (with Meyer, Weiss, etc.) suggest that the Evangelist referred to His eternal relationship to the Father. Deification was to the Jews blasphemy, to the Greeks a light thing. The Evangelist shows that the principles of deification lay in the Word of God Himself. 'All things came into being through the Logos,' who is the mediator Agent in creation,2 'Apart from him nothing came into being. That which has come later being was, in him.'3 Bosonnet, following Augustine, comments rightly: 'Everything, even inanimate things, were life in the eternal Word, by his idea and eternal thought.'

The Logos is the light of man as life; that is to say, revelation is vital and dynamic. God reveals Himself as vital law to be obeyed and lived. The cosmic process, including, of course, the spiritual history of mankind and of the individual, is the sole field of revelation. 'The light shineth in darkness.' As the first step in the first creation was to divide the light from the darkness, so the new creation effects the same division in the moral and spiritual sphere. 'And the darkness arrested (φανερῶς) it not.'

This is the genuine light, which lighteth every man as it comes into the world.'4 He was (always) the light of the world, the Son of God, the Logos. 'And the Logos became flesh and tabernacled among us.' Here (v.14) the Evangelist mentions the Incarnation for the first time. The Logos, who from all eternity was fully divine (θεός), became flesh (assumed visible humanity) at a certain time.

It is not easy to say whether the Evangelist conceived of the Logos existing before the Incarnation as 'true man from all eternity';1 but 3:18 and 6:6(1. cf. I on 16) suggest that he did. It is certainly in accordance with Johannine ideas to hold that the Incarnation, and the Passion as the sacrifice of the divine self-sacrifice, were part of the counsels of God from all eternity. The Logos before the Incarnation was, according to this thought, ἀρχηγὸς, though not πρωτόσωμα. The Prologue thus leads up to the Incarnation of the Logos, 1There was nothing strange in this doctrine. The book of Proverbs (9:5) had asserted the same of Wisdom: 'I was set up from everlasting, from the beginning, or ever the earth was created.'
2This is also Philonic; cf. de Cherub. 35: σφραγίς γὰρ αὐτοῦ μὲν αὐτὸν καὶ αὐτὸν σφραγισμὸν εἶναι τὸν θεὸν, 'ὁ υἱὸς τῆς ἀληθείας εἶναι τὸ πρωτόσωμα καὶ τὸν θεὸν, καὶ τὴν ἰδιότητά του.'
3De Origo bonae voluntatis, probably rightly.
4This is exactly what Heracleitus also says about the Logos.
5T. H. Green, Works, London, 1885-93, II. 208 f.
which is the theme of the whole Gospel, though the historical form precludes any further discussion of creation. Minucius Felix 2 equates the Christian Trinity with 

Mens, Ratio, Spiritus. This is to be noted, because, later, under Platonic influence, a principle above Noēs (Mens) was asserted, and this, with Christian speculation, was identified with the Father, with the result that Noēs was now equated with the Logos, and Ratio (the will and thought of God transmuted into vital law) had to be subordinately assimilated to the Holy Ghost. This led to confusion. The Alexandrians continued to call the Father Noēs, feeling probably that the Neo-Platonic Absolute in no way corresponds to the Christian God the Father. Thus they introduced a distinction resembling that between the Godhead and God in Eckhart; a sublimated conception of Noēs was introduced between the Absolute and the Logos.

In Clement of Alexandria the Logos-doctrine is a doctrine of Immanence. The world is an organic whole, moving on to some exalted destiny in the harmony of the divine order. Humanity has its life and being in Christ. The Incarnation is no abrupt break in the continuity of man's moral history. Christ was in the world before He came in the flesh, and was preparing the world for His visible advent. Thus the Logos, in the Incarnation, entered into the organic process of human history. The history of man's redemption is, for Clement, the education of the human race under its divine 'Instructor.' As Instructor, the Logos has always been with the world through Moses, and through Greek philosophy. He even gave the sun and moon to be worshipped, that men might rise from the lower worship to the higher. 2

Salvation is not a physical process, but a moral growth through union with God; knowledge is not merely speculation, but a growing sympathy and insight into the character of God and His laws. The union of the Logos with God is so intimate that we cannot hold (with the Gnostics and some Platonists) that the Father is passive in the work of redemption. The Incarnation is in itself the Atonement by which the Logos reconciled the Human with Himself. For Clement, as for other Greek theologians, there is properly only one dogma—the Incarnation.

For Origen's Logos-doctrine see art. ALEXANDRIAN THEOLOGY, vol. i. p. 316.

There were two schools which opposed the Logos-theology—the rationalistic Unitarians, who regarded the 'divinity' of Christ as a mere power bestowed on Him by God, and emphasized the humanitarian aspect of His Person, and the modalistic Monarchians, such as Praxeas, Noetus, and Sabellius. These maintained the old alliance with Stoicism, after the Catholics had adopted Neo-Platonism as their mistress in philosophy (see, further, art. MONARCHISM). Hippolytus's anti-Sabellian treatises show the line of argument used by the orthodox—Christ, who was more regarded as not wholly satisfactory. Methodius, 4 a Platonist but not an Origenist, argues that the Incarnation was the necessary complement of the Creation, the imperfection of Adam being natural. There is a double development—in the race and in the individual, both due to the immanent Logos. The

The Arian controversy drove orthodoxy into something like a conflict with materialism. The text-word ὄρασις gave the Monarchists most of what they wanted, and its adoption soon ended the hostility of this school. The Arian Christology is of some philosophical value and the great opponent Athanasius, though he writes much about the Logos, does not add anything significant to the doctrine. It was, in fact, no longer thoroughly acceptable to the Catholic Church, but was not allowed to appear in the Nicene symbol; and the Synod of-folder (A.D. 451) condemned the doctrine of the ἴδια τέλος, or the Logos. Other terminology, and to some extent other ideas, displaced it. It was never acclimatized in the Latin-speaking countries.

The Logos-doctrine has an obvious affinity with mysticism, and with types of religion which emphasize the divine immament. It was revived by Eckhart in the Middle Ages, and has been a living article of faith with religious idealists, Christian Platonists, and speculative theists. It belongs to a period and an important type of religious thought, and can never lose its value, though there are now many who (like Max Müller) are ardent supporters of the Logos-ideas in religious philosophy: while they cannot accept the Johannine identification of the Logos with a historical individual.

For an evolution in Indian philosophy somewhat similar to the development of the Logos-doctrine see art. VACH.

W. R. INGE.

LOKAYATA.—This word, which denotes properly 'belonging to the world of sense,' is the Indian name for the materialistic system whose adherents are termed Lokayatikas or Lāukāyatakas, or more usually Chārvakas, from the name of the founder of their doctrinal system. There are clear indications of the presence in India, as early as pre-Buddhist times, of teachers of a pure materialism; and undoubtedly these theories have had numerous adherents in India from that period to the present day.

Although two authorities bear witness to the former existence of text-books of materialism, viz. the Bhāgavata and the Sūtras of Dharmapati, the mythical founder of the system, yet materialistic doctrines have never gained any further place in the literature of India. In order to understand these theories, therefore, we can only have recourse to a few passages of the Mahabharata, to the polemic which was carried on against materialism in the text-books of the other philosophical schools, and to the doctrines of King Rāma in the philosophical drama Prabhādatḥaramadraśa. This last work was written in the 4th cent. A.D., and aims at setting forth in allegorical style the superiority of Brāhmanical orthodoxy to all other theories of the universe. The principal source of our knowledge, however, is the Brihadāraṇyaka Upanishad, which is the greatest of all the philosophical systems of India, composed in the 14th cent. of our era by Mādāvāchārya, the celebrated Veda-priest of the Brahma-sutra. The majority of the doctrines of Indian materialism are set forth in the greatest detail. Mādāvāchārya begins his exposition with an expression of regret that the majority of the men of his day follow the materialism represented by Chārvaka.

The Lokayatikas allow only perception as a means of knowledge, and reject inference. It recognizes as the sole reality the four elements, viz. matter, and teaches that, when a body is formed by the combination of the elements, the spirit also comes into existence, just like the intoxicating quality from the mixture of special materials. With the destruction of the body the spirit returns again to nothingness. The soul, therefore, is only the body's attribute of existence, since the existence of a soul distinct from the body cannot be established by perception. Supersensuous things are, of course, also wholly denied, and are dismissed at times with a mere jest. Hell is earthly pain, due to earthly causes. The Supreme Being is the king of the country of whose existence the whole world affords tangible proof.

Emancipation is the dissolution of the body. The post-operative force of merit and demerit, which, according to the belief of all other Indian schools, determines the lot of each individual down to the smallest detail, is here denied by the Lokayatikas, because this conception is reached only by inference. To the objection of an orthodox Philosopher, that those who reject this controlling force in the universe leave the various phenomena of the latter without a cause, the materialist replies that the essential nature of things is the cause from which the phenomena proceed.

On the practical side this system exhibits itself as the crudest Eudemonism; for it represents the gratification of the senses as the sole desirable good. The objection that sensual pleasures cannot be the highest aim for mankind, since they are always mingled with more or less pain, is met by the remark that it is for us to secure by prudence enjoyment as little alloyed as possible with pain, and to shun as far as is in our power the suffering inseparably connected with pleasure. The man who would have fish for his skin and bones, and he who wants rice cannot exclude the husks from his bargain. Let him not then from fear of the barren remuneration of the pleasures which we instinctively feel to be congenial to our nature.

The Vedas are declared to be the idle prating of knaves, characterized by the three faults of untruthfulness, partial contradiction, and useless repetition; and the professors of Vedice science deceivers, whose doctrines are mutually destructive. To the Chārvakas the ritual of the Brāhmans is a fraud, and the costly and laborious sacrifices are useful only for providing with a livelihood the cunning fellows who carry them out. 'If an animal sacrificed at the Jātisjōma (the original form of the soma offering) rises to heaven, why does not the sacrificer prefer to slay his own father?' No wonder that in the view of the orthodox Hindū doctrine the Chārvaka is the worst of all heresies.

It is natural to conjecture that the Lokāyata system was based by its founder upon deeper principles, and developed upon more serious philosophical lines than the information which has come to us from their opponents allows us to understand. The conjecture, however, cannot be established.

LOLLARDS.—See Wycliif.
LONGSUFFERING.—Longsuffering is alike a divine attribute and a human virtue. In both its uses its meaning is well represented by 'long-suffering,' for the frequent occurrence, and not altogether obsolete.

The earliest example of 'longsuffering' quoted in the O.F. (cf. Col. 3:12; Sir 24:4) is, 'though he be long with them:' but RV 'and he is long-suffering over them.' A. Plummer (I.C.T., Edinburgh, 1838, in loc.) grants that 'et 3' 3'10 may refer to the enemies of the elect, but prefers to understand it to apply to the elect. The meaning, then, would be: 'And shall not God deliver His elect who cry day and night to Him, while He is slow to act for them?' But the analogy of Jer 15:18 (cf. Sir 59:9) suggests that the main thought is of God, in the fulfillment of His promises to those who are at once His enemies and the oppressors of His chosen ones. J. Moffatt renders: 'And will not God see justice done to his elect who cry to him by day and night? Will he be tolerant to their opponents? If you who love him can only see justice done to his elect?' (The New Testament: A New Translation, London, 1913).

The uncertainty in regard to the interpretation of this passage is increased by the diversity which the translators serve to emphasize what Plummer rightly insists upon, namely, that, although μακροθυμία is usually means 'is slow to anger,' yet 'it sometimes means 'to be slow, be backward, tarry,' and is almost synonymous with βραδύς.' So also μακροθυμία may mean 'slow persistence' as well as 'slowness to anger.' Comp. 1 Mac. vii. 4 (op. cit. p. 414).

The RV recognizes this wider meaning, and renders 'longsuffering' as equivalent to 'patience,' in He 6:12 and Ja 5:18. The corresponding verb is applied in Ja 5:19 to the husbandman's patient waiting for the harvest. But 'patience' is more frequently the translation of μακροθυμία, 'the temper which does not easily succumb under suffering,' while μακροθυμία is the self-restraint which does not hastily retaliate a wrong (J. B. Lightfoot, St. Paulus's Epistles to the Colossians and to Philemon, London, 1879, on Col 1:16). To the 'long-suffering' of God reference is made in Lk 18, Ro 2:5, 1 P 3:2, 2 P 3, and to the 'long-suffering' of Christ in Ti 19 and probably 2 P 3. In Ro 2: 'forbearance' (διαχώρισις) is linked with 'longsuffering.'

The distinction between these two words is that the διαχωρίσις is temporary, transient, and we may say that, while it ascribes its own temporary, transient character. . . . This, it may be urged, is true of μακροθυμία no less. . . . But as much does not lie in the word; we may conceive of a μακροθυμία, though it would be worthy of little honour, which should never be exhausted; while this latter implies the concept of a permanent, provisory character (J. C. Trench, Synonyms of the New Testament, London, 1860, p. 193).

As a moral attribute of God, 'longsuffering' is a manifestation of His grace. In 'the riches of His goodness' He waits long and patiently for the sinner's repentance (Ro 2:4), and in loving-kindness He tolerates those who deserve His wrath (Ro 9:33).

Yet 'patience and long-suffering yield not merely to the suspension of punishment, but to the love which never tires till it has exhausted its last resource. Opposed to the contrast between the apparent impotence of long-suffering and the mystery of true providence, this is an attribute which excites special reverence' (T. H. Hasting, The Christian Faith, London, 1916, ii. 625).

'Longsuffering,' as a Christian grace, is a 'fruit of the Spirit' (Gal 5:22). Though a passive virtue, it is the manifestation in the human character of spiritual power received in answer to prayer from Him by whom believers are 'strengthened with all power, according to the might of his glory, unto all patience and longsuffering with joy' (Col 1:11).

In his earnestness, many Christians may feel that they may have the mind of Christ, for he obtained mercy, that in him, as chief of sinners, 'Jesus Christ might show forth all his longsuffering, for an ensample of things which are to be written afterwards concerning eternal life' (1 Ti 1:18). In 1 Co 13 'longsuffering' is said to be an attribute of the 'love' by which we are made partakers of the divine nature. Tertullian (De Patentia, 12) and other Fathers 'explain it to mean greatness of soul or magnanimity, but μακροθυμία differs from μεγαλομορφία, the high-mindedness of Aristotle:—

'First, it is not a condescending greatness, but a largeness of conception. Second, it is not the lowness of spirit that great men alone possess, but a moral and godly frame of mind to be exhibited in the life of every Christian. And it becometh more and more every day that they may have the mind of Christ, for he obtained mercy, that in him, as chief of sinners, 'Jesus Christ might show forth all his longsuffering, for an ensample of things which are to be written afterwards concerning eternal life' (1 Ti 1:18). In 1 Co 13 'longsuffering' is said to be an attribute of the 'love' by which we are made partakers of the divine nature. Tertullian (De Patentia, 12) and other Fathers 'explain it to mean greatness of soul or magnanimity, but μακροθυμία differs from μεγαλομορφία, the high-mindedness of Aristotle:'

Literature.—The word 'longsuffering' is best studied with the aid of commentaries on the passages in which μακροθυμία occurs. There is an instructive and comprehensive article in Eikon xil. (1900-01) 290 ff.; the following bibliography is given: H. Cremer, Bibl. Thol. Lexikon, Edinburgh, 1856, p. 388 ff.; J. Taylor, Works, London, 1845, iv. 452 ff.; R. W. Dale, Week-Day Sermons, 1883, p. 297 ff.; F. Temple, Royal Sermons, 1883, ii. 1728 ff.; C. J. Vaughan, University and Other Sermons, 1907, p. 399 ff.; A. Macalister, Psalms and Proverbs and Other Sermons, 1885, p. 217 ff. See also J. Hastings, art. 'Longsuffering' in EIB iii. 198 ff.; H. C. Lees, art. 'Longsuffering,' in DCG ii. 341.
in the miracles of healing supposed to be wrought there, describes the town as "containing few in-
habitants except those who serve the needs of the
religious devotees" (Journal of Travels, Eng. tr.,
London, 1903, ii. 191-209). The great basilica,
The shrines of which is visible from afar, was begun
in 1468 and was completed in 1536 and has since received
many additions and modifications. Of its artistic
merits an excellent account is given in A. Cola-
santi (Loreto, Bergamo, 1910). But the basilica was
built to enclose a shrine of the Virgin Mary, which is the real
object of pilgrimage. The Holy House is believed
to rest on the surface of the ground without
foundations, and this fact seems to be authentic. It
measures roughly 31 ft. by 15, and its walls are
built of hewn stones, from their shape and colour
often mistaken for brick, but externally they are
hidden from view by a casing of marble richly
adorned with sculptures, a ancient statue of the
wood, of Byzantine representation, the
Madonna and Child, now voluminously draped
and also crowned, occupies a niche inside the little
house on some height from the floor, and beneath
it stands a altar at which Mass is said. Countless
votaries are suspended all round, but these probably
represent only a small part of the rich gifts which
blessed the shrine before Napoleon rilfled it
in 1797. On that occasion the Emperor himself
visited it, and on his return to Paris, in 1801 the
First Consul returned to the niche that it had
formerly occupied. The words 'Ilie Verbum caro
factum est, et inhabitavit nobis et domus eius'
indicates the site of the shrine's official claim to the veneration of
the faithful, for the story is more fully told in a Latin
inscription set up in the basilica by Pope Clement
VIII (in 1600). In 1900 the approved English rendering of
which runs as follows:

'Christian Pilgrim, you have before your eyes the Holy
House of Loreto, venerable throughout the world on account of
the many miracles accomplished in it and the great
miracles herein wrought. It is here that the most holy Mary,
Mother of God, was born; here that she was saluted by the
angel; here that the eternal Word of God was made flesh.
Angels conveyed this house from Palestine to the town Terenzo,
in the region of the Etrurians, where, having changed its
station three times, it finally fell into the hands of the
pilgrims. Then, the will of God, it took up its permanent position on this spot three
hundred years. The holy House of Loreto, through the
power of God, was in the year 1296 raised up from a simple
structure to the power of a basilica, a benefaction which has
since attached to the shrine ('nde acceptu tunc iste ecclesia nomen
"santa Maria de Loretah ab illis domina que erat illius silice
domina et patrona'). Here, however, there was
such a concourse of pilgrims that the wood was
infested with robbers and murderers.

For this reason, 'the Basilica Terranese goes on,' 'the Holy
House was once more taken up by the hands of angels, and
it was carried to the Mount of the Two Brothers, and on this
same mount by the hands of angels it was set upon the
ground. The which brothers, on account of the immense revenue and gain
of money and fame, were much displeased, and
thereupon dis-
cord and strife. Wherefore the angels, in the same manner as before, carried it away from the said place on the
mount and brought it to a spot in the public road and there
they made it fast.'

The legend also relates how the Blessed Virgin in 1296 appeared to
her devot to her, and in this way made known the whole story. Therupon sixteen good men and
true journeyed to the Holy Land to measure
the foundations of the Holy House at Nazareth.
They discovered that these exactly agreed with the
dimensions of the Santa Casa, and also that
a stone tablet commemorated the disappearance of
the little building which had formerly been
vener-
ated there. Furthermore, in the time of Tera-
nanus himself two old men came forward and
teach testified that his grandfather's grandfather
had confirmed from personal knowledge the ac-
to
The story which, with further ampli-
Sabina, to the present day. Al-
though such as B. Karel and G. A. Vogel betrayed their misgivings, they
did not venture to throw doubts upon the
sub-
stantial truth of the narrative. It was only in 1906 that W. Chevallier, following in the wake of
the less elaborate criticisms of H. Grisar (at the
International Catholic Congress of Munich in 1897),
A. Bondikin (in Revue du clergé français, xxii. (1900) 241), and L. de Felice, (Nazareth, Florence, 1905),
published a systematic refutation of the whole legend (Notre-Dame de
Lorette). Since then an energetic and
often acrimonious controversy has been carried on, both
in magazine articles and in separate books, be-
tween the assailants and defenders of the
legend;
but, even among the organs of Roman Catholic
opinion, the more weighty and critical reviews
without exception have all ranged themselves
on the side of Chevallier.

Apart from the intrinsic improbabilities of the
legend itself, two lines of argument have
been pressed home against the legend with irresistible force.
The first, namely, negative, lays stress upon the
fact that a shrine of Our Lady had existed at
Loreto a century before the date of the supposed
translation, that nothing whatever is heard of
this translation until the middle of the 15th cent.,
and that, even when first spoken of, the accounts
of the transportation by angels do not suggest
that it was the house of the Holy Family at
Nazareth which was so transported. Curiously
enough—and this is a point which all the many
writers on the subject seem to have missed—the
earliest known mention of a miraculous translation by angels occurs in the narrative of an English
pilgrim, William Wey, one of the original fellows of
Eton College. His account, which is probably
not of later date than 1462, runs as follows:

'Also twelve miles from Ancora solemnly as it
Recanati, is a hamlet which is called Loreto, where there is now
a stone chapel of Blessed Mary which of old was built by St.
Helen In the Holy Land. But because the most Blessed
Mary was not honoured there, the chapel was lifted up by the
angels, and the most Blessed Virgin Mary sitting upon it
was carried away from the Holy Land to Areatum, while the country-folk
and shepherds looked on at the angels bearing it and setting it down in the plain where there now is what is called the
most Blessed Virgin Mary is held in great honour' (Wey's Pilgrimage,
Boroughs Club, London, 1876) assigns it to the
early years of the 14th cent., but it seems to be mentioned
in documents of the year 1353, and other authorities attribute it
to the 13th or 14th century. The legend declares it
has to be carried by St. Luke the Evangelist,
other hand, the first papal document which gives any indication of the special sanctity attaching to the Loreto shrine is the bull of Paul VI. in 1470, which speaks thus:

1. Desiring to show our veneration for the church of Blessed Mary of Loreto, which is so closely connected with the life of the Virgin, it is established that it is truly the place where the Holy Virgin was conceived. The Loreto shrine is thus under the protection of the most holy church of Nazareth outside the walls of Eisenstadt, in which, as the statement of persons worthy of credit attests, and as all the documents of the Casts for themselves demonstrate, are the remains of the glorious Virgin, through the wondrous mercy of God, has been deposited. The site is further dedicated to a troop of angels, and the church, by reason of the countless stupendous miracles which the Most High through her intercession has worked for all who devote themselves to her and humbly seek her aid in their necessities, etc.

Here again not the least suggestion is conveyed that the building, even if believed to exist miraculously without foundations, was the actual house of the Holy Family of Nazareth. On the other hand, the terms of this notice lend great probability to the opinion, supported by Hüffer and others, that it was the statue, showing, as we have noticed, Byzantine characteristics, and consequently known to have come from a distance, that was at first supposed to have been brought to Loreto by the hands of angels. Then the fact that the chapel had no proper foundations seems to have given rise to the further development that the whole building had been miraculously transported from the East. And, finally, a reason was found for this exceptional Providence by assuming that the building was the actual Holy House of Nazareth. Considerable support is lent to this hypothesis by a curious parallel in the case of a chapel erected without foundations in the 15th century by A. Fortunato in his Cronichetta del Monte San Savino (Florence, 1583, pp. 9-11). In the year 1116 a little wayside chapel of the Blessed Virgin at Assisi belonged to a certain lord, who at his death left it to his two sons. They quarreled over the division of the offerings and were on the point of fighting a duel when, during the night, the angels took the chapel and bore it to a place about 14 miles off, called Colle di Vertighe, near Monte San Savino. G. B. Mittarelli, a really serious and critical antiquary of the 18th cent. (see his Annales Camaldulenses, Venice, 1755-73, iii. 89-92), bears witness to the existence of the chapel in his time and also to its great antiquity. Here again, just as at Loreto, the chapel was without foundations, and a great church had been erected under it to protect and enshrine it. Whether the Loreto legend or that of the Colle di Vertighe is really the older it is difficult to decide. In the case of Loreto the negative evidence is stronger, showing that in the beginning no idea existed of the chapel having come from Nazareth is emphasized by the large number of documents of the 14th and 15th centuries which have been unearthed concerning it. It is incredible, as Hüffer shows in his very patieni discussion, that the supremely sacred character of the building could have been ignored, as it is, in almost all of them, if men had then believed that this was actually the Holy House in which God had become incarnate.

The second line of argument, developed by Chevalier and other critics, claims to show that at Nazareth nothing was known to have happened in 1291, when the Holy House is supposed to have been transported westwards; no pilgrim comment on the disappearance of a shrine which was known to have been venerated by their predecessors in the 12th and 13th centuries, nor do the accounts of what was venerated at Nazareth as the abode of the Holy Family apply in the least to such an edifice as we now see at Loreto. It may be noted that the measurements and proportions of the chapel of the English shrine of Our Lady of Walsingham, which happen to have been accurately preserved to us, do not agree with those of the Santa Casa, while, according to legend, the English Walsingham chapel reproduced exactly the dimensions of the Holy House as measured by a pilgrim about the year 1000.

By the time of Pope Julius II. the legend of the Santa Casa had fully established itself in public favour and it is incorporated in a bull of 1507, but with the qualification 'ut pie creditur et fana est.' In 1518 Leo X. identifies himself with the whole marvellous story of the miraculous procession of the picture, and the witness of Thomas Duchie or Doughie of Musselburgh made his pilgrimage to the Holy Land and brought back that image of the Italian shrine for which he afterwards built a chapel on the land now occupied by Loreto School. Other pontiffs, notably Sixtus V. and in modern times Pius IX. and Leo XIII., adopted the tradition without any question, and Innocent XIII. permitted the celebration of a special feast of the translation of the Holy House with a 'proper' Mass and Office. In the latter part of the 16th cent. the story of the miraculous translation was so authorized and endorsed by the local traditions of Nazareth itself were modified to suit it. It should, however, be remembered that none of these papal bulls or other similar acts of ecclesiastical authority is regarded in the Roman Church as having the actual status of building, but that consequently all Roman Catholics are free to accept or reject the legend according to their own judgment of the historical evidence. The defenders of the tradition still hold that, quite apart from the examination of the materials, particularly the stone of which the Santa Casa is built, and it is claimed that experts have declared that such materials are unique in Italy, but it had been more honestly admitted by Doughtie of Nazareth (see D. Bartolini, Sopra la Santa Casa di Loreto, Rome, 1881). But these experiments were carried out in 1857, and it may be doubted whether their conclusions can be regarded as rigidly scientific. Let us also notice that the frescoes at Gubbio and in one or two other places, said to be of early date and representing angels carrying a house (the date and details are nearly always matters of controversy), cannot be assumed to refer of necessity to the Loreto legend. It is clear from the Monte San Savino chronicle quoted above that there was at least one rival tradition of the same kind in Italy. These facts cannot be appealed to as a conclusive argument in favour of the early date of the Loreto story in particular.

Loreto.—The most voluminous bibliography of the subject has been very fully, though not quite exhaustively, dealt with by J. Faurax, Bibliographie lorettaine, Tournai, 1913, and also by G. Hüffer, Loreto, Loreto (see below), pp. 2-9. Of books and articles can be mentioned here. The text of the early writers who elaborated the legend into the form which ultimately prevailed, viz. Teramanni, Gereon Antiqua, Raphael Riera, and Horacio Turrusellini, will be found printed at length in the voluminous work of P. V. Martorelli, Teatro historico della S. Casa Nazarena, 3 vols., Rome, 1722-35. Besides this, we may note, among older works, the important treatises of G. A. Vogel, de Ecclesia resanmatcl et laetaverae oraeumqve episcopi commentarius, 2 vols., Recanati, published in 1593, though written in 1541; and M. Leopardi, La Santa Casa di Loreto, Lupano, 1841. Both these works give proof of much research among monastic archives and local documents. In the modern controversy, after U. Chevalier, Notre-Dame de Loreto, Paris, 1866, by far the most important contribution to the subject is that of G. Hüffer, Loreto, eine geschichtskritische Untersuchung der Frage des heiligen Hauses, Münster, 1913 (so far only in German, but a second edition has appeared). A. Boudinon, La Question de Loreto, Paris, 1910; C. Bouchard, La Verite sur le Saint de Loreto, dè, 1910, and The Month, July 1912. Of the various attempts made to reply to Chevalier's criticisms we may note the work of Eschbach, La Eccoli di Loreto, Paris, 1910; F. Thomas, La Santa Casa dans ses Religions, Lyons, 1896; G. Poiesis, Loreto, in Bullettino storico, 1908; M. Falcioni Pulignani, La Santa Casa di Loreto secondo un affresco di Gubbio, Rome, 1877; J. Rineri, La Santa Casa di Loreto, 2 vols., Rome, 1911; and G. Kreusch, Das Loreto Quartalschrift, Lübn, 1897, p. 786-800, and 1911, pp. 608-
LOTUS (Egyptian)—LOTUS (Indian)

LOTUS (Egyptian).—I. Name.—First we must dismiss entirely the modern botanical name 'lotus,' the 'Lotus Arabicus' is a small leguminous plant resembling a vetch ('Prose. Ray. Soc. ii. [1890] 223). As plants more or less confused together, being all water-likeys, and popularly called 'lotus,' there may be specified (1) rose lotus (Nelutumum speciosum), distinguished by imbricated petals on the bud; (2) white lotus (Nympharum lotus), distinguished by ribbed petals on the bud, rounded when opened; and (3) blue lotus (Nympharum corrales), distinguished by smooth, pointed petals. The two Nympharum lotuses cross, and any intermediate form may occur naturally.

(1) Rose lotus.—This is at present an Indian plant unknown in Egypt, except as a cultivated race. It was unknown in Roman times, being found in the cemetery at Hawara (W. M. F. Petrie, Harv. 1899, p. 62), and described by Athenaeus:

"T'us grows on marshes ... one like that of the rose, and it is the garlands woven of the flowers of this colour which are properly called the garlands of Antinous; but the other kind is called the lotus garland, being of a blue colour' (xv. 21). It was known earlier to Herodotus:

"There are also other flowers like roses that grow in the river, the fruit of which is contained in a separate pod ... in this there are many berries-fit to be eaten' (ii. 99).

There does not seem to be any proof that this plant was indigenous with any instance of it was represented in Egypt. It cannot, therefore, be reckoned as of importance in religion or art. Various instances have been alleged, but incorrectly. Loret states that the lotus-flower supporting Horus is a rose lotus; but the petals are equal-ended and striped as white lotus. He also states that the flower supports the head of Nefertum; but that flower appears rather to be a Nympheae. He agrees that it is not shown on monuments. The capital found at Memphis (Petrie, Palace of Apries, London, 1892, xvii.), like other early capitals, is white lotus, and not rose.

(2) White lotus.—This is characterized by the sepals and petals being ovoid with rounded ends. It is frequent in canal scenes of the early kingdom; as a capital at Memphis (Petrie, Palace of Apries, xii.), and on capitals of canals (Zwicky, Abhydla, viii. dyn.; El-Bersheh), xith dyn.; El-Bersheh, xith dyn.; see E. Prisse d'Avenne, Hist, de l'art égyptien, t. vi, 1879), as a garland (F. E. Newberry and F. L. Griffith, El Bersheh, London, 1893) it was placed upon the mummies of Aahmes, Amenophet 1., and Rameses II. It is represented as the flower upon which Horus is seated, shown by the strong ribbing of the sepals (R. V. Lanzoni, Dizionario di egyptologia e critica, Turin, 1888, xix., l., fig. 1). The figure is entirely of late date, 8th cent. B.C. and onward. Loret attributes this to the rose lotus; but J. G. Wilkinson emphatically states that it is the 'Lotus of the Egyptians' (447). It is still called in Egypt (Egyptians, London, 1878, i., 132 f.) the ribbing would indicate that it is, as a matter of fact, the white lotus.

(3) Blue lotus.—This is the most usual lotus-flower of all periods, with straight-edged pointed petals. It is found commonly in the toms, and is the origin of the regular lotus-capitals. The Egyptian name of the blue lotus is variously equated. Loret puts the neheb, nekheb, or neshub to the rose lotus, seshmi to the white lotus, and serpet to the blue lotus. But we have seen that probably the rose lotus was a Persian importation, and could not therefore have a usual name dating from the VIth dynasty. (Papyrus, i. 499). A certain Nefertum is said to have been given authority for the seshni being a blue flower (Pl. Porcar, p. 116), and the khehnum (which in the Scale = seshni) being also blue. It seems probable that seshni is the blue lotus. The seeds of all three lotus-plants were eaten (Herod. ii. 92), and seshni was gathered in the IIrd dyn. (see a seal in Petrie, Royal Tomb, London, 1891, pl. xxxi., xxii. 171). The blue lotus was eaten and used by the Egyptians. The commonest name neshub is the white lotus. The name serpet is more fully spelled out like a Syrian word, as saripeta. It seems obviously connected with sarpet of Is 55, where it stands in antithesis to myrtle, and is therefore probably a bush rather than a herb or water-plant. It does not appear to have any connection with a lotus.

2. Meaning.—Though the lotus is so abundant naturally in Egypt, and so incessantly represented in decoration, yet it seems to have singularly little contact with the religion or writing. Its use as a vocal sign is rare and of late period, and before that it appears only as a determinative of the names of such plants. It is not associated with any early god. Nefertum, who wears the flower on his head, is a late deity, the figure first occurring in the VIIIth dyn. (A. B. Cook, draughts of Paris, 1890-95, i. 38c), where also is a portable shrine with the lotus-flower of the god, clearly the blue lotus. Usually he is not represented till the Greek period. Horus, who appears seated on the lotus-flower, is first represented only in the Egyptian and later ages (G. Colonna-Cecchaldi, Monuments antiques de Chypre, etc., Paris, 1852, pl. viii.; G. A. Hoskins, Visit to the Great Oasis of the Libyan Desert, London, 1894, p. 129). In view of this, it says of the lotus, 'there is no evidence of its having been sacred, much less an object of worship' (iii. 133).

Versions.—The principal books are V. Loret, La Flore pharaonique, Paris, 1892, for the botany; G. Foncarter, Histoire de F'Evro, lotamenti, do 1897, for Egyptian architecture; W. H. Goodyear, Grammar of the Lotusi, London, 1901, for general art connections, but overstrained.

LOTUS (Indian).—To the Indian taste the lotus has always been the fairest flower: it has enjoyed an unparalleled popularity throughout the length and breadth of India from the earliest times down to the present day, as is shown by its dominance in literature and art. Beginning to be mentioned in the oldest Veda, it plays a prominent part in the mythology of Brāhmaṇism. To the later Sanskrit poets it is the emblem of beauty to which they constantly compare the faces of their heroines. The lotus, moreover, enters into Indian art of all ages and all religions as a conspicuous decorative element. It appears thus on the oldest architectural monuments of Buddhism as well as later on those of Jainism and Hinduism all over India. With the spread of Buddhism to the countries of the Farther East, its use as an ornament in religious art has extended as far as Japan.

1. In literature.—The lotus is already named in the Rigveda and is mentioned with increasing frequency in the later Sūtras. Two varieties occur in the Rigveda. The Missaka (later known as a white variety of the Nelutumum speciosum) is once referred to (X, exilii. 8) as a water-plant. In the Atharvaveda (X, viii. 43) the humān heart is compared with this lotus, and the Padhārīni (XVIII, ix. 6) speaks of its flower as 'born of the light of the constellations.' The Taittiriya recension (i, viii. 2, 1) of the Black Yajurveda mentions various names for the lotus (pundrā-sūtra). The blue variety named pañcakra occurs several times in the Rigveda (VI, xv. 3, VII, xxxii, 11, VIII, lxxii. 11) and still often in the
LOTUS (Indian)

After Buddha began to be represented in sculpture, from about the beginning of our era, his image constantly appears sitting cross-legged on a lotus seat, occasionally also standing on a lotus pedestal. In this form it occurs, for instance, at Rajgir in Behar, in the Kanheri caves near Bombay, and often in the Gandharan monuments of the North-West. From the latter region this type spread beyond the confines of India, reappearing in Nepal, Burma, China, and Japan. Even when the seat is not seated with its various edible parts, in the Atharvaveda (IV. xxxiv. 3). The flower meant in the so-called white edible lotus (Nymphea lutea), denoted by this name in later times.

In the Brahmaṇas the lotus first appears associated with the Creator Brajapati in cosmicognic myths. Thus the Taittiriya Brahmaṇa (t. 3. 3. 6) tells how Brajapati, desiring to evolve the universe, which in the beginning was fluid, saw a lotus-leaf (pūsvana-paraṇa) standing erect out of the water. Thinking that it must rest on something, he dived in the form of a bear, and, finding the earth below, broke off a fragment, rese with it to the surface, and spread it out on the leaf. Again, the Taittiriya Aranyaka (t. xxiii. 1) relates that, when the universe was still fluid, Prajapati-alone among gods—stood erect.

Later, in the epic poetry of the Mahābhārata, the Creator, under the name of Brahmā, is described as having sprung from the lotus that grew out of Viṣṇu's navel, when that body lay absorbed in its circle. How the navel of the Creator of Brahmā is 'lotus-born' (abja-ja, abja-yoni, etc.). The lotus is thus also connected with Viṣṇu, one of whose names is accordingly pāda-mahābhūka, 'lotus-navel.' It is further associated with Viṣṇu's wife Lakṣmī, goddess of fortune and beauty, in the Mahābhārata, where the myth is related that from Viṣṇu's forehead sprang a lotus, out of which came Śrī (another name of the goddess), and where one of Lakṣmī's epithets is pada, 'lotus-ised.' The Mahābhārata, in its account of Mount Kailasa, the abode of Kubera, the god-king, is described in his lake Vaṭāla and his river Mandalā as covered with golden lotuses.

In art.—As regards its application in religious art, the lotus figures, with the rise of that art in India, on all the Buddhist monuments which came into existence after the 1st century B.C. and onwards. In its simplest form the expanded lotus is very frequent as a circular ornament in the sculptures at Sanchi, Bhārhat, Amāravati, and Bodh Gaya, as well as in the rock-cut Buddhist temples of Western India, being introduced as a decoration on pillars, panels, and ceilings. Very elaborately carved half-lotuses sometimes appear thus, or, in Ceylon, as so-called moonstones—semitranslucent stones at the base of staircases. Lotuses growing on stalks also occur in the sculptures of Gandhāra and of Mathurā, and often figure in elaborate floral designs on the pillars of Sānci or the panels of Amāravati.

The lotus is further found from the earliest times conventionalized either as a seat or as a pedestal on which divine or sacred beings rest in a sitting or standing posture. The oldest and most striking example of this use is exhibited in the figure of the Hindu goddess Lakṣmī in the Buddhist sculptures at Udayagiri, at Bhārhat, and especially at Sānci, where it is frequently repeated on the gateway of the Great Stāpa. She is portrayed sitting or standing on a lotus and holding up in each hand a lotus-flower which is watered by two elephants from two of the four elephants which support the ancient type is found all over India at the present day; it even occurs among the old sculptures at Polonnaruwa in Ceylon.

Later Vedas. In the former it is alluded to as growing in lakes. Here also the term seems to be applied to the bowl of the sacrificial Ind, pre-
LOTUS (Indian)

The device of a lotus-flower in the hand seems to have symbolized not merely divinity but the possession of life everlasting, and the preservation and procreation of life. Such was it with the Aryan queen of heaven, the Brahmānī goddess Śrī, and her derivative, the Buddhist Tārā, both of whom have the title ‘Garlanded by Lotus’ (Tantā, Kangyur, xv. 4). In the mystical Vedic, pre-Buddhist Satapattra Brahmaṇa the lotus was a symbol of the Śrī, and in the Inf. and testament of the Buddhists, for which see in the famous Oṃ mānī padme hūn formula (see Jewels [Buddhist], § 7). Probably, therefore, such a meaning may be in part implied in the lotus held in the hand of Avalokita, the consort of Tārā, to whom that formula is now specifically addressed.

In the hand of Maitreya, the next coming Buddha, and other divine bodhisattvas of Gandhāra, the lotus in the hand, however, may have had a metaphysical significance and have denoted the preservation of the life of the law and the re-vivifying of the same. It was possibly in this sense as cherishers of the law that we find that a lotus-flower adorns the hands of many of the images of Buddhā and bodhisattvas who do not specifically possess the attribute of a lotus held in the hand (see list below).

The gods and goddesses of Buddhism who hold a lotus in their hand are here enumerated; this lotus, with the object which it carries, forms one of the chief conventional attributes of the particular divinity.

The simple lotus, one of the three kinds specified above, is the especial mark of Tārā, Avalokita, Padmapāni, and, occasionally, Maitreya. The lotus surmounted by a thunderbolt (vajra), it is an attribute of Mahāsāri and of Vajrāsattva; by a book, it is an attribute of Maitreya and Prajñā Paramitā; surmounted by a jewel, it denotes Kṣitigarbha and Akṣājā; by a sun, Samanta-bhadra. Among Tibetan saints the lotus is the special emblem of the founder of the Order of Lāmas, Padmakara, ‘the Lotus-born’; and Tsong-kha-pa, the founder of the Yellow-Hat reformed sect, the Gelug, has two, one on either side of him. Images of lotus symbols thus, such as the seventh C. Childers, Dict. of the Lālī Language, London, 1875, pp. 316, 392).

The white lotus, padparādha, gives its name to two out of the twenty-four previous Buddhās of the Pāli canon, namely Paduma (properly Padma) and Padumuttara, and to several nāgā demigods, Padma, Padumottara, and Padparādha; also to several of the Buddhist hells, namely Padma, Mahāpadma, and Padparādha (Sutta Nipāṭa [SBE x. pt ii. 121]); these appear to be named from the flower-shaped boils which torment the inmates therein. It is also used to denote the highest number known to Buddhist computators, namely 10,000,000, or 1 followed by 119 ciphers, which is called a padma or, in Pāli, paduma, whilst the white lotus, padparādha, gives 10,000,000, or 1 followed by 121 ciphers.

In Buddhism the lotus is a flower among the flowers which symbolize the Buddha’s teachings. Padma, hence the name "Lotus," is the meaning of the lotus in the Pāli canon. The lotus is a symbol of purity and wisdom. It is said to have seven petals, each representing one of the seven stages of spiritual development. The lotus is also a symbol of the Buddha’s teaching, as it grows from the muck and rises to the surface of the water to bloom, representing the Buddha’s teaching rising above worldly concerns to reach enlightenment. The lotus is also a symbol of the Buddha’s death and rebirth, as it is said to endure the heat of the sun like the Buddha, and to return to the muck at the setting of the sun like the Buddha’s body. The lotus is also associated with the Buddha’s descent from the Bodhi Tree. The lotus is a symbol of the Buddha’s teaching, as it grows from the muck and rises to the surface of the water to bloom, representing the Buddha’s teaching rising above worldly concerns to reach enlightenment. The lotus is also a symbol of the Buddha’s death and rebirth, as it is said to endure the heat of the sun like the Buddha, and to return to the muck at the setting of the sun like the Buddha’s body. The lotus is also associated with the Buddha’s descent from the Bodhi Tree. The lotus is a symbol of the Buddha’s teaching, as it grows from the muck and rises to the surface of the water to bloom, representing the Buddha’s teaching rising above worldly concerns to reach enlightenment. The lotus is also a symbol of the Buddha’s death and rebirth, as it is said to endure the heat of the sun like the Buddha, and to return to the muck at the setting of the sun like the Buddha’s body. The lotus is also associated with the Buddha’s descent from the Bodhi Tree.

The lotus is also a symbol of the Buddha’s teaching, as it grows from the muck and rises to the surface of the water to bloom, representing the Buddha’s teaching rising above worldly concerns to reach enlightenment. The lotus is also a symbol of the Buddha’s death and rebirth, as it is said to endure the heat of the sun like the Buddha, and to return to the muck at the setting of the sun like the Buddha’s body. The lotus is also associated with the Buddha’s descent from the Bodhi Tree. The lotus is a symbol of the Buddha’s teaching, as it grows from the muck and rises to the surface of the water to bloom, representing the Buddha’s teaching rising above worldly concerns to reach enlightenment. The lotus is also a symbol of the Buddha’s death and rebirth, as it is said to endure the heat of the sun like the Buddha, and to return to the muck at the setting of the sun like the Buddha’s body. The lotus is also associated with the Buddha’s descent from the Bodhi Tree.
LOTUS OF THE TRUE LAW.—No book gives a more accurate idea of the literature of the Great Vehicle or Mahāyāna (q.v.) than the Sūtramārdanīkāra, or Lotus of the True Law; and none gives a better impression of the character of the classic and of Buddhism in certain surroundings, from its beginnings down to the earliest times of the Christian era.

1. The Buddha in the Lotus.—In the ancient Pali documents Sākyamuni is a man, a simple mortal, and he goes in a historical background. In the Lotus he is a sublime being, eternal or almost eternal, who unrolls in a phantasmagoric setting the ‘divinity,’ i.e. the divine splendour and the majestic power, which Buddhists now attribute to the Buddha; he is a god as Hindus and Buddhists understand the word—that is to say, he manifests himself especially by mythological performances, although he is a stranger to all notions of creation or of immemorability. Such a being has no history; therefore, as Kern says (SBE xxii. p. ix), the Lotus is a sort of ‘dramatic performance, an undevolved and mystery play.’ It consists of a series of dialogues, brightened by the magic effects of a would-be supernatural scenery.

Among the most characteristic episodes we may mention the silence which Sākyamuni maintains for three thousand years; characterizing out his divine tongue into the most distant worlds; the appearance of the stūpas of a deceased Buddha, who had been in Nirvāṇa for a long time, but who wished to inaugurate in the world the security of innumerable saints and Buddhas eager to hear the teaching of the Master, and coming from all the worlds. By means of Kern’s excellent translation (SBE xxii.) we can appreciate the character of the ‘sublime’ and the ‘supernatural’ attributed by the Great Vehicle to the Buddha.

Although completely divine, Sākyamuni is not God in the Lotus. He is Buddha ‘from the beginning’; he is the father of the worlds, the father of the future Buddhas and saints, the universal presence. In order to save human beings and to lead them to Nirvāṇa he appears in a human form which is illusory; he is born, teaches, and enters Nirvāṇa—at least as far as ordinary men can see; but in reality, while illusory Sākyamunis are appearing in this world, the true Sākyamuni reigns on a divine plane of unchangeable destiny, attended by future Buddhas, and imparting to them the true teaching, the true law. This is the true Sākyamuni that the Lotus shows.

Nevertheless, as Kern said, this god is not God. There is no single word in the Lotus which is not capable of an orthodox, i.e. ‘atheist,’ interpretation. Sākyamuni may be styled Svayambhū,6 who is by himself, because, like all the Buddhas, he became Buddha without receiving the teaching from another. He is Buddha ‘from the beginning’; but, just as the Lotus mentions a Buddha who will one day replace Sākyamuni, so we must believe that Sākyamuni is Buddha ‘from the beginning of this cosmic age.’ We know, moreover, that Brahmā himself 1

1 The development of the tongue, capable of covering the whole face, is one of the signs of the ‘great man’ in the ancient Pali-Mahāyāna.

2 Contrary, evidently, to all Buddhist dogmas. The being ‘who has obtained Nirvāṇa’ is invisible to gods and men, since he is annihilated or has entered into eternal rest. The appearance of ‘deceased Buddhas’ in the Lotus is probably, therefore, only a representation of the imagistic or deceptive power (māyā) of Sākyamuni.

3 A hill near Rājgṛha, which was turned by the neo-Buddhists into a heavenly mountain.

4 See art. Buddha.

5 This is a name of Brahmā. The Sānyamabhūprāptā is a glorification of the Buddha of Nepal (S. Lévi, Les Népal, Paris, 1903).

6 Of this expression with the one described in art. Mahāyāna. Mahāyāna is the means of teaching in the middle, and the end, therefore the Eternal and also the Absolute—quite different from Sākyamuni in the Lotus.

The Lotus is not, properly speaking, eternal. Besides, Sākyamuni is not the only Buddha; other Buddhas reign and teach at the same time as he, his equals in nature, although not necessarily in merits, glory, or activity as a saviour; every Buddha has his own domain and field. If he has been already born, it is not because he creates human beings; it is because by his teaching he is the father of the saints or future Buddhas.

So much for speculation. In practice, on the religious sentiment that the Lotus assumes, Sākyamuni is really God, providence, and reward of the saints.

2. The doctrine of salvation in the Lotus.—According to the Lotus, the saints of the Little Vehicle (see art. Arhat), or Hinayāna (q.v.), do not attain Nirvāṇa; they believe that they will not be re-born, but they are re-born to receive the true doctrine from the heavenly Buddhas. Deliverance cannot be obtained except by first becoming a Buddha; and for that purpose it is necessary to enter the Vehicle of the future Buddhas (see art. Bodhisattva). This doctrine is set forth in various parables, the most famous of which is that of ‘The Prodigal Child’ (iv.); it is not without a somewhat distant resemblance to the Gospel parable.

It is . . . as if a certain man went away from his father and betook himself to some other place. He lives there in foreign parts for many years, twenty or thirty, and in course of time the one (the father) becomes a great man; the other (the son) is poor; is seeking a livelihood . . . In all directions and goes to some city, whereas his father removes to another country. The father is vexed at having no son; but one day, when, sitting at the gate of his palace, he is dealing with the affairs of millions of sovereigns [except Nirvāṇa], he sees his son, poor and tattered. The son thinks, ‘Unexpectedly have I here fallen in with a king or grandee. People like me have nothing to do here; let me go; in the street of the poor I am likely to find food and clothing without much difficulty. Let me no longer tarry at this place, lest I be taken to do forced labour or incur some other injury.’ The father orders his son to be brought to him; but, before revealing his birth to him, he employs him for some years at all kinds of work, first at the meanest kind, and then at the most important. The father treats his son with paternal kindness, but the son, although he manages all his father’s property, lives in a thatched cottage, and believes himself poor. At last, when his education is completed, he learns the truth. In the same way we are the sons of the Buddha, and the Buddha says to us to-day, ‘You are my sons.’ But, like the poor man, we have no idea of our dignity, of our mission as future Buddhas. Thus the Buddha has made an impression on inferior doctrines; we have applied ourselves to them, seeking as payment for our day’s work only Nirvāṇa, and finding out that it is not so. ‘If I were to be born as a Buddha the Buddha has made us dispensers of the knowledge of the Buddhas, and we have preached without desiring anything. As last the Buddha has revealed to us that this knowledge is to be ours, and that we are to become Buddhas like him.’

3. Episodoc.—Although the four last parts of the book (see below, § 4) is almost entirely devoted to Sākyamuni, chs. xxii.—xxvii. glorify several Bodhisattvas. We may mention the Āsāra of Avalokiteśvara (xxvii.), which is one of the most widely read works in China (see art. Avalokiteśvara); the myth of the ‘healer king,’ Bhūsajyāraja (xxii.), a Bodhisattva who sets fire to his gigantic body for the salvation of human beings, and who is none other than the sun. In the Chinese Great Vehicle the practice of burning the skull is connected with this myth. In submitting to this cruel rite, the monk fulfills the effect of the sacrifice incumbent on the Buddhas (J. J. M. de Groot, Code du Mahāyāna en Chine, pp. 50, 217, 227).

The history of Sadaparibhūtā, 1 the always subdued one, ‘the always despised one’ (xix.), is an example of the endurance of a monk of the unfailing and pure-heartedness to worldly wisdom and scepticism (Kern, in SBE xxii. p. xxii). We should not have a right idea of the Lotus if we did not mention the glorification of the domain of the Great Vehicle.

1 See art. Mahāyāna for the plurality of Buddhism and Abhidharma for the stages in the development of the Buddhists.

2 With this idea is associated in the Lotus the false teaching of Buddha—provisional teaching (Little Vehicle) and true teaching (Great Vehicle).
formula (xxi.), and the glorification of the Lotus itself (xx.). ‘He who writes this book, or causes it to be written, obtains infinite merit,’ etc. We know that, in the Milinda, a Pali book of the Little Vehicle, all that is required to obtain a divine re-birth is to think of Buddha when dying (Sutta Pitaka, xxv. (1890) 124); with more reason, in the Great Vehicle, the tendencies of bhakti predominate (see art. BHAKTI-MARGA).

4. What he owed from his University. — The Lotus was translated into Chinese for the first time in A.D. 255; but this ancient translation is lost. The next one (286) contains chs. xxi.—xxvi., which criticism proves to have been added afterwards, the former ch. xxii. becoming ch. xxvii. On the other hand, the former chapters include verses (gāthā) and explanations in prose (the latter more recent). Kern therefore thinks that ‘several centuries’ separate the primitive reduction from the one which was certainly in existence before 286. Winternitz is not so generous, and places the original about the year 200. The present writer is inclined to favour an earlier date: the authors of the Lotus were translated into Chinese in 145–170, and show a Buddhistic development as the Lotus. It is difficult to identify the Bodhisattvas of the Gandhāra sculpture, except Maitreyas, but it is certain that the sculpture also shows the quasi-divinization of Buddhas and future Buddhas.

L. DE LA VALLÉE POUSIN.

LOTZE.—1. General philosophical position. — Among German philosophers of the period which opens with the triumphant advance of natural science about the middle of last century, the most eminent name is undoubtedly that of Rudolf Hermann Lotze. Lotze's significance lies, above all, in his having instigated and constructed an all-embracing theory of the universe which does full justice to the claims of modern science, and that at the same time conserves whatever was of real value in the theory of the latest movement of German philosophy in the preceding period; it was Lotze, in fact, who first directed those results to genuinely fruitful issues. To him belongs, moreover, the merit of having stated and discussed the problems of thought with such outstanding clearness, force, and thoroughness that even in the most perplexing questions the reader is stimulated to form his own conclusions, or at least enabled to realize the difficulties that stand in the way of a definite result. The several philosophical sciences, accordingly, are indebted to Lotze's tireless intellectual labours for an effective and permanent furtherance and enrichment in numerous directions; and, indeed, it cannot be said that the results of his work have as yet been exhausted, or have been worked out in due measure by his followers.

2. Life and works. — Lotze's early life falls within the period dominated by the thought and sentiment of Romanticism. Born on the 21st of May 1817, in Bautzen, in Lusatia, he was grounded in classical study at the gymnasium of Zittau. Even as a boy he displayed that combination of critical acumen and lofty idealistic thought which characterized his riper years, and in a number of papers in which he won attention at sixteen, and given to the public among his posthumous papers, we can clearly trace the rudiments of the comprehensive views which he subsequently elaborated; they reveal a maturity which amazes us in one so young. In 1834 he entered upon his academic course at the University of Leipzig, where he devoted himself to the study of medicine, and so came into practical touch with scientific pursuits and with the exact methods of contemporary natural science. Simultaneously, however, he sought to satisfy his philosophical and aesthetic aspirations by the study of German idealism, and to this end attended the lectures of Ch. Weisse. During his stay at Leipzig he was above all, the conviction that the mechanical mode of interpreting nature must be extended also to the organic, animate sphere, and that the current mechanical doctrine of vital force must be banished from the scientific field (cf. his dissertation, De futura biologie principiis philosophicis, Leipzig, 1838); and this challenge to vitalism continued to be one of the leading features of his critical activity until his view at length won general acceptance.

After practising for a time as a doctor in Zittau, Lotze qualified as a Dozent both in the medical and in the philosophical faculty of the University of Leipzig (1839), and from that time to his call to Göttingen in 1844 he not only laboured successfully as an academic teacher (he had become a Professor Extraordinarius in 1842), but manifested a remarkable fertility of mind; for it was during the first of his great philosophical works, the Metaphysik, in which he stood forth as an independent thinker who had struck out upon fresh paths, though at the same time taking the impetus which he had received from Hegel and Herbart is clearly traceable in the work. The distinctive feature of the Metaphysik is in constant presentation of the idea that which truly exists—the ultimate root of reality—is to be found only in what by virtue of its unconditional value deserves to exist in this supreme sense. This line of thought, reminding us of Platonism and the Platonic insistence upon the supremacy of the Idea of the Good, finds pointed, if somewhat paradoxical, expression in the concluding statement of the book, viz. that the beginning of metaphysics lies not in itself, but in ethics. In 1842 Lotze issued a second work of importance, his Allgemeine Pathologie und Therapie als mechanische Naturwissenschaften. Here he attempts to apply without reservation the mechanical theory to the field of organic life, where the scientifically inadequate and, indeed, inadmissible idea of vital force had so long been resorted to; to that idea he likewise directed the title of his third text, ‘Lebenskraft,’ in R. Wagner's Handwörterbuch der Physiologie (Göttingen, 1843). In 1843 he also completed his Logik, in which he works on independent and often fresh lines, and strenuously emphasizes the 'spontaneity' of our thought-processes. His leading psychological views he brought out at some length in another article in Wagner's Handwörterbuch, viz. 'Seele und Seeleleben' (1846), the most notable features of which were its doctrine of the substantial unity of the soul as a real entity and its unequivocal opposition to the materialistic views then forcing their way into psychology. His opinion as to the field of aesthetics he set forth in a treatise entitled Über den Begriff der Schönheit (1845), which was soon followed by his Über die Bedingungen der Kunstschönheit (1847) — both appearing in the Göttinger Studien.

His Allgemeine Physiologie des körperlichen Lebens (1851) and Néurologische Psychologie (1852) develop the fundamental ideas of the Pathologie and closely the validity of the procedure by which the mechanical method is extended to the organic sphere, as also to the psychological, and to define the necessary limits of that application. It is worthy of note that here
Lotze, in opposition to the parallelistic theory, quite distinctly forms the hypothesis of a causal connexion between body and soul; and to this he adhered all his life. As regards the relation between the physical organism and the soul, in Lotze's theory it is a mechanical one, by which external stimuli are enabled to make a due impression upon the latter, and by which, again, the impulsion of the soul are brought to bear upon the external world. The soul is thus a mere copy of the bodily life; the truth is rather that the soul governs the body, and makes it subservient to its own higher ends.

From 1850 to 1884 appeared the three volumes of Lotze's great work, Mikrokosmos (Eng. tr., 2 vols., Edinburgh, 1885), in which he set forth his philosophical system as a whole. His previous treatises, devoted almost entirely to a consideration of the basis of human life in nature, are here supplemented by a profound treatment of human life as expressed in history and the forms of civilization, and the work culminates in a survey of the universe from the standpoint of the philosophy of religion. The Mikrokosmos as a whole is dominated by the purpose in which Lotze's life-work in relation to his age took definite shape—to show how absolutely universal in its application, and at the same time how possible in the time of an age, can be performed by mechanism in the structure of the world. It is in reality the philosophical problem of the age that Lotze here undertakes to solve; he makes it his light of otherwise than as analogous to our own spiritual being, though, of course, as raised to an incomparably higher power and freed from the limitations necessarily inherent in human nature as a finite thing. Ultimately, therefore, the world-ground is defined as an infinite spiritual being, or deity, the entire process of things being conceived as immanent in this deity, and as integrated and sustained by the unity of its being.

Lotze then proceeds to deal in a thorough-going way with the idea that this world-ground or deity forms the one ultimate basis of the existence and interpretation of all things. The elements of the real are all merely dependent parts or modifications of the Infinite; at a later period Lotze preferred to call them its 'actions.' Such actions of the Infinite he defines as the 'existence' of the particles of the material world, or the atoms, which he speaks of as the 'elementary actions of the one world-ground,' but as 'actions always maintained in uniformity by it'; and, secondly, souls, the actions not always [so] maintained, but emerging at distinct points of the world-process, and for a section of that process generating a not previously present centre of 'individualization' (Verinnerlichung). Outside of and prior to the activity of the Infinite, however, there are no universal laws operative per se, nor any so-called eternal truths; there is no independently valid 'law of occurrence' (Recht des Geschehens) or of existence; 'law and 'truth,' indeed, simply express the mode of realization by which the Infinite chooses to effect its will, and their validity depends absolutely upon the will of the Infinite, and lasts only so long as that will remains one with His—self-life, which, however, must be regarded not as a metaphysical necessity, but as a consequence of the ethical nature of the world-ground or deity, in the sense of the latter's 'fidelity to itself.'

Further, a vital constituent in Lotze's theory of the universe as originally formulated was the idea of the animistic nature of all reality. The ultimate elements of the material world are regarded as spiritual entities, as of kindred nature with the Leibnizian monads. He was led to take this view mainly by aesthetic motives, as also by the con-
viction that a purely material reality could have no independent existence. But, as he gradually wrought out his doctrine of the Infinite, the divine world-ground, his hypothesis of the animate nature of reality was more and more dispensed with, becoming ever the less necessary as what it had been dispensed to supply was gradually well and, indeed, even better supplied by the fundamental position to which he latterly attained. He came at length to the above-mentioned conception of the material essence as the 'extreme of the actions of the Infinite,' maintained in a condition of uniformity, and thus differentiated in the clearest possible way from souls. Souls themselves, however, were likewise conceived as 'actions of the world-ground,' but as specially distinguished by their admirable and at bottom inexplicable capacity of feeling and knowing themselves as the active centres of an outgoing life (Met. p. 601 i.). Some writers are of opinion that this view involves a denial of the doctrine of free will—a doctrine which Lotze always distinctly insists upon as an essential element in his theory of the universe, and for the sake of which he rejects, e.g., the pantheism of Spinoza, notwithstanding the profound relationship between that theory and his own. Obviously, therefore, Lotze himself did not believe that his conception of the essence of the Infinite in any way implied the surrender of human freedom; but it is nevertheless true that he refers to the subject only in certain religious-philosophical reflexions, and never deals adequately with the crux which undoubtedly shows itself at this point, so that in his metaphysical construction he has left here a problem still unsolved.

Taken all in all, however, since the development of Lotze's thought never guided by a purely systematic interest, but, on the contrary, takes the fullest possible account of experience, his philosophy presents a conception of the universe which is distinguished by a marvellous unity and completeness.

Literatur.—Of the more important works dealing with the life and philosophy of Lotze, the following may be named: E. Pfeiffer, Lotze's philosophische Weltanschauung nach ihrer Grundlagen, Berlin, 1884; O. Caspari, Hermann Lotze in seiner Stellung zu der durch Kant begründeten neuesten Geschichte der Philosophie, Breslau, 1884; E. von Hartmann, Lotze's Philosophie, Leipzig, 1885; E. Rehnisch, Zur Biographie Hermanns Lotzes (see in: Garten-Grundriss der Ästhetik, at the beginning), and, 'Hermann Lotze' in Neues Leben (1901); E. von Hartmann, Stuttgart, 1901 (Fremmlands Klassiker der Philosophie, vol. xii.), and art. 'Lotze' in Allgemeine deutsche Encyclopädie, vol. iii. (1901); M. Antich, Hermann Lotzes Kritik der Philosophie im 19. Jahrhundert, i. Heidelberg, 1913. For further lit. cf. D.P.P. ii. (1900) 345-350.

M. WENTSCHER.

LOURDES.—Lourdes, a small town in the extreme south of France (diocese of Tarbes, department of Hautes Pyrénées), has become known as a place of pilgrimage only since 1858. In view of the insinuation that the development of this shrine represents a conscious design on the part of the Roman Catholic clergy to exploit pious credulity in the interest of the then newly defined dogma of the Immaculate Conception, it is worth while to point out that in 1858 and for some years afterwards Lourdes was one of the least accessible spots in the country. The nearest railway was at Bayonne, 80 miles off, and the road through Lourdes led nowhere except to some little-frequented health-resorts in the Pyrénées. If there were any question of deliberate organization a fraud to impress the world, the choice of such a site would be inexplicable. Whatever judgment may be formed as to the nature of the phenomena of healing now witnessed at Lourdes, the careful study of the manifestations which first brought the shrine into notice tends unmistakably to establish the good faith of all the persons primarily con-

cerned. The history of the grotto of Lourdes is briefly this.

About mid-day on Thursday, 11th Feb. 1858, three little girls went to gather wood on the banks of the Gave. One of them, Bernadette Soubirous, a delicate child of 14, who looked much younger in the world, was alone and who then could neither read nor write, was left behind by her companions. She was standing on a narrow strip of ground between the river and a low cliff known as the Massabielles, in which was a natural shallow cave or grotto with a sort of niche in the rock above it. Her attention was roused by such a rustling of the leaves as is caused by a sudden breeze, and, looking in front of her, she saw standing in the niche the figure of a beautiful young lady clothed in white and with a rosary in her hands. The figure made the sign of the cross, and the child, after doing the same, began to say her rosary. When the rosary was finished, the apparition smilingly saluted the child, and disappeared. This was the first of a series of similar apparitions of which a few details are given below. It is to be noted that, contrary to the usual experience of such visionaries, Bernadette had no clear intuition as to the identity of the heavenly visitant. Joan of Arc recognized her 'voices'—St. Michael, St. Catherine, etc.—from the first, but this was not the case here. Bernadette was, however, of a shy disposition, and her child's nature, Bernadette went to the grotto a second time three days after, she took holy water with her and threw it at the apparition for fear the figure which she saw might be some delusion of the lady only smiled. Even after the sixth apparition Bernadette described her mysterious visitant in her potao as aquëro, i.e. 'it' (cf. Spanish aquello = cosciido), and sometimes also as una visionizér (una petite demoiselle; cf. Cros, pp. 43, 302). The vision was at all times restricted to Bernadette alone; no one else saw anything or pretended to see anything—a fact which is in marked contrast to such cases as those of Marie Magnotier at Le Pontinet in the Dordogne in 1880 (see L. Marillier, Proc. Society for Psychical Research, vii. [1891] 109 ff.) or that of Knock in Ireland in 1879-80 (see M. P. Curran, The Paleckense, 1880). On the other hand the child herself usually fell into a state of trance in which her features were completely transfigured, and Dr. Dozos, who went at first out of curiosity as a sceptical scientist in search of experience, testifies that the flame of a candle playing upon her hand for many minutes neither raised her from her trance nor left any trace of burning upon the skin. Bernadette, as early as 21st Feb., was subjected to the severest cross-examination by the commissary of police, M. Jacomet, and by the Procureur Impérial, M. Dutour, both of whom threatened her and her parents with punishment if she persisted. Still later, on 28th Feb., she was severely cautioned by M. Rives, the Judge d'Instruction, her proceedings at the grotto were closely watched by gendarmes, and she was met with a severe rebuke more or less repeated, from the curé, Abbé Peyramale, to whom the apparition had directed her to address herself. None the less, though timid by nature, she was never in the least shaken in her account of what she had seen, nor was she cowed by threats of punishment. Not one of the many formidable persons who cross-questioned her detected any signs either of incriminating hypochondria or of a hysterical temperament. There is a large amount of contemporary evidence upon the point in the works of Cros, Estrade, and Dozos. As
early as 27th March 1858, three physicians, appointed by the Prefect of the Department, who were in possession of the necessary qualifications, made a medical examination of Bernadette. In their report, dated 31st March (before the apparitions had come to an end), which is still preserved, the whole story of the early appearances was recapitulated, as the doctors heard it from Bernadette's own lips, and it is interesting to note its complete agreement with the account given by her many years later. Of mental and physical intensity which would suggest the probability of conscious fraud the doctors found no trace. 'There is nothing,' they say, 'to show that Bernadette wished to impose upon the public.' On the other hand, nothing in the report suggests that the medical examiners themselves placed any faith in the story of the apparitions. They think that Bernadette was the innocent subject of a hallucination, and, while calling attention to her naturally impressionable character, they point out a certain development in the intensity of the trance with which the apparitions were normally accompanied. For the rest, they report that the child was delicate but perfectly sane and healthy-minded, and they offer no kind of suggestion that she should be put under restraint (Cros, p. 143).

It is in contrast to this report, which was fully justified by Bernadette's subsequent history, with the very unsatisfactory career of the two children who were witnesses of the alleged apparitions of the Blessed Virgin at La Salette in 1856, or again with Marlire's account of Marie Magontier, the child voyante of Le Pontinet, already referred to:

'I have no doubt,' says Marlire, 'so far as I am concerned, of the reality of her visions. In my opinion she certainly saw the Virgin in the crack of the wall. . . . She is no doubt subject to hallucinations; but at the same time she is ill-balanced and heavily weighted with the burden of heresy. She is the daughter of a father who was epileptic, and of a mother who was doubtful insane, and she has the bearing, the character—in a word the appearance of suffering from hereditary degeneracy. She is filled too with the morbid self-love and the enormous vanity so common among the degenerate' (Proc. Soc. Psych. Research, vii. 207).

According to the testimony of a number of persons who, much to the child's distress, pursued her with questions as to what she had seen, none of these undesirable characteristics was present in Bernadette Soulioune. Traps were laid to induce her to make further revelations, but to no avail. Her simplicity and good sense defeated them all. Though below the average in intelligence, she learned afterwards to read and write at the convent school, and began to cultivate her own humility at occupations at Lourdes. She never saw the apparition again after 16th July 1858, though she visited the grotto frequently. In 1866 she became a nun at Nevers and remained there discharging the duties of informer and sacristan, as far as her delicate health permitted, until her death in 1879. It is noteworthy that, though her body at the time of death was covered with tumours and sores, it was found, when the remains were officially examined in 1899, thirty years afterwards, entire and free from corruption (see CARRÈRE, Histoire de Notre-Dame de Lourdes, p. 243).

With the redaction of the year 1858, it is to be noted that Bernadette always described the vision as one of ravishing beauty, and as living, moving, and speaking to her. The recorded words —for she was wont to have been others which the child felt that she was bid to keep secret as relating only to herself—are comparatively few. Though Bernadette several times asked the lady, as she had been bid to do, to disclose her name, the ancient custom to suppress these revelations—true of March 25th—only smiled in reply. The dates and utterances of the series of apparitions are thus commemorated in an inscription upon marble which is erected near the grotto:

'Dates of the eighteen apparitions and words of the Blessed Virgin in the year of grace 1858. In the hollow of the rock, where the statue is now seen, the Blessed Virgin appeared to Bernadette Soulioune, fourteen times between March 19th and February 16th, each day with two exceptions from Feb. 18th until March 4th, and on March 19th and 24th, to Bernadette and to Jeanne Marchand, to the Blessed Virgin said to the child on Feb. 18th: "Will you do me the favour (ou faire la grâce) of coming here daily for a fortnight?" "I do not know how to make you understand, for I am a child but in the next," "I want many people to come." The Virgin said to her during the fortnight which was to last for ever: "You will kiss the earth for sinners. Penitence, Penitence, Penitence." "Go tell the priests to cause a chapel to be built." "I want people to come here in procession." "Go and drink of the fountain and wash yourself in it." "Go and eat of that grass which is there." On March 26th the Virgin said: '"I am the Immaculate Conception.'

One point claims to be especially noted. These visions did not come to Bernadette at command. On two important occasions, as the inscription notices, she failed to see the apparition viz. on 22nd Feb. and 3rd March, when she herself certainly expected to do so and when a large crowd—in the latter case some 4000 people, many of whom had spent the night upon the spot—had come long distances to assist at the manifestation. But, as sensible critics remarked even then, this arbitrary behaviour of the mysterious lady was a feature in the genius of the apparition. "If the child had simply invented the apparition," said one of them, "what was there to prevent its happening to-day, just as it happened yesterday?" (Cros, p. 121).

But what has given permanent significance to these occurrences was the discovery of the spring the healing virtues of which now bring hundreds of thousands of pilgrims to Lourdes from every part of the world. At the ninth apparition, on 22nd Feb., the crowd of four or five hundred people who were watching Bernadette saw her rise and walk towards the grotto and then back again, moving to and fro in apparent perplexity. Finally she stooped down and began to scrub up the ground with her hand. A puddle formed, and the child then drank some of the dirty water and daubed her face therewith and also parts of the grass which was growing in the same spot. Many of the spectators took this for proof that the poor girl had really gone out of her mind. Afterwards Bernadette explained that the Lady had hidden her drink for a while, but now that she had found no spring, she had followed the apparition's directions in scrabbing up the ground as described. It seems absolutely certain that at that period the existence of any spring engaged the Black Virgin was unknown to the inhabitants of Lourdes. By the next morning the trickle had grown to the thickness of a finger, a few days later it was like a child's arm, and since then and down to the present time it yields a quantity of water equal to 122,000 litres, or about 27,000 gallons, a day. This is the miraculous water which is the reputed source of so many miracles. The wonders of healing began almost at once, and several of them were juridically investigated by a commission appointed by the bishop of Tarbes, which occupied itself with the inquiry from Nov. 1858 to the end of 1861. It is to be noted, and the fact is proved by contemporary reports made to Baron Massy, the Prefect of Hautes Pyrénées, and to M. Ronaud, the Minister of Worship, that for some months the clergy did all in their power to discourage these manifestations. They fully acquiesced when the Government erected obstructions barring access to the grotto, but the evidence of the cures that had taken place eventually bore down all official opposition, and in Jan 1862 the bishop of Tarbes, acting upon the advice of the Commission which he had appointed, issued a decree declaring that the
apparitions (of the Blessed Virgin) have all the characteristics of truth and that the faithful are justified in holding the method of Lourdes. Since the death of the lady, further ecclesiastical approval has been given both to the apparitions and to the miracles of Lourdes in many ways, both direct and indirect, by means of the body of evidence. Any adequate discussion of the marvellous cures which take place at Lourdes must raise the whole question of the possibility of miracles. For Roman Catholics the possibility is not, and it has always been, that there is the continuation of a dispensation by which the Divine Omnipotence suspends at times the operation of natural causes.

Given the hypothesis that miracles may occur and do occur, it is difficult to imagine any facts more wonderful, either from the invertebrate and organic nature of the diseases healed or from the abundance of the evidence, if the cures are attested, than the miracles worked at Lourdes. For those who wish to examine the subject for themselves no better or more convenient examples offer than the cures with which Émile Zola was brought into contact during his visit to Lourdes, and which he has introduced under fictitious names into his novel which bears that title.

Clémentine Trouvé (called in the novel Sophie Contine) was cured of a club-foot, slight and the most aggravated kind which, down to the moment of her bathing in the piscina, was suppurating freely. Marie Lemoine (alias Élisée Couteau) was also instantly healed. This was a most reparative case of lupus, in which the face had been so eaten away as almost to lose the semblance of a human countenance. The evidence quoted by Bertrin in his last edition (Historien, p. 362) shows that seventeen years after the cure Marie Lemoine was a healthy married woman with five children, Mme. Gerdet (in the novel Mlle. de Guermans) had been an invalid suffering from a great number of most painful disorders, including tumour and phlegmon, for more than twelve years. The doctors declared that the only possible remedy lay in a dangerous operation, but she also was instantly cured. In the case of Marie Lemoine (Zola's Lise Fortin) who was suffering from incurable affections, and had reached the very last stage of consumption, Zola supposes in his novel that the patient, after a temporary relapse owing to the excitement of the pilgrimage, relapses soon after and falls a victim to the old disease which had never really relaxed its hold. In point of fact, the real Marie Lemoine was in the enjoyment of vigorous health in 1908, fourteen years after the date of her cure (see for all these Bertrin, Historien, who in his last edition has followed these cases up to the latest available date).

But examples of such cures are almost innumerable, and may perhaps be most conveniently studied, especially by medical readers, in F. de Grandmison's Vingt Guérison à lourdes, which gives an admirable choice of specially selected examples, not out of the desire to dispute that modern psychotherapy, and especially suggestion, have accomplished many marvels, but the instantaneousness of the cures, as witnessed more particularly in such cases as that of Pierre de Rudder, Mme. Rouche, Gabriel Gargam, etc., can in no way be paralleled by any of Charcot's experiments at the Salpêtrière or elsewhere. Again, there are the extraordinary cases of the healing of quite young children, as, e.g., the two-year-old infant of Dr. Aumatier of Nantes, born with a club-foot and instantaneously cured at Lourdes, of which a remarkable account is given in a patient paper by J. Dozy (1907, p. SS6f.). It may be cemented that if more carefully the evidence is studied, the more certain it becomes that the words 'suggestion' and 'hysteria' are incapable of accounting for the phenomena witnessed at Lourdes. In the preface to a booklet on Lourdes published by R. H. Benson a few months before his death, the doctors of Lourdes established the fact with a famous French scientist—whom we owe one of the greatest discoveries of modern times—who has made a special study of Lourdes and its phenomena. The conclusions of this scientist, which, as Benson says, are particularly interesting because he is not himself at present a practising Catholic, were as follows:

'(1) That no scientific hypothesis up to the present accounts satisfactorily for the phenomena. Upon his saying this to me,' adds Benson, 'he exclaimed, "It is an agreeable answer to laugh in your face and to tell me, practically, that this is the most repugnant hypothesis of all."'

'(2) That, so far as he can see, the one thing necessary for such cures as he himself has witnessed or verified, is the atmosphere of prayer. Wherever this takes place, the intensity of the phenomenon rises with it; where this exists, the cures sink too.'

'(3) That he is inclined to consider that the transference of a vitalising force either from the energetic faith of the sufferer or from that of the bystanders. He instance an example in which his wife, a qualified physician, partook. She held in her arms a child aged two and a half years, blind from birth, during a procession of the Blessed Sacrament. As the monstrance came opposite, tears began to stream from the child's eyes, blindness closed. When it had passed, the child's eyes were open and seeing. This Madame tested by dangling her broochlet before the child who immediately clutched at it, but from the fact that she had never learned to calculate distance, at first failed to seize it. At the close of the procession, the lady, who herself related to the story, was conscious of an extraordinary exhaustion, for which there was no ordinary explanation.'

In a lecture given by Benson in June 1914 he stated publicly that the scientist here referred to was no other than Prof. Alexis Carrel, whose marvellous experiments in the transplanting of living tissue have constituted the great sensation of recent biological research. Benson declared that Carrel was prepared to give a demonstration on all hands that in the less conservative circles of the medical profession the brusque dismissal of the phenomena of Lourdes as matters already classified and fully accounted for, is becoming more and more anachronism. This change of attitude was emphasized not long since by the action of the medical faculty of the University of Lyons. A lady doctor, Jeanne Bon, presented a case of a two-year-old child suffering from a tumour of the leg, which had resisted all treatment, and had been cured, by a visit to Lourdes. This University thesis was officially approved, and certain of the professors superintended its composition. It was only at the last moment that the jury took fright and found a pretext for conferring the doctorate upon the candidate in virtue of some different title. The author in her thesis maintains that genuine cases of tuberculosis, in which laboratory experiment has established the fact that pseudo-hysterical hysteria, when not in question, have been spontaneously cured at Lourdes, and that these cures are effected under conditions of extreme rapidity which completely distinguish them from the less rapid cases of consumption as generally observed.

Finally, it should be noticed that, in contrast to the cures of Christian Science and many other faith-healing sects, no one moment of investigation is welcomed at Lourdes. Medical men of all creeds are invited to attend at the Bureau des Constatations, to which a permanent medical staff is attached, and every facility for observation is afforded to all scientific inquirers. Patients who believe themselves to have been miraculously healed or benefited are urged to bring their medical certificates and to attend personally at the Bureau that the case may be properly investigated, and efforts are also made to induce them to return after an interval of a year or more to afford the staff of the Bureau an opportunity of inspecting it again.

Lourdes.—Many of the earlier books on Lourdes, notably that of H. Lasserre, Notre-Dame-de-Lourdes, Paris, 1898, which has been translated into many languages and of which numerous editions have been published, are lacking in accuracy or in the medical knowledge desirable in the treatment of such a subject. The best general work is undoubtedly that of G. Bertrin, Histoire critique des événements de Lourdes, 31st thousand, Paris, 1911. This, with (the Eng. tr., Lourdes [the Appearances and Apparitions of Our Lady at Lourdes], London, 1912, is unfortunately incomplete, lacking most of the documents printed in the Appendices. Other valuable works are: F. de Grandmison, Vingt Guerisons à Lourdes discutées médicalement (Paris, 1912); A. Vourch, Quelques Cas de guerisons de Lourdes, Paris, 1913; A. Genelli, Le Lotta contro Lourdes, Florence, 1912, Où cette responsable avive des folies de lourdes. 
LOVE (Psychological and Ethical)

LOVE (Psychological and Ethical).—I. The psychology of love. — Love, as a complex psychical experience, may be classed as a "sentiment" or "passion," the term "passion" being here understood not as an explosive emotional outburst, but as a deep and steadfast enthusiasm. Whether we prefer to call love a sentiment or a passion will depend upon the point of view we take of the phenomenon. A "sentiment" is a characteristic feature of a passion as distinct from a sentiment is its forcefulness. A passion is an emotional complex of a predominantly forceful kind. A passion has been defined by A. F. Shand as "an organized system of emotions and desires."1

When, as in the life of the lower animals, emotional impulses are independently active, they may still occasionally pass over a dog summoned from the pursuit of a cat by his master's whistle, no longer feels the pure joy of the chase, for the fear of his master's displeasure tends to neutralize the impulse. But such restraint is temporary and contingent: it does not suggest self-restraint. Where, however, the various emotions of the soul have found an object on which they can concentrate their desire or their aversion, or have become devoted to an idea about which they cluster and develop, a system of self-restraint grows up within the emotions. "In every passion there is a system of self-control regulating more or less efficiently the intensity and behaviour of its emotions."2

HERBERT THURSTON.
emotions and desires which, by very reason of its systematic charater and the principle which unifies it, is stable, regulative, inclusive, and instinct with a profound rationality.

For the normal development of love the fundamental wish to distinguish belief from faith, the intellectual from the intuitional aspects of spiritual sensibility, we might say that faith is the sense of reality, belief the sense of truth. Peires, in his "Illustrations of the Logic of Science" (Popular Science Monthly, xii. (1577), 289 f.), defines belief somewhat differently, but with similar purport, as the goal of thought and the starting-point of action. It is essentially the self-confidence that comes from having reached beyond doubt, and in its place built up settled habits or rules of action, the assurance that one is ready to meet the contingencies of life in any direction. At root this view identifies belief with the sense of power, power being here conceived as the reality with which our life is invested when doubt passes over into belief. To have a sense of power is to believe in one's self, and to have ready set one's personal mark on whatever one touches; in a word, to hold, in James's phrase, that the fons et origo of all reality is ourselves.

Now, if we turn from belief so understood to love, and ask what the passion of love has to tell us about reality, we find that for love the supremely real thing is not itself, but its object. Clearly, if belief and love, or, rather, the wish to meet harmoniously the reality and significance of self so essential to the belief that means power must be identical with that sense of the reality and supreme worth of its object which is so essential to love. Our joy in the object must be one with our belief in ourselves.

This requirement leaves us with the question: What must the nature of that object be which we can intimately identify with our own selves? It must be at least personal, or we could not identify ourselves with it. Moreover, the view that we take of the nature of our own personality must be such a kind that we can conceive it as identified with this personal object without being lost or absorbed in it. If the self is lost in its object, the sense of power, the belief, will also go, and there will be no recognition of belief, for if belief is to be love's belief, if faith is to be love's faith, the object of love must be such that communion with it heightens our sense of personality and makes us more truly ourselves than we were before.

But, it may be objected, when I really love anything, is it not one of the most satisfying features of this experience that I get away from myself? How can I surrender myself to the call of the great starry spaces of ether or of spirit and yet continue to be impressed with the importance of my own individuality.

The question goes to the root of all ethical inquiry. It compels us to recognize that there is something which we currently call our individuality, which is yet too weak to subistitute in the presence of which we are really swallowed up by our own passions and in history. This individuality, which grapples itself to a finite body and shrinks from all the great things, from the infinite, from sacrifice and from death, how is it possible to conceive any organized sentiment or passion fulfilling itself within the limits of such being as this? Sooner or later it must strike its roots home into deeper personal ground. Only a self which has these roots of the infinite about its heart can tender the question out of which the true science of self emerges. Only in this infinite self can the will to love and the will to power prove no longer tendencies that are mutually destructive.
emotions and impulses, to 'whatever stirs this mortal frame,' that love stands out as the great transforming and inclusive agency, and therefore as the ultimate virtue of the spiritual life, of the life which aims at a universal or common good.

Working through the emotion of anger, it is the root of moral indignation and of justice; through that of fear, it makes the object loved the object whose hurt is feared. It regenerates the self-regarding sentiment; incurring their affection from the atomic, private ego to the personal and inclusive self; the competition of others, directed as it is against the merely individual self, is no longer felt as an injustice to one's true personality and therefore excites neither envy nor distrust.

'There is no remedy but love,' writes Goethe, 'against great superfluities of others.

Nor can the inclusiveness of true love tolerate the exclusive passion of jealousy. Moreover, with the complete passing of exclusiveness not only jealousy, but pride also, is transfigured, for love is not truly inclusive until it shows itself as ready to be grateful as it is to be generous, as ready to receive as to give. Love again is inseparable from reverence, and as such is the great security of true personal dignity. The negative element is never absent from love; love itself is the supreme reverence which guarantees that as intimacy grows so also does the value set upon personality. Again, we reverence the object of our love because we have a joy in it for its own sake, as an end in itself, and this joy is rooted in our sense of its reality, and most intimately associated also with the sense of our own reality. Belief or faith, an emotional belief in the intrinsic value of its object, is therefore essentially a feeling of reverence which guarantees that as intimacy grows so also does the value set upon personal.

And, when the whole personality is volitionally active in this broader sense of the term, and this activity is motivated by the idea of a common good, then we become justed and our will, elevated, and not that mere rationalistic; none less than the habit of right choosing, in which virtue essentially consists, is guided by the practical reason; for to choose rightly is in all things to choose the mean, and the practical reason alone can show where the mean lies. Thus with Aristotle we reach a more inclusive conception of virtue than that given by Socrates. The Aristotelian conception is a substitute for the Socratic only in the sense that it is a deepening or transcending of it. The Socratic 'reason is taken up into the Aristotelian 'will' and made to function in its service. Similarly the definition 'Virtue is love' does not supersede the Aristotelian definition. It simply deepens, and by so doing develops and reorganizes it. To do justice to the value of habit we must look deeper than the habit. Moral habits grow from their intrinsic foundations, not automatically, but through the enthusiasm which we put into the task of their formation. Hence, when we say 'Virtue is love,' we are far from implying that it involves habits of right willing. We simply emphasize the motive power which is at the root of the formation of all habits of right willing. If enthusiasm for what is good fails to express itself in decisions and habits of right willing, it is a virtue; it is no more than the capacity for virtue. But it is especially in relation to the varied

1 Tim. 110 A.
hilities of our own, save as our affections are strong. Every narrowing of love, every encroachment of egoism, means just so much blindness to the good.1

Now, Plato, in the Republic, connects the philosophical element in human nature very intimately with that which 'makes him fond of what he understands, and again makes him want to understand,' by which he means the understanding and the attraction go together.12 Indeed the very word 'philosophy' implies this.

But there is still one question to be faced if the inclusiveness of love as a virtue is not to be misconceived. The thing we call love, the things love's hate, for the lover of good is the hater of evil.3 Hence, so long as evil actually exists, love must exclude it with all the force of its being. Now, in order that evil love actually exist it must graft itself on to the good. For evil is a source of disintegration, and nothing can be wholly evil without being wholly disintegrated. Plato points out, in the first book of the Republic, that it is only in virtue of there being honour among thieves that the gang can subsist at all. Evil, in fact, can subsist in actuality only in virtue of the good which it parodies and imitates. Hence love, through successive redemptions of all the elements of good contained in things evil, becomesinclusive of all good, evil as an actuality must cease to be. We cannot, indeed, think of it as annihilated, but we can conceive of it as depressed to an infra-actual level of reality. At best it could survive as a real possibility of evil, real, that is, in relation to the will. As an actuality it would have vanished from the world. There would not then be love, or any incline to evil as an actuality of all evil. For, though love cannot include actual evil, it must include at all times the possibility of evil, seeing that the possibility of evil is implied in the possibility of good, and all moral choice is ultimately a choice between possible evil and possible good. Hence, when evil shall have been reduced to the status of a real possibility it will cease to lie outside love. Love will then be all-inclusive.

LOVE (Primitive).—That love, as one emotion of love is as difficult to define as life itself, and probably for the same reasons. The following statements are useful:

1 Dewey-Tuffs, p. 423.

analysis he has given of it.13 Bound the physical feeling forming the nucleus of the whole are, gathered the feelings produced by personal beauty, that constituting simple attachment, those of reverence, of awe, of admiration, of affection of love of freedom, of sympathy. These, all greatly excited, and severally trying to reflect their excitement on one another, unite to form the mental state we call love.14 Mantegazza, speaking of it as a colossal force, and 'force of the soul,' in 'L' amour,' for 'the entire emotional, the most characteristic and the most remarkable characteristic of sexual love. This is the temporary raising of the individual to a higher power, the intensifying of all his capacities. A woman of the people said:24 When I am thinking of myself, I am nothing. Nietzsche has eloquently described this result:

'The world is as one to oneself transfigured, stronger, richer, more complete; one is more complete. . . . It is not merely that the changes of feeling of value; the lover is worth more.25 For Plato love was a 'divine madness'; he was thinking of its automatism, its sweeping away of reason and even consciousness. It was perhaps this aspect that led Schopenhauer and others to condemn it as an illusion. But love is only a delusion in so far as the whole of life is a delusion, and if we accept the fact of life, it is philosophical to refuse to accept the fact of love.26 Ellis defines love 'in the sexual sense' as 'a synthesis of sexual excitement (in the primitive sexual sense) and friendship,'27 It is a minimum definition.

There is no doubt that the various forms of love—sexual, parental, fraternal, filial, and social—are kindred emotions. Their relative intensity decreases from the sexual to the social, and this decreases, extension increases, and more and more persons may be embraced. It is unnecessary to do more than mention the sociological truth that in all its forms love plays a part in society only less important than that of the instinct to live. It brings together the primal elements of the family, it keeps the family together, and it unites in a certain fellow-feeling all members of a race or nation.

I. SEXUAL LOVE.—Especially in its sexual grade, love has certainly during the progress of civilization become not only more refined and complex but more intense.2 This is shown by a comparison with modern savages. Not only is the impulse weak, but the physical development is inferior, and consequently the difficulty of obtaining sexual excitement is great.2 Social result of this last condition is the orgy, a method of periodic artificial excitement (see below). Jealousy is frequently absent, among the Central Australians to a remarkable degree.

1 Amongst the Australian natives with whom we have come into contact, the feeling of sexual jealousy is not developed to anything like the extent to which it would appear to be in many other savage tribes.26

Jealousy, however, seems to have little or no connexion with sympathetic love, but to be entirely concerned with animal instinct and the sense of property, and many savages show jealousy to such a remarkable degree as the Central Australians show its absence.

The question remains, and it is important for the study of the origin of the family, whether primitive love was merely organic desire. A prior it is conceivable that the family could have been established, monogamous, independent of the type of marriage, and 1 Westermarck, Mf li. 225, quoting Spencer, Principles of Psychology, p. 468.

2 F. Nietzsche, Der Wille zur Macht, Leipzig, 1911, ii. 236. The neuro-muscular effects in man are curiously paralleled in animals not only by intesstion activity, but by morphological developments; 'it produces new weapons, pigments, colours and forms, . . . new rhythms, a new seductive music' (Havelock Ellis, Sex in Relation to the Psychology of Sex, 3d. ed., London, 1897-1910, vol. vi. p. 179).

LOVE (Primitive) 155

more or less permanent unions fixed in social habit, merely by the operation of animal instincts. Similar results of the same causes are sufficient in the case of the animal world to preserve the race and render it efficient.

The Primitives may have based the regulation of marriage on various causes, from fear and passion. It is quite possible that they had a lack of understanding in the subject, and that the regulation of marriage was based on the fear of the primitive man or woman of the woman losing affection for him or her.

The Australian bride is generally dragged from home to the man to whom she is allotted. But love "may be after marriage from kind treatment. It is pointed out that love 'must be assumed in Australian marriages by elopement, which was recognised form of marriage."

The Papuan language possesses no word for love. The Hess have no word for it; but they feel it all the same. The Papuas are said to form "romantic" attachments.

An observer remarks that the passion for love is, indeed, much talked of by the inhabitants of towns, but I doubt whether anything is meant by them more than the present activity of the marriage process. This statement is probably too sweeping, as it may indicate the belief that the Bible contains no reference to romantic love. Love-songs are rare among the lower races. It may be proved that the imperfect development of literature. But Polynesian peoples are adept at love-poetry, which may be regarded as proving some degree of an emotional refinement, or rather irritation, of the passion of love. At the outer extreme, physical contact, it has been remarked that kissing and caressing are rare among savages, except towards young children. Yet among the Eskimo 'young couples are frequently seen rubbing noses, their favourite mark of affection, with an air of tenderness.

Suicide, which is fairly frequent among the lower races, is often prompted by unremitting passion. But there are many trivial reasons for suicide which indicate merely a rudimentary development of character, and special conditions of social structure must also be considered. It may be regarded as a general rule that love, of any degree or character, is not an essential basis of marriage. Among the majority of early marriages it is a matter of arrangement; spouses are allotted by the relatives, often in infancy. In many cases such 'betrothed' couples are prohibited from all association until marriage takes place. That love, however, may be the basis of permanent marriage is another matter. It is probably as essential as the needs of the offspring. Marriage by arrangement and 'the marriage of convenience' were often contracted among the Greeks and Romans. They were frequent in medieval Europe, and occur in modern civilization. But it is certain that social developments during the last century have involved a general adoption of the principle that marriage should be based on previous mutual attachment.

In the majority of early societies the two sexes are strictly separated, at least after puberty. Such a condition precludes much sympathy between youthful and maturing love. It is to be

Yet among the Eskimo 'young couples are frequently seen rubbing noses, their favourite mark of affection, with an air of tenderness.

Suicide, which is fairly frequent among the lower races, is often prompted by unremitting passion. But there are many trivial reasons for suicide which indicate merely a rudimentary development of character, and special conditions of social structure must also be considered. It may be regarded as a general rule that love, of any degree or character, is not an essential basis of marriage. Among the majority of early marriages it is a matter of arrangement; spouses are allotted by the relatives, often in infancy. In many cases such 'betrothed' couples are prohibited from all association until marriage takes place. That love, however, may be the basis of permanent marriage is another matter. It is probably as essential as the needs of the offspring. Marriage by arrangement and 'the marriage of convenience' were often contracted among the Greeks and Romans. They were frequent in medieval Europe, and occur in modern civilization. But it is certain that social developments during the last century have involved a general adoption of the principle that marriage should be based on previous mutual attachment.

In the majority of early societies the two sexes are strictly separated, at least after puberty. Such a condition precludes much sympathy between youthful and maturing love. It is to be

5. Ibid., p. 273.

The statement is that "a love is, indeed, much talked of by the inhabitants of towns, but I doubt whether anything is meant by them more than the present activity of the marriage process."

The Papuan language possesses no word for love. The Hess have no word for it; but they feel it all the same. The Papuas are said to form "romantic" attachments.

An observer remarks that the passion for love is, indeed, much talked of by the inhabitants of towns, but I doubt whether anything is meant by them more than the present activity of the marriage process. This statement is probably too sweeping, as it may indicate the belief that the Bible contains no reference to romantic love. Love-songs are rare among the lower races. It may be proved that the imperfect development of literature. But Polynesian peoples are adept at love-poetry, which may be regarded as proving some degree of an emotional refinement, or rather irritation, of the passion of love. At the outer extreme, physical contact, it has been remarked that kissing and caressing are rare among savages, except towards young children. Yet among the Eskimo 'young couples are frequently seen rubbing noses, their favourite mark of affection, with an air of tenderness.

Suicide, which is fairly frequent among the lower races, is often prompted by unremitting passion. But there are many trivial reasons for suicide which indicate merely a rudimentary development of character, and special conditions of social structure must also be considered. It may be regarded as a general rule that love, of any degree or character, is not an essential basis of marriage. Among the majority of early marriages it is a matter of arrangement; spouses are allotted by the relatives, often in infancy. In many cases such 'betrothed' couples are prohibited from all association until marriage takes place. That love, however, may be the basis of permanent marriage is another matter. It is probably as essential as the needs of the offspring. Marriage by arrangement and 'the marriage of convenience' were often contracted among the Greeks and Romans. They were frequent in medieval Europe, and occur in modern civilization. But it is certain that social developments during the last century have involved a general adoption of the principle that marriage should be based on previous mutual attachment.

In the majority of early societies the two sexes are strictly separated, at least after puberty. Such a condition precludes much sympathy between youthful and maturing love. It is to be

also the fact that crude types of social organization have been broken up by the family, strongly oppose this partial view.

It is right to notice that a time came when the conditions of life became favourable to an expan-
sion of the family, for the rude character of the food and herbivorous type of existence was a gregarious one—scarcity of food—was overcome. 1 But before that there was a different type of gregariousness, which, so far as it went, did possess elements congenital to conjugal affection, at least. It is probable that increased security of subsistence assisted the growth of this emotion and strengthened thereby the family bonds. Westermarck has argued:

'Where the generative power is restricted to a certain season—a peculiarity which primitive man seems to have shared with other mammals—it cannot be the sexual instinct that causes the protracted union. The sexes can find other egoistic motive that could account for this habit. Considering that the union lasts till after the birth of the offspring and that it is accompanied with parental care, I conclude that it is for the benefit of the young that male and female continue to live together. The tie which joins them seems, therefore, like parental affection, to be an instinct developed through natural selection. The tendency to feel some attachment to a being which has been the cause of pleasure, love is undoubtedly at the bottom of this instinct. Such a feeling may originally have been given to the young animal and the male to protect the female even after the sexual desire was gratified; and if procuring the young animal and thereby strengthening the animal's instinct this conjugal attachment would naturally have developed into a specific characteristic.' 2

This is an important statement and calls for consideration. In the first place, the assumption that even the earliest paleolithic men were capable only of periodic impulse is insecurely based. That a more or less regular capacity did actually develop from it was a frequent matter. Secondly, even admitting the above-mentioned view, no account is taken of the phenomena of habit. Habit is the essential factor to-day, and must always have been, in the development of conjugal affection from the primary incidence of the sexual emotion. And here habit is reinforced by many associations, one of which is the care of children. Another, itself a strong emotion, is the proprietary feeling, strengthened by habit. Even the rudest savage woman feels a right of property in her 'man,' however badly he treats her. Again, the invocation of a natural selection is, when analyzed, merely rhetorical. Westermarck admits that the sexual impulse is 'at the bottom' of conjugal affection and prolonged union, but he here ignores improved environment. Neither of these factors has been, in the development of conjugal affection from the primary incidence of the sexual emotion. The fact is that improvement of conditions and development of nerve and intelligence have been accompanied by an increase both in emotions and in their control; the emotion of love in all its grades has been no exception. To apply the doctrine of the survival of the fittest to such a development within the species is a misapplication of Darwinism, or, rather, an unnecessary extension of the doctrine.

2. Development of sexual love.—In order to estimate aright not only the course of development, but the character, of modern love, in its typical form, it is necessary to note some further elements—in particular, complementary elements—in the love of man and woman. Male love is active and dominant; female love is passive and subservient. 3 In men it is possible to trace a tendency to inflict pain, or the simulacrum of pain, on the women they love; it is still easier to trace a disposition in women to accept the infliction of pain when inflicted by a lover, and an eagerness to accept subjection to his will. Each type of love is certainly normal. How are we to distinguish the affection of the female in this? The woman in love who gives herself to her lover, who is not coerced by any necessity, but who feels she must love, cannot be regarded as evidence of a deficiency of moral sense. Moreover, it is hardly possible to put woman under the necessity of submission. It is possible that the affection of the females has been a long time developing, and that the influence of the male has been strong, and there can be no doubt that our present human ancestors had, in the same way, to fight for their wives; even now this kind of courtship is far from being unknown among savages. Moreover, the male pursues and tries to capture the female, and she, after some resistance, yields. The stronger impulse of the male is thus connected with a desire to win the female, and the sexual impulse of the female with a desire to be pursued and won by the male, for the female sex there is consequently an instinctive appreciation of manly strength and courage. 4 A connected result of male superiority in strength, activity, and courage is the element of protection in male love, and of trust on the side of the female. The pugnacity observed in the males, both of animals and of wild men, is one aspect of the general increase of capacity effected by passion. The intimate psychology of love reveals not only an impulse for union, but an association in the male psychology with an impulse for destruction, and even for devouring. Love often uses the language of eating. The natural modesty and coyness of the female play an important part both in stimulating and in check in the sexual appetite.love, is "only an episode in a man's life, whereas for a woman it is the whole of her life. 5 Biologically, courtship is a stimulus of love, a means of producing purnuences which by their differences in secondary characters noted above, the love of the male is expressed chiefly in acts of courtship, that of the female in receiving them. If the preservation of love in a permanent union is analyzed, it will be found that it depends on a more or less continuous process of courtship. A remarkable development of sexual love was made by the early Christians. This was the practice of close but chaste unions between the virgins and young men (see art. CHASTITY). The poetic or romantic exploitation of love to which the custom led (as shown by the literature) was perhaps the only intellectual result of the fact that this became a tradition and thus influenced the medieval valuation and practice of chivalrous love. 6 For a medieval knight the chief object of love was his lady. It became a saying that love, which theoretically was defined as 'the chaste union of two hearts by virtue wrought,' 7 Dante's love for Beatrice is the highest type of the practice. Its essential condition was that the passion should be hopeless and should not be consummated in marriage. But, as with a similar ideal of love in ancient Greece, so in this case, the reality was generally immoral. The lady as a rule was the wife of another, and adultery was frequent. In European civilization to-day the factor of intellectual and moral sympathy in love has become more pronounced with the greater freedom and higher education of women. Sympathy strengthens affection, and affection strengthens sympathy. The element of equal friendship in love has been greatly increased, and thus, curiously, in spite of the levelling which has taken place to some extent in class-distinctions, has made love between members of different social spheres more rare.

A gentleman to-day 'seldom falls in love with a peasant woman in some parts of Hungary do not think they are loved by their husbands until they have received the first box on the ear; among the Italian Camorretti a wife is not beaten by her husband, regarded as a fool. 8 In courtship, the female human alike, the male plays the more active, the female the more passive part; during the season of estrus or the period of the most timid animal species engage in desperate combats with a view to the possession of the female, and there can be no doubt that our prismatic human ancestors had, in the same way, to fight for their wives; even now this kind of courtship is far from being unknown among savages. Moreover, the male pursues and tries to capture the female, and she, after some resistance, yields. The stronger impulse of the male is thus connected with a desire to win the female, and the sexual impulse of the female with a desire to be pursued and won by the male, for the female sex there is consequently an instinctive appreciation of manly strength and courage.

LOVE (Primitive) 157

is a fact that spring and harvest are among
savings, being associated with springs and
seasons both for general festivity and for
special development of the sexual feelings. The
reason may be partly biological, partly climatic,
and partly connected with the food-supply. The
probable conclusion is that the season being
favourable for any sort of expansion and perhaps
especially so for amorous expression—an increase in
the sexual impulse during these periods is estab-
lished for modern peoples—the opportunity is
taken by societies, which express themselves only
socially, to stimulate their normally feeble sex-
ut and to obtain organic relief.

The principle of dramatication, which is at the
root of magical ceremony, may be noted in love-
charms, of which all folk-custom, from the
Australian to the European, has a store, and in a
large class of primitive marriage ceremonies, which
generally typify union. The latter are organized
love-charms.

The connexion between love and religion is of
the same nature as the connexion between love
and art and life generally.

Very much of what is best in religion, art, and life, owes its
charms to the progressively widening irradiation of sexual
feeling.

4. Homosexual love.—Sexual love between in-
dividuals of the same sex is not an infrequent
abnormality. It probably occurs, at least spon-
distically, among every race of modern man,
and in post-Homeric Greece it became, so far as the male
sex was concerned, almost a ‘national institution.’

Cases of congenital perversion are very rare; habit
and environment have been largely studied by
investigators. The majority of barbarian and
civilized peoples have condemned the habit; in
medieval Europe it seems to have been regarded as
connected with witchcraft and heresy.

II. NON-SEXUAL LOVE.—I. Parental love.—As
in the case of conjugal love, observation of primitive
peoples is contradictory; but it is certain that
maternal affection is universal, and paternal affec-
tion, though less intense, and often defective, is
normal in the human race.

According to Aristotle, parents love their children as being
portions of themselves. Espinas regards this love as a modi-
fied love of self or properly. A. Bain, however, derived
parental love from the ‘intense pleasure in the embrace of
the young.’ But, as Westermann notes, this affection in
animal contact was at the bottom of the maternal feeling,
and conjugal affection was regarded by moderns in
Europe as the inheritance of the father. Yet, among the lower races at least, the case is exactly the
reverse; conjugal affection being vastly inferior in degree to
the mother’s love of her child. He adds: ‘It seems much more
likely that parents like to touch their children because they
love them, than that they love them because they like to
touch them.’ According to Herbert Spencer, parental love is ‘essentially love of the weak and helpless.’ Westermann observes that
‘when the young are born in a state of utter helplessness
somebody must take care of them, or the species cannot
survive, or, rather, such a species could never have come into
existence. The maternal instinct may thus be assumed to owe
its origin to the survival of the flock, in the natural selection
of useful spontaneous variations.’ But, as stated above, it is
unnecessary to regard these instincts as cases of natural
selection.

a. Filial love.—‘Children’s love of their parents is generally
much weaker than the parents’ love of their children. No
individual is born with filial love.’ But ‘under normal
circumstances the infant from an early age displays some attachment
unto its parents,’ especially to the mother. It is ‘not affection
pure and simple, it is affection mingled with regard for the
physical and mental superiority of the parent.’

14 Ibid. ii. 194.
Conversely, parental and, still more so, paternal affection includes a regard for weakness and helplessness. Filial love is proved to be normal in primitive races; as with other forms of love, it is both less intense and less complex than in civilization.

3. Fraternal and social love.—All peoples exhibit 'altruism of the fraternal type, binding together children of the same parents, relatives more remotely allied, and, generally, members of the same social group. Fraternal affection is the outcome of social needs, and a real social affection and friendly sympathy are proved. As before, Westermarck applies the doctrine of natural selection to this development. With progress in culture social affection becomes a marked feature of religious and ethical practice and theory. Noteworthy examples are the doctrine and duty of charity, in Christianity idealized by the Founder's love for all mankind and by the theory of brotherly love, and the Oriental systems, such as the oh Vaid of Hindu religions.

The philosophical literature which explains the idea of love is enormous. Plato developed the view that love is the creator of beauty, though beauty must have an objective element. Greek, Christian, and medieval thinkers developed the concept of love as the love of God, the amor intellectualis Dei of Spinoza is paralleled by many Oriental theories of contemplation. Throughout, love in religion stands midway between the philosophical and the human conceptions.

III. LOVE—GODS.—Deities embodying the abstract notion of love are hardly developed until the higher stages of barbarism are reached, but some points may be noted in the previous evolution. Animistic thought may produce, by a process of normal hallucination, the belief that evil spirits take the stage of handsome men and love their women. Primitive psychology, by analogical reasoning, explains love as made of fire (the Malay notion), or the state of love as one of possession. The latter animistic view is connected with any departure from the normal; the new character of the individual is regarded as due to the entrance of a spirit. The West Africans attribute love to possession by the god Legba, or Elegba. Dreams of love are explained in the same way as in mediaval Europe with its ideas of the incubus and succuba. Such a deity might develop, as others to be cited might have or actually have developed, into a deity of Love. But, as usual, a deity has an indirect connexion only with this or that emotion. Many peoples, like the Finns, have regarded love as a form of insanity (a variety of possession). It is doubtful whether the expression of this or that deity as 'patron of love' has any more definite meaning than an indirect connexion, such as is usually the case with possession. The Finns regarded the god of evil as the patron of love. The Yoruba 'patroness of love.' Odun is 'worshipped' at erotic feasts. Her connexion with love is probably indirect only. Such a connexion is frequent in the case of 'deities of fertility.' The Scandinavians Freya, goddess of love and fruitfulness, seems to have been synthe-
LOVE (Buddhist).—The way in which early Buddhist literature takes account of the emotion of love is many-sided. It cannot adequately be settled, as some have tried to settle it, by a treatment that is too abstract or, again, too specialized. The hunger for unity or simplicity leads some historians to assign to every departure in religious

to servant and conversely, and that of layman to reclus or Brahman and conversely. The practical forms which these six several modes of devotion or worship should take are simply and concisely described. For our present purpose it is chiefly interesting to note that they are prescribed not as mere duties for certain acts, but rather as ways of giving expression to a spirit of ‘compassion’ felt by the agent. Thus not only should parents in five ways take compassion on (ena-kampanti, lit. ‘to think of’) their children, and teachers in five other ways take compassion on their pupils, but wives, in yet other five ways, should take compassion on their husbands, friends and colleagues, in yet six other ways, should take compassion on any honourable mind. This we would refer pointedly to Siṅgāla and his companions, in yet other five ways servants should take compassion on their master, and to six ways recluses and Brahman should take compassion on the laity. The corresponding term in the other six cases of reciprocated service—e.g., of children to parents, husbands to wives, etc.—is ‘ministering to’, or creatures upon. And the choice of these two Pali words, differing as they do from those that we should find in a similar European catalogue, is interesting. The former word, ‘to take’, the ‘compassion’ while it is here applied, for instance, to the devotion of the good servant, is very often used in the Suttas for the supreme instance of the reciprocal devotion—of a superior to its inferiors—to wit, the compassion of a Buddha to spend himself for the welfare, the happiness of many folk, for the good . . . of gods and men,4 and to live perpetually moved towards the welfare of others.5 This was the spirit that he prescribed for those whom he sent forth as missionaries.6 For all these six forms of mutual service or devotion a Christian catalogue would probably use the word ‘love,’ however much the sources and outlets of the emotion so termed are shown to differ. The fact that the Buddhist catalogue does not bring in its ethics to supplement, or flow from, Siṅgāla’s religious beliefs, but supersedes the latter by the former, and, again, the fact that it substitutes the ‘divine emotion’ of compassion and the practical devotion of ministry for our more familiar and personal expression, shows the caution in making affirmations about love in Buddhism. It may help us further towards some, or away from other, conclusions if we examine in brief detail some of these forms as met with in the five Nikāyas.

1. Parental love.—The typical form of intense and self-surrendering devotion is that of mother-love, just as the type of overwhelming sorrow is that of the bereaved mother.4 The wise man should cleave to a genuine friend—a watchful, loyal, sagacious, sympathizing friend—as the mother is devoted to her child.6 And not only to his friends:

        1. Dīpa Nikāya, ii, 211, etc.
        2. Anāgutta Nikāya, iv, S. S., etc.
        5. Dīpa Nikāya, ii, 188.

2. Sex love.—No case is found of a woman seeking death or religion through the death of her husband.6 Yet the case of a wife does not appear in Buddhist literature. The anthology mentioned above has one case, vouched for by the Commentary only, of a man leaving the world because of his young wife’s death.7 And women are recorded, in text and commentary, as having left the world because their husbands had forsaken it for religion. The power of sex to enthrall is sufficiently acknowledged in the Sangha, and the term kāmya, which may be rendered ‘resting in,’

        1. Rhys Davids, Psalms, i, 34.
        2. Anāgutta Nikāya, i, 1.
        3. Rhys Davids, Psalms of the Early Buddhists, pt. i, p. 85, etc.
        5. Rhys Davids, Psalms, i, 49, ii, 350 f.
        6. Māgahīna Nikāya, i, 188; Rhys Davids, Psalms, i, 139 f.
        7. Rhys Davids, Psalms, i, 106, 163.
        9. Dharmaguptaka Commentary, i, 21, 430, etc.

This simile is quite in keeping with the chosen term ‘being made to vibrate towards,’ since mother-love contains so large an element of passion, protecting pity.

This love towards the Buddha.—Filial love alone is the form wherein early Buddhist devotees gave expression to their feeling for the founder of their rule and doctrine. They confessed themselves not seldom as the ‘own mouth-born’ sons and daughters of the Buddha—a sentiment which, in the later commentarial records, finds an echo in these children being termed severally ‘my son,’ etc., by the Master.9 Yet, so far as the present writer knows, none of the usual terms for love or affection is applied to him, and certainly no one is spoken of as loving him or taking compassion on him. He, as father, teacher, ‘recluse,’ is ministered to or waited upon; it is he who ‘takes compassion’ on children, disciples, and laity. Honour, worship, or homage, devotion, or breathing, and the term jātusamudāya, which may be rendered ‘resting in,’
One of the Indian words for love were not sufficiently elastic to cover this relation, which was not the less deep and genuine, whether it was expressed in terms of self-surrendering devotion of a believing and adoring 'heart' or of the intellectual love of the philosophic mind:

1. "I see him with my mind as 't were mine eyes,
By night, by day, incessant, watching ever.
I see him, admiringly, waiting for this hour.
And thus methinks I' ver with him dwelling."

2. "Truly my mind with him is joined, O friend."

The emanipratting force of his teaching drew the imagination:

3. "So I leave the men of vision cramped,
Come as the awan flies to the mighty sea."

And the charm or majesty of his presence drew by way of sense:

4. "O wondrous fair the All-enlightened abodes,
Like a great storm-cloud in the summer sky,
The one on thy followers poorest precious rain,
Noble of aspect, whose skin
Reemneth gold, say, what is friar's life
With presence so supremely."  

This adorning for his person is usually accepted, but not always:

5. "Long have I wished, friend, said the devoted Vakkali on his deathbed, 'to do brave to behold the Excellent, but now is there more strength left in me to come?'
Let be, Vakkali, what be his majesty in the death of one of us?
He who seeth the Norm, he is it, is that seeth me; he that seeth me is he who seeth the Norm."

And expressed it was the conviction that, in this man of the long and tireless ministry, carried out purely from sweet compassion for the sons of men, such wisdom and goodness, charm and power, were combined as to be the while and where he lived, the need for superhuman objects of worship from his followers, and which, long after he had passed away, aided the theological evolutions of Mahayanan— the conception, namely, of Manjusri, and Avalokitesvara, wisdom and compassion personified. And Maitreya or Metteyya, the future Buddha, has been conceived as one who will revive the spirit of loving-kindness among men.

4. Love towards deities.—For deity, or the deities of its age, early Buddhism finds no need of adoring devotion. No deities in our sense of the word exist for it. All devas are more like our conception of angels, beings differing from man kind only in degree and in quality of physical and mental characteristics. They inhabited other more or less adjacent worlds or spheres. On earth were natural, or heavenly, or such of them who came down to it. All were to be treated with good will and friendliness, but nothing further. They were believed to have the power of communicating with man, and are found rebuking and admonishing the lax or lazy recluses. But in the case of the chosen few—a Buddha and his Arahants—it is the devas who render homage and minister to the man, not the reverse.  

5. Ideal love.—The emotion of ideal love, though it was not reserved for any personified deity in Buddhism, and though it played largely round the person of the founder, was not otherwise atrophied. It never affairs as associated with the whole of that cosmos which, for the more intellectual Buddhists, takes the place of a theodicy. Devotion bestowed on a cosmic mechanism, not planned by divine wisdom, and involving for each and all such unrepayable suffering, was not to be looked for. But the Norm, as doctrine and as a part of that cosmos, in Pali dhamma and Sanskrit Nigata, verses 1142, 1144.  

Other love that Love surpasseth.

The same emotion is aroused by the idea of Nirvana (nibbana-nibbiriati, a stronger form of ratii): "All my heart's love is to Sishthana given," and by that of the Samaa, or 'religion,' rule (samasariri).  

6. Friendship.—'Goodwill and friendliness (avvajjada, adosa, metta) express, better perhaps than the overburdened word 'love,' that expanded sentiment of amity to all living things which the average man can cherish only for personal friend or comrade. The cultivation of amity (saratva), pity, sympathetic gladness, and equanimity formed a sort of sublimated or higher self, or code of morals, the first three of them forming a development of that 'vibrating towards,' or compassion, which is so essential an attitude in Buddhist ethics. It is to the effect that the Elder refers in defending himself against the charge that he lived in the woods to receive stolen goods:

7. If, as certain writers think, we should refrain from applying so warm-blooded a term as 'love' to metta, 'amity,' this may be justified, perhaps, on etymological grounds, and on the ground that Buddhism sets itself against passionate feeling. But it cannot be justified either by lucrewonnness in the exordiums to practise metta and sympathy with pain or joy by or through the carrying out of these virtues by leading Buddhists.

It would be hard to find in ancient literature any exordium so aglow with goodwill towards men as that of the so-called Four Brahma-viharas, i.e., Best Dispositions, or devasaddharmiyu (lit., 'deity').

6. Suffusing, tender and compassionant, such an one with the rays of our loving (or sympathizing) thought, and from him bringing suffusing and heat that quells the whole world with loving consciousness far-reaching, . . . beyond measure; or again, that of the emanipation of mind through 'amity': All the mean of this be known as bases for right doing . . . are outborne in fulness and glory by this, which takes all these up into itself.

If this be amity only, we can let love stand as ideal.

There is no specific and positive injunction to love your enemies, but this is only because the true spirit of the Dhamma would label no fellow creatures as enemies. All were either to be ministered unto with honour or to be taken compassion upon in that spirit of grave tenderness for the burden of ill on earth—and in a sense too—which is Buddhism at its emotional best.

Conquer the wrathful by mildness, . . . the stiency by giving, the liar by truth! is the preised line of action.

7. Altruism.—Among the channels for catholic altruistic sentiment, however termed, the giving of...
LOVE (Celtic).—1. The concept of love in Celtic literature is closely tied to the natural world and spiritual beliefs. The Celtic people believed in a strong connection between love and the natural environment, often depicted in tales of sacred beings and their quests. The concept of love is often intertwined with the idea of fertility and prosperity, as seen in the worship of the goddess Connla, who was associated with fertility and the wellbeing of communities.

2. The concept of love in Celtic literature is also characterized by a strong sense of community and the collective worship of deities. This is evident in the tales of the goddesses of love, who were often associated with the well-being of the community as a whole. The Celtic people believed that the love of the deities was necessary for the prosperity of the land and its inhabitants.

3. The concept of love in Celtic literature is also marked by a strong sense of justice and fairness. The Celtic people believed that love should be equitable, and that it should be shared by all members of society. This is evident in the tales of the goddesses of love, who were often associated with justice and fairness.

4. The concept of love in Celtic literature is also marked by a strong sense of temporal and spiritual reality. The Celtic people believed that love and its consequences were not just physical, but also spiritual. This is evident in the tales of the goddesses of love, who were often associated with the spiritual dimension of life.

5. The concept of love in Celtic literature is also marked by a strong sense of the divine. The Celtic people believed that love was a manifestation of the divine, and that it was essential for the well-being of the community. This is evident in the tales of the goddesses of love, who were often associated with the divine.

6. The concept of love in Celtic literature is also marked by a strong sense of the eternal. The Celtic people believed that love was a timeless quality, and that it was an essential part of the human experience. This is evident in the tales of the goddesses of love, who were often associated with the eternal.

7. The concept of love in Celtic literature is also marked by a strong sense of the communal. The Celtic people believed that love was a collective experience, and that it was essential for the well-being of the community. This is evident in the tales of the goddesses of love, who were often associated with the communal.
In his analysis of the Tuatha Dé Danann, the great epic of Ireland—which depicts to a great extent the morals of Connacht—H. Zimmer has pointed out that Medbh, the heroine of the epic, is/with her husband the son of Conchobar, but, having abandoned him, married in succession two chiefs of the same name, Alloll, the second of whom is her husband at the beginning of the account ("Der ultima der Bruchworte: Hintergrund in den Erzählungen der alten irischen Heldensage," SBAW, 1911, pp. 174-227).

An idea of the unusual prominence of the love-motive in the early Irish sagas can be formed from the list of titles given in d’Arbois de Jubainville’s Essai d’un catalogue de la littérature épique de l’Irlande (Paris, 1893). Thus on pp. 24-27 there are twelve stories bearing the title aithid, or ‘elopement,’ among the most important of which are: Athel Blaenhalle, Uffin Pudd, mas Fainte, re Coscholain, or ‘Eloquence of Blantain, daughter of Faull, son of F Taliban, to Coscholain’ (cf. G. Keating, Hist. of Ireland, tr. J. O’Moynihan, New York, 1860, vol. 1, pp. 61-63); Atholl Greine re Diarnait, or ‘Eloquence of Ormlain to Diarnait’ (Book of Lecan, fol. 381); Brit. Mus., Harley MS, no. 6172. In addition to Cath Nu Tiregh and Cath Tochmarca, ‘Battle of the Demand in Marriage’ (d’Arbois de Jubainville, p. 321), there are six sagas bearing the title contest or ‘encounter’ (pp. 292-294), of which the most famous are: Consonant Conchur, or ‘Conception of Conchur in Consonant’ (174), and Coenbresgaid, or ‘Conception of Coscholain’ (Windsich, pp. 134-135, 244 f.).

Rathain an Phoicis is the great love-story in Irlande. The title was probably etymologically derived from the Enchanted Palace’ (d’Arbois de Jubainville, p. 151), is concerned entirely with love, and is also Den-a-mauns Atollia, or Single Jealousy of Atollia (pp. 190), of which the title is aithid, or ‘elopement’ (pp. 201 f.), of which Ferinn Finn go rochor, or ‘Lockard, or ‘Love of the White Man’ (in Norwegian) has to be mentioned (Roy. Ir. Acad., Osiris MSS, 1785-1819). As those with the title of tocherne, or ‘demand in marriage,’ there are in all at least twenty (pp. 251-252). One of the best is from Tochmarca Boina (ed. and tr. J. O’Looney, Proceedings of the Royal Irish Academy, v. 12, 174-183), Tochmarca Eimer in Coscholain, or ‘Demand in Marriage of Emer by Coscholain’ (Windsich, p. 524 f.), Tochmarca Boina (ib. 117-120), etc.

3 Welsh.—In Brythonic mythology the naturalism common to the Irish sagas has been greatly refined, and magic, especially in the form of the love-potion, assumes greater prominence. The nearest approach to a goddess of love is found in Branwen, ‘White Bosom,’ daughter of a sea-god, who has been called the ‘Venus of the n. thern sea’ (C. I. Elton, Origins of English History, London, 1890, p. 321). She was in all probability a goddess of fertility, but reappearance in romance, giving a love-potion to Tristan, which in itself is perhaps a reminiscence of her former attributes as a goddess of love. Dôn, the Welsh equivalent of Danu, was once a goddess of fertility, and had her child Gwydion, Gwilythwy, Amanethon, Gavannon, and Arianrhod (MacCuilo, p. 103). All these divinities play a more or less important part in the story of Gwyllhwyddion’s Iliad of love for the ‘foot-holder’ of Math in the Mabinogion.

Resorting to magic, Gwyllhwyddion succeeded in obtaining for Math from the court of Pryderi certain scion sent him by Annwn, king of Annwn, for the purpose of aiding him in his love-affair. The trick was discovered, and a battle ensued, in which Gwyllhwyddion slew Pryderi by enchantment. Having discovered that Gwyllhwyddion had seduced Gwawin, Math transformed him and Gwyllhwyddion successively into deer and wolf, and was pleased that Gwyllhwyddion was the lover of his own sister Arianrhod, by whom he had two children. MacCuilo suggests (p. 106) that these are mythic reflections of a time when such unions, perhaps only in royal houses, were permitted. Arianrhod, on her part, while being the object of her brother’s pretensions to be a virgin and refuses to acknowledge her children.

The more or less universal type of the treacherous wife is found in the story of the unfaithful dawn-goddess, Blodeuwedd, who disguises herself by the dress of her husband’s life and then places him at the mercy of her lover (T. W. Rolleston, Myths and Legends of the Celtic Race, London, 1911, p. 338).

In the Welsh poetry of love, due principally to foreign influences, assumes a new form of woman-worship. This new attitude towards
LOVE (Chinese)—LOVE (Christian and New Testament)

love is already apparent in Kul-wen and Olwen, which is comparatively an ancient tale, and is further developed in later stories like Percedur and Thomas the Lady. But the latter, which is the account of the facts (see the Celtic and Medieval Romance, London, 1899). It is the main symptom of the extent to which, in comparison with the Irish, Welsh literature had lost its pure Celtic character. The relations between the sexes in Wales have already been discussed in Ethicus and Morality (Celtic), III. 1-7.

LITERATURE.—This has been sufficiently indicated in the article.

JOHN LAWRENCE GERIG.

LOVE (Chinese).—The importance of love as an ethical principle is recognized by Chinese moralists. This can be made sufficiently evident from the classical books.

When asked about benevolence (jin), Confucius replied: 'It is to love all men.' (Ana. xi. 22). 'jin is the characteristic element of humanity, and the great exercise of it is in loving relatives' (Doct. of Jinan, xx. 6). 'The benevolent embrace all in common; he does not partake of the greatest importance is to cultivate an earnest affection for the virtuous.' (Mencius, vi. 6. 5). From these passages it appears that the general affection of love is modified in accordance with the claims of kinship and virtue. The ethical nature of love is further brought out in such sayings as these: 'The Master said, 'It is only the truly virtuous man who can love with a very loving heart' (Ana. xv. 29). It is not merely 'Not to do to another what I would not have done to myself, but, more positively, 'To serve my father as I would require my son to serve me ... to set the example in behaving to a friend as I would require him to behave to me.' (Doct. of Man, xii. 3). In the Confucian ethic, however, the exercise of love is limited by retributive justice.

'Some one said, 'What do you say concerning the principle that injury should be recompensed with kindness?'' The Master said, 'With what then will you recompense kindness? (i.e. recompense with justice, and recompense kindness with kindness' (Ana. xiv. 30).

Sperically interesting in connexion with the place of love in Chinese ethics is the philosopher Mucius and his doctrine of universal love, as the bond of a perfect social state. The Confucian ethic has its religious counterpart in the classical representation of Shang-ti as a benevolent and righteous (cf. art. God (Chinese)). Of love in the narrower sense as between the sexes, neither its more romantic aspects nor its depravations are reflected in Chinese literature from the Shi King and Shi King down to present-day novels. In view of too evident grossness of thought and life, one is surprised to find the religious sphere so clean. There is, e.g., polytheistic superstition, but no grossness in the religious wor- ship reflected in the classics, though it is true that regrettable features appear in popular superstition—spiritual beings may be attracted by the fair looks of women, and call them to the other world to be their wives; prostitutes may worship a goddess of their own.

According to E. H. Parker (Studies in Chinese Religion, London, 1906, p. 7), 'there is a considerable amount of dissimulated linga worship, especially in the south of China.' He adds, 'In the north, where theс, for chaste, as expiated by women, are common enough in every province.'

Such prayers are in themselves innocent, but in some cases the accompanying ritual worship of the idol is not so innocent. It does not necessarily follow, however, that there is in China no defilement of vice or any public practice of immoral rites.

LITERATURE.—In the classical religion and ethics, see the relevant works of J. A. G. Farquharson; and E. Faber, Missionaries of China, 1850. For examples of popular superstition cf. H. C. Du Bos, The Dragon, Image, and Monster, London, 1880, ch. 21.

THE LADY. For the Lady, see also E. J. Peters, The Lady, London, 1874.

LOVE (Christian and New Testament).—I. Divine love.—The highest and most satisfying faith which the human mind can attain, or can attain, is formulated in the sublimely simple conception, "God is love." (1 John 4:8). This is interpreted as meaning not only that God, self-conscious and moral, creates, sustains, and orders all things in love, but that love is His very essence and the spiritual conflict of the ages has been, and is, waged against the forces opposing this first principle of religion and ethics, the acceptance or rejection of which leads logically to optimism or pessimism. A few expressions of the belief that eternal love subsists at the heart of all things, and manifests itself through them, may be chosen as typical.

"Let me tell you why the Creator made the universe. He was good... and desired that all things should be as like Himself as possible," (Pilate, Tim. 39 E). "The Lord is good to all; and his mercies are over all things," (Ps. 103:11). "For thou lovest all things that are, and abhorrest none of the things which thou hast made; let no sinner then have formed thought if thou didst hate it," (Wis. 11:4). And we know that to them, that love God all things work together for good! (Ro. 8:28). If we so love God, if we love his creatures, how fair and lovely must Thou be in Thyself! (Susu, quoted by W. Finley, Christian Mysticism, London, 1882, p. 290). For lovers of Nature Wordsworth expresses the conviction that nothing shall ever prevail against us, or disturb Our cheerful faith, that all which we behold Is a holy messenger (Tintern Abbey). There is no doubt in R. C. Trench's large utterance: 'We and all men move Under a canopy of love, As broad as the blue sky above' (The Kingdom of God, 4:6). or in Browning's eri du cœur: 'God! Thou art love! I build my faith on that.' (Parnassus, v. 51).

And in Carlyle's words there is at least a wistful longing to believe: 'O Nature!... Art not thou the "Living Garment of God"... Is it, in very deed, He, then, that ever我们在流 through thee: that lives and loves in thee, that lives and loves in me?" (Sartor Resartus, "The Everlasting Yea").

It is common knowledge, however, that this splendid creed of three syllables is not only severely tested but strenuously contested. The notion that love is the ultimate reality of things—that transcendent love is Creator and Lord of the world, and immediate source of all other love, is no longer current in the Spirit ceaselessly operant in Nature and humanity—is pronounced by many to be a delusion and a snare. One of the champions of popular free-thought thus emphatically expresses himself: "That God is love is a very lofty, poetical, and savoring con- ception; but it is open to one fatal objection—it is not true" (R. Blatchford, God and My Neighbour, London, 1897, p. 23).

So manifest and prevalent in human lives that Swinburne makes the chorus of one of his dramas sing: 'The high gods... with weeping and laughter, And fashioned with loathing and love. The holy spirits of Calypsis (Poems, London, 1904, iv. 220).

The bitter pagan belief, that the gods take the same pleasure in the sufferings of mankind as cruel children in the torture of flies, still has its adherents, finding expression, for example, in Thomas Hardy's pessimistic dictum, "The President of the Immortals (in Æsoplybean phrase) had ended his sport with Tosse." Some critics of the world-order do not hesitate to say, "In Thomas Mann's The Magic Mountain. Wherever the Face of Man is blackened? God needs to take as well as give man's forgiveness (Omar Khayyam, quatrains liv.)." Worst of all,
science hesitates to say that God is love. The belief so dear to the heart of Linnaeus, that the phenomena of Nature bear witness to the benevolence of the Creator, is supposed to have received a staggering, if not a fatal, blow from the principle of evolution, so that no comforting red or staff, but only a broken reed, appears to be left in the hand of man.

Who trusted God was love indeed And by His Creation's final law— The nature, red in tooth and claw With ravine, shrub'd against his breast— (Tennyson, In Memoriam, iv.).

Confident assertions on the one side and the other help at least to make the issue clear, while they make also a greater, still a stronger, feeling apt to be generated in the attempt to solve the problem of problems.

Every man admits the one absolute certainty that he is ever in the presence of one infinite and eternal Energy, from which all things proceed (H. Spencer, Ecclesiastical Institutions, London, 1885, p. 843). The question is whether that Energy is controlled by love, or, rather, is identical with love—whether the All-Great is the All-Loving.

(a) What answer comes from the heart of Nature? That a struggle for existence, with a resultant survival of the fittest, of the more efficient, has gone on through geological ages and is still going on is one of the demonstrated truths which modern science has added to the sum of knowledge. And many evolutionists find it difficult, if not impossible, to escape contending and witnessing that secular conflict. But do they fairly interpret the struggle? The indictment against Nature which was frequently heard in the early and somewhat hysterical days of the evolution doctrine is now generally admitted to have been based upon half truths. Unqualified assertions that 'nature is one with rapine,' that 'any little good would be wonderful building' (Tennyson, Maud, iv., iv.), that the 'cosmic process has no sort of relation to moral ends' (T. H. Huxley, Collected Essays, London, 1898, p. 83; cf. 197), that all progress is attained by the methods of the gladiatorial show or the battle-field, are seen to be almost a libel. For the whole range of life upon the earth—vegetal, animal, social—bears witness to something quite different from hatred and strife. The processes of life itself—nutrition and reproduction, and, while the object of nutrition is to secure the life of the individual, the object of reproduction is to secure the life of the species—may superficially be thought to be concerned with self-assertion, another is concerned with self-sacrifice, and it is not too much to assert that the world is not only an abode of the strong, but a home of the loving.

Nature has more to say than "Every one for himself." There has been a selection of the other-regarding, of the self-sacrificing, of the giving of the love" (A. A. Thomson, The Bible of Nature, Edinburgh, 1896, p. 179).

If Rousseau erred in closing his mind to everything but the love, peace, and harmony of Nature, we are equally at fault if we find in her nothing but discord and cruelty.

* Love is not a late arrival, an after-thought, with Creation. It is not a novelty of a romantic civilization. It is not a new word of religion. Its roots began to grow with the first cell of life that budded on this earth. It is the supreme factor in the Evolution of the world. The struggle for the Life of Others is the physiological name for the greatest word of ethics—"love." (Tennyson, Maud, iv., iv.)

* The principles of morality have their roots in the deepest foundations of the universe, and "the cosmic process is ethical in the profound sense. (John Fiske, Through Nature to God, London, 1899, p. 79.)

If, then, creative evolution is God's theophany—His manifesting Himself—of the facts of the case, on a wide and impartial survey, go far to prove that His central energy, or ruling motive, and therefore His true Name, is Love. And to Divine overtures of love the human heart cannot fail to respond. Viewing the world as mysteriously 'full of God's reflex,' Charles Kingsley says, 'I feel a gush of enthusiasm towards God!' (Charles Kingsley: His Letters and Memories of his Life, London, 1877, i. 56).

It must be admitted, however, that there is another side. Nature's physical and vital forces do not all inspire confidence, making us 'very sure of God' and ready to acclaim the 'handsome and heroic right with the world.' There are times when it is not easy to 'rise from Nature up to Nature's God,' or to maintain that He has done all things well, the facts that disturb one's faith in the benevolence of the Creator are too many and too compelling to be ignored. The life of the forest and the jungle is not all idyllic. The wolf does not lie down with the lamb, nor the lion eat straw like the ox. The tiger and the tamarind are no less real than the fawn and the dove. It is impossible to forget Nature's ruthlessless to the unit or her savage outbreaks of fire and flood and tempest. Over against Nature Benigna we have always to set Natura Maligna, as T. Watts-Dunton does in a group of sonnets (The Coming of Love). And the existence of positive evil in the world has driven not a few observers of the unit, and the evolution doctrine is now generally admitted to have been based upon half truths. Unqualified assertions that 'nature is one with rapine,' that 'any little good would be wonderful building' (Tennyson, Maud, iv., iv.), that the 'cosmic process has no sort of relation to moral ends' (T. H. Huxley, Collected Essays, London, 1898, p. 83; cf. 197), that all progress is attained by the methods of the gladiatorial show or the battle-field, are seen to be almost a libel. For the whole range of life upon the earth—vegetal, animal, social—bears witness to something quite different from hatred and strife.

At the best the evidence is conflicting. Nature speaks with two voices. We can never be quite sure whether she is a kind mother or a cruel stepmother. Love is not seen at a glance to be her primal law. The men of science who decipher the testimony of the rocks do not feel constrained to proclaim with one accord that God is good, and, though they may comfort themselves with the reflection that in the final analysis of things that are, 'few things have been read, and acknowledge that there is no religion without mystery, yet the inquiring spirit of man is troubled.' Devout but open-eyed spectators of the dramas are sometimes 'perplexed in the extreme.' They feel as if Nature were betraying the heart that truly loves her.

* God's love, transcendent, all-penetrating! We do not get this faith from Nature or the world. If we look at Nature along, full of perfection and imperfection, she tells us that God is disease, murder and rapine' (H. T. Tennyson, Alfred Lord Tennyson: A Memoir, London, 1897, i. 311).

And, if 'to be wroth with those we love doth work like madness in the brain,' it is the crowning sorrow to doubt the God whose loving-kindness is better than life (Ps. 63).

(b) But the God who speaks ambiguously through Nature reveals Himself also through humanity. He has His dwelling place in the heart. He has His dwelling in "the House of the Lord" (see Isaiah, vi. 1). The Stranger for the Life of Others is the physiological name for the greatest word of ethics—"love." (Tennyson, Maud, iv., iv.)

* The principles of morality have their roots in the deepest foundations of the universe, and "the cosmic process is ethical in the profound sense. (John Fiske, Through Nature to God, London, 1899, p. 79.)

His manifesting Himself—of the facts of the case, on a wide and impartial survey, go far to prove that His central energy, or ruling motive, and therefore His true
LOVE
(Christian and New Testament)

Henry Huxley, London, 1906, p. 289) that moral purpose, in the strict sense, is an article of exclusive human manufacture, he is wrong in denying it a place in the cosmic process. Human nature is an integral part of nature. If Nature is personified, human life is her crowning achievement.

The development of the moral sentiments, the moral law, devotion to unselfish ends, characterized love, nobility of soul—these are human's most highly wrought products, latest in coming to maturity. They are the consummation towards which all the ideas, the ideals, the hopes of human nature, all the 'ex-sensitized' (Fiske, p. 139).

Now, these constitutive elements of the moral life are the root and ground of that assurance of Divine love which must be regarded in the first instance as a instinct or intuition of loving hearts. The writer of the Song of Songs calls it 'a Hebrew maiden, inspired by her passion of holy love, claim: 'For love is strong as death... the flashes thereof are flashes of fire, a very flame of the Lord' (8). This means not only that the pure love which glows and burns in the human breast is a fire kindled and cherished by God, but that it is an emanation from, and in quality identical with, His own love. The declaration, 'the spirit of man is the lamp of the Lord' (Pr 20:22). The prophet Hosea, made wise by a patient love outwearing mortal sin in his own home, laid the truth flashed upon Hosea that a human affection which bears, hopes, believes, endures all things, and never fails is explicable only as a radiation from the love of God, a revelation of the heart of the Eternal. His own idea, conduct in the supreme moral crisis of his life sensitized his mind to receive a new and true image of the Absolute. His forgiving pity, his redeeming love, his confidence in the ultimate triumph of good, gave him an unerring insight into the controlling principle of the character of Love. He saw, is paramount in heaven and earth, and is the instrument. Love is therefore the Leitmotiv of his prophecy, his master-key to the mysteries of religion and life.

He dared to make his own confessio amantis the preface to a stupendous love-tale, of which the scene is the world and the hero is God. He represents Israel's patient Divine Friend saying, 'I delight in love, and not in sacrifice. When Israel was a child, then I loved him... I drew them with cords of a man, with bands of love' (6:11-14; cf. Z 14:1). Later prophets and lawgivers reiterate Hosea's teaching in many beautiful forms. 'I have loved thee with an everlasting love: therefore have I continued lovingkindness unto thee' (Jer 31:3). He will rest in his love, he will joy over thee with singing' (Zeph 3:17; cf. Dt 4:7:6-10:4. Is 43:4-9). 'But it is not too much to say that the entire faith, and theology of later Israel grew out of Hosea, that all its characteristic views and ideas are first to be found in his book' (C. H. Cornill, The Prophets of Israel, Chicago, 1890, p. 53).

(c) Jesus linked His gospel with the prophecy of Hosea by repeatedly quoting the words 'I will have mercy and not sacrifice' (Mt 9:12). And it is the spirit of the Ideal Man—His personal experience in word and deed—that constitutes mankind's surest evidence of the love of God. In His compassion for the multitudes, His tenderness to sinners, His hope for the vilest, His yearning to win the lost He decided all those who 'know not what they do,' He is the Revealer of God. He changes Israel's Lord of Hosts into mankind's 'Our Father.' The writer of the Fourth Gospel (John 1:14) calls Him, 'He that hath seen me hath seen the Father' (Jn 14). And the love of God which is in Christ Jesus our Lord is a fact which science must reverently accept. Christ is indeed the crown of evolution, fulfilling not only the spiritual ideals of Israel, but the coman ethical strivings of Nature.

'Our first reason, then, for believing that God is Love, is the authority of Jesus Christ—His declaration and manifestation of the fact as God incarnate. That is to say, all the cumulative and complex proofs of Christianity are pretexts to us of this truth, which simply is the kernel of Christianity. If Christianity is true, God is Love' (J. R. Illingworth, Christian Character, London, 1909).

(d) The apostles always interpret Divine love in the light of Christ's sacrifice. The love which inspired the early Church was more than that of the Father who makes His sun to shine on the just and the unjust. It was that of the Father who withheld not His own Son, but delivered Him up for us all; that of the Son who laid down His life for the sins of the world. In the 20th century the manifestation of Divine love with atonement is automatic. 'Herein is love'—in a Divine initiative which provided a propitiation for sin (1 Jn 4:9). Personal faith centres in 'him that loveth us, and loosed us from our sins by His blood' (Rev 1:5). God, who loved me and gave himself for me' (Gal 2:20). It was His Spirit of sacrifice that con quered the intellect as well as the heart of the ancient world. His age-long empire is the expression, not of the love of power, but of the power of love. He can never cease to be hailed as the Strong Son of God, immortal Love.

2. Human Love. Great and true conceptions of love have not been confined to any single nation. In the Greek classics love is often something much higher, purer, and nobler than sensual passion or natural desire. This fact appears clearly in the cosmogonic myths. The Eros of Hesiod is not 'erotic' in the later sense of the word. His love is the fairest of the gods, who rules over the minds and councils of gods and men, and he is the power, who brings order and harmony among the conflicting elements of Chaos. To the loveliest mind of Plato love is the sympathy of affinities, the instinctive and instinctive longing together of kindred souls for the harmony of spirits, without such a touch of natural feeling as strengthens without dishonouring the union. And the Stoics laid the foundation of a noble ethic in their conception of the brotherhood of men, regarded as akin to God, or even as children of one great Father.

'For we,' says the Hymn of Cleopas, 'are Thine offering, abased at mortal things that live and walk the earth moulder in the image of the All' (cf. Ao 17:7-8).

But Christianity raises love to a higher mood, invests it with a new power, purifies it by the touch of God, making the natural love of man and woman sacramentally holy, and changing the bitterest foe into a potential friend as 'the brother for whom Christ died.' The very vocabulary of love is changed, Eros, a word too often profaned, giving place to Agape. The natural elements of conjugal love, real and imperious enough, consecrated now to the Uses, has support, virtue, and it is the spirit of the Ideal Man—His personal exhaus
Only of such lives can it be safely said that ‘love is an unerring light, and joy its own security’ (Wordsworth, Ode to Duty, 1st.) The strongest affection độcs unless it is rooted in idealism. The house of life cannot be built on the shifting sand of passion... It is the house of the Kingdom, as we know, in which men claim love’s final sacrifice—that gives the affections of the home a purity and an intensity never dreamed of in the life of the pampered individualism. When Christ says, ‘He that loveth father or mother... son or daughter, more than me is not worthy of me,’ He is calling men to the ideal life, which includes whatsoever things are pure and lovely and of good report. We need love the highest when we see it (Tennyson, G. H. S.).

The truth is that the heart’s deepest instinct—its passionate ‘amoris desiderium’—cannot be satisfied with an earthly affection. The Hebrew poet speaks for the human race when he says that, as the heart pants for the waters brooks, so his soul pants after God, thirsts for the living God (Psa 42:1-3).

The most philosophical students of love from Plato to Plotinus to Augustine and Dante down to the last resort, an infinite object and an infinite response (Dillingworth, p. 80). Modern science has immeasurably widened man’s mental horizon, and the vaster the material world becomes the greater is the spirit’s inquest in its cage of senses. It is the same desire from the ‘malady of the ideal,’ and is restless till it rests in God. The deepest thoughts of a nation are expressed by its artists and poets. Rossetti painted human love languishing for fullness, life, but evermore fearing death. Watts painted divine love leading life per aspera ad astra. Tennyson says ‘his love would be half-dead to know that it must die’ (In Memoriam, xxxv.), while his faith in immortality stays itself on his deathless love of a friend.

‘Peace, let it be! for I loved him, and love him for ever: the dead are not dead but alive’ (Faithful, ad fin.).

At the close of life his dying wish was to ‘learn that Love, which is, and was My Father, and my Brother, and my God!’ (Double and Single, 7:14).

Browning repeats in a hundred forms his reasoned conviction that there is no good of life but love—but love!

What else looks good, is some shade fain from love—

Love glids it, gives it worth.

And he is certain that love cannot be quenched by death.

No! love which, on earth, amid all the shows of it, has ever seen the sole good of life in it,

The love, ever growing there, out of the strike in it,

Shall arise, made perfect, from death’s repose of it.

(Christian Era, v. 97-100).

If love is thus proved to be the essential character alike of God and of the sons of God, this result profoundly affects all human relationships. (a) True intercourse with God Himself is a fellowship of love. To be right with Him is to have the heart of a lover or a child. Though in the OT breathes many passionate longings for such an intercourse, the NT alone exemplifies it in its perfection. The bare notion of such a divine fellowship was strange to the Gentile, whose relation to the object of his worship was always cold and distant. Jesus lived in uninterrupted filial communion with His Father, teaching His followers to do this. And it was in the OT breathes many passionate longings for such an intercourse, the NT alone exemplifies it in its perfection. The bare notion of such a divine fellowship was strange to the Gentile, whose relation to the object of his worship was always cold and distant. Jesus lived in uninterrupted filial communion with His Father, teaching His followers to do the same. It is the love of God that keeps them alive in the love of God (Jude 21), and so to have His love shed abroad in their hearts by the Holy Spirit given to them (Ro 5:5).

(b) The knowledge of God can be attained only through love. In love’s love a ‘dry light’ helps but hide. Theology at its best, like divine philosophy, is always charged with feeling. ‘Pocus factit theologam.’ Selfishness absolutely disqualifies the student of divine things. God reveals Himself to the sincere, the life itself, to those who truly love and are loved.”

(c) The ideal society consists of persons animated and united by the spirit of love, each seeking the good of all and all of each. The programme of Christianity is the renewal of human life and the reconstruction of human society, on the basis of the faith that ‘God is love.’ While hatred has a fatal power of division, love is the bond of perfectness (Col 3). Human associations are strong and stable in proportion as they are welded together by that brotherly love which is the law of the kingdom of heaven.

‘Love rules the court, the camp, the grove, And man and wife, and every order; voluntary, as a gift—an Augean— as well as a Gabe. It is not a passive sentiment or an involuntary emotion. The verb ‘to love’ has an imperative mood, which the greatest lawgivers—Jesus as well as Moses—frequently use. To this extent Christianity as well as Judaism is legalistic. The practice of love is the highest exercise of freedom. ‘The love of the will’ is no less real than that of the heart (I John, p. 101). Love’s rise and progress are dependent on a continuous effort, and the more perfect it becomes the more does it embody the immost desires and strongest impulses of the soul. It is more than good-nature, which is no satisfactory basis for ethics; more than good intentions, which are proverbially delusive; it is a good will—which, according to Kant, is the one absolutely good thing in the universe.

(d) All duties spring ultimately from the one duty of love. It is more than a poetical fancy, it is a literal fact, that, ‘as every lovely hue is light, so every grace is love.’ Augustine describes virtue as the unfolding of love. ‘Virtue, that is, amors’— and in reference to the cardinal virtues he says: ‘I would not hesitate to define these four virtues which make such an impression on your minds that they arequently and stay in your mouth: temperance is love surrendering itself wholly to Him who is its object; courage is love bearing all things gladly for the sake of Him who is its object; justice is love serving only Him who is its object, and therefore rightly ruling; prudence is love making wise distinctions between what hinders and what helps itself’ (De Moribus, i. 15 [25]). The law of love is called the royal law (Ryga Barakas, Ja 2:4), because, being supreme in dignity and power among the principles which control human action, it brings all the others into subjection to itself.

‘All thoughts, all passions, all delights, Whatever else this mortal frame, All are but instruments of Love, And feed his sacred flame’ (Cowper, Love, 1:4).

(f) And love is perfected when even its most laborious duties are performed with gladness. It is true that ‘tasks in hours of insight will’ can be through hours of dulness (M. Arnold, Moralit y, 51 [Foot Works, p. 256]). But the moral life needs the heart to aid the will. It never flourishes long if its roots are left dry. Its strength and fruitfulness are always traceable to hidden springs of
affection. Schiller was justified in complaining that Kant made too much of the categorical imperative and too little of the aesthetic side of morality—the beauty of holiness. Duty is not perfectly done unless a great love makes the yoke easy and the burden light. In the power of love the will of each of a thousand thoughtful deeds becomes a labour of love (σέβομαι τις δύναμις, 1 Th 1). Ferdinand in The Tempest (iii. 4) says that the rubbish will be washed away when his "labours of pleasures," and Jacob's seven years seemed to him but so many days because of his love (Gen 29). Moral education advances rapidly when a man can say from the heart, "Thou wilt, Lord, I take delight." It is not enough that morality be touched by emotion; it needs to be transfigured with the spirit and transfigured by the glory of love.

"A heart is pure that is not passionate; so virtue is safe that is not enthusiastic" (J. R. Seeley, Eos Homo, London, 1867, p. 9).

It thus becomes evident, that before the activities of love can be spontaneous, a man's very nature must be changed. 'Every one that loveth is born of God' (1 Jn 4). That which is natural, the self-life, the heart's own being, which is spiritual, the life of self-renewal, and nothing else changes the natural into the spiritual like the contemplation of the sacrifice of Christ.

Then, as an instance of love itself conceives of Miss, but love I gave thee, with Myself to love, and thou must love Me who have died for thee!' (John 15). What a love!

Many have found it possible to conceive for Christ 'an attachment the closeness of which no words can describe' (Seeley, p. 187). To cherish love for Him is to love His Kingdom, which ideally embraces the whole human race. Where the AV reads 'We love him, because he first loved us,' the RV has 'We love, because he first loved us' (1 Jn 4). This may mean 'We love the Son of Man and, for His sake, every son of man.' Christ's constraining love is at once the impulse and standard of all Christian love—that ye should love one another, as I have loved you (Jn 15). Judas supplied the law of love (Dt 6, Lk 19), Christianity supplies the power—the grace which came by Jesus Christ (Jn 19). It seems a priori impossible to love the world that hates us, but it is morally impossible not to love the world which God has so loved. Faith works by love (Gal 5), and works miracles.

For the God-given desire the text "Love thy neighbour as thyself" to be taken quite literally, and, in short, this demand represents the power of love in the soul, the counterfeiting, common-sense intellect answers "No," a thousand times over... The gospel replies to this No with a decided, quiet Yes— (Dan. 4), The Faith of a Modern Protestant, London, 1909, p. 97 f.)

While, however, all finite love flows from God's infinite love, it is not always conscious of its source. It may well up pure and strong in a heart which has never been able by searching to find out God. And it is none the less acceptable to God though it is not yet its object. This truth is exquisitely expressed in Leigh Hunt's poem of 'About Ben Adhem,' who, though not yet one of those who love the Lord, has it revealed to him that, because he loves his fellowmen, his heart stands first among them whom love of God has blessed. And it is expressed more authoritatively in Mt 25, where our Lord proclaims that deeds done in love to the least of your brethren are accepted as done to Himself. Those who do them are unconscious Christians. Their merit, of which they are astonished to hear, is real, and their reward, which they never sought, is sure.

"For they love goodness, and to love goodness is to love God... While, therefore, the unbelief of men who love God may ruin their lives, it is not the cause of the ruin of Christians, the goodness of their lives need not perplex him, as being implicitly due to the same cause which has for himself become explicit" (Bingham, p. 162).

George Herbert calls sin and love 'the two vast, spacious things' which it behoves every man to measure (The Apology, 4). The one seems, but the other is, infinite. And the stronger subdues the weaker. Where sin abounds, grace—which is Divine love in its redeeming energy—superabounds (Rom 5). And all hope for the world lies in the fact that a God of holy love is, through His Spirit in His children, for ever wrestling with its sin.

"Is not the world at last made? Is not His love at issue still with sin, visibly when a wrong is done or a wrong done?" (Browning, A Death in the Desert, 211).

Augustine uses a still finer figure than that of the arena. He speaks of 'the glory of love... alive yet frostbound.' The root is alive; but the branches are almost dry. There is a heart of love within, and within are leaves and fruits; but they are waiting for a summer (Epist. 213, ad Potth., v. 10). The leaves of the tree are, or the healing of nations torn by passions of hatred. And, with eyes opened by eating of the fruit, men find their Paral花草 in letting their desire and will be turned,

Even as a wheel that equally is moved, by the Love that moves the sun and the other stars. (Dante, Convivio, iv. 174)."

James Strahan.

LOVE, Greek. I. GODS OF LOVE.—I. Introductory.—Greek lovers, whether of a woman or otherwise, in opposition to deities presiding over marriage and fertility, are products of a relatively late development. Doubtless, too, the moment of gratification gave rise to certain momentary gods, and served to fix their permanent influence in the cultus; this group will include Aphrodite Παρός in Megara (Paus. i. xiii. 6), Aphrodite Πάρηγα in Abydos (Athm. xiii. 752 Cf. R. Meister, Griechische Dicht., Gottingen, 1889-90, ii. 239), Aphrodite Μούφα at Gythium (Paus. iii. xxii. 1), and Aphrodite Περσάμη in Arges (Hesych. art.). Nicand. frag. 23 (Schneider). In Provence the phallic deified figure was dedicated at Corsept (IG xiv. 241), and the comic poet Plato (i. 648 [Kock]) enumerates a group of kindred figures in her retinue. Another special goddess is the Πάρφα of an inscription from Phalerum, Πάρθηνος της Παρθηνίου, Dion Athens, Nationalmuseum, ii. [1903] 485, whose character may be deduced from the epithets δαλαχλος and Μούφατος (Paus. viii. xxvii. 6) applied to Aphrodite. With this single exception, however, Aphrodite is everywhere the most prominent figure.

2. Aphrodite.—Aphrodite was originally by no means merely a goddess of love; on the contrary, she also presided over the development of female life from the period of youth, and a relic of this conception survives in the story that she nurtured the daughters of Pandareus (Hom. Od. xx. 68). At marriage ceremonies these rites were effectuated in conjunction with Hera and the Charities (Etymologicon Magnus, 220, 54) or else to her alone (in Hermionis [Paus. ii. xxxiv. 11]) in Sparta the bride's mother made a sacrifice to Aphrodite Hera (ib. iii. xiii. 9). Aristophanes (Nub. 52, Lisistrat. 2) speaks of Aphrodite Καλώς as specifically the goddess of women and the Περσάμη, the goddesses of birth, belong to her circle (Schol. to Aristoph. Thesmoph. 130, Lisistrat. 2; Hesych. art.). In
an epigram of Theoritus (no. 13); cf. U. von Wilamowitz-Möllendorff, *Euripides*, der Bekleidung, Berlin, 1906, p. 118) a woman of Cos thanks her for the fruits of her marriage. The prayers of widows for a second husband were directed to her (Nau- paides, *Hist. Græc.* 1). 1) Demeter she was entertained to retard the coming of old age (ib. III. xviii. 1; Corn. Pop. frag. 2 [Bergk]).

In addition to these functions, however, she promoted increase and growth in the larger world of nature, as appears from such epithets as Διαυσα (Cnidus) [Paus. i. 1. 3] and Εὐδοξις (Syme husch. s.v.), which can hardly apply exclusively to the ἕφεσις Κύρος. To her, as the goddess of fertility, the goat was sacred, and she rides upon it (A. Purtwanger, *SMA*, 1899, ii. 590 ff.; v. Garinier, *Mélanges Perrot*, Paris, 1902, p. 121 f.). Moreover, sacrifices of swine were offered to her, as to Demeter, at the festival of *τερησ* in Argos (Ath. iii. 96 A; the name of the festival is ancient, as is shown by the mode of its formation; cf. *Aρθρός-ς*); as also in Cos (W. Dittenberger, *Syllog. Inscrip. Græc.* 3, Leipzig, 1888, p. 621; Thessaly, and Pamphylia (Strabe, *ib.* 438). 2) And, just as goddesses of the field and of fertility, like the Charites and the Ηρόη *(s.v.)*, were often represented as triads, so we find three Aphrodites in other places, who might be the same deity, and also—probably derived therefrom—in Megalopolis (ib. VIII. xxxix. 2). 3) In this broader capacity she was worshipped along with Zeus, as was Dion (who in Athens is identified with her). 4) In her name is the *IG* xii. 5. 229, where the names of Aphrodite and Zeus *Ἀφροδίτης Ζεὺς* occupy the first place in a dedication; ib. 551 *addition.*. Her association with Hermes is, no doubt, to be understood in the same way (Paus. VIII. xxxii. 3; IG xii. 5. 273; C. Michel, *Recueil d’inscr. grecques*, Brussels, 1890–1900, nos. 822, 33; Ancient Greek Inscriptions in the British Museum, London, 1911–15, nos. 790; F. Hiller von Gaertner, *Inschriften von Priene*, Berlin, 1906, no. 183). To her as the tutelary goddess of the meadow and of fertility, of the prosperity of man and beast, pertain also the dedications made to Aphrodite—probably as thanksgiving for *ἐλευθερία*—by those who were leaving office, as shown in Hali- carnassus (Ancient Inscriptions in the Brit. Mus., iv. 901), Cos (IG xii. 5. 552), Paros (ib. xii. 5. 220), Mégara (ib. xii. 5. 80), Rhodes (ib. xii. 11.), and elsewhere. As the protectress of a whole people she is called *Αἰαδός (cf. CGS ii. 658), and in this capacity she was actually accorded a *σωμα* at Athens (IG ii. Suppl. 914). She invites human beings generally, not merely the sexes, and is thus called *Εποφα* (Wilamowitz-Möllendorff, in G. Wentzel, *Euríalein Thèos*, Göttlingen, 1890, p. 4) and *Ἀρώ* (Plut. *Amat. xxii.*), though a reference to marriage is also possible here.

Then the sinister aspect of her character as an earth-goddess is likewise dully brought out; she bears the epithets *Εὐρώπη (Hesych. s.v.)* and *Μηδείς (Paus. ii. ii. 4; Ath. xiii. 555; Paus. viii. v. 5, ix. xxv. 5), as does Demeter in Arcadia; in Thessaly there was a festival of Aphrodite *Ἀβρα* or *Ἀβραφά (Nilsson, p. 378), which, it is true, seems as far-off a reference to her domestic female love;

1 Gardner's attempt to find an Oriental origin for this feature is rendered abortive by the fact that the goat has no place in the mythology of Aphrodite. Similarly Purtwanger's attempt to interpret Aphrodite *Ἐυρώπη* as a goddess of light are futile, as the air-godle with which she is occasionally portrayed merely implies that at a later period she was identified with Olympia.

2 Parnell (CGS ii. 646) and M. P. Nilsson (Griechische Stadt, Paus. X. 229) are undoubtedly wrong in thinking to find in all these instances a connection with Adonis; such a connection finds no support in tradition, and, so far as the Argive festival is concerned, it seems rather as if there were no State cult of Adonis in Greece.

3 Perhaps *Ἀφροδίτης (IG VII. 653) and *Ἐυρώπη* are *comparatives*; the former, however, is probably a *Ἀφροδίτης* at all.

In Aphrodite was merged another goddess, the pre-Hellenic Aristane or Ariagne; the result is most clearly seen in Delos, where she acquires the name Hagne (ibid. vii. 1885, 268), and in Amathus, where a festival in which the two sexes exchanged garments was celebrated in the grove of Aphrodite Aristane (Nilsson, p. 369). Then in Cyprus we find a goddess of Spring named *Απρόδιτης θεός* Φεριάρσα (K. Meister, *SSGW*, 1910, p. 247), who appears again in Crete as *Ἀνθριά (Hesych. s.v.)*, and in Pamphylia, where her priestesses are called *ἀνθριάφιόρα* (IG ii. 2921 f.). Certain glasses of Hesyhex (s.v. *θοῖς, θείς, θέα* and *αὐτα* which bring her into relation with the May-pole have likewise to do with this aspect of her character. In Amathus she is thought of as androgynous under the name of *Ἀπρόδιτος (Hesych. s.v.)*; in Phoestus, similarly, and it spread from there to other Greek towns (Nilsson, p. 270). It is usually supposed that the Aphrodite cult of this district was derived from the worship of Astarte, and that it spread thence to the androgynous demon Leucipus (Nilsson, p. 270). It has already been noted, however, that the Aphro- dite cult of the Greek motherland presents certain features which cannot be explained as importations. There is also the fact that androgynous forms are unknown as regards Astarte (W. Baudissin, *PRB* ii. 156), and that such are shown to be Hellenic by the figure of Leucippe in the festival of Aristane in Amathus. The epithet *Ἀριάζα*, borne by the goddess in Cyprus (SSGW, 1910, p. 246), is certainly met with elsewhere only as an attribute of Oriental goddesses (O. Weinrich, *Atth. Mit. des deut. archäol. Instituts*, xxviii., 1912 f., note 1), but the name *Ἀριάζα* (Soph. Ant. 900) suggests that it was peculiarly congruous with Greek sentiment. Moreover, E. Sittig (*De Greecorum nominibus theophorii*, Hamburg, 1909, p. 4), has shown that there are in Cyprus no Phoenician theophoric names formed with 'Astarte.' It is true that in the ancient Greek traditions likewise there are only 'comparatives,' but no theophoric, names derived from that of the goddess of love,—but the same holds good as regards Eros (ib. p. 110). In view of the early relation between Cyprus and Arcadia, it is of great importance to note that her birth-place was transferred not only to Cyprus or Cythera, but also to the River Laden (Hesych. s.v. *Ἀριάζα*). On the other hand, it is not to be denied that the figure of Aphrodite shows a considerable admixture of Oriental features. Such are certainly the ritual prostitution of Phaphos and Corinth (Nilsson, pp. 365, 376), the worship of Aphrodite Ωφία (CGS ii. 629), and perhaps the fact that her name is also a name of Astarte. This relation to Ares, which is frequently ascribed to epic influence, has been not satisfactorily explained (cf. K. Tümpel, *Flechtensjahrb.* Suppl. xx. [1890] 611). Another fruitful point is the Hellenic origin of Aphrodite Εὐρώπη, the goddess of navigation (H. Usser, *Legenden der heiligen Pet Vitalia*, Bonn, 1875, xx.); she may quite well have been evolved from the goddess of Spring, who was brought across the sea from Cyprus, and perhaps the joint goddess of North Africa and Scythia. On the other hand, we must certainly assign a Semitic
LOVE

(\text{Greek})

origin (see W. R. Smith, \textit{Rel. Sem.}, London, 1894, p. 471) to the sacrifice of an \textit{ovis pedalis} to Aphrodite in Cyprus.\footnote{1} The worship of Aphrodite was also influenced by foreign deities in other districts; on the Black Sea there was an \textit{Ophas} of Scythian origin (Iren. iv. 29, 67), the deity of Apaktus (B. Latschev, \textit{Inschr. Pont. Eux.}, Petrograd, 1886-90, ii. 19).

The function of the goddess was in historical times closely connected with the maternity of the protectress of love. It is only as such, with the exception already noticed, that she is recognized in the Ionic epic, and it is therefore worthy of remark that her cult was introduced into Sicily proper (Sittig, p. 105). Her influence in that region were almost devoted to the goddess of love. In this capacity, too, she absorbed Peitho, who had originally an independent cult (in Sikyons, Paus. ii. vii. 7), but subsequently became sometimes an epithet (IG ix. 2. 236), sometimes an attendant, of Aphrodite (Weizsäcker, in Roscher, iii. 170), as is aptly shown by the figure of Farnesina (\textit{Mom. dell'Inst.}, xii. [1885] 21). She united also the '-loving' function, as is certain, of the Aphrodite \textit{Agroepis} of Boeotia (Phanoc. ap. Clem. Alex. \textit{Protr.}, ii. 38 [PG viii. 17]; Athen. xiii. 663 D; Steph. Byz. s. v. \textit{Agroepisis}) seems to have been devoted to her oracles, as it is certain true of the Aphrodite \textit{Saxia} of Pheneus (\textit{Eust. Mag.}, 543, 49; in Crete the boys were called \textit{ektris} (schol. to Eur. \textit{Ach.} 589). As Aphrodite was brought into connexion with the myth of Phaon-Phaedon (Wilamowitz-Möllendorff, \textit{Hermes}, xviii. [1883] 416 ff.; Sappho and Simonides, Berlin, 1913, p. 33 f.), it is easy to see why madness remark that her cult was introduced into Smyrna (schol. to Theoc. ii. 10; Hesych. s. v. \textit{Ophaleia} s.f.), just as in the Erotic Fragment (6) the lover invokes the stars and the \textit{epeira \kappa\iota}.\footnote{2}

1. \textit{Erotes}—Aphrodite, the only Greek love-deity of real importance is Eros. He too had a more general function as a deity of procreation, viz. in Thespia, where he was worshipped as a stone fetish (Paus. ix. xxvii. 1), as also probably in Attica (Paus. xiv. viii. 20), and in the sex-cult of the Lycomids (ib. ix. xxvii. 2; cf. Furtwängler, \textit{Jahrb. des deut. archäolog. Instituts}, vi. [1892] 116 f.). In Elis he is represented as the child of the right hand of them (Paus. vi. xxiv. 7), i.e. as their leader, like Hermes elsewhere. From his procreative aspect arose the cosmic character which he bears in Hesiod and among the Orphics. In consequence of the obvious derivation of his name, however, he remained all along the god of sensual desire. His cult had only a narrow range. In Laconia and Crete sacrifices were offered to him before a battle (Athen. xiii. 561 C), and the connexion between these and pederasty has been explained by E. Beth (\textit{Rhet. Mus.}, ii. 1907 [445]). We are told also that in the Academy he had an altar which was dedicated to him by a boy; Anacreon sometimes obviously regards him as a youth (fraggs. 2, 47), while in other passages (e.g., fragg. 62) one may well doubt whether he thinks of him as a personal deity at all. But this indefiniteness of outline, which persists throughout the subsequent period, is counterbalanced by the magnificence of the associated conception. While Sappho (frag. 1) naively prays to a god who in a moment removes the pains of love, \textit{Æsilalus} (frag. 44 [Nauck?]) extols the might of that craving which pervades all that lives, and depicts the shattering effects of its absence with loving vehemence. If, in other two great tragedies give expression to similar ideas regarding the destructive and enslaving power of \textit{Eros} (Soph. \textit{Ant.}, 781; Eur. \textit{Hipp.} 1024, 1025; etc.) in \textit{Pirke} \textit{Eros} and \textit{Hedylas} as sacred and profane love—a contrast having no foundation in their essential meaning, but dominating their usage for the future.

4. Later developments.—In the sphere of common life the activities of love declined as the practice of heterism gained ground. In this period \textit{Aphrodiasa} became a characteristically heteristic festival (Nilsen, p. 374). Besides \textit{Eros} we now find \textit{Lupeas} and \textit{Aphrodite \textit{Phyllos}}, called \textit{Fulchris} (Paus. i. xiii. 6); on the meaning of \textit{Hedy} cf. Wilamowitz-Möllendorff on \textit{Bion} \textit{Adonis}, v. 58), and in other districts \textit{Arktos} (Paus. i. xxx. i, vi. xxiii. 3, 17), the sacred hero, who is mentioned under the name of \textit{Aphrodiasa} (\textit{Delv.}, p. 533). In the vase paintings of the Hellenistic socities the Aprophiles were largely represented (F. Poland, \textit{Griechisches Verhainosen}, Berlin, 1903, p. 180 f.), though it is true that there were also \textit{Eroses}, the numerous foreign (Syrian) cults. The high favour enjoyed by Adonis also served to revive the worship of Aphrodite; the deities of love in general now reached their highest vogue, and it is in this period that \textit{Eros} (ib. ii. xxvi. 1 and 4) and \textit{Hermes} (ib. ii. xxvi. 2; cf. \textit{Philostr.}, \textit{Apoll.}, xx. 672), who in the later period, derived from Aphrodite, though no doubt—with but few exceptions—in the lower ranks of society (Sittig, p. 168). Aphrodite and \textit{Eros} are no longer deities of the realm between the two gods, but the guardian spirits of love in the modern sentimental sense. It is worthy of note that unhappy lovers now frequent the supposed tomb of Rhadam and Leontia, the heroine and hero of the romance of \textit{Estrichus} (Paus. vii. v. 12). Syncretism one more held the figure of the love-goddess, and combined it with that of the healing mother of the gods (IG iii. 136), while the recollection of her larger function survives in the literary tradition, as appears in the poem of Lucretius, and as revives itself also, immediately before the collapse of the ancient religion, in the \textit{Periplus \textit{Veneris}} (Ad Adonis). The names of the last memorial of antiquity to the goddess who influence pervades the universe.

II. \textbf{ETHICAL IDEAS}.—1. The Homeric age.—It remains to examine what ideas concerning the
emotion of love and its ethical value were characteristic of the Greeks; and the prevalent view is that empire developed in consequence of political and social movements, together with a certain variety of contemporary opinions in the most important case of all, the expression of domestic affection which are to be found in the Homeric poems, such as the parting of Hector and Andromache (Iliad, vi. 270 ff.) or the meeting of Odysseus and Penelope (Odyssey, xx. 1-5). Even occasional comments like 'there is nothing mightier and better than when husband and wife keep house with united hearts' (Odyssey, vi. 182 ff.), and the tenderness of the allusion to the soft voices of the youth and maiden while they are courting each other (II. xxii. 128), reflect a condition of society in which wedded love was highly prized. This was the natural outcome of the respect with which women were treated, and of the comparatively high degree of liberty which they enjoyed.

2. Post-Homeric development. — The causes which led to the disappearance of the Aeolian monogamy are imperfectly known, we may (see above, KING [Greek and Roman], and the evidence available does not enable us to trace the course of the changes which lowered women in public estimation by debasing them of their earlier freedom. But much of the representation may be observed even in the utilitarian precepts of Hesiod regarding marriage (Works and Days, 700 ff.); and the same tone pervades the inventive of Sophocles and Aeschylus of a poet which Istrius was asked by the oilspill of the busy bee blessing with material increase the gathered store of her mate (line 83 ff.). It is remarkable that the same simile is employed by Iamblichus in describing to her wife the duties which he expects her to perform (Xen. Econ. vii. 32), and the whole of the training prescribed in Xenophon's dialogue (op. cit. vii. x.), as well as the desire of man thus to domestic happiness, shows that the Attic ideal was satisfied by the loyalty of a careful and thrifty housewife (Lyce. i. 7). In historical times an ordinary Greek marriage was so entirely prompted by motives of convenience that we read without surprise the typical sentiment of the Athenian orator:

'While we keep a mistress to gratify our pleasure and a companion to minister to our daily needs, we marry a wife to raise legitimate issue and to have our property carefully preserved' (Dem. 3. 52).

3. Sappho. — It must not be supposed that in the meantime the passionate outpourings of the lover failed to find adequate expression in literature. In this respect the poems of Sappho occupy so peculiar a position that an attempt must be made to define it. Sappho, a poetess of such eminence as to have been accounted the rival of Homer and to have earned the title of the tenth Muse (Anth. Pal. vii. xiv. 15; cf. Strabo, p. 617), owed most of her reputation to the fervour of her love-poems. Yet in estimating their tendency we encounter unusual difficulty, partly because, notwithstanding the additions made in recent years, only scanty fragments of her writings survive, and partly because comic poets and later gossip-mongers have shrouded her name in unmerited scandal. It is generally admitted that the story of her unrequited love for Phaon and of her suicide (Iliad, ix. 5) in the Leucadian rock are fictions due, perhaps, to a misunderstanding of her own words (U. von Wilamowitz-Moellendorff, Sappho und Simonides, Berlin, 1918, pp. 24-40). The greater suppositions, such as those indicated by Seneca in his reference (Ep. lxxviii. 37) to the discussion of Diodorus 'an Sappho publica fuerit,' are not to be supported by such indications. The main thing that are contradicted no less by the soundest part of the tradition, which represents her as a wife and a mother (Suid. s. v. Σαπφώ; cf. Sappho, frag. 80), than by the sincerity and freedom of her genuine utterances.

The psychological genius of Sappho was the same as that of Homer and 2 and Berlin frags. 2 and 5 is to understand how the yearning affection inspired by the loss or departure of one of her girl friends came to be expressed in terms of domestic affection which led to the disappearance of the Aeolian monogamy is imperfectly known, we may (see above, KING [Greek and Roman], and the evidence available does not enable us to trace the course of the changes which lowered women in public estimation by debasing them of their earlier freedom. But much of the representation may be observed even in the utilitarian precepts of Hesiod regarding marriage (Works and Days, 700 ff.); and the same tone pervades the inventive of Sophocles and Aeschylus of a poet which Istrius was asked by the oilspill of the busy bee blessing with material increase the gathered store of her mate (line 83 ff.). It is remarkable that the same simile is employed by Iamblichus in describing to her wife the duties which he expects her to perform (Xen. Econ. vii. 32), and the whole of the training prescribed in Xenophon's dialogue (op. cit. vii. x.), as well as the desire of man thus to domestic happiness, shows that the Attic ideal was satisfied by the loyalty of a careful and thrifty housewife (Lyce. i. 7). In historical times an ordinary Greek marriage was so entirely prompted by motives of convenience that we read without surprise the typical sentiment of the Athenian orator:

'While we keep a mistress to gratify our pleasure and a companion to minister to our daily needs, we marry a wife to raise legitimate issue and to have our property carefully preserved' (Dem. 3. 52).

3. Sappho. — It must not be supposed that in the meantime the passionate outpourings of the lover failed to find adequate expression in literature. In this respect the poems of Sappho occupy so peculiar a position that an attempt must be made to define it. Sappho, a poetess of such eminence as to have been accounted the rival of Homer and to have earned the title of the tenth Muse (Anth. Pal. vii. xiv. 15; cf. Strabo, p. 617), owed most of her reputation to the fervour of her love-poems. Yet in estimating their tendency we encounter unusual difficulty, partly because, notwithstanding the additions made in recent years, only scanty fragments of her writings survive, and partly because comic poets and later gossip-mongers have shrouded her name in unmerited scandal. It is generally admitted that the story of her unrequited love for Phaon and of her suicide (Iliad, ix. 5) in the Leucadian rock are fictions due, perhaps, to a misunderstanding of her own words (U. von Wilamowitz-Moellendorff, Sappho und Simonides, Berlin, 1918, pp. 24-40). The greater suppositions, such as those indicated by Seneca in his reference (Ep. lxxviii. 37) to the discussion of Diodorus 'an Sappho publica fuerit,' are not to be supported by such indications. The main thing that are contradicted no less by the soundest part of the tradition, which represents her as a wife and a mother (Suid. s. v. Σαπφώ; cf. Sappho, frag. 80), than by the sincerity and freedom of her genuine utterances.

The psychological genius of Sappho was the same as that of Homer and交际 was the same as that of Homer and
a famous fragment (frag. 385 N.), characterizes the love-god and a preference for the passion itself, in the following words:

'Love is not love alone, but is called by many names; it is Desires, it is Hunger, it is Greed, it is Raging; it is a thirst for Passion; it is Lamentation; in Love is all activity, all peace, all that prompts to violence.'

Over and over again stress is laid upon the irresi-
istive power of Love; he is the mightiest of all the gods (Eur. frag. 269, 430; Menand. frag. 235, iii. 67 K., frag. 449, iii. 129 K.; and not one of them (Soph. frag. 443), not even Zeus himself (Eur. frag. 684; Menand. frag. 209, iii. 60 K.), can withstand his attack.

'He is not wise,' says Delianus in the Trachiniae (411 f.), 'who stands forth to contend with Love, like a boxer at close quarters.

It is not difficult to imagine the result of this assumption upon the attitude of the average Athenian citizen. The celebrated ἰδονεῖον of the Corinthian Aphrodite (cf. Pind. frag. 122 and art. HIERODOULOI [Grec-Roman]) help to explain the abuse of the word. It is an evident lack of Love.

Resistance to the on-set of Love is no less reprehensible than it is futile (Eur. frag. 346), though excessive indulgence is as much excusable, if not sanctioned as entire abstinence (Eur. frag. 428).

Much self-control as was exhibited by Agisllans in refraining, despite the violence of his passion, from accepting the kiss offered by a beloved maiden boy (Xen. Aesp. fr. 4 f.), was so rare that the historian felt it to be altogether marvellous.

5. Pederasty.—The passage last quoted confronts us with that form of love-passion, the love of boys, which has come to be known as 'Greek love,' and has tarnished the whole fabric of Greek morality. There is no trace of this custom to be found in the Homeric poems; for the assertion of such relations having existed between Achilles and Patroclus is not, so far as we can tell, earlier than Aeschylus (frag. 136 [Troph. frag. 536]), by the relation between the ἱππόκρατες and ἄθρα in the disciplinary system of Spartan training (Plut. Lyc. xvii. f.; Athen. Var. Hist. iii. 10, 12); and by the famous custom of the Cretans, according to which the lover carried his favourite, or his show of force, and was more or less seriously resisted according to his supposed merit (Strabo, pp. 483, 494). The inveteracy of the habit may be ascribed to the long duration from a primitive period when continuous military service involved a scarcity of women (Bethe, in Rhein. Mus. xii. 435 ff.). Moreover, it is fair to admit that the results of such companionship were by no means invariably bad.

7. Gomperz has well remarked that 'the sentiment in question appeared as much, if not more, varied and gradated, than the love of women at the present day. Here, as elsewhere, a noble action was often granted upon a savage stock. Devotion, enthusiastic, intense, ideal, was not indiscriminately the fruit of those attachments, the casual origin of which was entirely for-gotten. The Greek Thinks, Ed., London, 1901–12, II. 260).

Such an elevation of sentiment is the easier to understand if we bear in mind the continually increasing segregation of the sexes to which reference has already been made, and which, owing to the natural craving for companionship, is justly Frenzy, it is right to feel that a gap to be otherwise filled. Widely spread as the evil undoubtedly was, there were many—probably an increasing number—who were keenly alive to its disadvantages, and, as, with Athens,
frag. 483 [Usener], the Stoics followed closely in Plato's footstep, recommending him to the Wise Man as an attempt to produce friendship with youths who displayed in their beauty a capacity for virtue (Diog. Laert. vii. 129; Stob. Éc. ii. p. 113, ed. T. [1887]). Philetaerus, whose dialogue entitled ἐπαυρισκότα, aimed at reconciling conflicting views by a return to the common sense point of view, while he was largely influenced by Phatonic imagery, vindicated the claim of woman as the proper object of a divinely inspired passion (21, p. 766 E.f.). We even find Plato condemned altogether as unworthy of serious attention by such writers as Dionysius of Halicarnassus (de Administr. sa decadit in Demosth., p. 1027), Athenaeus (608 D), and Heraclitus, the author of the Homeric Allegories (76, p. 101, 19).

7. Romantic love.—In the meantime we are able to trace the growth in Greek literature of the romantic love-story in which the hero and heroine, who have fallen in love at first sight, after a series of adventures are at last happily united. The realistic treatment by Euripides of certain tragically subjective scenes which he portrayed in his new idiom contributed to the appearance of the domestic drama known as the New Comedy. Among the stock elements in the plots of Menander and his rivals are the wedding (a climax), the rival citizen with a slave-girl who often proves to have been originally a free-born Athenian exposed by or otherwise lost to her parents; the overcoming of an unsympathetic parent or a rascally pander by the cunning of a devoted slave or parasite; and the ultimate reconciliation of all parties, leading to the marriage of the happy lovers. But paths also went back to an entirely alien to the cold atmosphere and artificial mechanism of these plays. A new tone—that of sympathy with the fortunes of the lovers—asserted itself for the first time in some of the masterpieces of Alexandrian literature.

Whether this was merely the result of the diffusion of the Hellenic spirit outside the confines of the city communities through the countries which then constituted the civilized world, or more specifically of contact with popular spirit came from Eastern as well as that of Abradates and Panthia in Xenoph.

8. Cynogoras, v. i. 31 E., iv. 2-11, viii. 1, 9-32, iti. 2-18; see J. P. Mahaffy, Greek Life and Thought, 1896, p. 244; A. Rohde, Der griechische Roman, p. 583 f.), it is impossible now to determine. The vigour of Alexandrian love-poetry receives its best illustration in the third book of Apollonius's Argonautica, where the growth of Medes's passion for Jason, the conflicting interests prompting her to struggle against it, and her final submission to an irresistible emotion are depleted with poetic power of a very high order. There is no doubt that Vergil made Apollonius his chief model when constructing the well-known episode of the love of Dido and Æneas. Another example was the love-story of Acontius and Cydippe described by Callimachus in the end of a digression in the Ætica, the conclusion of which has recently been discovered in one of the Oxyrhynchus Papyri (no. 1011 [=vii. [1910] 16 f.]). The various features which become common to the writers of these romantic narratives have been summarized A. Courant, La Poésie alexandrine sous les trois Ptolémées, Paris, 1882, pp. 140-160; J. P. Mahaffy, op. cit. p. 340 f.; as follows: (1) the minute portraiture of the characters of both lovers; (2) the sudden interposition of the love-god at their first meeting; (3) the record of the misfortunes obstructing the fulfillment of their wishes; (4) the description of the pangs of thwarted love; and (5) the importance attached to the perfection of the virgin purity of the heroine amidst all her trials and dangers until her final reunion with the hero. It is unnecessary to follow in detail the influence exerted by the art of Callimachus and Apollonius upon Latin poetry, and especially upon the works of Catullus, Propertius, and Ovid; but mention should be made of the MēΤρητα of Aretaeus, which held an extensive circulation in the Roman era (Ovid, Trist. ii. 143; Lucian, Phys. 1). This was a collection of erotic tales put together in the 2nd cent. B.C., whose general character may be inferred from Petronius, Apuleius's Metamorphoses, and Lucian's Asinaria. Varro, the friend and editor of Apuleius, dedicated to Cornelius Gallus was different in both scope and purpose: it consisted of excerpts relating to the misfortunes of lovers and drawn from various historians and poets. The characteristic features of the romantic love-story enumerated above were closely followed by the later romance-writers (ἐπαυρισκότα; cf. art. Fiction [Primitive] (3)), who were the direct inheritors of the Alexandrian tradition and became extremely influential in the Middle Ages (L. Bekker, Anecd. Graeca, Berlin, 1814, p. 1082). The best of these novels was the Εὐθυπολία τος Heliodorus (3rd cent. A.D.), which was preceded by Xenocrates, Eustathius and followed by Achilles Tatius (Leucippe and Clitophon) and Chariton (Characra and Callirhoe). The Daphnis and Chloe of Longus was constructed according to the pattern of a rustic life of a real citizen of the pastoral Ídyle of Theocritus. To these names should be added the fictitious love-letters of Alcinous and Aristonemus, which aimed at restoring the Attic flavor of the New Comedy.

8. Literature.—Several of the authorities quoted have been indicated above. Certain portions of the subject-matter are covered by R. Besnier, Die dorische Kranzliebe; Rethel, Mus. Philol. (1907) 488 E.; A. Rohde, Der griechische Roman, p. 593 f.), and for the ethico-religious aspect, the author- tions quoted under Ethics and Morals (Greek), and especially L. Schmidt, Die Ethik der alten Griechen, Berlin, 1888, i. 204-208; J. Deniau, Histoire des theories et des idees morales dans l'antiquite, Paris, 1876, ii. 122-170.

A. C. PEARSON.

LOVE (Jewish).—The dictionaries define love as 'a feeling of strong personal attachment, induced by that which delights or commands admiration.' The subdivisions of this sentiment comprise the impulses of attachment, due to sexual instinct, or the mutual affections of man and woman; the impulses which direct the moral conduct of members of one family, parents and children, brothers and other relatives; the attachment that springs from sympathetic sentiments of people with harmonious character, friendship; and, finally, the various moral, physical, and even religious uses of the love for moral and intellectual ideals. To the last class belongs the religious concept of love for God, while the particular Biblical conception of God's love for Israel is closely related to the idea of paternal affection.

1. Sexual love.—Love for woman as an irresistible impulse is most strongly represented in Canticles in the words:

Love is strong as death; Jealousy is cruel as the grave: the flashes thereof are flashes of fire, a very flame of the Lord. Many waters cannot quench love, neither can the floods drown it: If a man would give all the substance of his house for love, he would utterly be condemned (58f).

The passion of sexual instinct which must be elevated by a feeling of love is repeatedly referred to in the same book (24: 3rd 5th 6th: see also 1st 24: 3rd 5th 6th 7th), and sensuous life of the physical type is often mentioned either directly (Pr 7: 22 f.) or by figure of speech (Pr 20: 22, 25-27, 31). The Biblical stories give us repeated instances of the power of this love, as in the case of Samson (Jg 14: 16-19), where the
denomic power of woman over man leads man to run away from the marriage. This is the case of Dinah (Gn 34:19), though in his case the love for Dinah is not of the strictly carnal nature which characterizes the relation between Samson and Delilah. The love of Kadmon for many strange women—a prototype of the licentious influence of the hareem on politics in the Orient—is given in the Bible (1 K 11:4) as the cause of the downfall of the wisest of kings. Kadmon wisely warned Solomon of this story that it is impossible for any man to guard against the influence of woman, and use this fact as support for the theological doctrine that law is unchangeable in this life, as well as in the next (Gn 34:19, 20), a statement which has a remarkable parallel in Max Habe's tragedy Jugend (Berlin, 1893). The term 'love' is also used with regard to other physical pleasures, as love for delicacies (Gn 27:4).

2. Matrimonial and parental love.—The higher conception of matrimonial love as an attachment which elevates sexual relationship, just as the later without such a thematic relationship is degrading, is often referred to both in principle and in illustrative story. The case of Jacob, who was willing to work seven years in order to gain Rachel, and the remarriage of their seven years passed by like 'a few days' (Gn 29:20), as well as the hope of Leah that the birth of her third son would make Jacob love her (v.40), show that ideal matrimonial relation is agreeable; for even by spiritual thought he was wise enough to be safe from having his heart turned away by women (Dt 17:17), fell a victim to their influence (Ez. Rabba, ch. vi., Tanhuma, Ez., ed. Baber, Wilna, 1855, p.18).

With equal foresight sexual passion is described in the case of Amnon, raping his stepsister Tamar (2 S 13), when, after the gratification of the brutal impulse, Amnon's passion turns into hatred and disgust (v.16), a step which has a remarkable parallel in Max Habe's tragedy Jugend (Berlin, 1893). The term 'love' is also used with regard to other physical pleasures, as love for delicacies (Gn 27:4).

The affection of Jacob for his mothers and his fathers, and their love for him, is a direct counterpart of the love between husband and wife. The home love of Jacob and Leah is that of Elisha and Hannah (1 S 1), where the husband tries to console his wife, longing for the blessing of children, by saying, 'Am I not better to thee than ten sons?' David is spurred by the love of Michal to do great acts of valour (18)—a command that is related to that of Solomon (2 S 5:11). Even in the story of Esther the king's love for the queen (Est 2:7), while in many ways showing the characteristics of an Oriental despot, willing to give half of his kingdom away in order to gratify the whim of an odalisque, is presented as an attachment seizing the king with the force of a sudden passion. Such passion is referred to in the case of a captive of war, and the law requiring that she be allowed time to become assimilated to her environment is dictated by a delicate understanding of wanly feeling the law for the conduct of a man who has two wives, one of whom is beloved, and the other hated (v.16-17). It is worthy of note that Rabbinical apologetics explains the love of the tribe of Assyria as that of piety and hatred as being 'hated by God' (Sifre, ed. Friedmann, Vienna, 1864, p. 115). At the same time Rabbinic ethics derives from this a law a condemnation of polygamy as leading to domestic trouble (b. ).

In a general way sexual licence the author of Proverbs advises (5:9) devotion to 'the loving kind and the pleasant Doe'; and the author of Ecclesiastes gives as a recipe for happiness the advice: 'Live long with the wife whom thou dost love all the days of thy vanity ... for that is thy portion in life' (9:10).

It is significant that such advice was put in the mouth of the wise man. From this conception of domestic felicity, as the highest ideal of life, are many Rabbinical statements.

Closely related to this conception of love is the love of children, so often referred to in the OT, and already in the Mosaic law a source of happiness derived from the possession of children (Ps 127:1-2, 128, Pr 17); and the misfortune of not having children, as in the case of Rachel, who 'would rather have died than be given to another' (Gn 30:1), and in the similar case of Hannah (1 S 1). The love of Jacob for Joseph, because 'he was the son of his old age' (Gn 50:21), and the love for Benjamin, who, in addition to being the son of his father's old age, was the only one left of his mother (44), are so naturally presented that they show the psychological continuity of human nature. The same feature of truly human life is seen in the story of Jacob and Esau, where the father loves the daring hunter Esau, while Rebekah feels more affection for Jacob, the young man of domestic habits (25). Such affection does not rest in the blood, but is often stronger in persons attracted by congenial feelings. There is hardly in the whole world's literature a nobler expression of devotion than the words spoken by Ruth to Naomi in the east, the words of felicitation spoken to Naomi on the birth of Ruth's son, that Ruth's love for her is greater than that of seven sons (44), are felt by the reader of the Bible as a profound truth, just as they were at the time when they were written. A similar feeling of affinity is that of the faithful servant, of which the law takes cognizance in the case of a slave who would rather remain in the house of his master than go free (Dt 15:19, Ex 21).

3. Friendship and wider love.—The love of friends is naturally presented in comparison with that arising from sexual and blood relationship. David says of Jonathan, 'Thy love was wonderful, passing the love of women' (2 S 18). A true friend is one 'that sticketh closer than a brother' (Fr 189). False friends who fail in the hour of need are rebuked as in the case of David's friends (2 S 18, 9, 26-13, 11, Ps 106:11). The happiness that friendship brings in poverty is contrasted with abundance and hatred (Fr 155). In correct interpretation of the evidence the Rabbinic view of the natural friendship of the ostracized for each other, naming the proselytes, slaves, and ravens (Talm., Psalim, 113b). As specimen of the highest love the Rabbis give the case of David and Jonathan (1 S 20), and contrast it with that of Amnon and Tamar, showing that the first, because unselfish, lasted, while the second, being based on carnal affection, could not last (Abvth, v.8).

Love, as not limited to friends, but extended to all mankind, is a principle the priority of which Jewish and Christian theologians have been contesting with one another. On the Jewish side it was claimed that the command, 'Thou shalt love thy neighbour as thyself' (Lv 19:18), is universal. As proof for this conception it was adduced that the commandment of love in the same chapter is extended to the stranger, 'for ye were strangers in the land of Egypt' (v.41), and that, therefore, it expresses implicitly the idea of Hillel (q.v.—a teacher of the 1st cent. B.C.—). 'What is hateful unto thee do thou not unto thy neighbour': this is the whole Torah, and all the rest is its commentary (Talm., Shabbath, 31a). It is claimed that in the same sense Rabbi Aqiba, a teacher of the 2nd cent., said, 'Love thy neighbour as thyself is a great principle in the Torah' (Sifre, Orthâkim, ch. 4; Prishnâhilâ, Naphthânim, x. 5). Christianity, on the other hand, claims that Jesus, in the parable of the Good Samaritan, speaks of himself as answer the question, Who is my neighbour, in

1 See also Dt 10:18. 2 Or the fundamental principle.
LOVE (Jewish) 175

the universalistic sense. 1 One might introduce the argument that the Rabbis interpret the commandment, 'Love thy neighbour as thyself,' as teaching a humane method of execution, evidently implying that even the criminals remain our neighbour's (Talm. Pes. 75a). The Hebrew word eḥēk('lover') for friend is also used in the social sense, as in the case of Hiram and David (1 K 5:2 [EV 5:9]).

True love is tested by the sincerity which will not accept rebuke (Pr 9), but, on the other hand, loving friendship will overlook faults (10:17). In the same sense the Talmud reports that Johanan ben Nuri praised his companion Rabbi Aqui for having loved him more each time that their teacher chastised him on the ground of a charge made by Johanan (Arabkān, 16a). For this reason controversy on religious questions between father and son, teacher and disciple, will promote their mutual love (Qiddūškēn, 36b).

At the same time it is commanded to suppress hostile feelings. In Talmudic casuistry the question is asked, What precedes, if a man see at the same time his enemy's and his friend's ox or ass lying under his burden (Ex 22:2)? The answer is given that he must first help his enemy 'in order that he train himself in saving his brother' (Ec 611). Love is also used in the plain social sense, as when it is said that 'breakfast removes jealousy and brings love' (ib. 107b). The making of friends is true greatness. A man should turn his enemy into a friend (Abbōth R. Natōnā, ch. 23). Just as true friendship is praised and recommended, so false friendship is condemned. The Rabbis warn to keep at a distance from false friends, for 'they pose as lovers, when they have use for you, and will not assist you in the time of distress' (Abbōth, ii. 3). The utilitarian point of view in friendship is presented in the case of Cannan who-so the Talmud says—admonished his sons to love one another, but at the same time to love all vices (Psāḥēm, 113b). On the other hand, it is cited as an expression of true love, when Rabbi Judah han-Nasi, while the spiritual head of the Jewish community, repeated his own decision in a legal case when he heard that Rabbi Jose had decided differently.

4. Metaphorical uses. Love in the metaphorical sense is used very frequently in connexion with wisdom, especially in the introduction to Proverbs (4:7); see also the counterpart of loving folly or hating wisdom (12:10). As true wisdom is identical with true religion, we find the love of the Torah (Ps 119.105) and of God's commandments (vv. 97, 192) monotonously repeated in the long Psalms, which evidently is the work of an early Pharisee who anticipates the ideal presented in the sayings of the Fathers:

'Turn it [the Torah] over and turn it over, for everything is in it, speculates over it, grow old and grey with it, and never depart from it, for there is no higher conception of life than this' (Abbōth, v. 29).

This conception is repeated innumerable times in theory and story. In commenting on the passage, 'This day thou art become the people of the Lord thy God' (Dt 27:9), the Rabbis say:

'Israel had indeed become God's people forty years previously, but Scripture wishes to say that one who studies the Talmud too much, it becomes new every day' (Abbōth, 43b).

As an example of such devotion Joshua is quoted (Mānahōk, 99b), to whom God said, not in the sense of a commandment, but in the sense of a blessing, that the Torah should not depart out of his mouth (Jos 1:8).

The love of instruction—in Hebrew synonymous with reproof (Pr 12:1)—wisdom (12:5), purity of heart (5:21), righteousness (Ps 45), and kindness (Mie 9) are the characteristics of the pious, as to love their opposites is characteristic of the wicked (1's 5:24).

The injunction of Micaiah (6) to do justice, to love mercy, and to walk humbly with God is presented by a Rabbin of the 4th cent. as the sum-total of 'the commandments of the Torah' (Mānahōk, 24v). The true disciple of Aaron is, according to Hillel, 'he that loves peace and pursues it' (Abbōth, i. 12; cf. Ps 34:19). To Rabbinic theology ethical conduct and ritualistic conformity are the same divine commands (Abh. ii. 1), and therefore the righteous is he who practices God's laws without regard to material advantage. Moses took care of Joseph's remains (Ex 13) while the Israelis were busy trying to secure the booty of the drowned Egyptians, which shows how he loved God's commandments (Abbōth, 13a), for to bury the dead is the highest of the cardinal virtues (see To 17, 189: Mt 8, Lk 6).

Fulfilling God's commandments at a great personal sacrifice is another proof of love. The legend reports that Rabbi Gamaliel bought a palm-branch at a thousand drachmae, to fulfill the divine commandment (Lv 23:41) even while he boarded a ship (Sukkāh, 141b).

A similar story of a great number of ducats paid for an etrog (citron used on the same occasion) is told by L. Münz, Rabbī Blasser genannt Schenen (Kobben, Treves, 1895). Love is perceived as a place where only the righteous may set their foot (Ps 15), is also an object of love for the righteous (22). In a eudemonistic sense love is advised for the purpose of the practical public: to work for the field. 'Love Meḥākāb work in the sense of man's occupation abroad office and seek not the acquaintance of those in power' (Abbōth, i. 10).

As devotion to practical pursuits, love is mentioned in the case of king Uzziah, who is praised as one who 'loved husbandry' (2 Ch 26:19). Perhaps the obscure passage in Ec 5 is to be interpreted in this sense of man who is wise in his field. 'The popularity of a king is referred to as love in 1 S 18.6. As a love of the ruler for the people the Rabbis define the devotion to public improvements in the case of Joshua, who is said to have built roads and erected public buildings (Erabōn, 22). Time-serving is implicitly condemned in those who 'love the rich, while the poor is hated by his own neighbour' (Pr 14). Prophets who seek their own material advantage are denounced as 'watchmen loving to slumber' (Is 55), and the people steeped in materialism are said to 'love cakes of raisin' (Hos 3).

A special theological aspect of love in the metaphorical sense is the use of the word as referring to the mutual relation of God and Israel, both in Biblical and in Rabbinical literature. The traditional liturgy speaks very often of God's love for Israel in giving it His commandments, especially Sabbath and holy days, and this love is often referred to in the Bible as the love of a father for his children, as that of a loving husband, and especially as that of a bridegroom (Dt 7:9-10, 1 K 10:5, 2 Ch 5:11, 6. Is 43:6. Hos 3:9 11:14, Mal 1:21). Inasmuch as Israel is ordained to maintain the heritage of Abraham to do justice (Gn 18), God loves justice and Righteousness (Ps 33:5, 146:9, Is 61) and hates him 'that loveth violence' (Ps 11). As Zion stands for the embodiment of all that is noble, God loves Mount Zion (78) and, as Israel's patriarchs were the living representatives of this ideal, God loves them and, for their sake, their descendants (Dt 49). Just as Israel is not selected by God for His power, but for His righteousness (Dt 7:10); cf. Pr 15:2), so He loves the humble (Is 66:1) and the stranger (Dt 10). Prosperity is not a sign of God's love, and affliction is not a sign of His hatred, for the Lord often 'correcteth him that he loveth' (Pr 3; see Job 5). Yet prosperity is
repeatedly quoted as a token of God's love, as in the case of Solomon (2 S 12:4). In a satiric sense the relative value of suffering is referred to in a Talmudic story. R. Hishai calls on his friend R. Johanan who is ill, and asks him whether he loves his sufferings. Johanan answers: 'Neither the sufferings nor they who produce them.' (Talmud, Boda, 59b.) The case of King Manasses (2 Ch 23:15) is quoted as proof that suffering ought to be received with love (Sanhedrin, 101b).

As a fundamental doctrine R. Ashi presents the principle that God loved mankind, for He created man in His image; He loved Israel, for He called them His children; and, furthermore, Israel is beloved by God, for He gave them a most progressive word (Rabbah, 11b). R. Ashi clearly evidently wishes to grade God's love as the love of mankind in general, of Israel in particular, and of the law-observing Israelite as the best beloved. God, according to Rabbinitic ethics, loves especially the humble and peaceful (Pirke Aboth, 17a), and more generally him who is beloved by his fellow-men (Aboth, iii. 10). Modesty is the best means to gain God's love.

God loves, says the Talmud in a different passage (Pirke Aboth), him who is calm, temperate, and humble, but hates him who is a hypocrite, who does not offer testimony when he knows something of the case, and who sees his neighbour commit a wrong and testifies, although he is the sole witness (gossip). Most probably in the sense of condemning luxury in the building of synagogues R. Hishai, who lived in Babylonia in the 3rd cent., says, commenting on Ps 87:1:

'God loves the gates, ornamented with the 113th Psalm (play on words: the Latin of the Hebrews, and more than all the Psalms)' (On 160b); and Moses said of himself and Aaron: 'What are we among the congregation (of Israel), that we are spoken of thus: "I am a worm and no man" (Ps 22:9) (Nahum, 58a).

God loves, says the Talmud in a different passage (Pirke Aboth), him who is calm, temperate, and humble, but hates him who is a hypocrite, who does not offer testimony when he knows something of the case, and who sees his neighbour commit a wrong and testifies, although he is the sole witness (gossip). Most probably in the sense of condemning luxury in the building of synagogues R. Hishai, who lived in Babylonia in the 3rd cent., says, commenting on Ps 87:1:

'God loves the gates, ornamented with the 113th Psalm (play on words: the Latin of the Hebrews, and more than all the Psalms)' (On 160b); and Moses said of himself and Aaron: 'What are we among the congregation (of Israel), that we are spoken of thus: "I am a worm and no man" (Ps 22:9) (Nahum, 58a).

It is consistent with this principle that the true Israelite who is beloved of God is in the sense of St. Paul (Ro 2:6) the spiritual Israelite, and therefore the heathen who came to Hillel to be converted, and desired to be assured that he might become high priest, was satisfied when he heard that he is the stranger who comes with his staff and wallet has the same rights as the Israelites who are called God's children (31a). Israel is beloved by God, for the Sibbidah accompanies them wherever they are exiled (Miqra'ot, 29a). A distinctly polemical idea is found in the statement of R. Jose, who says, 'God loves Israel so that they need no mediator' (Yoma, 52a), probably, an antithesis to the statement in the Gospel of John (3:14). Yet the Rabbinitic theologians considered also a miracle a proof of divine love (Rabgath, 26b; Ta'amith, 20a).

The correlative term to God's love for Israel is Israel's love for God. It is enjoined as a duty in Dt 6, and this section is the principal part of the daily morning and evening devotion, thus practically enjoining the doctrine of Jesus (Mt 22:37), which makes this the principal commandment. The injunction to love God is typical of the Deuteronomic code (5:10, 17, and often) and of the Psalms, where the pious are called lovers of God, of His salvation, or of His righteousness (51:11, 40:9, 97:11, 118:97, etc.). To those who love Him God will be good (Ex 20:24, Dt 7:14, Mal 19), and therefore Abraham (Is 41:2, 2 Ch 29) and Solomon (1 K 3) are called lovers of God, and Jehoshaphat is reproved for loving God's enemies (2 Ch 19), whom the pious must hate (Ps 109:6).

Many traditions ascribed to the Prophet on the subject of divine love go far beyond the somewhat arid and perfumy allusions in the Qur'an, but there is no reason to suppose that they are genuine. They belong to the mystical doctrine which developed under Christian influence in the 2nd cent. of Islam, and which in the course of time established itself as the guiding influence of the mystic, at the centre of Muhammadanism. The following examples are often cited by Sfin authors:

LOVE (Muhammadan).—Although in the Qur'an the veneration and wrath of Allah are more forcibly depicted than His mercy and love, many one reading the successive revelations in chronological order, as far as possible, will observe that the latter conception was gradually gaining ground from the hour when the Prophet's strength began to fail and his power to wane, in the period immediately before the Prophet's migration, all the Qur'anic references to divine love occur in those chapters which were revealed at Medina. It is likely that his settlement in a city where he could not fail to be brought into contact with Christian ideas cooperated with the happy change in his fortunes and caused him to reason, as a profound lover of Allah in a corresponding degree. Of these references, which are about thirty in number, most are brief statements that God loves various classes of men—e.g., the beneficent, the patient, those who trust in Him, light for Him, keep themselves pure, and so on—that and He does not love various other classes, such as the transgressors, the proud, and the unjust. Muhammad denies the claim of the Jews and Christians to be the children and, in a peculiar sense, the beloved of Allah (v. 21). Man's love of God is mentioned in three passages: some men take idols which they love as much as they love Allah, but the faithful love Allah more than anything else (li. 160); those who love God must follow His Prophet, then God will love and forgive them (li. 29); if any of the faithful apostatize, Allah will fill their places with men whom He loves and who love Him (v. 59).

Many traditions ascribed to the Prophet on the subject of divine love go far beyond the somewhat arid and perfumy allusions in the Qur'an, but there is no reason to suppose that they are genuine. They belong to the mystical doctrine which developed under Christian influence in the 2nd cent. of Islam, and which in the course of time established itself as the guiding influence of the mystic, at the centre of Muhammadanism. The following examples are often cited by Sfin authors:
When God loves a man, his sins hurt him not; and one who repents is lost. But who is without sin? (Q. 'al-Salālīl, Calr. 1319 A.H., il. 50, 15).

God said: "Are they who pretend to love Me, but when they are alone love to hurt those who love Me? Lo, I am near to those whom I love, and I am the witness of their meaning and mentionation." (Q. 6, 23).

God said: "My servant draws nigh unto Me by works of devotion and I draw nigh unto them by the way of which he hears and the eye by which he sees and the tongue by which he speaks." (Q. 11, il. 165, 167; there are several versions of this tradition).

It is obvious that the doctrine of divine love will assume different forms according to the relative orthodoxy or irreligion of the epochs. We often find it linked with mysticism of an ascetic or devotional type, while in other cases it accompanies a thorough-going pantheism, or occupies various points between those extremes. The subject is exhaustively treated by Ghazali in bk. VI of his Ḥiyā (Bīlāq, 1289 A.H., iv. 280-349). Only a brief abstract can be given here, but this will suffice to show the scope and development of the doctrine as it stands forth in the most popular and authoritative encyclopedia of Muhammadan ethics.

Love (kabīb) is the natural desire for that which gives pleasure; when that desire grows intense it is called passion (qabīh). Each of the bodily organs takes pleasure in different objects. Similarly, the spiritual sense, whose organ is the heart (qālid), has a tendency to love the object by which the bodily senses are gratified. Ghazali enumerates five chief causes of love: (1) the desire of one desires to possess it so as to make it as perfect as possible. Therefore men hate death and seek wealth, children, etc. (2) Benevolence. Men love those who love them and are kind to them. (3) Disinterested love of good. Sometimes a good man is loved for his own sake, and no advantage may be derived from him. (4) Love of beauty (moral or spiritual), when the whole pleasure which it gives consists in the perception of it. (5) Spiritual charity. Ghazali then proceeds to demonstrate that all these motives have their ultimate source in God, who is the sole object of affection in perfect love, although in his God necessarily includes love of the Prophet and the saints. The strongest and rarest motive, he says, is spiritual charity. Man is called to an infinitude of spirits in respect of certain attributes, according to the tradition, "Form yourselves on the moral nature of God" (Ṭabā'fīh bī-šābīhā Allāh). He becomes near to God through his acquisition of knowledge, benevolence, compassion, and other virtues. But, underlying this, there exists between God and man a real and intimate union, of which Ghazali speaks with the utmost caution as an inscrutable mystery which is revealed to the experienced. It is indicated by the verse of the Qurān where God says that He breathed His spirit into man, by the divine command given to the angels to worship Adam, and by that tradition that God created man in His own image.

Every human sense and faculty seeks a particular end, which is a rule of action. The spiritual faculty is described by different names, e.g., reason, faith, illumination, insight—seeks to know the end, and all the objects of knowledge are only objects of knowledge; therefore knowledge of God is the highest pleasure. The gnostic (šīrīf) inevitably loves that which he knows, and his love increases in the same degree as his knowledge. Both sprin'g up together in his heart when he has pursued his object with great enthusiasm. What he loves in for perfect contemplation and perfect knowledge. The former, though, it is not attainable in the world, yet it can be enjoyed in the hereafter in vision hereafter, and perfect knowledge of the Infinite Reality can never be reached either in this world or in the next. Consequently the gnostic's longing (shagīr) is everlasting; even in the bliss of union with God he moves uncessesssibly towards an unrealizable perfection.

Having defined love as the soul's desire for that which gives it pleasure, Ghazali points out that the term is metaphorically applied to God, who wants nothing and regards nothing except His essence and His essential attributes. When it is said that God loves certain men, the intended meaning may be expressed as follows: God raises the veil from their hearts in order to show them His Godliness. Consequently, when a man tries to draw nigh unto Him, and has eternally willed that they should draw nigh by means of works of devotion, which are the steps which lead to them, and the raising of the veil from their hearts, and of their attaining to the rank of the gnostic, then, it is clear that these are acts of faith involving no change in the divine perfection, but inwardly transforming the person who is the object of them. How shall a man know that God loves him, and that God loves those who love Him? Ghazali answers this question by enumerating a list of the signs which characterize the lovers of God, since their love of God is the source of all affection. He loves those who love Him, and those who love Him in order to meet God and therefore desires death, or, if he be unwilling to die, it is because he feels that he is not yet ripe for the love of God. Good works done with a true faith do not come except union with the Beloved, and no hell except separation from Him. These doctrines lead many Sūfis into a position that practically coincides with落在the same thing. If love of God stands in sharp antithesis to conventional religion, it is equally opposed to logic, philosophy, and every form of intellectual activity. Real knowledge is not come to the man who is a true workman for a hideous existence without God. Good works done with a true faith do not exist except union with the Beloved, and no hell except separation from Him. Therefore the lover has no real existence without God. Good works done with a true faith do not exist except union with the Beloved, and no hell except separation from Him. Therefore the lover has no real existence without God. Good works done with a true faith do not exist except union with the Beloved, and no hell except separation from Him. Therefore the lover has no real existence without God. Good works done with a true faith do not exist except union with the Beloved, and no hell except separation from Him. Therefore the lover has no real existence without God.
his faith, and scorns the demonstrative arguments of the theologian.

LOVE (Roman).—Nothing is more significant of the practical character and the prosaic morality of the early Roman than his attitude towards love. In the earliest known period of Roman religion, the so-called "religion of Numa," we do not find single trace of any deity connected with love. Now, inasmuch as all phases of life had their representatives in the world of the gods, the conclusion would seem to be inevitable, that while there was, of course, natural affection, there was no pronounced development of sentiment, along either moral or immoral lines. Immoral expression was checked by that extraordinary self-restraint which characterized a people who were instinctively conserving all their energies for future conflicts; and expression along moral lines was discouraged by the practical view of marriage mere as an institution for the propagation of the race.

So far as we are able to tell, therefore, we have in the case of the early Romans a people without any defined father or mother. In the accretion of Rome's development she was destined to receive a goddess who was eventually to represent in her world all that the Greeks included under the concept of Aphrodite. The goddess was known as Venus, and was, from about the 3rd or 2nd cent. B.C. onwards, identified with the Greek and not Greek; and the fact that, when the Romans learned of Aphrodite, they called her by this name seems to indicate that she was known to them before Aphrodite was, and that there was sufficient resemblance between her and Aphrodite to make an identification possible. Our first task, therefore, is to find what is known about Venus in the period before Aphrodity, pp. 407 et seq. Books on all Roman religion, except a few of the most recent ones, are full of information about an Italic, a Latin, and even a very early Roman Venus. It is utterly first to examine these statements.

1. The Cult of the Italic Venus.—In general the assertion is made that in very early times there was present throughout Italy the cult of a goddess who was called Venus. But a closer examination shows that many of the facts adduced to prove this statement are of very doubtful value. (1) It has been repeatedly said that this goddess of gardens was especially worshiped in Campania, that, in other words, she is the Venus so famed at Pompeii, the Venus Pompeiana. But this is false, for the Venus Pompeiana is the Venus whom the veterans of Sulla brought to Pompeii when they were returning from the coloniae of the Colonies the Colonies, the Colonies, a combination of Venus-Aphrodite and Felicitas (see below, § 3). Her cult, therefore, does not antedate the first cent. before Christ. (2) In the light of the above among the Oscans of a goddess akin to Venus, a certain Herantae (mentioned in three Oscan inscriptions; two from Herculaneum [R. von Planta, Gramm. der oekl. und erabischen Dialekte, Strassburg, 1892, 117; id., 191]), the nearest Oscan inscription to this, R. H. (540). If one of these inscriptions Herantae has the cognomen heruitakun (= Eruca, i.e., the Aphrodite of Mount 

Eryx in Sicily). This proves, therefore, that the goddess resembled Aphrodite; it tells nothing of Venus, so far as any early Italic cult is concerned. (3) We are in a similar position regarding Frutius, for whom we have two passages; Calpurnius Frutius, cited by Solinus, i. 14, who tells us that in the country of the Laurentes Anaeus dedicated the statue of Aphrodite, which he brought from Sicily, to the 'Mother Venus who is called Frutis'; and Paulus the Excerpta from Frontinus, who says that the temple of Venus Frutis was called Frutinal. But these passages show merely that an unknown goddess Frutis was identified with Aphrodite, and again nothing is gained for the old Italic Venus. (4) There are, however, traces of a very early Venus cult at Laviniun and Ardea. Strabo (p. 252) tells us that Laviniun had a temple of Venus which was the common property of all the Latin cities (i.e., the Latin league), and that it was in charge of priests from Ardea; further, that near Ardea itself there was a shrine of Venus, which served as a meeting-place for the Latins. These statements must be taken at their full value, in spite of the fact that suspicions readily suggest themselves. It is suspicious, for instance, that Pliny ([HN liii] 50) and Pomponius Mela (i. 4) refer to a temple of Venus, an unfortunate name for an old Latin cult. Following the ordinary sound principle that on solemn occasions the Romans often made sacrifice at the mother-city, while the shrine of the priestess in the temple of the goddess was that devoted to Venus, and at such occasions the Romans were, according to the mythological books, commanded to sacrifice to Venus at Ardea (Livy, xx., i. 19). The Roman cult may well have come from Ardea, but this reference scarcely proves it, for the sacrifices of Aphrodite, according to Greek auspices, and the connexion of Ardea and Rome in the Anyss-legend is likely to suggest such an act, merely as one step in the metamorphosis of the Anyss-legend into a State dogma, which was taking place during the 3rd cent. B.C.

2. Traces in Rome of the early worship of Venus.—If we search for early traces of an Italic Venus is not very rewarding, an attempt to discover early traces in Rome itself is still less so. The three old cults of Venus ordinarily quoted are Venus Clodia, Venus Libitina, and Venus Marcia, all of them old, but not one of them originally a temple. It is any time official to make an impression with Venus, (1) Venus Clodia. Clodia was the goddess of the clona, and possessed a shrine on the north side of the Forum, near the Comitium, at a point where the Clarena Maxima entered the Forum. No ancient writer refers to her as Venus Clodia until Pliny ([HN xv] 119), and, depending on him, Servius, ad Æn. i. 720) makes Clodia a cognomen of Venus. Starting from this, a passage in Osequeius (8, from the year 178 B.C.), where he speaks of a fire in the Forum as having absolutely destroyed the temple of Venus, has been interpreted to mean a temple of Venus Clodia. This is, of course, contrary to the inscription historiques des monnaies de la republique romaine, Paris, 1857, "Massalia," 6, 7; cf. H. Dressel, Wiener Studien, xiv., [1900] 418 ff.  

(3) On the etymology of the same see Walde, p. 369.

(4) For etymology see Walde, pp. 321, 870.

(1) On the word see especially A. Walde, Lat. etymol. Wörterbuch, Heidelberg, 1909, p. 818 ff.
and whose sacred grove on the Esquiline was the headquarters of the undertaking establishments of Rome, had originally no connection with Venus. Later she was identified with Venus, the goddess of love, and her grove was praised as the grove of Venus Libitina—a combination which never existed in the actual cult. It is easy to see two or three things which led to this: the presence eventually of a temple of Venus not far from the shrine of Libitina; the association of Aphrodite with gardens, and her cognomen ἀνεργία; lastly, Venus's own cognomen Labentinum, or Libentinum, which was taken from a garden by that name. The temple of 255 B.C. was, however, in its origin connected with Venus-Aphrodite as a goddess of love rather than of gardens, for it was built by the edile, Q. Fabius Gargens, from the fines obtained from the punishment of women taken in adultery (Liv. x. xxxix. 9). During the First Punic War the Romans became acquainted with the cult of Aphrodite on Mount Eryx in Sicily; during the Second Punic War, in the year 217, this goddess, under the name of Venus Erycina, was formally introduced into Rome at the command of the Sibylline books, and given a temple on the Capitoline. A generation later, in 181 B.C., another temple of Venus Erycina was built outside the Porta Collina. But, though Aphrodite was a goddess of gardens (Pliny, H.N. xiv. 23; cf. Plut. Aem. 62), this deity of Mount Eryx was pre-eminently a goddess of love, with a pronounced accent upon illicit love. A reaction was inevitable, and about the beginning of the Christian era the temple of Aphrodite was erected to Venus Verticordia (Ἀφροδίτη Ἀρσάκης; cf. Paus. ix. xvi. 3; L. Freiler and C. Robert, Gr. Myth., Cambridge, 1894, i. 368), who 'turns the heart back' from evil passions (cf. Val. Max. xv. 12.; Pline, H.N. vii. 120.; Solin. i. 129.). In 114 B.C. a temple was erected to this same goddess (Ovid, Fasti, iv. 183 ff.; Ov. Fast. xvi. 22) as an atonement for a prodigy which showed the anger of the gods at an account of the uncleanness of three Vestal virgins. We do not know where this temple was (Servius, ad Aen. viii. 636, wrongly places it in the valley of the Circus Maximus, confusing it with Murcia). Thus by the end of the 2nd. B.C. Rome was equipped with two forms of the worship of the goddess of love—the Venus of Mount Eryx, representing licentious love, and the Venus Verticordia, whose festivals—an accession, though this was not connected with the floral festival of the Roman calendar—were held during the last quarter of the Republic. Venus assumed three more forms. First, under the leadership of the dictator Sulla, who translated his name Felix into εὐφροσύνη and devoted himself especially to the promotion of the cult of Venus Genetrix (Aphrodite Αρσάκης), it was especially her function as a goddess of gardens that appealed to the Romans. This function, secondary in Greece, seems to have been primary in Rome.

2. The coming of Aphrodite.—We do not know exactly when or how the Aphrodite-cult came into Rome—probably not at first by order of the Sibyline books. She came, however, before the Aeneas-legend, though, of course, Aphrodite and Aeneas were subsequently inseparably connected. The first datable temple is in 295 B.C., and the first official proclamation of the Aeneas-dogma by the State was in the year 282 B.C. Naturally Aphrodite was publicly known before 295 B.C., and the Aeneas-legend had been circulated privately before it was publicly proclaimed. The two oldest temples of

Venus-Aphrodite in Rome were the one in the grove of Libitina, the date of whose foundation is unknown, but was probably in the 3rd cent. B.C., and the one founded in 255 B.C. near the Circus Maximus. The dedication day of these temples was August 19th, which was also the festival of the hortiarcos, or kitchen-gardeners (Pliny, H.N. xi. 35). The temple of this goddess in Rome is confused with the temple of Venus Verticordia. At the dedication festival, a lyric poet composed a poem praising the new temple of Venus, and his work of oratory was performed in front of the temple of Venus Verticordia. This dedication festival was held under the protection of the goddess and was connected with the building of her temple. The temple was dedicated on August 19th, the same day as the dedication of the temple of Venus Verticordia, and it was also connected with the building of this temple. The festival of Venus Verticordia was held on August 19th, and it was connected with the building of her temple. Thus we have seen that, so far as we are able to tell, Rome began life without any deities of love; that her first genuine goddess of love was the goddess of gardens, with whom she was later identified with Venus Verticordia, and that the festival of Venus Verticordia was connected with the building of her temple. This goddess was associated with the cult of Aphrodite on Mount Eryx in Sicily; during the Second Punic War, in the year 217, this goddess, under the name of Venus Erycina, was formally introduced into Rome at the command of the Sibylline books, and given a temple on the Capitoline. A generation later, in 181 B.C., another temple of Venus Erycina was built outside the Porta Collina. But, though Aphrodite was a goddess of gardens (Pliny, H.N. xiv. 23; cf. Plut. Aem. 62), this deity of Mount Eryx was pre-eminently a goddess of love, with a pronounced accent upon illicit love. A reaction was inevitable, and about the beginning of the Christian era the temple of Aphrodite was erected to Venus Verticordia (Ἀφροδίτη Ἀρσάκης; cf. Paus. ix. xvi. 3; L. Freiler and C. Robert, Gr. Myth., Cambridge, 1894, i. 368), who 'turns the heart back' from evil passions (cf. Val. Max. xv. 12.; Pline, H.N. vii. 120.; Solin. i. 129.). In 114 B.C. a temple was erected to this same goddess (Ovid, Fasti, iv. 183 ff.; Ov. Fast. xvi. 22) as an atonement for a prodigy which showed the anger of the gods at an account of the uncleanness of three Vestal virgins. We do not know where this temple was (Servius, ad Aen. viii. 636, wrongly places it in the valley of the Circus Maximus, confusing it with Murcia). Thus by the end of the 2nd. B.C. Rome was equipped with two forms of the worship of the goddess of love—the Venus of Mount Eryx, representing licentious love, and the Venus Verticordia, whose festivals—an accession, though this was not connected with the floral festival of the Roman calendar—were held during the last quarter of the Republic. Venus assumed three more forms. First, under the leadership of the dictator Sulla, who translated his name Felicis into εὐφροσύνη and devoted himself especially to the promotion of the cult of Venus Genetrix (Aphrodite Αρσάκης), it was especially her function as a goddess of gardens that appealed to the Romans. This function, secondary in Greece, seems to have been primary in Rome.

3. The coming of Aphrodite.—We do not know exactly when or how the Aphrodite-cult came into Rome—probably not at first by order of the Sibyline books. She came, however, before the Aeneas-legend, though, of course, Aphrodite and Aeneas were subsequently inseparably connected. The first datable temple is in 295 B.C., and the first official proclamation of the Aeneas-dogma by the State was in the year 282 B.C. Naturally Aphrodite was publicly known before 295 B.C., and the Aeneas-legend had been circulated privately before it was publicly proclaimed. The two oldest temples of
Greeks Aphrodite; that even here the Greek ideas of womanly loveliness were echoed, for it is clear that a corrective was sought; and found in Venus
Verticordia; that in the last century of her Republic three of her great rulers paid homage to Venus
as their ideal prototypes; and, finally, that the example of Julius Caesar's cult of Venus
Genetrix elevated Venus into the goddess of the Imperial household during a large part of the
Imperial age. LITERATURE.—On Venus in general: G. Wissowa, Religions
und Kultur der Römer, Munich, 1912, pp. 231–239; W. W.

JESSE BENEDICT CARTER

LOVE (Semitic and Egyptian).—I. Among the
primitive Semites.—No written records or oral tra-
ditions have come down to us from that remote
time when the forefathers of the several branches of the
Semitic race, together with the aboriginal people of
Central Arabia. Our knowledge of that period is derived
solely by the comparative method of research,
which assumes that common elements in the life,
thought, and language of the Semites are the
inheritance of their earliest ancestors. The
love-songs of the Babylonians, the Egyptians,
the Hebrews, and the Arabs disclose many common
features that we may hesitatingly assume to have
flared from the fountains of primitive Semitic thought.
The poems of the pre-Muhammadan Arabs in
particular have preserved the ancient type with
remarkable fidelity. For generations this poetry
was transmitted by oral tradition, but in the second,
or the third, century of Islam the songs were
collected and written out by the grammri-
arians. The most important collections are the
Hamāda, which contains 884 songs, or fragments;
the Mu'allakāt, or seven most famous poems;
the Mu′aṣṣālāt, a collection of thirty odes, the
Diuwān, or collected poems, of Labīd; and the
Kīthāt al-Aqālīm, which contains the traditions in
regard to the lives of the poets and the circum-
stances of the composition of their songs.
Love is the emotion that finds most frequent
expression in the old Arab poetry. Every ḍaṣāda,
or ode, is normally accompanied with a account of the
poet's affection for some woman and his grief at
separation from her, and continues with a descrip-
tion of the way in which he solaced himself for
her loss by war, or by adventure on his feet camel or
horse. The ḍiṭa, or fragment, the other main
type of Arabic lyric, is often merely a portion of
an ode. Where it is an independent composition,
it usually has love for its theme. The seven
Mu'allakāt are all love poems, and the 124 songs
of the fourth division of the Hamāda all treat of
this subject.

These poems show that, although Arabian society
had already passed into the patriarchal stage in
the pre-Muhammadan period, yet many traces of a
primitive matriarchal organization still survived
(s. above, p. 229). The greatest liberty existed in
the relations between the sexes; and women
were free not only to choose their husbands, but
also to receive in their tents lovers of other tribes.
During the winter the rainfall was sufficient to
come into the desert, and the climate was
mild and verdure, and to replenish the springs that dried up
in summer. Then the tribes forsook their
permanent headquarters by the perennial springs, and wandered far and wide over the plains. The clans
were brought into new temporary relations, and
their men and women, the important personal
ties become mutually acquainted. The result was
numerous inter-tribal attachments.
The poets relate how they first met their lady-loves,
and were captivated by their beauty; then how they
won her consent; and, finally, how the
example of 'Umaria while she was bathing, and would not return
them until they promised to carry his horse to
her camel. Duraid fell in love with al-Ḥāja, herself a poetess, while,
secretly clad, she was anointing a sick camel with
her oil. Under such circumstances it is unsafe
machine to say that unless the poet's heroines
were able to describe the charms of their mistresses with
as great detail to those of a favourite she-camel. Large parts
of the poems are devoted to word-pictures of the beloved
that are as circumstantial as the praise of the
faints among women in the Song of Songs. As among the modern Orientals,
loveliness and heavy perfumes are specially admired in women.
When an attachment was established, the poet made secret
visits by night to the tent of his inamorata. If she were a
maid, she went out with him into the solitude of the desert,
dragging a heavy garment behind her to obliterate the foot-
prints in the sand (Mu'allakāt of Ḥatta, 87 f.). If she
were a mother, she remained in her tent, receiving her cares
with one hand, while with the other she stilled her babe (ib. 18).
The poet protested his devotion and fidelity, and besought
her to cease coquetry, and give him her love; and, he assures
us, her entranced were not in vain. Often the lady belonged to a
hospitable tribe, and such visits were accomplished only by
stealing past the sentries at the risk of life (see Ṣ̱. 119). The
poems speak also of accounts of such women as had visited the
Imra-ḳays even boasted to 'Umaria of the number of women
that he had loved in the past (ṣ. 5, 10).

All this is accompanied by a conception of the
winter rains and the drying up of the springs and the
pasture. Then the tribes moved away to their
distant homes, and the lovers were separated. The
poet describes how he watched the tent of the beloved had stood and found it deserted. They called to
mind the happiness that they had known there, and
bitter tears, and refused to be comforted. All the poems of the
Mu'allakāt begin with this theme, and they show rare
beauty and pathos in their descriptions.

Love of family and friends also finds frequent
expression in the old Arab poetry, particularly in the
lamentation of the most numerous and most
beautiful products of the lyric art.

This passion, like all strong human emotions,
was ascribed to the direct influence of a divinity.
Possibly in the earliest times a special demon pre-
sided over love in distinction from the powers that
presided over reproduction and birth. Traces re-
main of an old Arabian god Wadd, i.e. 'love'
(see J. Weilhnisen, Bestes arabischen Heidentums,
Berlin, 1897, pp. 14–18; Ṣ̱. 62). Little is
known about his character, but he may be a
personification of love similar to other Semitic gods
such as Gil, 'joy', and Pūba, 'fear' (Ṣ̱ 91f.).
His erotic character is evident in the Nābiqha preserved by Ibn Ḥābil and cited by
Weilhnisen (p. 17):

'Farewell Wadd, for sporting with women is no longer per-
mitted us, since religion is now taken seriously' (i.e. since the
introduction of Islam).

However this may be, it is certain that, long
before the separation of the Semitic tribes, the
function of inspiring love had been assigned to
the great mother-goddess ʿAshtar, the giver of
springs and the producer of life in all realms of
the organic world. Under the varied forms that
this divinity assumed in different Semitic lands
she was everywhere the goddess of love. The
love that she inspired was not merely sexual, but
also maternal, fraternal, and sexual. In the
To depict the Send, she is occasionally mentioned
by the titles al-Lāt, 'the goddess,' and al-ʿUbba,
'the strong,' and the infrequency with which she
appears is almost certainly due to the intro-
scription of Allah ʿilā ʿAllāh. In other Semitic liter-
tures she is constantly described and invoked as
the awakener of love (see ʿAshur, vol. ii. p. 115 f.;

This goddess is the subject of the numerous
poems in their primitive matriarchal stage of social
organization. She was the analogue of the mother
matriarch, free in her love, the fruitful mother
of her clan, and its leader in peace and in war. In
her supremacy there was a potentiality of monotheism popularly felt. In the face of this, a fact of deep importance for the growth of the religion of Israel that its starting-point in primitive Semitic religion was not the delusion of nature, but the delusion of maternal love. In the cult of the mother-goddess there existed the assumption of the Prophets that God is most truly revealed in unfailing human love, and the message of the gospel that the supreme revelation of God is the perfect Fatherhood.

2. Among the Hebraic Semites. — When the matriarchal form of society gradually gave place to the patriarchal, it was no longer natural to think of the chief deity of the tribe as a mother, but rather as a father. Two things might then happen to the old mother-goddess 'Ashtar. (1) She might be degraded to the position of consort of one or more male gods. This was the step taken in Babylonia, Syria, Canaan, and most other parts of the Semitic world. It involved a surrender of the inestimable monotheism that was characteristic of primitive Semitic religion, and an adoption of polytheism. It also involved an over-simplification of the sexual element in the conception of deity. (2) 'Ashtar might change her sex and become a father-god. Thus the monothestic tendency of primitive religion was at last overwhelmed by the matriarchal element would be blended with the maternal in the conception of the tribal god. This was what happened in the case of the Semitic race, to which the tribe of Judah is the most typical example. Ancient Egypt, Arabia, Abyssinia, and Moab, 'Ashtar changed her sex and became the masculine 'Athtar (= 'Ashtar) who retained feminine characteristics (see Etrusci C. L. 118); cf. also vii. 429). Ammon and Edom also were tribes that were matriarchal and apparently had no feminine associate. Jehovah was originally a god of this sort. He was the father of His people, who united maternal characteristics with paternal, and who reigned without a consort. This is a phenomenon of great interest in the development of Hebrew monothism. By it sexual dualism, the curse of other Semitic religions, was avoided, and at the same time maternal tenderness was retained as a fundamental element in the conception of the deity.

3. Among the ancient Egyptians.—Our knowledge of love and gods of loving the Egyptians is derived from the pictures on the walls of the tombs and temples, and partly from occasional references in the elegant literature, but mainly from collections of popular love-songs. The chief of these are the London MS (Harris 500), which dates from about 1400 B.C.; the Turin MS, which dates from about 1200 B.C.; the Ghizeh ostraca, from about 1530 B.C.; and the Paris fragment, which may be a copy of an original of the Middle Empire. These were first published by C. W. Goodwin, T.S.B.A. iii. (1874) 380, and G. Maspero, J.A. 6th ser. i. (1883) 5; and in a much more correct edition and translation by W. M. Müller, Die Lyrik der antiken Aegypter. They contain true folk-poetry, free from the artificialities and tediousness of the ordinary Egyptian classical verses and of the ordinary Oriental literature, and in their simplicity and directness they make a strong appeal to modern taste and interest. The poems in these MSS show the same loose arrangement that is seen in the Hebrew Song of Songs.

The Egyptians belonged to the Hamitic stock, which was closely related to the Semitic; and from the earliest times they were mixed with influences of Semitic population. It is not surprising, therefore, that their deities existed in general and under similar names in both. The earliest times seem to have been organized matriarchially (see A. Erman, Life in Anc. Egypt, Eng. tr., London, 1894, p. 155), and at this time their marriage, which was a fact of deep importance for the growth of the religion of Israel that its starting-point in primitive Semitic religion was not the delusion of nature, but the delusion of maternal love. In the cult of the mother-goddess there existed the assumption of the Prophets that God is most truly revealed in unfailing human love, and the message of the gospel that the supreme revelation of God is the perfect Fatherhood.
In connexion with these poems a number of gods, such as Ptah, Sekhmet, Nefer-Atum, and Amon (ib. 18, 22), are invoked to favour one's suit; but the proper divinity of love was Pet, 'the sky,' who, under the forms of Nut, Neith, Bast, Hathor, and a variety of other local names, was the chief Egyptian goddess. She was conceived either as a celestial cow, whose belly formed the dome of the sky, or as a water-calf, with horns rearing on her brother-husband, the earth-god Keb. Under the form of Hathor, 'abode of the sun,' at Denderah she attained the greatest glory, and became one of the chief divinities of the empire. Here she was depicted as a benevolent-faced woman with the ears of a cow, or with a head-dress consisting of the horns of a cow enclosing the solar disk (see ERE vii. 439p). Since she was originally a sky-goddess, her function as love-goddess must be regarded as secondary, and as due to Semitic influence. The Semites who settled in Egypt in the earliest period found in her characteristics as mother and as cow the nearest counterpart to their own mother-goddess 'Ashtar, and accordingly attributed to her all the erotic qualities of the latter. Thus she early became the Egyptian form of the Amur-goddess, and was regarded as identical both by the Asiatic Semites and by the Egyptians. The Canaanite 'Ashtar was depicted with the attributes of Hathor, and Hathor with the attributes of 'Ashtar. During the XIXth dynasty 'Ashtar survived (1286–1072 B.C.), and received worship in Egypt under her own name, or under the epithet of Kadesh (see ERE iii. 182a, 184a).

4. Among the Hebrews.—We know that love-poetry, 'qir'a', is a name borrowed from such incidental allusions as Am 6, Is 5 29, but specimens of these compositions have as a rule been excluded from the books of the OT. Only the Song of Songs, alone, and this only to an anachronistic exegesis, has found a place in the sacred canon. This is to be regarded as a collection of folk-songs, similar to those found in modern Palestine, which were sung at weddings in the villages round about Jerusalem. As such it is an invaluable source of information in regard to the Hebrew conception of love. The collection as a whole dates from the Persian or Greek period, but its folk-songs may have a much greater antiquity. Besides these primary sources, we have numerous incidental references to love in the other books of the Bible.

The seven songs of the OT show that women enjoyed much of the freedom that existed among the primitive Semites and the Egyptians. They dared to love even before they had been wooed (1 S 18, 22), and they were allowed to express their choice in marriage (Gen 24:24). In the Song of Songs the woman is fully as ardent as the man. The same passionate intensity that existed among the primitive Semites was found also among the Hebrews. The Song of Songs bears a close resemblance to the love-poetry of the ancient Arabs and of the Egyptians. It describes the physical charms of the beloved with the same sensuous detail (e.g. 4:10–12, 17–19, 20–22). The beauty of the beloved is invested with an air of authority by the honours and titles that are assigned to her. She is called 'queen of flowers,' 'a beautiful young lady,' 'a woman of beauty,' 'a woman of name,' and is endowed with the appellation of 'lovely.' The love-couplet shows also numerous cases of strong paternal love (Gen 25:1–37, 2 S 12:27–18:2), and the love of David and Jonathan stands out conspicuously as the most perfect friendship in all literature (1 S 18, 29, 2 S 13).

With all these forms of love Jahweh, the God of Israel, was closely connected in the early Hebrew consciousness. There is strong evidence that He was originally the tribal god of the folk who dwelt at Mount Sinai, and that He was the God of Israel through the works of Moses. Among the Kenites He can have had no consort, for otherwise she would have been adopted by Israel at the time of the conquest of Canaan, but in the old Hebrew religion we find no trace of any such goddess. Jahweh must, accordingly, have belonged to the class of Semitic gods that have been considered above (2), namely, mother-goddesses that were transformed into father-gods in consequence of the transition from the patriarchal to the patriarchal form of society. As such He united with paternal characteristics all the maternal characteristics of the ancient Semitic chief goddess 'Ashitar. (1) He was a god who manifested Himself in life-giving springs (ERE ii. 282p, 285p). (2) He was regarded as identical both by the Asiatic Semites and by the Egyptians. The Canaanite 'Ashtar was depicted with the attributes of Hathor, and Hathor with the attributes of 'Ashtar. During the XIXth dynasty 'Ashtar survived (1286–1072 B.C.), and received worship in Egypt under her own name, or under the epithet of Kadesh (see ERE iii. 182a, 184a).

(3) He was the creator of animals; the Passover was celebrated in acknowledgment of His gift of the young of the flock, though these were still known as 'Abode of the god' (Gen 30:22). He was also invested with sexual love; circumcision, a primitive Semitic rite of preparation for marriage, was the special badge of loyalty to Him (Ex 42, Gn 34). In sacrificing to Him the Hebrews were reminded of the love which He displayed over sexual love; circumcision, according to the Semitic etymology of His name, is that which is in effect 'a living reproduction of His thigh' (Gen 4:24). The 'ashera, the symbol of the mother-goddess, stood originally beside His altar (2 K 13:16, 21, 23). The 'qadhesh, the name of a goddess, was the word used for 'abode of the god.' The man with the word was the goddess, and the woman with the word was the god of love. The account of the marriage, the love of the young wife, was never lost in the later development of the religious of Israel.

The message of Moses, that Jahweh, the God of Israel, was the creator of animals, shows the eternal love of the god to the children of Israel, and that He had chosen to be the father of Israel. The reference to the love of the god towards the children of Israel is found in 'Ashtar-Ishar see ERE ii. 125f., vii. 429–431. These facts seem to show that the Kenite Jahweh was the old Semitic goddess of love and fertility who had been transformed into a father. The love of the god towards the children of Israel was not wholly lost in the later development of the religious of Israel.
forth the redeeming love of Jahweh in the deliverance from Egypt and in the gift of the land of Canaan became the keynote of the religion of Israel. From His people He demanded exclusive worship and a love for Him like His love for them. As early as the Song of Deborah His worshippers are called His 'lovers' (Jg 5:4). It is clear also that from the first Jahweh demanded a kindness to fellow-Israelites similar to that which He had shown when He delivered them from bondage. Thus for Israel Jahweh became the God of love in an ethical sense that had not yet appeared in any other Semitic religion.

After the conquest of Canaan Israel was confronted with the problem of the relation of Jahweh to the gods of Canaan. This problem was solved by the identification of Jahweh with the b'\text{\textit{alim}} and other male divinities of the land, so that their sanctuaries and rites became His, and they ceased to exist by being absorbed into Him (1Es 11:391). With 'Ashhtar, 'Anath, and other goddesses the case was different. They could not be identified with Him, and He had no consort with whom they could be combined; consequently they remained His rivals with whom He waged war to the death. In all the pre-Exilic literature Jahweh is never once said to have participated in this war, but it is certain one of His primitive functions, apparently because this was regarded as the work of His rival 'Ashhtar. Everything connected with the sexual life of Israel is rendered 'tabu', that is, 'taboo' from participating in the worship of Jahweh, because of the association with the hated mother-goddess; yet, with curious inconsistency, Jahweh was still regarded as the giver of children.

In the Prophets from Hosea onwards the moral love of Jahweh that had appeared already in the Mosaic religion received fresh emphasis. In his love for his wife Hosea saw 'the beginning of Jahweh's speaking' unto him (Hos 1:2). When she forsook him for her lovers and plunged into the depths of degradation, he found that he could not give her up, and, when the opportunity came to return her to her father, and bring her back to his home, he eagerly embraced it (3:2). Through this experience of unselfish love in himself he received his vision of the love of Jahweh for Israel. Jahweh had taken Israel as His bride at the time of the Exodus and had loved her ever since with unflinching fidelity; she had forsaken Him for the b'\text{\textit{alim}} of Canaan, yet He could not give her up. He must send her into exile to reform her, yet He would not abandon her. This message of Hosea is echoed by all the other pre-Exilic prophets, and finds its noblest expression in the words of Jer 31, 'I have loved thee with an everlasting love, and with tender mercy hast thou loveth me.' The recognition that in unselfish human love the truest revelation of the character of God is found.

In return for His love Jahweh demanded the univocal love of Israel. This teaching found its classical expression in Dt 6, 'Thou shalt love Jahweh thy God with all thy heart, and with all thy soul, and with all thy might.' The recognition of Jahweh's love for Israel carried with it a demand to return in kind love for Israelite's treatment of fellow-Israelites. This thought runs through all the pre-Exilic prophets, and is finally summed up by the Holiness Code (c. 800 B.C.) in the words, 'Thou shalt love thy neighbour (i.e. fellow-Israelite) as thyself' (Lv 19:18). Even the alien residing in Israel was to be treated kindly (Dt 10:19, Lv 19:34), but the extension of this love to the Gentiles was not yet imagined (Dt 14:19-15, Lv 25:44). The interpretation of Jahweh's love in the terms of wedded love reacted also upon the conception of marriage. In the post-Exilic period monogamy became the rule, prostitution was condemned, and men were urged to cleave their fidelity to their youth (Pr 5:19-20). This higher ideal of marriage is nobly expressed in Ca 5:1: 'Love is as strong as death, passion as inattainable as Sheol. The flashes thereof are flashes of fire, a very flame of Jahweh. Many waters cannot quench love, neither can the floods drown it. If a man should give all his possessions in exchange for his lover, he would not sell her for all his possessions, because his love is regarded as more precious than all worldly possessions, and as a flame kindled by Jahweh Himself in the soul. An utterance of such purity and profundity concerning love is not found in the whole range of classical letters of the west.

Jesus took up the prophetical conception of the love of God for Israel, and clarified and intensified it by teaching that love was not merely an attribute, but the very essence of the divine nature. The Prophets said, 'God has love'; Jesus taught, 'God is love' (1Jn 4:8). He also declared the universality of God's love, which had not yet been grasped by the Prophets (Jn 3:16). He reaffirmed the old commandments, 'Thou shalt love Jahweh thy God with all thy heart,' and 'Thou shalt love thy neighbour as thyself,' and gave them new emphasis. His juxtaposition of them, through which love to man became the supreme expression of love to God, and by His new interpretation of 'neighbour' as meaning every fellow-man (Mk 12:30, Lk 10:28). He recognized that the Israelite's love to his fellowman's love to God to and to man were perfectly manifested, and therefore He proclaimed Himself as the supreme revealer of God and the reconciler between God and man.

LOYALTY.—See AGAPE.
LOYALTY

whose claim on his allegiance be, as a true man, admits. Furthermore, in the natural exercise of his quality, the loyal man applies it to all persons and groups of persons in whom he recognizes any claim of bounden duty or faithful service.

But not only is the range of application wide; the claim for loyal service goes very deep; it is the service of those who desire to serve, and to do so up to the limit of their ability. The law is to lay within them, written on their hearts, as the Scripture says, and incorporate in their will. The whole of Ps 119 is, indeed, an expression of the loyalist spirit in application to the Divine law. The devotion expressed by this loyalist in religion is entire; the Divine law is conceived as not perfectly apprehended by him, but he sets no limit to his desire to fulfill it to the end. It is by this note of unlimited purpose, upheld by faith and chastened by humility, that the loyalty of the Psalmist stands out in contrast to the spirit of precise legality, limited by the letter of the law and its tradition, that marked certain developments of a later era. This distinction between the loyalist and the legalist may be found in all times and all places. It applies to allegiance of every kind, whether in the matter of thought, or to human ordinance by ancient tradition, modern statute, authoritative utterance of prophet or king, the word of a leader, the rule of a communal organization. This is the loyalist spirit. It requires that the law is told, breaks no rules; he keeps faith to the word that is written and can be read. There is the loyalist who does this but can by the nature of his spirit be counted on for more, who puts his whole mind into his duty, who forms his spirit in accordance with the spirit of the purpose to be served.

Loyalty, then, may be defined as the quality of character which is free from all genuine service to the appointed person or the appointed cause. Thus the perfectly loyal person is certain to obey, to serve, despite all obstacles, at all costs, to the best of his ability, to those he regards as the best of his abilities. He who bears himself so is loyal, in the sense of obedience implied, that he uses all means to make himself efficient in knowledge and skill and in understanding the requirements laid upon him. The perfect loyalist of story corresponds to this description. Of a loyalist known carrying out his instructions— which are his loi—with zealous care to undertake them so that, by fulfilling them in the spirit as well as in the letter, he may, if the law demands, also, even should the letter fail. He has to be intelligent, alert, resourceful—not merely obedient to precise instructions given—and these qualities he needs the more in proportion to the importance and difficulty of his task. It follows that the development of perfect loyalty throughout a company requires that the duties should be accurately apportioned in accordance with the abilities of each member. It requires also that opportunities for the training and exercise of latent abilities should be given to all. This ideal does, in fact, appear, both in pagan heroic story and in medieval romance, as characterizing bands of pre-Christian heroes and bands of Christian knights.1 The unwritten law—not mere personal law, but a pact of comradeship—that bound the Round Table knights to pursue and to defend the law above all, is a notable case in point. The two chief cycles of Irish Gaelic story are noteworthy also in this connection. Later comes the age of chivalry with its blemish of bounden duty, and yet its law above all, universal in scope. The two chief cycles of Irish Gaelic story are noteworthy also in this connection. Later comes the age of chivalry with its law above all, universal in scope.

2. Loyalty and fealty. — 'Fealty,' from Latin fidelitas, 'faithfulness,' has an equivalent in all the Romance languages, and so has 'loyalty.' But loyalty was neither of these. English adopts the French loyal to mean 'law-fulfilling' in the sense of the Sermon on the Mount, and distinguishes it from 'lawful,' or 'legal,' which means allowable, and from 'law-abiding;' which connotes submission to the law, the passive quality of the orderly citizen. German translates by specialization and slight change of significance, using such words as 'Mannigfaltigkeit und Juriste' (ordinance and coordinate) and Vaterlandstreue (fidelity to the Fatherland) the quality, of course, exists in many diverse applications, and, though fidelity or fealty is not identical with loyalty, the one characteristic is apt to be accompanied by the other. Loyalty connotes a certain specialization of good faith and faithfulness towards the person, principle, ideal, or covenant in respect of which it is expressed; it lays stress on this obligation of specialized fidelity rather than on any wider duty of humane comradeship and general goodwill. Nevertheless, there is close affinity between these qualities, the deeper motives of which are widely overlapped. The good comrade who, in time of danger or trouble, takes up his responsibilities with settled mind and faithfulness sustains them is apt for loyal service wherever his allegiance is to a higher cause, however conceived, or to human ordinance by ancient tradition, modern statute, authoritative utterance of prophet or king, the word of a leader, the rule of a communal organization. This is the loyalist spirit. It requires that the law is told, breaks no rules; he keeps faith to the word that is written and can be read. There is the loyalist who does this but can by the nature of his spirit be counted on for more, who puts his whole mind into his duty, who forms his spirit in accordance with the spirit of the purpose to be served.

Loyalty, then, may be defined as the quality of character which is free from all genuine service to the appointed person or the appointed cause. Thus the perfectly loyal person is certain to obey, to serve, despite all obstacles, at all costs, to the best of his ability, to those he regards as the best of his abilities. He who bears himself so is loyal, in the sense of obedience implied, that he uses all means to make himself efficient in knowledge and skill and in understanding the requirements laid upon him. LOYALTY

childhood is educated carefully in all manly accomplishments, and in all social courtesies, including respect for women, children, and grey hairs. He emerges from his tutelage free, companionable, and courteous, a strong individual. But this is not all. Not the least important part of his education is the contribution which he makes to the formation of his character by laying bonds or obligations (in the Gaelic geis) on himself that he will never refuse assistance to a woman frequently occurs, and may supply occasion for the turning-point of the story. Others are of the nature of obligations to a king, leader, or comrade, or to all the members of a band. King Arthur and his Round Table come to mind, or, for those who know Gaelic story, Fionn and the band of heroes whose story has been a fund of moral instruction for western Irish children to this day. Some stories turn on a conflict of two loyalties, each claiming dominion over the loyal soul. The discussion of such difficult situations, however, is not in terms of loyalty, but in terms of keeping faith; in a certain typical case where the vows appear to be of equal weight the decision is given on grounds of common sense quite modern in complexion, whether exerted with or without effect.

This practice of self-made vows in the social interest has, no doubt, been a principal factor of moral education, in its best form of self-discipline for each individual, and in the formation of the moral character of the West of Europe, where mild forms of government by loose tribal organization of free men prevailed. Faith to a self-made vow covers all cases of voluntary allegiance, and so, as the feudal system was estabished, the man of the West of Europe understood himself instinctively of this free man's social virtue by the institution of the oath of fealty from the feudal subordinate to his over-lord. At this point loyalty emerges; fealty and respect for authority maintain each the other and are fused. Fealty, however, is not exhausted in the compound. It remains as the quality of faith to the pledge once given, the central virtue of the self-respecting hero who cannot be false to his word. Carried to the point of fulminating in spirit, rather than merely in letter, this implies not being false to the reasonable expectations involved in mental understanding towards his fellows and himself. The ideal of the self-made man signifies all this. Such a one is 'loyal,' or 'leet,' so far as his conduct goes, but in his motive he is primarily 'feal.' It may be that only he himself is aware of the motive of his action; he cannot doubt the motives are mixed, but it seems probable that in many, or indeed most, cases either one or the other is the backbone of the composite characteristic. If so, it is important that in the education of each person sufficient demand should be made on the leading trait to evoke it strongly, and sufficient social opportunity given to direct its practical expression in terms of the other—the faithful soul realizing itself in service to others, the loyal spirit fulfilling its service by self-reliant intelligence and steadfast faith.

A Political LoyaltyPatriotic loyalty is an object in feudal and modern times. Loyalty connotes attachment to some definite authority which has a right to be served. The growth of the feudal system in Europe was favourable to the special personal turn which its application took. The political problem was the organization of many small groups into one large inclusive group, or nation, especially for purposes of defence against some common foe. The national sentiment was conceived and expressed largely in the series of loyalties from man to master that bound each to his feudal superior, from the lowest vassal upwards to the supreme over-lord or king. Each primary group was sufficiently small, and grouped round a leader sufficiently well known, to bring out men's natural instincts to follow their chief, to cleave to him truly, to give him allegiance, acclaim him lord, and be his men. This loyalty of the most picturesque and primitive type, rooted, moreover, in a high mood to which religious enthusiasm is akin. What the man was to the lord, the lord was to his over-lord, and so the national system was linked up unit by unit into the composite over-lordship of the king. The system of loyalties, as signified in this actual system of political allegiances, would in the perfect State have likewise been linked up, all loyalty centring in the king. When the kings of France succeeded in making all the under-feudatories take the oath direct to the king, they established themselves as the centre beyond all doubt. Under absolute personal government the king stands for le roi; his will—bound more or less by his coronal oath—is the standard and subject-matter of service due; his under-lords are subordinates commissioned to use their subordinates as his servants in so far as he may require.

The reality, to be sure, was never so systematic, and bred many other qualities, bad and good, besides its medium of high-toned loyalty. It is, however, certain that no system by such a system was not by encouragement given to so useful a quality. Thus the situation was favourable to much praise of loyalty as a prime virtue in the mouths of the upper classes and in the mouths of their dependents—poets and men of letters generally, lawyers and all who had to do with the executive government, whether on the national or on the local scale. The loyalty of the feudalism declined, or was broken up, the source of authority gradually defined itself anew as duplex in form: (1) the king administering the realm in accordance with the law, and (2) Parliament, i.e. the Diet of the nation, Lords and Commons, wielding sole power by joint action with the king to change the law. The Lords were, in the first instance, the true peers of the king—the displaced feudal lords—and the old sentiment of feudal loyalty continued for long to be expected more or less by them and conceded less or more. As local magnates of one sort or another, they have in this country had a prolonged and honourable reign. In France they disappeared entirely and politically, as did the king himself, at the Revolution, and as later did the pseudo-king or emperor in 1870. England is still in process of change as regards the sentiment of the rural and the town; but certainly it is no longer necessary to consider loyalty as a sentiment greatly affecting the relations between ordinary people and the Parliamentary peers who are lords of the soil. No historic sentiment of the kind attaches personally to the elect of the people in the House of Commons. Each commands the loyalty of his own supporters in his own constituency, so long as he and they are in general agreement on political issues. But he is not in any sense la lait to them, except in so far as he adopts, and with sufficient ability expounds, those principles of national policy which are common to them and him. The feeling to which the expression of fealty—not the maximum of fealty—but of loyalty; they support him so long as he continues to support that policy with which they continue to agree. Personal loyalties, of course, endure, but they are not in the nature of the case. There is a very real loyalty, however, to 'the party' as a whole—either party—and to the leader of the party, also, more especially when he is a strong and attractive figure satisfyingly to the moral sense, arresting to the imagination, strong and of a good courage.

But for the civilized world of Europe in general little importance in the first instance attached to
LOYALTY

Parliament in any form as an object of loyalty. The king and the law emerge from the feudal system as claimants by moral right on the service of men. The sphere of service to which loyalty properly belongs implies the sphere of duties and restrictions enforced under fear of punishment. Loyal service to the king included, as of course, loyal obedience to the law; but loyalty, no doubt, was more consciously directed to the king and to courts than to the law, though courts were advanced to personal devotion. The Bourbons in France and the Stuarts in England assumed themselves to be kings by Divine right after the manner of the Roman emperors—in effect, claimed all loyalty, and from many obtained it, as due to the king. The revolt in England took its stand on the law as binding on the will of kings, and claimed restitution of the powers as rights guaranted by ancient charter. The English Revolution of the 17th cent. was, in effect, not a revolution but a restoration of the ancient constitution, cleared, however, of feudal complications, the great Whig families standing with the common people, and the Royalists, who more especially esteemed themselves as loyalists, with the defeated dynasty. In due course there emerged two widely different systems and gallant endeavour on the one hand, and conflicting ways of the court de facto on the other, the British Constitution—or rather its first edition—with all its 20th cent. characteristics latent, and sure to develop as the king lived.

Here it is, a sufficiently complex object of loyal regard:

(1) The law of the land as the one authority which all must obey; and all commands by persons in office must be in accordance with it.
(2) King, Lords, and Commons making one Parliament; and these three only, and by consent of each, can change that law, order taxation, or decree the appropriation of the revenue to the purposes of Government.
(3) The king and his ministers, by whose advice all his decrees are made, whom he appoints by the established custom of the constitution from the leaders of the political party which commands a majority in the House of Commons; the maintenance of this power is guaranteed by the Commons on the Power of the Purse.1

So there emerged slowly in England the modern State, which has emerged elsewhere more suddenly and with less of the attractive complexity of detail which links it with its own historic past. This is what stands for le loi to the modern Englishman. As an object of loyalty it has advantages over some other examples of the 'Mixed State.' Not only is the British Constitution built as it is in order to preserve intact the ancient liberties of the people which had been lost, but affords, by the very act of maintaining them, it is apt, therefore, to excite a high degree of enthusiasm in the minds of all those who care about history, all those who lay store by the liberties of the people and the powers of the House of Commons. To them the members of that House, and especially the two front benches, whichever party is in power, constitute the political aristocracy, in the fine Platonic sense. If they are loyal citizens, they will be loyal in the full sense to their own front bench, and law-abiding to the other front bench if it happens to be in power. In stormy times, when great principles, on one or other or both sides, are at stake, the adherents of the party likely to be defeated steady their minds to bear the shock by a very real loyalty, pitched finely in the more abstract point of view to the Crown and Constitution, whatever betide. This link is an efficient and practically upheld by the consciousness of historic continuity throughout all changes, each having been effected by self-evolution within the Constitution itself; the King's prerogatives that have come under the power of Commons have done so by the King's consent; the House of Lords, too, in 1911, submitted to the limitation of its veto.

5. Grades and modes of loyal sentiment in modern life.—Among persons outside the large circle who take part in public life, the sentiment of political loyalty is probably in many cases practically non-existent, or at least very shallow, except, indeed, when roused by some real or imaginary national danger. This, no doubt, is the reason why some newspapers bristle with intimations of national danger when, a general election being at hand, it seems necessary to awaken the latent patriotism of voters. Of the others—the great majority, it may be hoped—there are those to whom the ideal of the nation to be served, in some small way or other as one can, makes a constant appeal as steady as that of his lord to the devoted henchman. For some this social service lies entirely outside the sphere of State control; for others it consists in service under, or cooperation with, the State. In all cases it is better done by those who interest themselves in the public administration as it is related to their work, so that they may use it to better effect by working loyally with it. State Insurance, Old Age Pensions, and similar legislation for children are cases in point; voluntary workers disposed to loyal co-operation can do much. No form of loyalty is more honourable than this.

6. Loyalty in the public services.—Persons who are in the service of the State are, of course, the servants of the Executive. Efficient service according to agreement, and reticence in confidential relations, and abstinence from public comment on the policy either of the ministry they serve or of the opposition they may have to serve—these make up the obvious minimum of their bound duties. To reach the maximum that are needed: (1) zeal in the service because it is the service, and (2) self-identification with the instructions under which they work, or loyal adherence to the leader under whom they serve. Under adverse circumstances

1 Since the battle of the Constitution had been fought to a large extent on the people's claim to be taxed only by their own consent, and all powers of taxation were concentrated in the House of Commons, it was inevitable that the Power of the Purse should be stoutly claimed and rigorously retained by the Commons; and this it is, followed, by the logic of events, that no ministry could remain in power that did not command the confidence of the Lower House.
these conditions may fail to be possible in whole or part; in that case the loyal temper still shows itself by putting the best face upon the matter and keeping silent.

It is in the military and naval services more particularly that the idea of service, as to the king direct, counts for most. Here we are back to primitive requirements. The soldier is under bond to risk life and limb—respectfully, and respecting this word is vital to his character—respect without limits—and this, in the last resort, is self-devotion unto death. The good soldier's loyalty, no doubt, is often fealty pure and simple, as, e.g., it certainly is when he has naturally no sentimental tie to the service in which he finds himself. Normally, however, we may take it to be a compound mixed in various proportions, into which enter loyal attachments to his sovereign, his country, his leader, his comrades, and the flag he follows, the last being a symbol of all these things and of his own self-respect as bound to stand or fall by them.

7. Problems arising from the complexity of the modern State.—Casual reference has been made above to non-political loyalty as between friends of a voluntary group or a natural social order. Clearly this is not the primary application of the word, but the tendency to use it in this, rather than in the political, is becoming. This is due, no doubt, to that confusion of ideas as to the political object of loyalty consequent on the complexity of the modern State. Angry politics are apt to use the word 'disloyal' rashly to denote persons who differ from themselves as to the right balance of power in the State and the focus, consequently, of right loyalty. Thus claims have sometimes been made in the name of loyalty to right of attack on the lawfully constituted State, as, e.g., in the case of constitutional reform to which a minority strongly objects. This implies confusion of ideas between the State in some special sense—e.g., apart from the principle of development which it contains—and the State as it is, including its provision of a sovereign authority empowered by law and precedent to make changes in all things, including itself. A somewhat wilful confusion of ideas to the opposite effect is also possible between hostility to the personal and policy of the ministry of the day, which is the normal motive-force that sways the political pendulum, and the question of government which might happen to be led by that ministry, and the majority of which takes responsibility for its doings. The complex character of the modern State lends itself to such confusion of feeling in times of stress and change. Every attempt at large reform divides the citizens into two camps, each vowing loyalty to its own ideal of the State in some particular. This is partly loyalty, which is quite consistent, as the inner circles fully understand, with perfect loyalty to the actual State as by law established—that self-conserving, self-developing organization of King, Lords, and Commons with which we are all familiar. An attractive focus for the loyal sentiment of the simple or careless citizen, who makes no attempt to join issue in the political dialectic, is provided by the presence in the trio of the hereditary monarch in his uplifted place, holding his supreme veto to be used only on the side of the majority in the House of Commons, subject to the delaying powers of the House of Lords. The number of persons in Britain whose sole effective loyalty centres in attachment to the Crown is probably large; it counts doubtless for much also in the British colonies.

8. The focus of loyalty in republican nations.—In republican States this focus is supplied—as far as it is supplied at all—by a more vivid consciousness of the organized nation as a self-governing whole, the ark of whose covenant is the Constitution. The ideal of the republic as the lode-star of loyal sentiment is highly developed in France. The French mind has perhaps a natural genius for the concrete ideal, as indeed is perhaps implied by its tour of speculation on the subject, respect for thought—by means of generic terms that fire the imagination. In the United States of America loyal affection is rather to the composite nation in reference to all its interests, and this is the basis of its own—a wonderful 'Union' of diverse elements, run by a carefully planned political machine, which would do its work much better if all the citizens in every section were more enthusiastic in serving it according to their lights. The idea of the Republic as an organization of free citizens for purposes of self-government seems to have lost for a time something of its pristine freshness and attractive force. At any rate, it is of the United States rather than of the United States Republic that many Americans think as the focus of their political loyalty. This much may be said in their defence, but, of course, in all cases the ultimate end of the political art, and the final object, therefore, of that sentiment which reverses as its proximate end the national institution.

9. The ideal of loyalty.—To be loyal is to be much more than law-abiding. Whether the object be a person to whom we owe duty or affection, the community of persons to which we belong, the institutions under which we live, the service to which we are pledged, or the law—human or divine—by which we ought to regulate our conduct, the loyal man is distinguished from the law-abiding man as one who serves with his whole heart and mind, making of himself a veritable organ of expression for the purpose, or the master, or the mandate, under which he serves. No voluntary sins of commission, omission, or明明ance does he permit himself. We realize him at his time of special effort in a passion of service, every faculty awake and urgent to achieve his end. And in the intervals of passivity his mind is clear and steady—stayed, as it were, on his whole nature as a rock. Self-training to this effect in any school of wholesome service must work like a leaven on character as a whole. Even under questions of judgment which do not happen, as far, as all experience of public service shows, to make a man. But it must be remembered that, without either a morally attractive cause or wise and sympathetic leadership, the loyal sentiment which is the motive of self-training is not adequately evoked. History and literature abound in examples. Three lines of thought, independent of each other and contrasted, may be distinguished in their logical order here. (a) The heroic romance of Western Europe, developing through the centuries from its original sources in Classic lore, deals largely in loyalties within the smaller social sphere, intimate, personal, and glorified by affection. Patrioticy loyal in this dawn of the civilized world has little to do with government, but is steeped in a vivid idealism; the race-life and the home-land are seen as of infinite value, objects in effect of religious faith, worthy of devotion through the obscurity of the moment. The effect is the primitive loyalties—to kindred, friendship, race, and land. Nor is the spirit which forms them dead; it does not die so long as a race either vaguely or clearly believes in itself as having a part of some high in the fulfillment of human
LOYOLA

destiny. This is why the history of any nation true to itself is capable of being treated as the development of an ideal implicit from the first.

(b) For the ideal of personal virtue relative to civic institutions, and for the fundamental theory of the State in the post-Exilic, we go back to the Greeks, and specially to Plato in The Republic and The Law. It is his conception of the individual soul in relation to the State that concerns us here. Plato, in his State, as he teaches, should be built up within the soul. Thus—wielding his thought to our inquiry—we may say that the soul of the loyal citizen is trained, or trains itself, into accordance with the ideals realized in the constitution of the State. Thus he exceeds the law-abiding, and is the loyal, man. Further, it is implied in Plato's thought that all those who have political power the loyal ones are they who cultivate their philosophic attitude to perfect the ideal of the State in the soul, in order that they may labour to develop the organization of the real State and bring it into harmony with the ideal.

This obviously is what the sincere modern statesman does, or thinks he is doing. It is a necessary part of his loyalty that he should spare no effort in its promotion. Moreover, in the modern self-governing State, every enfranchised citizen shares this duty.

(c) Finally, we find in post-Exilic Judaism the same spirit of exactitude as to the law—allegiance to the law embodied in a written code that he who breaks may read. The Davidic monarchy had come to an end; the high priest held the supreme office as chief ruler in the little theocratic State. But from the time that Ezra had read in the ears of the people all the words of the book of the law which he had brought from Babylon, the Jew who was faithful and pious felt that the law was above the priesthood and that he was to obey it and understand it for himself. Externally the Jewish people had many masters after this; internally—in his own mind—each pious Jew spent all his loyal sentiment on the law of his God. This was no short commandment, but the whole law, dealing with conduct in all social relations and with ceremonial ordinances in considerable detail. The Jew who obeyed the law was, in quiet times—except for taxation—to all intents and purposes a free man. The ideal of his State in its essentials was built up in the mind of the properly instructed Jew; if a professing Jew, he obeyed, whether grudgingly, willingly, or loyally, i.e. with his whole heart and soul, according to and to obey more perfectly. In that perfect and inward obedience his freedom was realized, though it was not his quest. The Psalms and the Prophets abound in expressions of this loyalist spirit applied to the Supreme Law:

* Teach me, O Lord, the way of thy statutes; And I will keep it unto the end. Give me understanding, and I shall keep thy law. Yes, I shall observe it with my whole heart." (Ps. 119:13-16).

So runs the Psalmist's typical prayer, and it continues in the same strain, asking for help to go in the path, to incline his heart aright, to turn away from vanity, to establish God's word unto His servant. In NT times, we find in the elaboration of the latter-day Pharisees prevailed, the great Master Teacher set over against it the true doctrine of loyal observance, the fulfillment of the law by being the kind of person who expresses its purpose naturally in all his acts. "I am not come to destroy, but to fulfill" (Mt. 5:17).

A good man out of the good treasure of his heart brings forth that which is good (Lk. 6:45). And later, St. Paul, following the same line of

* "The law of thy God which is in thine hand; it is called in the decrees of the great king Antæsusius (Lær 7:14)."

thought, attains to the vision of the 'liberty of the sons of God' (Ro. 8:23). Thus the cycle of reason on the highest as on all lower planes is complete, from the free man's faith through loyalty to the higher liberty of devoted service to the ideal in his soul.

LITERATURE.—Little of note appears to have been written dealing directly with this subject. (a) It enters into the history of the development of the State more especially as a serviceable motive-force in the medieval growth of the legal system: see Cambridge Medieval History, ii. (1913), ch. xx., Foundations of Christian Society (Origins of the Middle Ages), by F. W. Carruthers, Chivalry, London, 1911; Essay on Romance and Chivalry, do. 1870, containing extracts from Hallam and Sir Walter Scott, are also interesting. (b) The primitive ideal of heroic character to which the political virtue corresponding may be traced in Celtic and Teutonic States and in their later developments, (c) under the influence of medieval chivalry, and (d) in recent years. Sufficient exemplification will be found in Velazquez Sagas and Grettir the Strong, tr. E. Magnusson and W. Morris, Three Northern Love Stories, London, 1879; E. Hult, Chivalrie, the Hound of Ulder, do. 1913; T. Wolleston, The High Deeds of Finn, do. 1910; T. Malory, Morte d'Arthur, ed. do. 1894, and its primitive prototype, the Welsh Mabinogion, tr. Lady Charlotte Guest, do. 1877.

S. BRYANT.

LOYOLA.—St. Ignatius Loyola, the founder of the Jesuits (n. v.), was the youngest of the eight sons of Don Beltrán de Yáñez de Oñez y Loyola. The name Lopez was also borne by the boy, and some time between 12-16, he changed it to Loyola. It is often designated (so, e.g., in AS and in the British Museum Catalogue) as a simple blunder, due originally to the carelessness of an anotary. He was born in the house, or cortijo, of Loyola, in the Province of Guipuzcoa. The year of his birth is disputed. Astrain (Hist. de la Compañía de Jesús, i. 3 ff.), the best modern authority, assigns it to 1491, but others have thought 1495 more probable (cf. Tau's Centurii, in Christi Life and Death, July 1900). The name Ignatius, by which Loyola is now generally known, was not that which he himself used in his youth. Down to 1537 Inigo (not, however, Inigo in the modern mode of speaking, or the proper expression of the inviable signature, but he then began to use sometimes Ignacio, sometimes Inigo, and after 1542 Inigo hardly occurs at all. It seems certain, though early biographers intent on embellishment have glossed over the fact, that the future ascetic passed an unbridled youth, following the course which was then almost inevitable for all who adopted the career of arms (Ascanio, l. 12-16). But at the siege of Pampeluma in 1521 he was dangerously wounded by a cannon-ball, and in a long convalescence which followed he gave himself up to reading the lives of Christ and the Saints, with the result that, after many years and much conflict, he decided to make a complete change in his own way of living. As soon as he was able to travel, he journeyed to the monastery of Monseñor, made a very devout profession, and, after a sort of vigil of arms, divested himself of his knightly attire and went forth to beg his bread. He then took refuge for nearly a year in a cavern near Manresa. The life that he led in this retreat was one of terrible self-maceration, marked by tempestuous inward trials of which he has left a relatively full account in the autobiography. It was during his stay at Manresa that he drew up, at least the broad lines of, his most celebrated work, the manual of ascetical discipline so widely famed under the name of the Book of the Spiritual Exercises. There seems no reason to claim such originality for this system of spiritual training as to exclude the influence of earlier ascetical writers like Garcia de Cineros of Monseñor (see J. M. Besse, in Revue des questions historiques, i. (Paris, 1897) 22-91) and especially Gerard de Zurqien and Johannes Maria Vermonius, brother of Ignatius, of the famous book of (The Life; but, as Watrington has shown, the combination of these materials into one instrument employed for a clearly recognized and uniformly consistent purpose is entirely the work of Ignatius,
and bears the imprint of his eminently practical mind.

It must always be remembered that the Spiritual Exercises is not a book intended merely for reading and reflection, but a manual of training to be put into practice. In particular, it differs from such a work as A Kempis's *Imitation of Christ*, and it would be as vain to expect literary graces in the Exercises as in a proposition of Euclid. After some preliminary considerations, from the mind of man, the exerctant is directed, during a week or ten days and always under the advice of a competent spiritual guide, to occupy his mind with the recollection of his past sins and of the punishment which they have deserved, and to cultivate a sense of shame and sorrow, bringing external adjuncts to bear to deepen the impression—e.g., by depriving himself of light, warmth, unnecessary food, and all intercourse with his fellows. After this preliminary discipline, he is introduced to the study of the life of Jesus Christ, who is set before him in two powerful military parables as a chieftain appealing for volunteers to aid Him in the task of reconquering the world from the dominion of sin and the devil. It is easy to see that Loyola's thought had been powerfully influenced by the still vivid remembrance of the struggle to free Spain from the yoke of the infidel. The meditations of this "second week" of the Exercises are intended to occupy another ten days. By this time it is assumed that the well-disposed exerctant will have been brought to the point of resolution to leave all things and follow Christ if God should make it plain that He was calling him to a life of humiliation and self-sacrifice. A formal election of a state of life is introduced, accordingly, at this stage, and the two remaining "weeks" of the Exercises are intended to confirm the choice so made. In the third week the exerctant is bidden to use much bodily penance and to meditate on the Passion of Christ. In the fourth he is directed to allow the body its need of rest and refreshment, while the mind is occupied with consoled thoughts derived from the consideration of the Resurrection of our Saviour and the remembrance of the joys of heaven.

It was natural that one who laid so much stress upon the study of our Lord's life upon earth should feel the need of coming as closely as possible into contact with the scenes of those events with which his mind was filled. Accordingly, in Feb. 1529, Ignatius set out on a pilgrimage to Jerusalem, living on alms and, to a large extent, travelling on foot. He reached the capital of his country, and thence sailed to the Holy Land, so that almost a year elapsed before he found himself back in Barcelona. That he was specially called to labour 'for the greater glory of God' had by this time become a deep conviction, but the precise manner in which he was to further the work of Christ on earth does not seem to have been made clear to him until many years later (see F. Van Ortyy, 'Manisses et les origines de la Compagnie de Jésus,' in *Annalen de Bollandiana*, xxvii. (1908) 303-418). Still, he seems to have realized, at least vaguely, that to become an efficient instrument for good he required a better education than he then possessed. Thus we find him at the age of 33 learning the rudiments of Latin with the school-children of Barcelona (1524-26), and thence proceeding to the Universities of Alcalá, Salamanca and Paris. A personality like that of Loyola was bound to influence men wherever he went, and it is not altogether surprising that he fell under the suspicion of the Inquisition, on account of the disciples who gathered round him and to whom he imparted what he had learned. (Cf. p. 189.)

The clear and vivid expression of his own austerity of life. At first he seems to have been careless of what men said of him, conscious of his own integrity; but later he found that these suspicions hampered his influence for good, and he went out of his way to court and even to insist upon a judicial inquiry. The proceedings before the Inquisition, so far as they have been preserved, are printed in the *Scripta de Santa Ignatii* (Antwerp, 1589-92), partly on account of the hindrances to his work for souls which these suspicions engendered, partly, it would seem, in the hope of finding companions more in harmony with his ideals than any whom he had yet met. These delays, however, and Ignatius, in Feb. 1528, made his way to the University of Paris. There at the Collège de Montaigu and afterwards at that of Sainte-Barbe he pursued his studies for the priesthood. At Sainte-Barbe he must, at least occasionally, have encountered Calvin, who had studied there himself and still visited it in 1533. For his support Ignatius, owing in part to his unsellish generosity to his countrymen, had to depend upon alms, and during the begging expeditions made in the vacation season to the end he visited London, Bruges, and Antwerp. Conversions and persecutions in abundance were also still his portion, but in Paris he found at last what his heart had always craved—

a group of companions capable of sympathizing in his high ideals, and of an intellectual force which would appeal to those who were to form the basis of his Order. The story of his conquest of Francis Xavier by the constant repetition of the words 'What doth it profit a man if he gain the whole world and suffer the loss of his soul?' is well known. He must, while earlier recruit was Peter Le Fèvre, whose position in the University was already an influential one. To them were added James Laynez, Francis Salmeron, Simon Rodriguez and Nicholas Bobadilla. Laynez and Salmeron were destined to play a great part as theologians in the Council of Trent. Laynez was also to be Loyola's successor as second General of the Society. But even in 1534, when on 15th Aug. these friends met together in the chapel of St. Denys at Montmartre, and at the mass of Le Fèvre, who was so far the only priest amongst them, took vows of poverty and chastity (Astrain, i. 79), there seems to have been as yet no clear design of founding a religious Order. The third vow, which they added to the other two, pledged them only to make the attempt to undertake apostolic work in the Holy Land; but if, after a year's waiting, it was found impossible to obtain passage thither, in that case they were to place themselves at the disposition of the pope, for any work that he might assign them. This it was that actually happened, and the war broke out between the Sultan Sulaiman and the Venetian Republic. There was no longer any possibility of obtaining a passage to the Holy Land. The little band of companions waited the prescribement of a religious Order. The following year, and meanwhile Ignatius himself was ordained priest at Venice (24th June 1537), and he and his companions spent the interval in serving in the hospitals and in apostolic work in many different Italian towns. Eventually it was decided that they ought to address themselves to the pope, then Paul III., and, in spite of contradictions, they had a most favourable reception. It was apparently only at this time that they finally organized their society as a formally recognized religious society living under obedience seemed to take shape in their minds. It was characteristic of Ignatius that he always attached much more importance to the inward spirit than to the written letter. Even after he had recognized the fact that in order to perpetuate their work they must be bound together in some system of rules and must know how to provide written constitutions. But the various stages in the development of the Order now followed rapidly. Already in 1537 the companions had found it necessary to give themselves a collective
name, and they agreed that, if interrogated, they should describe themselves as belonging to the
'Company of Jesus' (Astrain, i. 89). When they had found favour with the pope, the scheme of a
definite religious institute (formula instituti) was drawn up and moved in the benedictine minds
towards ecclesia, 27th Sept. 1540. On 4th April
1541 Ignatius, in spite of his own reluctance, was
elected superior, and from that date until 1550 he
lived himself at Rome in compiling constitutions.

The Constitutions of the Society wereliterally rapid-
ly written by Ignatius, and, as the twelve volumes of his correspondence attest, the official business connected with his office of General steadily increased day by day until his death on 31st July 1556. Ignatius was inter-
ested, and he considered it the duty of his subjects
to be interested, in every form of religious work
which was for the greater glory of God. Although the
Counter-Reformation movement, it would be a
mistake to regard the Order as having been instit-
tuted with the conscious design of counteracting
the religious teaching of Luther and Calvin.
The central idea, which is found alike in the Exercisees
and in numberless passages of the Constitutions,
and which may be taken as the dominant concep-
tion of the Ignatian spirituality, was the
endeavour to assist in and carry on the work of rescue
and sanctification for which Jesus Christ had come
on earth. Loyola was not in any way a man of
brilliant intellectual gifts, but he possessed clear
judgement and indomitable will; and, contrary
to the idea so often formed of his religious descend-
ants, he was by the testimony of all who knew
him a man who was absolutely fearless and straight-
forward in religious conflicts. He was
beatiied in 1609 and canonized in 1622.

LITERATURE.—The first place among the sources for the life of Ignatius Loyola must always be given to the so-called 'Auto-
biography' (by Ignatius, 1556). Thereafter appeared under the title of the Testament
Ignatius Loyola, London, 1590. See also J. Susta, 'Ignatius von Loyola's Selbstbiographie,' in Rittenhagen's Zeits. fur
Eigene Geschichtswissenschaft, xxvi. (1906). A vast number of books and papers which bear upon the history of Ignatius and the Society may be found in the other volumes of the Monuments Historiques Soc. Jes. The biography of Ignatius by
Pedro Ribadeneyra, which appeared originally in more than one edition—the first at Naples, in 1572—is also re-edited in A. Soc. etc. A young disciple of the saint, who knew him and
wrote his biography, is Ribadeneyra. There is an important authority in the 'Translations of this life have been published in French
and many other languages. Of the 17th-cent. biographies of Loyola by far the most valuable is that of D. Bartoli, who had
important original materials at his command. The best available
ed. See Freytag with supplementary notes, by L. Michel
(Bartoli, 'Histoire de S. Ignace de Loyola,' 2 vols., Lille, 1888). Of
other lives the best are C. Geffrot, 'Les Deux siecles d' Ignatius
von Loyola,' Innsbruch, 1845, Eng. tr., London, 1851;
'Steuart Ross,' 'Life of St. Ignatius Loyola,' London, 1857;
Ec. de Mexico, 'Testamento de S. Ignacio de Loyola.' An excellent
short sketch is that of H. Joly (St. Ignace de Loyola,' Paris,
1904, Eng. tr., London, 1905). But by far the most trustworthy source of information among modern works is to be found in
A. Astrain, 'Histoire de la Compagnie de Jesus.' Madrid,
1893; this volume having entirely devoted to the period of the
life of Ignatius. It may be supplemented for French affairs by
H. A. de Nancarrow's 'Vie de S. Ignace de Loyola en France,
Paris, 1910; and for those of Italy by P. Tacchi Venturi,
'Storia della Compagnia di Gesù in Italia,' 2 vols., Rome, 1895
and later editions. See also J. Creisel, Span. Ignatius in Barcelona, 1906.

Few of those who have studied the life of Loyola from an anthropological and sociological point of view have taken the trouble to acquaint themselves accurately even with the facts of
his life, and still less with the geographical
work, very hostile in tone, of the ex-Jesuit M. Mir, 'Historia
terminos domestica; or, the life and person of S. Ignatius,
Loyola, and the Genealogies of the Society.' Halle, 1876, but on this see
Anoetica Hollandica, 1896, 449-454.
Even more fantastic is P. Müller, 'Die Jesuiten von de Jesuiten in der Zeit der Lehenordnung der Gesellschaft Jesu im 17ten Jahrhundert, Munich, 1910.
The only works of St. Ignatius besides his letters are the Spiritual Exercises and the Constitutions of the Society of Jesus.
A facsimile of the first 'Exercitio' of the Exercises was printed in
1590; it is known as the 'Exercitio Spiritualis,' and, as to the
Constitutions, a facsimile of the original Spanish text has appeared, Constituciones de la Compagnia de Jesus, reprodu-
ciones fotocopiadas, Rome, 1898, with valuable illustrative material.

LUCY.—See CALENDAR, CHARMS AND AMULETS, DIVINATION.

LUCRETIUS.—Titus Lucretius Carus was a Roman poet (9?-55 B.C.) who, in the last
century of the republic, accepted the philosophy of
Epicurus, and expounded it to his countrymen in
a noble didactic poem, entitled De Rerum Natura.

1. Life and writings. — Little is known of Lucretius except that he was born
at Carthage, published his first work in 105 B.C. (De Rerum Natur.), and died by
the Eusebian chronicle, under the year of Abraham 1923 (= 94 B.C.):
'Titus Lucretius poeta auctus. Postea annum pulcro in forestam venus, ut singulis libris per annum maxima conscripsisset, qua postea Cicero emendavit, propria alia interiecta a ceteris et, ut videtur, aliud distincta. This strange story of madness and suicide, which
Tenayon has made familiar, is, however, derived ultimately from Suetonius, de Vit. Illust., and, if
it is true, is a most important point of basis, of the
life of (cf. Laehmann on i. 922. p. 63 of his ed.; Munro, ii. 1 f.; Sellar, Roman Poets of the
Republic, p. 238 ff.). But there is an error of four or five years either in the birth year or in the age
assigned to the poet, most likely in the former.

According to Donatus (Vit. Vergy), Lucretius died on 15th October 55 B.C., and not, as Jerome's figures
would imply, in 51 or 50 B.C. This is confirmed by the
cartil aged mention of the poet in a letter of Cicero to his brother Quintus (ad Quint. fr., ii.
ix. 4). This letter, written early in 54 B.C., pre-
supposes the publication of the poem and, presumably, the poet's death. For on one
alone most scholars agree that de Rerum Natura, like Vergil's Aeneid, had never found a final revision
from the author's hand; certain passages, especially in the first three books, seem to be after-
thoughts or additions imperfectly adjusted to their
context. In the death of external testimony, something may be gleaned from the poem itself.

It seems clear that the author was a Roman noble, well acquainted with the luxury of the time (ii.
24-28, iv. 75 ff., 975, 1121) and with the rivalry and ambition of political life (ii. 11 ff., 40 ff., v. 1120 ff.). Strongly impressed by the crime and bloodshed of the
civil wars (i. 29 f., 40-43, iii. 70-74, v. 999 ff.), he deliberately chose, almost alone among the
Romans, a contemplative life (i. 922 ff., ii. 1 f., iii.
1 f.). Further, we see that on an observer a poet's clear, minute, exact observation with a poet's love
256-251, 472), that he had unbounded reverence for
Epicurus, both as a scientific discoverer and as a
moral reformer (i. 9-30, v. 1 ff., vi. 1 ff.), that
Democritus and Empedocles were also objects of
respectful admiration. In Lucan: the poet and
that he never mentions the Stoics or the
Socratic Schools, although sometimes alluding to
their doctrines, 'quod quidam fingunt' (i. 571; cf.
600 ff., 1095, ii. 107-175). He dedicated the work
to Memmius, the patron of Catullus, who was proctor in 68 b.c., and at that time an opponent of Cæsar. He addresses Memmius as an equal; the Lucretian belong to a genus distinguished in the early annals of Rome, and the cognomen Carus is said to be attested for an individual who was a writer on the atomic theory (bk. i. and ii.) and its applications to the relations of mind and body (bk. iii.), the wraiths or images whence he deduces the popular belief in the future life (bk. iv.), the origin of our world, of civilization, and of language (bk. v.), and the phenomena of sky or earth which are supposed to come from the vengeance of the gods, such as thunder, tempests, earthquakes, and volcanoes (bk. vi.). He admits that the system which he advocates is unpopular (iv. 18 ff.), and fears that Memmius will some day fall away (iv. 102 ff.). He therefore provides an antidote. Poetry is the honey at the edge of the cup which shall make palatable the medicine of truth. It is no less obvious that the sympathy evoked in the reader, the effect upon his imagination, is bound up with the philosophic propositions (Cic. de natura deorum, ii. vii. 76). A philosophical argument is ill-adapted for hexameter verse, but the mental power and perseverance displayed in so arduous an undertaking call for unstinted admiration. The difficulties of such a task apart, science, and to overcome them so far as may be at once his merit and his delight. His grasp of his subject with all its perplexities and problems bespeaks a logical mind, and he is eminently successful in discovering and marshalling whole groups of particular facts which lead up to and illustrate a general principle (i. 159–214, 260–328, ii. 333–390, 581–609), in the use of analogies, and in vividly picturing the consequences of hypotheses (i. 215–264, 963 ff., 988–995). It has been conjectured that the poet followed the larger epistome of Epicurean doctrine mentioned by Diogenes Laertius (x. 39 f., 75 [Gianesi, i. 10]). Whether this is so or his choice and arrangement of topics are dictated by his own immediate purpose must remain an open question. In any case the idolatry of the disciple and his close study of the master is evident. Yet with all the possibility of uncertainty that he introduced no innovations in substance, although the exposition, with its flights of imagination, its flashes of feeling, and its insight, is not less rich and varied. It is directly to those parts of the system only where Lucretius fills a gap in the scanty outlines left by Epicurus himself or gives a fuller treatment of particular doctrines (see preceding note).

2. Atomic theory. Lucretius begins by advancing the two propositions (1) that nothing can arise out of nothing, and (2) that nothing can be annihilated, which he proves separately from the order and regularity of the processes of nature, as especially seen in the generation of the species of organic life. The obvious objection that we cannot see the particles dispersed when a thing is destroyed is met with by analogies from the potent invisible agencies at work in the world. The existence of empty space (vacuum or void) is then proved from the impossibility of otherwise accounting for all the things we experience. The opposite view, that the world is a plural, is next refuted mainly by the consideration that condensation and expansion no less than motion imply the existence of a vacuum. Next, the existence of any tertium quid other than body and empty space is denied. All other nameable things, even time itself, must be regarded as the qualities (whether essential properties or transient accidents) of these two forms of reality. Body is then divided into simple and composite, according as it is or is not conjoined with void. The composite are what we call things (res generis), the simple bodies are atoms (materias, corpus corpora generatil, semina rerum, corpus corpora corpora). To postulate the existence of atoms is to deny the infinite divisibility of matter. And here again Lucretius employs his favourite negative procedure, following out the consequences of infinite divisibility to absolute annihilation, which he has proved impossible. Infinite divisibility would be incompatible with the natural laws (fodera naturae) which regulate the production of things and the permanence of organic species; for, unless the constituent atoms of things are unchangeable, there will be no uniformity of nature, and it will be uncertain what can and what cannot arise. Summing up the arguments and collecting what is said elsewhere in the poem, we arrive at the following conception: an atom is a little hard kernel of matter, quite solid and therefore immutable and indestructible (since heat, cold, and moisture, the destroyers of the composite things about us, cannot enter where no void exists). Each atom is a distinct individual ("sola pollicita est suavilis individua"), a part of the whole, a part of all parts, of which, however, it is not compounded, for they have no independent existence; hence it has size, shape, and weight, but no secondary qualities, no colour or temperament, no sound, no smell, no sense in the different qualities of composite things being due to the variety of atomic shapes, which, though very great, is not infinite. After refuting the divergent views of Heraclites, Empedocles, and Anaxagoras (l. 622–920), Lucretius proves by a variety of arguments that both matter and space are infinite, and refutes the opposing view that all things tend to the centre of the universe and the assumption of antipodes which it involves. He subsequently deduces from infinite space and infinite matter an infinite number of worlds, which come into being, grow to maturity, and ultimately perish (ii. 1021 f.).

3. Climax or swerving. Atoms are in constant motion. They move through space (1) by their own inherent motion, and (2) in consequence of collision. Some atoms of intricate shape form after collision, that is, by coming in contact, the things we call hard; others rebound to greater distances and thus form softer substances; others, again, do not unite at all, but wander freely through space. It is his own swerving or accidental motions (mutus intestinum) atomic groups or molecules increase in complexity and size until they reach the limits of visibility, like motes in the sunbeam (v. 125–141). It will still be our task to understand the relation between these internal atomic movements and the motion of the group of atoms as a whole, if we take Gianesi's admirable illustration (l. 111 ff.); as a swarm of insects moves slowly through the air in one direction, the individual insects of which it is composed are executing all manner of far more rapid movements, some of them in divergent or even opposite directions. The first motion of the swarm of insect forms, is inconceivably rapid and uniformly in the same downward direction; the apparent upward motion of some sensible things is shown to be not inconsistent with this. It will be certain times and places atoms, travelling downwards by their own weight, and therefore in parallel lines, swerve a very little from the perpendicular. The least possible change of inclination must be assumed, although it is imperceptible to the senses. Otherwise atoms would never collide, so as to unite and give birth to things, for in empty space, where there is no resisting medium, heavy and
light atoms fall with equal velocity, so that the heavier would not overtake the lighter. There is a further proof of this in the consciousness of spontaneous initiative, the power by which each living creature generates what will leads, the somethings which struggles and resists when we move involuntarily under compulsion (I. 216–238).

For our spontaneous movements originate in sole atoms, and their existence at all can be explained only by assuming a certain instability or contingency in the movements of such sole atoms. Thus the mind does not feel an internal necessity in all its actions, nor is all motion linked together in an unceasing chain of cause and effect (as the Stoics maintained), but atoms initiate motion, breaking through the decrees of fate. It will be seen that the postulate of uniformity—the decrees of nature which govern the birth and growth of organic species—to which appeal is so often made in the poem, is subject to certain limitations of which our information is imperfect. This being the case, it is not altogether strange that, while M. J. Guyan deduces from the 

climata universal contingency in the Epicurean scheme of nature, T. Gomperz and Usser incline to regard it as no more than a consistent determinism in opposition to the fate (Usser, I. 1235).

I. 4. Isonomy.—The atomic motions which go on now are the same as they have always been and always will be. What they have produced they will equally produce; for the essence of matter being constant, there can be no complete change of conditions and no change in the order of nature. The main distinction is between motions which tend to foster birth and growth and those which tend to destroy, whether the aggregate formed be inanimate or a organism. The forces of production and destruction alternate preval (ii. 1105–1140), but we always produce, during which time we may with a sense of the whole universe, the result is equilibrium, as is an indecisive battle (ii. 569–580, v. 380–415). This principle of equable distribution is best known from Cicero, de Nat. Deor. t. xix. 50, but undoubtedly it was familiar to Lucretius. Combined with the infinity of atoms of every shape, it guarantees that fixity and perpetuation of species to which so often appeals as a fact. That in an infinite universe the possible is also the real is the premise underlying some of the astronomical portions of the poem (cf. v. 526–533).

I. 5. Psychology.—The poet undertakes to prove that the senses, at least, part of a man as the hand or foot, and has therefore to refute the theory once current and last represented by Aristo-

toxenus (iii. 130–132) that it is a harmony or immaterial relation subsisting between corporeal elements or parts of the body. Though a single nature, it consists of two parts, mind (animus, mens) and vital principle (anima), the seat of feeling, the former lodged in the breast, the latter diffused all over the frame. The single nature which mind and feeling unite to form, is like everything else, material—an atomic aggregate formed of the very finest atoms of (1) wind, (2) heat, (3) an invisible medium, a medium in which sensation begins. The preponderance of one or other element in the single substance compounded of the four explains the diversity of character and the variety of forward and slow in animals and men. Soul and body, like mind and vital principle, form one whole, so constituted that neither can exist without the other (iii. 94–416), and this is enforced by twenty-eight arguments against the immortality of the soul (iii. 417–829), whence it follows that man's fear of death is unreasonable. The impassioned discourse on death in which these conclusions are driven home (iii. 839–1094), while sharing the defect of all attempts to 'make fear
dig its own false tomb,' is yet by its moral earnestness and depth of feeling one of the most impressive passages in literature.

The atomist theory of perception is developed at great length in bk. iv. Images or films (αἰσθήματα) are continuously parted from the surface of things and streaming off in all directions, but we see them only when and where we turn our eyes to them. An image rushes before it the air between it and the eye. This which is a certainty in Isonomy or contingency in the movements of such sole atoms. This takes place almost instantaneously; we do not see the images singly, but there is a continuous stream of them whenever an object is seen (iv. 239–258). The theory of images is applied to those cases where the senses seem to be mistaken. The true square tower at a distance looks round, because the images are blunted in their long journey through the air. In this and similar instances the eyes are not deceived. What they see they rightly see; it is the mind that errs in the inference which it draws. The poet lies in the opinion which the mind superimposes upon what the senses really perceive. The sceptic contradicts himself. For how does he know that nothing can be known? By what criteria he distinguishes knowing from not knowing? The senses are true, all equally true, for each has a distinct power and faculty of its own which the others cannot challenge or convict of error, nor is a single sense at one time more certain than another. The mind itself depends upon the senses, must be false if they are false, and with the overthrow of reason life itself would be impossible (iv. 469–521). The mind, moreover, receives its impressions from images, but these images are finer than those by which we see, hear, taste, and smell. Moreover, they do not all come directly from the surface of actual objects; sometimes images are formed by our thoughts, or, as a centaur, or they may be spontaneously formed by atoms in the air. In sleep, when and memory are inactive, images still find their way to the mind, writhings of the departed being one special kind. Dream images appear to move because some are coming, some going, in continuous succession, so that they appear to be the same in different postures. In the least sensible time many times are latent in which true things appear. Unless attention is directed to them, they pass unheeded. This explains why we think of what we will, and different men have different thoughts ...
produce. The monstrous births perished because they could not grow up and continue their kind. Many species must have died off, because they lacked natural weapons of defence or could not be utilized as much as man. But the union of two incompatible natures in the fabled creations—centaurs, chimæras, mermaids—is impossible. At no time did they exist (v. 878-924). This account mainly follows Democritus, but in the primæval monsters the influence of Empedocles is discernible.

7. Anthropology.—Civilization is the product of a long course of development. The sketch of man's gradual advance from primitive savagery (v. 925-1457) is not without interest and value even in the present day when so much fresh material has been accumulated and is continually enlarged. Men at first were harder and more like the brutes than now. Knowing nothing of tillage, they lived on acorns or berries, without fire, clothes, or houses, without law, government, or marriage. Their foes were the beasts, from whose fury they suffered. Civilization began with the use of nuts and skins and the ties of family life. Then came compacts with neighbours for friendship and alliance; and then speech, a natural impulse quickened by habit. The next step was the discovery of fire from lightning or the friction of branches. Further improvements led to the building of cities, the allotment of lands, and the discovery of gold. With the origin of political liberty, comes the body of religion. Another important discovery was the use of metals, especially iron and copper, which were accidentally discovered when the burning of woods caused the ore to ram. Hence came improvements in warfare, the extension of agriculture, and the invention of weaving. The art of music followed. When a knowledge of all the useful crafts had thus been attained, progress was steady.

8. Religion. —The popular faith, with its whole apparatus of prayers, vows, offerings, and divination, had been rejected not only by Epicurus, but by almost all philosophers since the feud between poesy and philosophy began with Xenophanes and Heraclitus. Lucretius is bitterly hostile; his indignation at the evil wrought by religion glows throughout the poem as fiercely as in the famous description of the sacrifice of Iphigenia (i. 80-101). But it is not merely popular superstition that he condemns; he is equally opposed to the philosophic monotheism or pantheism of Plato and the Stoics, and to the hyper-religious ‘natural theology.’ The negative propositions which he maintains are all-important. (1) There is no purpose in nature; the argument from design is dissallowed in advance; adaptation is the product of experience.

‘nihil ideae quantum naturae in corpore ut uti possessum; sed quod naturae, id procerat tumum’ (v. 834 f.).

The bodily organs were not given in order to be used. On the contrary, the eye preceded seeing, and man had a tongue before he could speak. Thus the activity of the senses is explained on mechanical principles without assuming final causes, and a similar explanation holds for all other activities, nourishment by food, and growth, walking and locomotion generally, sleep and dreams. Hence (2) there is no divine providence. The course of the universe is protected and guarded, and that it is the most fitting example of what we mean by insensible and insinuate (v. 110-145). (4) The world was not created by the gods. What could induce them to take such trouble inconsistent with their majesty? Or, supposing them willing to create, whence came their notion or preconception (τρόπων) of man before he existed? (v. 181-186)? On the contrary, the world and all that therein was good, bad, and neutral, all union of causes through the fortuitous concourse of some part of an infinity of atoms in some part of infinite space (ii. 991 f., v. 187-194). But negative metaphysics is not all. On the positive side the existence of gods is proved by the agreement of all nations, although the fables and legends told of them (ii. 600 f.) must be rejected. The gods are blessed and immortal. They need nothing of mankind, bestow no favours, take no vengeance (ii. 646-652). Their abodes, which in fineness of structure correspond to the impalpable nature of the divine body, too delicate for our sense to perceive, are in the intermundus (a word not used by the poet), or lucid interspaces between the worlds. They touch nothing that is tangible for us, since that cannot touch which cannot admit of being touched in turn (v. 148-152). There is a significant reference (iii. 819-823) to the conditions under which alone immortality is possible, namely the absence of destructive forces or their being kept at bay, or being neutralized by divine forces (see Giussani, i. 259). Not content with proclaiming the true doctrine, Lucretius goes on to explain how the false arose. The belief in gods arose from the images seen by the mind in waking hours and still more in sleep. Such images were seen, not of mere size, beauty, and strength. As these shapes were ever present, and as their might appeared so great, men deemed them to be immortal and blessed, and placed their abodes in the heavens because the unexplained wonders of the heavens had already excited awe. Thus all things were handed over to the gods, and the course of nature was supposed to be dictated by their nod. This fatal error sprang from the instinctive fear which associates with divine vengeance the calamity and ruin wrought by storms and earthquakes (v. 1101-1249). Lucretius more than once exults at the overthrow of this delusion (i. 62-69, ii. 1090-1104, iii. 14-30). On the other hand, it is obvious that he has gone too far in his concessions to anthropomorphism. The criticism which he successfully applies to the incongruous creations of legend, centaurs, and chimæras would, on his own grounds, be just as valid against the blessed immortals. The superhuman beings whom he in fact represents as buttressing the universe (v. 1122) are no more a help than are the pantheistic divinities purified, refined, and rationalized.

9. Ethics.—In a poem professedly dealing with physics we hardly expect to find a systematic treatment of ethics, yet there are enough short notices or digressions in which the subject appears (ii. 16-61, 172 f., iii. 14-16, 439 f., 978-1023, v. 9-31, v. 9-41) to establish the author’s complete agreement with the teaching of Epicurus. The end is pleasure—in other words, to secure that pain hold aloof from the body, and that the mind, exempt from cares and fears, feel its own true joy (ii. 16-19). Whoever has been born must want to continue in life so long as fond pleasure will keep him (v. 177 f.). Gratification of desires which, though natural, are not necessary affords no true happiness. The tortures of conscience make a hell upon earth. Tantalus and Sisyphus are like are types of men tortured in this life by various lusts and passions. The pangs of remorse are emphasized as well as the constant apprehension that, though the wrong-doer has lìthereto eluded gods and men, he cannot keep safe. ‘Whoever shall then, by his vileness foully, / Epicurus is extolled as the saviour who, seeing the miserable condition of mankind, partly from ignorance, and partly from mistaken fear of the gods and of death, proclaimed those truths which
LULLISTS

alone can bring salvation; that death is nothing to us, that the gods do not interfere with the course of nature. The frequent reference to temporary concourse of atoms, and man himself a still more ephemeral combination in that world. These are the doctrines which, he thinks, will redeem mankind. But, while master and disciple are long and loudly in the literal acceptance of these propositions, there is a marked difference in the spirit of their teaching. Starting with the proposition 'There is no joy but calm,' Epicureans deduces his ideal of a simple life, to which only he is refused. His knowledge is an anastere hedonism; the pleasure which is the universal law and condition of existence is not indulgence, but peace and a pure heart (v. 18). From all this the order makes quite demands of the soul, which rises, one might almost say, to the intensity of religion. Under this aspect, his earnestness has its counterparts in the Divina Commedia or Paradise Lost.

LUGH.—See CELTS, FESTIVALS AND FASTS (Celtic).

LULLISTS.—Among the figures of the 13th cent., none is more picturesque, none more representative of the great forces, spiritual and mental, of the age than Raymond Lull, 'The Illuminated Doctor,' logician, philosopher, scientist, poet, missionary, and martyr. He was born at Palma, in Majorca, in 1256, when the first spiritual enthusiasm of the Franciscan movement was dying away. During his boyhood the spiritual Franciscans were making desperate, but vain, efforts to maintain the simplicity of the original vow of poverty which had been the joy of their founders. Human nature made it inevitable, however lamentable, that an Order should possess property. Another deviation from the singleness of mind of St. Francis was, happily, inviolate also. During his life a brother was not allowed to possess a wife, and learning seemed as alien as riches. But true devotion cannot be permanently content without the offering of the realms of mind as well as of soul and body. Thus was born the writings of Roger Bacon and Raymond Lull, members of Franciscan Orders of the next generation, an enthusiasm for learning linked with an enthusiasm for Christ as intense as that of Brother Giles and Sister Clare. These are the figures who are setting amid the dim foundations of the great Palace of Science, blinded by the suspicion of the narrow-minded orthodox, strenuously maintaining the nobility of the offering of science, knowledge, and thought at the foot of the Cross. They were fervent lovers of Christ who stood at the parting of the ways of Scholasticism, still recognizing and using its words and its processes, but adding the facts and inferences of modern science. Their lives were enthusiastic fulfillments of the command, 'Thou shalt love the Lord thy God with all thy mind.'

Lull was seneschal of the household of James II. of Majorca, and till the age of thirty he lived the ordinary life of a libertine noble. Suddenly conscience was aroused, and in his chamber, as he was writing love poems, he beheld the vision of Christ on the Cross, and heard Him say, 'Oh Raymond, follow me henceforth.' Then came the agony of conviction and the determination to forsake the world and follow Christ entirely. Two aims at once filled his life—to gain martyrdom, and to convert to Christianity the Saracens around. He would use no carnal weapons; he would go to the Holy Father and to Christian kings, and induce them to establish colleges for the intellectual education of the unbelievers. For himself he would write a book so irrefutable as to ensure the conversion of Saracen, Jew, and heretic to the Catholic faith. A sermon on the pronunciation of St. Francis of Assisi completed his resolution; he left wife and children with sufficient for the necessities of life, sold all else, and went forth in earnest at the new life. He kept a cell for himself on Mount Randa, and there during nearly ten years he sought to fit himself for his work. By the advice of his friends he chose this solitary study in preference to the University of Paris, the centre of the intellectual life of Europe. He learnt Arabic from a Saracen whom he bought as a slave, and narrowly escaped being murdered when this instructed Muslim realized the object of his study. The crown of his long preparation came when eight days of profound meditation were succeeded by an illumination which Lull himself always claimed as a direct divine inspiration. Under this impulse he wrote the Book of Fargno, the first of Lull's works, and the most associated with his name. By its methods he felt sure that the truths of Christianity could be so irrefragably stated that the infidels could not possibly refuse acceptance of them. Nothing is more striking in the subsequent history of the philosopher and his followers than the absolute conviction, which they all shared, of the direct divine origin of the mode of reasoning here initiated. The assertion is crystallized in the title 'The Illuminated Doctor' by which he is always known among succeeding generations of Lullists. The woodcuts adorning the great folios in which Salzinger has issued his works all represent the divine beam of light shining down upon him. Enthusiastic disciples confidently appeal to the logical power of the processes as more than possible to effectuate successful results. The unbiased judgment of our own day fails to discover the same immense value or power.

It may be briefly characterized as a mechanical method by which all possible subjects may be subjected to all manner of questions, and in which an empirical, and learnings be obtained. The apparatus in its original form is a number of concentric circles divided into compartments denoted by letters of the alphabet. These letters denote in different circles different ideas. Thus we have in one nine subjects God, Angel, and Devil, one set of the Negative, the Elementary, the Instrumental. In another circle we have nine subjects: Goodness, Wisdow, Power, Wisdom, Will, Virtue, Truth, Glory. In another we
LULLISTS

have nine questions: Whither? What? Whence? Why? How large? At what? Where? When? Where? One of these circles is fixed, the others rotate, and we thus obtain a complete series of combinations, first of questions and then of statements. The precise form of the operation varies; in some works we have triangles of various colours intersecting each other. Elsewhere we have a tree with roots, branches and twigs, each labelled with some term contracting from the general to the particular, or vice versa, with each step corresponding with the steps of the apparatus. But in every case the general idea is the codifying of every possible statement on all subjects. The method, intended first exclusively for Christian apologetics and then for sceptical thought; through Maimonides (p.v.) and Michael Scot it gained the ear of a section of Scholasticism and won over as votaries many in the University of Paris, the important centre of the world. In attempting to save its orthodoxy it asserted that what might be true in faith might be false in philosophy. This was the special heresy against which Lull spent his life; the authorities at Paris eagerly sought his assistance in combating the heresy which threatened to capture the whole University. The contest was so keen that Lull himself was obliged repeatedly to obtain certificates of his own orthodoxy. At the Council of Vienne Lull worked hard, though apparently without success, to secure an edict forbidding the teaching of Averroism in Christian schools. It lingered for a couple of centuries longer, more and more tending to materialism and finding its chief sphere in the medical school of Padua. Lullism always provided its strongest foes.

When nearly eighty years of age, Lull set off on another missionary journey to Africa; his fervid exhortation roused the fury of the Muslim mob, and he was stoned to death at Bugia on June 30, 1185, thus gaining the development of the common people: his great religious romance Blanquerna was written in Latin, Arabic, and Catalan; his ecstatic hymns entitled Hours of the Virgin, with many others of his works, in Catalan alone.

Round Raymond Lull there has gathered a misty halo of romance and unorthodoxy through his incursions into the world of alchemy. His Franciscan supporters are eager to free him from this charge, which has repeatedly brought him within danger of the censure of the Church. He is stated to have learnt from Arnaud of Villeneuve the secret of the philosopher's stone. There is a tradition, exceedingly doubtful but not entirely discredited, of a visit to England to make gold for Edward II. in return for his help against the unbelievers. Certain it is that a number of works on alchemy are assigned to his name which were obviously not written by him. It is proved that on Lull has been fixed the discredit of certain works on magic by another Raymond of Tarascon, a renege converted Jew, who were condemned by Pope Gregory XI. But we must remember that alchemy was the beginning of natural science, that the early alchemists were religious men who commenced their studies to show the divine power of God; and that the man who believed that he had discovered a universal transmuter of the elements of thought might not unnaturally aim at a universal transmuter of the elements of matter. The pious idea was that there is one great principle running through the universe, since it is the expression of one divine mind. Scattered among his acknowledged writings are repeated references hinting that he thought much on alchemy, though he did not expect impossibilities from it. We can well believe that he wrote as well as thought on the subject. Indeed, Roger Bacon (de Emendandis Scientiarum, bk. iii.) refers to the fact of such writing.

The last period of Lull’s life revealed a foe within the Church against which he fought unceasingly. Round the name of Averroes (Ibn Rushd, † 1198; see AVERROES, AVERROISM), the Arab interpreter of Aristotle, had been gathering the thoughts and theories of Muslim, Jewish, and Scholastic successors, diverging gradually into the banishment of the Deity beyond the reach of prayer or care for the individual, the denial of individual immortality, and ultimately even asserting the identity of the soul of all men. Averroism thus, while using the name of a single devout Muslim, was really the composite deposit of heresies or heretics. His own islands, Cyprus, and Armenia certainly saw many converts, and the ban of death did not prevent his returning twice to Africa. The accumulations of his much wider travel need further proof.

Lull’s scheme for colleges for the study of missionary languages bore fruit for a time in a foundation by his own king, in 1276, of a college for the training of missionaries in Majorca, but it was not until the Council of Vienne, in 1311, that papal authority was given for schools for Hebrew, Greek, Arabic, and Chaldee in the Roman Curia, Oxford, Bologna, Salamanca, and Paris. It is interesting thus to realize that in Lull’s enthusiasm we have the germ of the Hebrew professorships at our English Universities, as well as the broader ideas of missionary education which he and Roger Bacon alike impressed upon the Church. The same instinct which sent Lull to talk to Saracens in Arabic led him to overlap the limits of tradition and to write many of his works, both philosophical and theological, in his native Catalan. He was a pioneer in that movement which, by entrusting to vernacular languages thoughts hitherto imprisoned in the Latin of the learned, gave a new dignity to national speech, and tended to the development of the common people: his great religious romance Blanquerna was written in Latin, Arabic, and Catalan; his ecstatic hymns entitled Hours of the Virgin, with many others of his works, in Catalan alone.

Round Raymond Lull there has gathered a misty halo of romance and unorthodoxy through his incursions into the world of alchemy. His Franciscan supporters are eager to free him from this charge, which has repeatedly brought him within danger of the censure of the Church. He is stated to have learnt from Arnaud of Villeneuve the secret of the philosopher's stone. There is a tradition, exceedingly doubtful but not entirely discredited, of a visit to England to make gold for Edward II. in return for his help against the unbelievers. Certain it is that a number of works on alchemy are assigned to his name which were obviously not written by him. It is proved that on Lull has been fixed the discredit of certain works on magic by another Raymond of Tarascon, a renege converted Jew, who were condemned by Pope Gregory XI. But we must remember that alchemy was the beginning of natural science, that the early alchemists were religious men who commenced their studies to show the divine power of God; and that the man who believed that he had discovered a
hieracy in 600 passages taken from Lull’s works. Franciscan apologists assert that Eymeric was a disciple in the doctrine of the Immaculate Conception, which was the special enthusiasm of the University of Paris and was warmly advocated by Lullists, and that this was the seed plot of Eymeric’s opposition. The Inquisitor asserted that 290 Lullist errors had been condemned by Gregory XI. in 1376. This bull has never been found, though the papal archives have again and again been searched. In 1439 the Punic Lull, Paris, 1900 (edifying but inaccurate); S. M. Zwemer, Raymond Lull, First Ame of the Modern, New York, 1902; and W. T. A. Barber, Raymond Lull the Illuminated Doctor, London, 1908. For further bibliography see L. Cho- narta, Repertoire des sources hist. du moyen age, bio-bibliographie, new ed., Paris, 1905-07, cxxxix-393.

LUMBINI.—A pleasure, or small wood, mentioned in Pali records as the birthplace of the Buddha. It is now occupied by the shrine of Rummimuk in Nepal, approximately in 33° 20' E., 27° 20' N., about four miles north of the frontier between the British possessions and the Nepalese Tarni, and half a mile west of the river Tilar. The references to it so far traced in the N. Indian Pali books are only three. One is in an old ballad, containing the prophecy of the aged Asita about the infant Buddha, this Asita story being the Buddhist counterpart of the Christian story of Simeon. The ballad is certainly one of the very oldest existing Buddhist documents, and must be earlier than 400 B.C. It is now included in the anthology called the Sānāvītika, which was published in 1908 at Venice, and it states at verse 783 that the child was born in the village of Lumbini (Luminbeingy qame). The other two references are in the Kathā Paṭthā, composed in the middle of the 3rd cent. B.C. by Tissa, son of Moggallana, a monk and director, and in the Pali Nīlapiṭakikā, or Repertoire for PTS, London, 1894-97, pp. 97 and 559) it is stated that ‘the Exalted One’ was born at Lumbini (Lumumbiṣyā jāta).

Our next point of information is the inscription found on a pillar in Dec. 1896. The pillar had been known for years to be standing at the foot of the small hill on which the tiny shrine is situated, but the fact that the word ‘village’ or ‘monastery’ appears in the inscription is confirmed by the excavation. The inscription is in old Pali letters, and in a dialect which the present writer would call Kosalī—a dialect so nearly allied to the literary Pali of the canon that one might prefer to call it Pāli. The translation is as follows: 1

There are slight differences in the translations by various other scholars, but not as to the double inscription on the fact that the Buddha was born at the spot where the pillar was erected. 2 The letters are beautifully clear, each being nearly an inch in height. When the present writer made a copy of them in 1900, though they had then been three years exposed to the light, they seemed almost as if freshly cut. In the dim light of the cell above, containing the shrine, each discerned a slight relief representing the birth-scene. But the Brahman who claims the right to the petty income arising from the pence of the penitent refuses any proper examination of it. So far as a cursory inspection of the gold of the inscription, it seems to be much later than the inscription.
the conversation between Asoka and his guide Upagupta on the visit recorded in the inscription. Perhaps the tradition that Upagupta, very possibly another name of the 
Katha Vattlha, accompanied him is historical. Though its date is unknown, it must be at least five centuries later than Asoka, who spoke, of course, the language of his inscription, and would not have understood the words here put into his mouth.

Still later are certain references in the Pali commentaries written at Kachchhipura 1 or Anuradhapura 2 (q.q.v.). In order to explain how the birth took place in a grove, they say that the mother, on the way to be delivered among her own people, was taken with the pains of delivery half-way between Kapilavatthu, her husband’s home, and Devadaha, her father’s home. This is quite probable; but, on the other hand, it may have been suggested by the meagre facts recorded in the ancient books. Neither the Buddhist Sanskrit writers nor the Pali commentators could have understood the long-buried inscription even had they known of its existence.

It is very interesting to see that this spot, so deeply revered by all Buddhists, should have retained on its site for centuries traces of neglect and desertion. Watters says that ‘according to some accounts 3 it had been named Lumbini after a great Koliyan lady who had dedicated it to the Buddha as a place of pilgrimage. There are other instances of a similar kind; but, unfortunately, Watters gives neither name nor date of any of the Chinese books to which he refers. We know that both Skākyas and Koliyās found difficulty in pronouncing the trilled r. Perhaps this was true of all Kosala. The inscription at Lumbini, for instance, has kōja for reja; and Lumbini itself is often written in Pali MSS with a dotted r. which may represent an untrilled r. Thus Rumminḍi stands for Lumbini Devi, the goddess of Lumbini. But that goddess was not really a goddess at all, nor even Lumbini, but only the mother of the Buddha. We have no evidence as to when or how the transformation took place. And in face of the stubborn opposition of the Nepalese Government, and of the Brahman who has this fact in his favour. Thinks there, is very little hope of any further excavation at the site to throw light on this question, or to explain the divergent statements of Chinese writers as to what they saw at the place.

LUNACY.—See INSANITY.

LUSHAI.—The Lushais are a composite community, consisting of those groups which were absorbed and reduced to a more or less complete unity by the skill and sagacity of the Thanga chiefs of the Lushai clan in the last century. They practise jhuming, a form of cultivation which involves constant moves from one site to another. In this fashion is found for some at least of their peculiar characteristics.

Each village is a separate State ruled by its own chief, who usually belongs to the Salai clan, whose talent for government has made them the masters of nearly the whole of the area now known as the Lushai Hills. The sons, as they reached maturity, were provided with a wife and followers, and were sent forth to found new villages. The youngest son was the head of the clan, whose ascendency in the village administration, and each village possesses, in addition to the council of elders, officers to settle where the jhumus are to be made, and also a village crier, and puthion (lit. ‘much nother’). The population of a Lushai village consists of members of different clans and tribes brought under the unifying influence of the predominance of the Thanga chiefs. Their religion, therefore, exhibits traces of a mixed origin; there are features in it which recall some of the more notable characteristics of the systems of their congeners, east as well as in the more distant north, all of whom speak cognate dialects.

The Creator is a spirit called Pathian, beneficent, but with little concern in the affairs of men. Subordinate to Pathian is a spirit Khuavang, whose appearance to men causes illness. He is also spoken of as a personal genius—an idea which is still further elaborated in the belief in the mivengtu, the watchers of men. Each man has two souls, thlarao, the one wise and the other foolish. One mivengtu is good and the other evil. The huai are demons inhabiting water and land, are all bad, and are the causes of all sickness and misfortune; the lushi are spirits of particular animals, whom they control; the spirits of the dead need constant propitiation and receive offerings of firstfruits. Each clan has a spirit, or clan deity, sakhu, to whom the初级 chief is addressed by the pathian (who may be a member of the clan), and identity of chants and ritual is a sure proof of membership of the clan.

The rites performed for the purpose of addressing some definite spiritual being may be separated from the rites which seem to be efficacious without the intervention or mediation of any definite spiritual being. The sakhu chants recorded by Shakespeare are accompanied by sacrifices of a sow. The sacrifices to huai, supposed to frequent houses and villages, are various, new a pig, new a cock, and sometimes a goat being offered. Three sacrifices should be performed after marriage. Dreams afford an indication of the necessity for the performance of one of these rites. Temporary tabus, closely akin to those so common in the Naga area, are part of the appeasement of the clan deity appearing the huai of the woods and waters is not dissimilar, but some of the most efficacious rites are the patent of certain clans. The villages close their gates on the occasion of an epidemic of cholera, so as to exclude all visitors from the infected area, and frighten away the demon causing the sickness by erecting a rough gate across the road leading to the distressed villages, which they man with straw figures of armed men; they suspend from the gateway the portions of the dog sacrificed in these emergencies, which are reserved for the demon—as a rule, the extremities with the heart, liver, and entrails. Some of the birth-rites are addressed to huais, while others are seemingly of almost automatic efficacy. In the second category of rites are those which are performed to bring luck to a straying soul (for more sometimes one of their souls, to produce children. To afford protection against sickness, to secure good hunting and to ascertain the luck of the intended chase, to benefit the crops, to obtain power over the spirits of animals and men killed in this world, and to secure freedom from the ghost of the slaughtered enemy. The series of five feats which affect the future life in important ways are religious rites of a specially interesting nature. Full details of the rites are accompanied by a regulation requiring that the social group concerned, be it a household or a whole village, shall abstain from all but the most
LUTHER

necessary work, and shall not leave the prescribed area. The Blacksmith's forge requires sanctity, and is a place where persons who have accidentally come into contact with any noxious influences may take sanctuary and be purified. The priesthood consists of the psalmists and the members of special classes. Any one can obtain by purchase the idol, songs or charms which form the stock-in-trade of the psalmists, whose success must depend largely on luck and short memories of his faith.

The first man, Pupawla, or the ancestor Pawla, possibly in revenge for his death, stands armed with bow and pellets at the entrance to the spirit world. Each has the thangkhun, i.e., those who have performed the series of five rites (fasts, as they are sometimes called) in this world, none can escape his aim. Yet he spares still-born children or those who die young, for he heeds their plea that, had they lived, they too might have performed the due ritual and so been free to enter with the thangkhun into Pielri, where all is pleasant. Those whom Pawla wounds go to Mitti Khua. Their wounds swell painfully for three years, and for a like period the scar remains. Thereafter they die again, are born as butterflies, and then die again, to reappear as dew on the ground. From them they ennoble the lives of a man, and others are reborn as human children. In addition to the personal advantages of the thangkhun rites, the man may take his wife with him to Pielri, whence there is no return to incarnation, and he may wear certain special clothes, build a verandah at the back of his house, enjoy a window in his house, and put an additional shelf near his bed.

The Lashris are a superstitious people, and believe firmly in witchcraft; not very long ago, to test the efficacy of the belief that the victim of witchcraft would surely recover if he could but taste the liver of the wizard, they killed three whole families who were thought to be bewitching an aged chiefness, cut the livers of the wizards out, and carried them back, only to find that the old lady had died in their absence. Naturally le mawern saumun is an expert at the black art, but their neighbours return the compliment to them in full.

Certain persons, especially women, can put themselves into a trance (zawl) and commune with Khnavang, from whom they acquire information as to the particular sacrifice required to cure the sick. The process of divination employed on these occasions requires the use of an egg and a shallow basket of rice, in which appears the footprint of the animal to be sacrificed. Possession by the spirit of a wild animal (khawring) is contagious and hereditary, and takes the form of passing from the hostess to another woman, who speaks with the voice of the original hostess. The belief in the power of men to assume the form of a tiger is common.

LUSTRATION.—See PURIFICATION.

LUTHER.—1. Life.—The career of Martin Luther naturally divides into three periods—the first or preparation (1485–1517); the second, or protest (1517–21); the third, of construction (1521–46). He was born at Eisleben in Saxony on 10th Nov. 1483. His birthplace was only the townhouse of his parents; they had come thither from Moehra, the real home of the family, some 80 miles to the south-west. The father, as an elder son, had no share in the paternal estate, and was, therefore, in straitened circumstances, until, by his daily labour in the copper mines, and by economy and thrift, he became proprietor of mines and furnaces, and an influential member of the community. Both as a child in his home and in his early school days, Luther knew what the struggle with poverty meant. As he advanced, his father was at first unable to provide him with the means for a liberal education. Both his father, John Luther, and his mother, Margareta Ziegler of Eisenach, were deeply religious, and subjected him to a strict discipline, continued to the time of which he was first sent, that was rationalistic rather than evangelical. His childhood was spent at Mansfeld. His elementary training was received chiefly at Eisenach, among his mother's relatives, and his University course at Erfurt, an institution which, at his entrance in 1501, was over 100 years old, and the most numerous attended of the German Universities. Intended by his father for the legal profession, he devoted his first years at Erfurt to classical literature and philosophy. While he read with absorbing interest the Latin classics, and derived from them the benefit of a wider horizon and a deeper acquaintance with human nature, it is a great exaggeration to affirm, as some recent writers have done, that they made him more of a humanist than a theologian; for he read them most carefully, although he was sensitive against the excessive devotion to the purely formal that dominated the humanistic school. His teachers in philosophy were nominalists, who introduced him to Ocean, Briel, and Gerson, and instilled a critical disposition towards the current scholasticism. Attaining A.B. in 1502, and A.M. in 1505, he reluctantly began the study of Law, for which he had little taste. His dissatisfaction with the calling in which his father had thought him was intensified by spiritual conflicts, brought to a crisis by the sudden death of a friend by his side—whether by a bolt of lightning or by assassination can scarcely be determined—and by his own narrow escape in the storm that is said to have destroyed his friend. In obedience to a vow made in the moment of peril, he turned his back upon the world two weeks later, and entered the cloister of the Augustinian hermits at Erfurt (17th July 1505).

Purity of life, deep moral earnestness, devotion to the study of the Holy Scriptures, and ability as a preacher and edifying minister, made him by 1510 popular and influential among the Augustinians; but it is incorrect to infer from their name any special interest in Augustine's doctrine of sin and grace. With all the intensity of his nature the young novice devoted himself to the scrupulous observance of every detail of the requirements of the Order, and rose rapidly in the esteem of his brethren and superiors. He found edifying spiritual advisers in an aged monk whose name has not been preserved, and especially in John Staupitz, his Vicar General. Some of his modern critics accuse him of morbid conscientiousness and needless scrupulosity in his conceptions of truth and duty. The rules of the Order came to him, with all the claims of divine commands, which he could not decline to observe in all their strictness, without, in his belief, sinning against God. Nor could he be reconciled with anything less than certainty with respect to his relations to God. It matters little that, as has been recently urged, in some of his earlier discourses, composed while he was still a monk, as, e.g., in the lately discovered lectures on the Epistle to the Romans, evangelical statements can be found foreshadowing his future position. For it is no uncommon circumstance for writers advancing towards a conclusion, amid many vacillations, to fail fully to grasp the import of their own words.1 In 1507 he was ordained to the

priesthood, and his father, with a large retinue of personal friends, honoured the occasion of his first celebration of the Mass; but that, even then, the breach between father and son was not completely healed appeared at the meal which followed, when the son, in his blunder, 'wished the clergy that obedience to parents is a command from which no dispensation could be given, and that what they esteemed a call from God might be nothing more than a delusion of Satan.' 

In Nov. 1508 as instructor in Philosophy in the University of Wittenberg, founded only six years before, Luther was delighted, when, four months later, as a Bachelor of Theology, it was his privi-
lege to lecture also on the Holy Scriptures. Re-
called the succeeding autumn to Erfurt, he was assigned the task of lecturing on the Sentences of Peter Lombard. Two years later (1511) he was sent to Rome to represent Staupitz in regard to certain business affairs of the Order. This visit was of the highest moment to Luther's subsequent career. His most recent Roman Catholic biogra-
grapher, Grisar, candidly says that the Rome which he visited was the Rome of the then ruling Julius II. and his predecessor, Alexander VI.— Rome glorified by art, but the deeply degenerate Rome that appeared on the threshold of the Renaissance.1 He was grieved by the many abuses forced on his attention; and, notwithstanding the credulity with which, as he afterwards acknow-
ledged, he accepted much of what he there saw and heard, and by which the whole Roman and authority had had upon him was greatly weakened. The story of his experience on Pilate's Staircase rests solely on the testimony published after his death by his son Paul. Rapid promotion followed, as a testimonial to the success of his mission. Re-
ceiving the degree of Doctor of Theology at the age of twenty-nine (1512), he accepted it as a special call 'to explain the Scriptures to all the world,' and broke the traditional modes of instruc-
tion by his method of lecturing. Although he retains the 'four-fold sense' of Scripture, he lays the chief stress upon the allusion to Christ in all the prophecies of the OT, and interprets the Psalter by the gospel of the NT. From the OT books he turned to the NT, treating successively Romans, Galatians, and Hebrews. From the moment of his return to Erfurt and turned to Augustine, and from Augustine more and more to Paul. The mystical writer, John Tauler, and the anonymous author of The German Theology had a decided influence on him. His time, how-
ever, was largely absorbed by administrative duties. In 1515 he was appointed Vicar, with the oversight of eleven monasteries.

It was in the midst of these responsibilities that he became involved in the controversy concerning indulgences (q.v.). The doctrine of indulgences was rooted in the denial of the completeness of the satisfaction for sins made by Christ. This satis-
faction, it was taught, had value for original sin, and, beyond it, was made for actual sins only by commuting the penalty from one that was infinite, and beyond man's power to afford, to one that is finite. In his lifetime man's salvation was either in this world or in that which is to come. Penitence, it was further taught, consisted of contrition, con-
fession, and satisfaction, made by the penitent. Such satisfaction could be made only for such sins as were recognized by the sinner. But, as in this

1 H. Grisar, Luther, i. 41

of supererogation—a fund upon which the Church, through its head on earth, could draw, so as to grant indulgence by the payment of an equivalent. Heretofore, no more had been claimed for a letter of indulgence than an abbreviation of the pains of purgatory for those which had already paid them. As the granting of these letters afforded large revenue, abuses constantly grew. It was the most convenient and effective way of raising funds for Church purposes, which had already been sold to the agents who collected them. The luxurious habits of Leo X. and especially the completion of St. Peter's church at Rome rendered this expedient very serviceable at this time. Albrecht of Branden-
burg, Archbishop and Margrave, had contracted to collect fees from this source, with the stipula-
tion that he retain one half. He commissioned as one of his agents John Tetzel, a Dominican monk and emotional preacher, who, by his appeals to the terror of his hearers, created great popular commotion wherever he appeared, and urged them to purchase his wares. It would not be difficult to accumulate from Roman Catholic writers abundant censure of the course of Tetzel. For more than a year Luther, entirely ignorant of the connexion which both Albrecht and the pope himself bad with Tetzel's transaction of the indulgences, turned a distance; but, as Tetzel drew nearer Wittenberg, the revelations made to Luther as a spiritual guide in the confessional compelled him first to appeal repeatedly to his ecclesiastical superiors, and, finally, when these appeals were unsuccessful, to pub-
lish his Ninety-five Theses for an academic dis-
cussion in the University. The effect which they produced, as well as the publicity which they received, was beyond all expectation. While in these Theses he strikes boldly and remorselessly at the very roots of the abuse, he is evidently still feeling his way, and has not entirely freed himself from some positions that were afterwards very forcibly repudiated.

There were formal answers the next year by John Eck and Silvester Prietrias, which called forth responses, with characteristic vigour, from Luther. There was a barren conference with Cardinal Cajetan at Augsburg (Sept. 1518), and another with Miltitz at Altenburg (Jan. 1519), followed by the Leipzig Disputation (beginning 23rd June), in which, after four days and turned to the theological disputes. After the Leipzig days, Luther's debate with Eck began (4th July) on Church authority, significant because of the advance shown by Luther upon anything that he had previously written or said. The matter of the infallibility of the Roman Catholic Church, and the censure of the Council of Constance for condemning Hus. The aid offered from the camps of humanism Luther not only declined, but repelled, as he wished to make it clear that his protest rested upon entirely different grounds from theirs. The year 1520 is noted for three monumental treatises, two polemical, one irenic and constructive. Of the former, the first was his famous 'Appeal to the Christian Nobility,' which might appropriately bear the title, 'The Responsibility and Duty of the Laity in Spiritual Affairs,' and the second, 'The Babylonian Captivity,' a searching criticism of the sacramental system of the Roman Church. The latter, 'The Liberty of the Christian Man,' has evoked the following tribute from one of his most prominent critics: 'One cannot help asking how the same hand which delighted to shatter as with a sledge-hammer all that had hitherto been held sacred and inviolable, could alone humble the God of love, the choirs of divine love' (Janssen, Gesch. des deutschen Volkes, Englt. ed., iii. 330).

The bull of excommunication promulgated by the pope on 15th June 1520 did not reach Witten-
berg until four months later, and was formally burned by Luther before the students of the
LUTHER

University (10th Dec. 1520). On 16th and 17th April 1521 Luther appeared before the Emperor, Charles V., at the Diet of Worms, and declared that he could not retract. There were too many political complications involved to enable the Emperor to act promptly against him, and before such action could be taken the Elector of Saxony, and the Lutheran princes, withdrew him, and continued the Diet. Luther continued to travel, and to return to Wittenberg, where he remained in retirement until the following spring.

The translation was thus an important work, the translation of the Bible into German. The NT was translated, from the second edition of the Greek Testament of Erasmus, within three months from the time when it was begun. The translation was completed with him when he returned to Wittenberg from his exile (6th March 1522), and appeared the succeeding September. The translation of the OT was a much more difficult undertaking, in which he had the assistance of Melanchthon, Aegolius, Roeter, Foerster, and others, and was published in parts, until in 1532 the entire Bible appeared complete, followed by an appendix.

On his return to Wittenberg the character of his labours was much changed. He had at once to meet with decision the radical reaction against Rome, which had resorted in some cases to revolutionary, and in others to precipitate, measures. Three days after his return he began a series of eight sermons, preaching daily, into which he threw all his energy to check their excesses and, against them, to define the principles for which he had been contending. The reformation of the churches in districts no longer under the dominion of the old Church now became necessary, to prevent them from being misled by the confusion that had been introduced, and in order, by a re-organization, to build them upon solid evangelical foundations. Henceforth, while the polemics against Rome did not cease, and almost equal energy was directed against the opposite extreme, he was occupied largely with constructive work—the visitation of churches, the preparation of Church constitutions, the re-organization of schools, the revision of the liturgy, the establishment of services, the composition of hymns, and the publishing of popular sermons, not only for private edification, but especially as models for the inadequately prepared preachers, besides his lectures to his classes and incessant correspondence and conferences—until, from sheer exhaustion, he fell a victim to disease, while acting as a mediator between the counts of Mansfeld, and died in his native town of Eisleben (18th Feb. 1546).

Among the more important events of this later period of his life are his marriage with Catherine von Bora (1525); the Marburg colloquy with Zwingli (Oct. 1529); his second period of isolation, at the castle of Coburg, during the Diet of Augsburg (1530); his conferences in 1533 with representatives of the English Church, which had an important influence on the English Reformation and its literatures; the Wittenberg Concord of 1536 with Bucer and other representatives of the Reformed Church; and the Schmalkald Articles of 1537. Probably the point that has occasioned most comment is Luther's pronouncements regarding the indulgences and concern for the welfare of women, and the public opinion which followed his interview with Philip of Hesse in 1540 (see W. W. Rockwell, Die Doppelte des Landgraf Philipp von Hessen, Marburg, 1904).

The Apparent Greatness of Luther lies largely in the versatility of his gifts and the readiness with which he could call them into service. His intensity, concentration, earnestness, directness, and action are constantly present. Beneath his efforts there is always some important practical end. His scholarship has a higher end than mere love of learning. He availed himself of the weapons of humanism, so far as he could use them, without being in any sense a humanist. He had lectured for years on the poetry of the Greeks and the scholastics. His writings abound in numerous historical allusions, without suggesting that he ever could be rated as a historical investigator. He was rather his devotion and love for the Christian that is ever leading him the more deeply into the treasures of Holy Scripture, to find therein the solution of the problems of human life.

As a professor he was neither a scientific exegete nor a systematic theologian. He cut loose from all scholastic formulæ and methods. While he could not entirely escape from the influence of medievalism, he was in constant antagonism to its authority. Even in the class-room he was a great preacher, stimulating the thought and life of his pupils, instead of retaining stereotyped definitions.

His lectures were almost entirely confined to particular books of the Bible, which he expanded with great freedom of manner. As an author, it is in his form rather than his matter that he reflects the present moment. Eminently conservative and slow to adopt the Age of Enthusiasm, when once he has reached it he writes in an intense glow of feeling; words crowd upon the other with great rapidity of thought, and with wealth of illustration often of the most homely character. He never has difficulty in making his meaning intelligible. He can write with equal ease as a scholar or for the plainest of the people. He loves paradoxes. He concentrates his attention intensely on the particular form of the subject before him as to make no qualifications in order to forestall possible incorrect inferences or misrepresentations. The whole, real Luther can be read only by placing side by side his declarations under varying circumstances, and against opponents that widely differ. Few writers, therefore, can be so readily perverted by partisans. His language is not infrequently round, and his allusions such as were in keeping with the rude age in which he lived.

He was master of the art of translation. Not verbal exactness, but the precise reproduction of the very spirit of meaning of the original in the language of the simplest people of a later age, was his aim. His German Bible is a modern book, which at last fixed the form and became the standard of modern German. His hymns are paraphrases of Scripture, or free renderings of the old Latin hymns of the Church. His sermons are most frequently expositions of long passages of Scripture, and grow naturally out of the text, as applied to contemporary circumstances and conditions; and hence generally reflect that with which his attention at the time was chiefly occupied. They have come to us mostly as taken down in shorthand by some of his hearers, and not in finished form from his own pen.

His contributions to the re-organization of churches are embodied not only in documents that bear his name, but also in those of his co-labourers. Malsch the Augenstädter, and other reformers, applied the principles which he laid down, and acted with his constant co-operation and advice. He was the advocate of liberal culture, the study of the Greek and Latin classics, the education of a free public for women, and free public instruction for war, from precipitate and revolutionary methods of reform that he proceeded with the greatest caution, unfolding what had been fixed and approved by long usage, until a break in the past was no longer possible, but, when the critical moment came, always acting with promptness and decision. His aim was not
even a restoration of Scriptural models, but the
continuance of whatever in life, worship, and
organization is other than Scriptural. Ex-
ternal union was approved only as it was the ex-
pression of a preceding inner unity. Agreement
as to the faith of the gospel was the condition of
an accepted Church union, which was esteemed
valuable only as the servant of faith; hence the
faith was never to be adjusted to the supposed
expediences of union.

As a theologian, his chief effort, on the negative
side, was to free theology from its bondage to
philosophy, and to return to the simplicity of
Scripture. He was dissatisfied with technical
theological terms, because of their inadequacy,
even when the elements of truth which they con-
tained restrained him from abandoning them. He
was not without a historical sense and a reverence
for antiquity, provided that it was subjected to the
tests of Holy Scripture. Scripture was not to be
interpreted by the Fathers, but the Fathers were
to be judged by their agreement or disagreement
with Scripture. It was his especial privilege to
have entered into the spirit of St. Paul as none
before him, not even Augustine. Luther's theology
is Pauline theology, in the language of modern
times. It begins and ends with the revelation
of God in Jesus Christ. Christology is the key to all
knowledge of the church and attributes of God and
the doctrine of the Trinity. Christ is the in-
terpreter of Scripture. All doctrines are to be con-
sidered in their relation to Christ. With Augustine,
he taught the organic union of all men in Adam,
and the organic union of all sins in original sin.

Original sin is emphasized rather as the corrupt
state resulting from the Fall than as the act itself
wherein this state proceeds—a state of spiritual
death, from which man can neither of himself escape
nor contribute towards his deliverance. The
incarnation presupposes man's sin. God became
man in order, by His sufferings and death, to
divine human nature. While the divine human
nature is preserved, the divine inseparably per-
vading and energizing the human; the human
sustaining and imparting to the human its infinite
efficacy. The humiliation (kenosis [I. V.]) is not of the
divine nature, but of the divine person in His
human nature, for it is not synonymous with
incarnation, but is only a determination of the
human nature, glorified from the first moment
of its union with the divine. Redemption
is made for all men and all sins, although not
received and realized by all. The doctrine of pre-
destination, he insists, should always be treated as a
supplement to Christology, since what God has
determined concerning our salvation from
eternity? He has revealed in the gospel, and, there-
fore, the gospel itself exhibits the contents of God's
eternal decree concerning salvation. The blessings
of salvation, to be realized, must be appropriated
by faith; but this faith is God's gift. Man cannot
believe in Christ, or come to Him, by his own reason
or strength. It is the office of the Holy Spirit alone
to bring man to Christ and Christ to man, to call,
enlighten, and regenerate. If man is saved, it is
entirely by the work of the Holy Spirit in applying
redemption through Christ; if he is lost, it is en-
tirely by his own persistent resistance of the
offers of divine grace. There are no degrees in justifica-
tion; it is perfect and complete, however weak
the faith that apprehends it, since the righteous-
ness which it imparts is the perfect righteousness
of Christ. If regarded as forgiveness, where the
least is involved, he considers the least sin is
unforgiven, none are forgiven. But justification is
even more than forgiveness.

Christ and man have exchanged places; so that,
while all the guilt of man is assumed by Christ,
all the righteousness of Christ is transferred to
man. Hence the confidence of man before God
is kindred love. As an active principle, faith not
only receives what God offers, but also receives
the new powers imparted with justification, exercises
itself in obedience towards God, and in efforts for
the good of man.

It is as impossible to separate works from faith, as it is to
separate heat and cold from fire' [I. V. I. L. c. 22, p. 163.]
This passage has called forth the unqualified commendation of
the Roman Catholic theologian, J. A. Mosler, although he in-
correctly adds that it is 'in the most possible contradiction
with the Lutheran theory of justification' (Symbola, Mains,

Furthermore, the Holy Spirit comes to men only
in and through the Word and Sacraments, through
the word of the Law, producing sorrow for sin,
and through the gospel, i.e., the promise of
the forgiveness of sins producing faith. The office
of the Sacraments is to individualize the general
promise of the gospel. The chief thing in baptism
is not the water, but the Word, which, in and
with the water, is applied to the person baptized.
The chief thing in the Lord's Supper is not the
boily eating and drinking, but the assurance
of the given body and blood of Christ, which is
visibly presented to you, which is avisible word,
guests, and sealed by the elements and the heavenly
mystery that they offer. Since, wherever this
Word is preached, whether orally or visibly in the
Sacraments, the Holy Spirit is given, the
Sacraments become marks, designating where at
least some truly believing children of God are to
be found; i.e., they indicate the presence of the
Church, which otherwise is a matter of faith, as
the Creed confesses: 'I believe the catholic
Church, the communion of saints.' The direct
relation of each individual to Christ, unmediated
by any other agency than Word and Sacrament,
creates the spiritual priesthood of believers, and
obliterates the distinction between an order of
priests and laitymen. The ministry of the gospel is
not a priesthood, but an office of the Church for
the administration of Word and Sacrament, in
which administration ministers are only the exec-
tutives of the congregation, and, through the
congregation, of Christ Himself, who has called
and ordained them. Distinctions of rank among
ministers are not unnatural, and in some cases
may be very advantageous when agreed upon
simply according to human law. Uniformity of
Church government and ceremonies is unnecessary,
however desirably it may be as a matter of expedi-
ency. The Church has no power but that of the
Word. Even in regard to those matters where the
Word of God allows no freedom, we have no
greeting to attempt to constrain others by any other
means than by the preaching of the Word.

'I will preach and talk and write against these things, but
no one will I attempt to force' (Eight Sermons preached at
Word that has created the heavens and the earth must do this,
or it will be left undone.' (C.)

The dualism in ethics that pervaded the mediaval religionism, according to which there is
an inherent antagonism between the spiritual and
the material, the heavenly and the earthly, en-
tirely disappeared in Luther. The separation caused
by sin is removed by redemption and regeneration,
and the spiritual now pervades the material,
the heavenly the earthly. Hence the believer is
not only a spiritual priest, but also a spiritual king,
and lord over all things; and his chastened enjoy-
ment of them belongs to that gratitude which he
owes the Redeemer who has provided them for
him. Nevertheless, and when the least sin is
unforgiven, none are forgiven. But justification is
even more than forgiveness.
LUTHERANISM

Protestantism, and especially Lutheranism, stands out as a new phenomenon in history. The reasons for this are the peculiar nature of the Protestant Church and its message. It is not simply a new form of religious belief, but a new way of life and thought. It is a revolution in the way people think and live, in their relationship to God and to each other. Lutheranism is not just a set of beliefs, but a way of being in the world.

LUTHERANISM.—Notwithstanding the protests which Luther himself raised against it, the term ‘Lutheran’ was soon applied in the 16th cent. to the church and doctrines of his followers. His voluminous works, many of which reaching us through the notes of others instead of from the pen of the author himself, the memoranda of friends, and the results of his own memory, fragmentary as many of his conversations in the bosom of his family, his most confidential letters to his most intimate associates, humorous and satirical as well as serious, afford an inexhaustible mine for students of successive generations. Researches in archives heretofore closed and in libraries where they have lain unnoticed are bringing to light MSS of decided historical importance. Thus, in the last year of last century, his lectures on the Epistle to the Romans, for which scholars had long been looking, were found in so public a place as the Berlin Library, shortly after a student’s note of the same lectures had been found in the Vatican Library, and succeeding only by a little over ten years the discovery of lectures on the Psalms, belonging also to his formative period. New biographies from both old and new sources, the latter as professed to apply with rigid impartiality the highest standards of historical criticism, succeed each other with a frequency that is remarkable when considered that he has been dead for over three centuries and a half, showing clearly that the last word has not been said on many questions that he started, and that cannot be answered without a thorough study of his own presentations.

LITERATURE.—(O) Of the more recent Roman Catholic criticism of Luther and his work, the following may be mentioned: J. Janssen, Geschichte des deutschen Volkes seit dem Ausgang des Mittelalters, 4 vols., Munich, 1874-91, Eng. tr., 10 vols., London, 1896-1911; H. S. Denifle, Luther und Lutherwissenschaft, 2 vols., Mainz, 1904-5; H. Grimm, Luther, 3 vols., Freiburg in Br. 1911-13.

(9) Among the replies called forth are the following: J. Ketten, Luthers und Janssens, der Deutsche Reformator und ein ultramontaner Historiker, Halle, 1893. R. Seeberg, Luther und Lutherthum in der neuesten katholischen Deutung, Leipzig, 1904; T. Kolde, P. Denifle, seine Beschaffenheit, Luthers, d. 1904, J. Hausserleiter, Luther im roman. Urtheil, d. 1904; C. F. Hauser, Ein Wort zu Denifle’s Luther, Tübingen, 1901; G. Kawerau, Luther in kath. Behandlung, Glossen zu H. L. B. F. 1904; K. Schulten, Luther’s Ethik, in the pamphlet of L. G. Evers, and Denifle, G. Ketten, and H. Beunaris, Luther’soldt der neuen Forschung, Leipzig, 1911, 1914.

(10) Among the collected works of Luther have been comprised in seven editions of varying excellence and completeness: the Wittenberg (1555-57); the Jena (1555-63); the Altenburg (1555-65); the Leipzig (1779-40); J. G. Waith, (Jenick’s of 1750-58), of which the St. Louis (1836-1901) is a thoroughly revised reprint; the Erzengl (beginning in 1829); the Weimar, the fullest and edited with greatest critical accuracy, under the patronage of the German Emperor. It was begun in 1833, and is still far from completion. For details concerning these editions see PB. 209, art. ‘Luther.’ A very convenient edition of select works, edited with critical care and with introductions, is that of G. Buchwald, G. Kawerau, J. Köstlin, M. Rade, and E. Schmidt, 6 vols., with 2 supplementary vols., 3rd ed., Berlin, 1905. Of greater scientific value is O. Clemen, Luther’s Werke in Auswahl, 2 vols., Born, 1897-1914.

(11) The list of biographies begins with that of Melanchthon, published the year after Luther’s death, in the introduction to the Latin volume of the Wittenberg edition of Luther’s works. Mention may be made of the following: M. Meurer, Leipzig, 1815; V. Weber, Leipzig, 1815; J. Köstlin, ed., G. Kawerau, Berlin, 1901; T. Kolde, Geschichte unseres Jahrhunderts, 1837; W. Hausrat, Berlin, 1904; and the English biographies of C. Becher, London, 1884; H. E. Ellis, London, 1894; T. B. Lindsay, Edinburgh, 1900, and esp. in his History of the Reformation, 1908; H. E. Smith, London, 1911; H. C. McNeill, et al., 1911. A very abundant, but most excellent and suggestive, classification of biographies and other writers on Luther, according to schools, is the work of

1 Critically edited and published, with historical introductions, by J. Freden, Luther’s Vorlesungen über den Hamburger Brief, 2 vols., Leipzig, 1898.
or Church body. Where the doctrines of the Confessions are held and confessed, even though the Confessions themselves be not authorized, the Lutheran character of the teaching is established; while, on the other hand, where the contents of the Confessions are not cordially received, as a matter of faith, i.e., as derived from God's Word, and there is no subscription to such Confessions with qualifications expressed or with mental reservations, the test is not met. A real Confession is one not merely a verbal or written declaration of Christian freemen of the liberty that they have attained in Christ, and of the limits within which this liberty is to be found and exercised (cf. art. CONFESSIONS, vol. iii. p. 845).

What are known historically as the Lutheran Confessions are not attempts to summarize the doctrines of the Holy Scriptures, as are various other Confessions in Christendom that are, in reality, systems of doctrine. The confessional development of Lutheranism has proceeded on the principle that Holy Scripture is its own interpreter, and needs no formal explanation by Church authority, unless the meaning of Scripture be involved in serious controversies that greatly agitate the Church and call for the careful guarding of the purity of the gospel. It would not be possible to perversely alter it. Articles of faith that have not been attacked or misrepresented need no confessional treatment. A Confession, from this view, should never be an exhaustive presentation of the Church's faith, but there should be a readiness, as new controversies arise, to meet them with the same weapons and in the same spirit with which preceding controverted points have been treated. Hence the Augsburg Confession closes with the words: 'Let those who, from false claims, mistreat the holy name of the Lord, pronounce it according to the Scripture.'

The Lutheran Confessions have thus been determined by certain practical ends in view at several crises in the experience of the churches that call themselves Lutheran.

Of these Confessions, the two Catechisms (cf. art. CATECHISMS [Lutheran], vol. iii. p. 250 ff.), both written by Luther in 1529, are handbooks of elementary religious instruction rather than theological documents. The four theological Confessions are: the unaltered Augsburg Confession, the Articles of the Formula of Concord, the Schmalkald Articles, and the Formula of Concord. The first of these chronologically, as well as by general recognition, the Augsburg Confession, was prepared by Melanchthon for presentation at the Diet of Augsburg in 1530. It is an irrecusable document, emphasizing the points of agreement with the Roman Church, in the hope that some way might yet be found to avoid a break in the Western Church. The term 'unaltered' is used to distinguish the Confession presented at Augsburg from unauthorized revisions made by Melanchthon personally in 1540 and 1542, in the interests of a nearer approach to the Reformed. The fact that the term 'unaltered' may not strictly belong to the very text—since the original copies placed in the hands of the Emperor Charles V. have both been lost, and Melanchthon was compelled to reproduce the Confession from the very full notes of himself and his colleagues for publication the succeeding spring—does not justify the rejection of the distinction made by the majority of the two owners of the unaltered Confession. The Apology of the Augsburg Confession (1531) is a full and learned defence, also written by Melanchthon against the criticisms contained in The Confutation of the Augsburg Confession by Schmalkald Articles. The Schmalkald Articles (1537), prepared by Luther, with a long Appendix by Melanchthon, mark a stage in the controversy with Rome when the differences were no longer reconcilable. The Formula of Concord, (1577, or even earlier), gives a decision concerning controversies among Lutherans, as the other Confessions had treated those which had assailed them from without (see, further, art. CONFESSIONS, § 13).

Differences between Luther and Melanchthon were intensified among their followers. These differences, due primarily to differences of temperament, training, and religious belief, as well as to the personal rupture between them. Melanchthon, gentle, timid, and sensitive, loved the retirement and occupations of the study, and shrank from conflict. Far more of a humanist than Luther, he was swept by the force of events, and, much to his regret, from classical studies into the current of theological discussions. He had passed through no such inner spiritual conflicts as had Luther. Accordingly, he excelled in the sphere of the formal rather than of the material. No one could give such accurate and graceful literary expression to Luther's thoughts. But, when Luther's influence was removed, he was not only vacillating, but dominated by two principles, viz. a much higher regard than Luther for patristic authority, and a greater concern for the external peace and integrity of the Church. Lutheranism was often involved in negotiations with respect to Church policies, which compromised his position, and brought into prominence his great contrast with Luther in this particular. Notwithstanding his sharp arraignment of scholasticism in the first edition of his Locy Communes (1521), he soon manifested a bent towards the principles which he had repudiated, placed undue importance upon the philosophy of Aristotle, and became the founder of Lutheran scholasticism. The perpetuation of these two types of thought has caused not only differences in regard to the attitude of their adherents to individual Confessions, but also a stricter or a laxer standard of Confessional subscription. The Formula of Concord is a formal repudiation of Melanchthonianism in its divergence from Luther.

Of the two principles of Froissard, the formal and the material, it has often been observed that Lutheranism lays greater stress upon the material—'justification by Faith alone'—than upon the formal—'The Sole Authority of the Holy Scriptures.' Indeed, Church and State have never separated, the Scriptures are regarded as the absolute norm of revealed truth rather than as a magazine or receptacle in which the truth is stored. For it must not be forgotten that the gospel itself was proclaimed orally before it was committed to writing, and was no less the power of God unto salvation where thus preached, or where taught by those who had heard it from the first ear-witnesses, than when read on the printed page. Nor can the Scriptures be correctly apprehended except in a regenerative a new spiritual sense is imparted.

When even the most able and learned men upon earth read or hear the Gospel of the Son of God, and the promise of eternal salvation, they cannot from their own powers apprehend, understand or believe and regard it true, but the more diligence and earnestness they employ to comprehend with their reason these spiritual things, the less they understand or believe, and before they become enlightened, or taught of the Holy Ghost, they regard this only as foolishness or fictions, 1 Cor. 2. 14 (Formula of Concord, vol. ii. ch. ii. 9, Eng. tr., H. E. Jacobs, Book of Concord, p. 259).

The true interpretation of Scripture is to be found only as the relation of each part to Christ as the centre is correctly apprehended, and this is possible only by the regenerated man.

While protestings against all ecclesiastical authority that arrayed itself against Holy Scripture, Lutheranism lays great stress upon the continuous witness to the truth of the gospel, given through
the Holy Spirit, as this truth is applied and developed from age to age in believing personalities. Such believers, according to its teaching, constitute the Church, and whoever is not a member of the Church. In this respect its doctrine is in contrast with that of Rome, on the one hand, which lays so much importance upon the decisions of the externally organized and manned Church, and, on the other, which is apt to isolate the individual from his historical relations and the mediation of those through whom Word and Sacraments reach him. The relation of this controversy with the relation of the Holy Spirit to Word and Sacraments, since, besides being a source of revealed truth, it regards the Word as a real means of grace through which alone the Spirit calls, illumines, regenerate, sanctifies, and sanctifies; and the Sacraments as efficacious instrumentalities by which the promise of the gospel concerning the forgiveness of sins and the grace of God is individualized.

Like all ideals, those of Lutheranism suffer various modifications as embodied in a concrete form in external organizations. The union of Church and State in European lands has not only prevented the principles of Lutheranism from being applied in entire consistency to practice, but has also often interjected adjustments of theory and policy foreign to both its spirit and its teaching. Its influence in Reformation, so at all times, since, there have been those whose intense conservatism has shown the presence of a Romanizing, or whose greater freedom that of a Reformed, tendency. Indifferentism, Unionism, Mysticism, and Rationalism have had their learned advocates among those claiming the Lutheran name, and within Church organizations known as Lutheran, just as the Chelsea Church has much within it for which Christianity is not responsible.

days, when three were permitted. In 1563 a further act was passed against outrageous and ex-
cessive apparel, while in 1564 there was a more
detailed sumptuary law. The inflow of precious
metals to Europe after the discovery of America,
followed by the extended use of coin, increased the
stock of several classes of goods which previously
had been excessively rare and costly. Hence commod-
ities which had been of great value became relatively less expensive. This increased the
organization of industry facilitated production, so
that Adam Smith was able to point to the fact
that the most common artificer's accommodation
exceeded that of many an African king, the absolute master of the lives and liberties of ten
thousand naked savages (Wealth of Nations, bk.
i. ch. i.). Sumptuary legislation in England may be
said to have ended with the Tudors. Mercantilism,
in its encouragement of manufactures, tended to
permit the production of luxuries for exportation.
The growth of foreign trade enabled seafaring
nations to participate in it and in the re-exporting
of rare and costly goods. Accordingly, though
there remained a sturdy body of opinion against
luxuries generally, and more especially against
those luxuries brought from foreign countries,
such as china, precious stones, and oriental
wares, the growth of wealth and activity in
England, in Scotland, on the other hand, as late as 1681 the
Scotts Parliament prohibited the importation of a
long list of foreign commodities which were held to
be "sumptuary" in character. The increased taxation
followed by the acceptance of the doctrine of
laissez-faire (q.v.) made the State less disposed to
interfere with private expenditure unless upon
moral or social grounds, as, for instance, in the
regulation of wines and spirits. In the 19th cent.,
the principle of the taxation of luxuries came to
be more and more recognized, partly on the ground
of restraining the consumer from a species of con-
sumption which was hurtful to himself (e.g., taxa-
tion of spirits), partly as raising revenue from what
were admitted to be superfluities, and thereby col-
lecting revenue from classes who would not pay
taxes on necessaries (e.g., tea and sugar taxes).
Few taxes may be regarded as having a sumptuary
element, such as the tax on armorial bearings or
those on male servants and on motor cars.

2. The economic questions arising out of the
existence of luxuries are of great importance. Men who
approach the problem of luxury from the historical
side are inclined to urge against it that it has been
the cause of the fall of great empires. Frequently,
indeed, it is the first symptom of decadence, but a closer analysis tends to show that
the moral weakness had already shown itself, and,
as it increased, it manifested itself in public and
private extravagance, while extravagance again
gave fresh impetus to the forces of political and
social disintegration. In these cases it is clear
that the evil lay in the abuse of luxury.

Some of the most powerful economic motives are
to be found in the desire of men to realize an idea
or scheme of life which seems to them an improve-
ment on their present one. Once their pure bodily
wants are satisfied, their further desires may be
centered on this ideal. This, however, is not strictly
accurate. In a great number of occupations the
worker who is able to satisfy the former wants
only would not be efficient. Therefore one must
extend the meaning of the term "luxury" so as to
include in it all those things which are required
for efficiency. What is consumed beyond that
point may well be described as consisting of
luxuries. It follows that the term "luxury" must
be understood in relation to time, place, and
the general circumstances. It is easy to determine
whether any specific commodity is a luxury to a
given individual in regard to whom the necessary

1 The matter is stated this way to allow for the possibility
that the producer of the luxury may save a portion of the
profit which he has realized from its sale. Such savings would
be available for new production.
LYCANTHROPY—The word 'lycanthropy' is used in two senses. (1) It may indicate merely a form of madness in which the patient imagines that he is an animal, especially a wolf, and acts as such. This disease was common in antiquity, and especially in the Middle Ages, doubtless as a result of the wide-spread belief that transformation into animal form was possible (§ 3). (2) It indicates the popular belief that on occasion a human being can actually transform himself or herself into a wolf, or be transformed into a wolf or some other animal. In this form he slays and eats men. But, if wounded while in his wolf form, it is found that a corresponding wound exists on the human body from which the transformation has taken place. When wounded or killed, the werewolf's human form is restored. While the wolf transformation is that which is or was commonest in Europe, it is by no means the only one. For this superstition is practically world-wide, and everywhere it is generally the fiercest and most dreaded animals whose shapes are assumed by the wolf transformations has been most usual in all parts of Europe and in N. Asia from early times, but in the North of Europe the bear form is also general, and in modern Greece the boar. In Abyssinia and E. Africa the hyena form is taken; in other parts of Africa the hyena, leopard, lion, and sometimes the shark, crocodile, or even the elephant. In India and other parts of Western Asia the tiger form is usual; in Borneo and Shos the tiger or leopard; in China and Japan the tiger, fox, etc. In N. America the wolf form is mostly found; in S. America the jaguar. But, while in regions where such wild animals have become extinct the old tales are still told, no other less harmful animal forms are believed to be taken by witches or sorcerers—e.g., those of the cat, hare, etc.—and in these animal shapes considered the 'sorcerer' is supposed to be done, while the idea of the wound being continuous in the animal and human shapes ('repercussion,' see § 5) also prevails.

'lycanthropy' is derived from Ancient Greek 'λυκανθρωπία, 'man, or the state being άνθρωπος (cf. πουάνθρωπος, 'man, man'), the common English name is 'werewolf,' Lit. 'man-Wolf,' A.S. wer-mann, O.H.G. wiermann, Norman guermain, etc.; 'man'; cf. O. It. fer, lat. uf, and cf. 'werwolf'). The French name for werewolf is loup-garou. In this case garou has been thought to be corruption of wer and loup, but this is miscalculation. The Old French romance contains the forms wera, wera, enema, 'to change one into an animal.' Bistoria for blot-garou (Ges.-&- entertaining.

The Slavic form for loup-garou is lupok-poryu. In this case garou has been thought to be corruption of wer and loup, but this is miscalculation. The Old French romance contains the forms wera, wera, enema, 'to change one into an animal.' Bistoria for blot-garou (Ges.-&- entertaining.

The Slavic form for loup-garou is lupok-poryu. In this case garou has been thought to be corruption of wer and loup, but this is miscalculation. The Old French romance contains the forms wera, wera, enema, 'to change one into an animal.' Bistoria for blot-garou (Ges.-&- entertaining.

LYCANTHROPY

zari. The Kallikantzari are beings of monstrous form, hurtful and evil, who destroy men and carry off women, and sometimes make a meal of their prey.1 Lawson considers that the Kallikantzari represent the ancient Centaurs, whom he regards as a Pelasgic tribe of Centaureti credited by the Achaeans with shape-shifting. Some connexion also exists between them and the mummies of the Dionysia who represented the satyre and Silen. The story of the dog-devouring part of the tribe could change into ravening werewolves in time of drought, others into vampires or kites.2 Among the Semites lycanthropy was not unknown, but recorded instances of the belief are few.3 Among the Sclaven in Hesse the whole tribe could change into ravening werewolves in time of drought, others into vampires or kites. The Arabs also regarded some men as having the nature of a hyena, and said that, if a traveller and his men were shot up with one of these and a hyena came, it would go at once to him.4

The belief among the Celts is illustrated by a story told by Giraldus Cambrensis. An Irish priest was met by a wolf in Meath and desired to come and see his dying wife. They were natives of Osmy, whose people had been cursed for their wickedness by St. Natalis, and were compelled to take two by two a wolf-shape for seven years, returning to their own form at the end of that time. The priest was persuaded to give the bale-wolf the sacrament, for the other turned her skin down a little, showing that she was an old witch. Giraldus also says that the Irish never hesitated to give his advice on this case at the synod of Meath two years after, and that it was referred to the popular custom.5

A citation in the Book of Ballymote (1406) says that the 'descendants of the wolf' in Osmy had the power of changing themselves and going forth to devour people. St. Patrick is also said to have cursed a certain man in Ireland so that they and their descendants are werewolves at a certain time every seventh year, or for seven years on end.6 These may be explanatory legends about older wolf-totem clans, later accursed of lycanthropy as an already current superstition—when totemism was requiring an explanation, as in the case of the wolf-clan in Arethia. To the same category may be referred the statements of early writers on the Sclaven who went to Ireland in the effect that the Irish took wolves as godfathers, prayed to them to do them no ill, and used their teeth as amulets. Lycanthropy ran in families, and here also it may point to an older totem clan. Laignech Faelad and his family could take a wolf-shape at will and kill the herd, and Laignech was called Faelad because he was the first of them to go as a wolf.7 In Irish and Welsh Marches transformation to wolf-form of oath-breakers by a stepmother or of a husband by a wife is not uncommon.8 Giraldus already refers to the belief that hags in Wales, Ireland, and Scotland can change to hares or to snakes in their milk. But, with St. Augustine, regards this supposed change as a delusion of the senses.9 This belief is thus contemporary with that in lycanthropy, but long survived it. Later Celtic witches—Irish, Welsh, Manx, Scots—usually turn into hares or cats, less often into dogs, weasels, ravens, porpoises, whales, etc., for the purpose of doing mischief. In Donegal the change is said to be effected by a hair rope made of a stallion's mane and by the recital of charms. In some cases the transformation is confined to certain families. Such witch animals can be shot only with a silver bullet. When followed up, the woman was revealed her true form and is found to have a corresponding wound. A Miller in Cork who saw many of

cats attacking his flour threw his knife at them and cut off the leg of one. Next morning he found a tear in the skirt with hair cut off, and concluded that she was a witch. Hares are usually thought to be unlucky, and are suspected of being witches in disguise. The ancient Welsh laws already speak of their magical character, regarding them as companions of witches, who often assumed their shape.1

The Slavic werewolf is referred to under DEMONS AND SPIRITS (Slavie), vol. iv. p. 624.

Fljorien, mentioned by Herodotius (iv. 105), were a Slavic people (cf. E. H. Minns, Scythians and Greeks, Cambridge, 1913, p. 102 f.). The Scythians and Greeks said that every year each Neurian became a wolf for a few days and was then restored to human shape. Among the Magyars witches and wizards assume the form of horses, cats, etc. If the former are caught and shod or the latter injured, they are found next morning in human form with iron shoes on hands and feet or seriously wounded.2 Hertz notes the sinister character of the belief through its connexion with that in the vampire, the names for both being inter-changeable.3

The Serbians think that the vuokolok have annual gatherings, where they hang their wolf-skins on trees. Should such a skin be taken and burnt, the owner of the skin is said to turn into a girdle of human skin laid across a threshold by a witch in a house where a wedding is taking place will cause all who step over it to become wolves. In three years’ time, if the hag then puts her other wolf- skin to turn them with skins with the hair turned outwards, they resume their human form. This is a Polish belief. In White Russia the werewolf is sometimes a man transformed by the devil, and, contrary to the usual belief, he is harmless, but is driven to wander from place to place.4

In a Polish story a wolf seizes a girl at a merry-making and carries her off to the forest. Years after, one of the peasants meets his long-lost brother, who concludes that he was the wolf changed by sorcery, that he had carried off the girl, who had died of grief, and that then he was convinced with man-skin and killed as many as he could. He had come to see his home once more, but must resume his wolf- form immediately, which he did.5 In another case a peasant, released from his wolf-shape, returned home to find his wife married again, he cried, ‘Why am I no longer a wolf that I might punish this woman?’ Immediately he was re-transformed, and killed his wife and child. The neighbours came and slew the wolf, when the body was seen to be that of a man.6

Olaus Magnus says that at Christmas many werewolves are on the prowl, and try to enter houses to drink in the cellars. Between Lithuania, Samogitia, and Livonia the wall of an old castle with thousands of wervolves come to try their skill at leaping. The unsuccessful one is beaten by one of the captains or by the devil. The method of transformation was to drink to one in a cup of ale and mumble certain words. Then he could assume or lay aside the wolf form when he pleased. The Livonian werewolves collected at Christmas, and crossed a river which had the power of changing them to wolves, like the lake in Arcadia. They resumed their human shape at the end of twelve days. In Livonia a servant whose power as a werewolf was disputed went down to the cellar and soon after came out as a wolf. Thedogs bit out one of its eyes, and next day the man appeared with one eye.7

3 In Scandinavian and Germany the superstition was well known, and here the wolf, and in the former also the bear, were animals into whose form the transformation took place. Boniface, Archbishop of Mayence in the 8th cent., mentions the belief.1 The change was caused by a man himself—e.g., by donning a wolf-skin (ulfhorn, hence the name `skilvanger'; cf. Lat. lupus, wolf-gourd, or a girdle of human skin; or it might be forced upon him—e.g., by throwing such a skin or girdle at him, or by shaking a wolf-skin glove at him. The latter, at least, was done on a dunghill, and was held in place by a buckle with seven catches. When the buckle was broken off, the transformation ceased. In such cases the man was a wolf or bear by night, and a man by day; or he assumed the animal form for nine days, or even for three, seven, or nine years, the eyes alone retaining a human appearance. He howled and devoured like the actual animal. Such persons were said to be elti eikhorne, ‘not of our form,’ or hamnarr, hambleg, ‘changing form.’ In some instances the gift of transformation was imparted by trolls. Burehard of Worms speaks of certain Parcae who by the blood of a birth can cause the child may later transform himself into a wolf or any other form.2 In later times Finns, Lapps, or Russians were thought by Scandinavians to have the power of changing into wolves, who were therefore disliked. The belief was apparently much mingled with and probably influenced by the fact that wild warriors and outlaws—e.g., the berserker—were wolf-skins or bear-skins, but wore armour or clad themselves in these, while they were often victims of ungovernable passion and acted as if they were animals.3 This is illustrated in the earliest Scandinavian instances of the werewolf—‘that contained in the Volunga Saga (chs. 5–8).

King Volsung had ten sons and a daughter, Sigrj, who was married to king Siggeir. Siggeir later slew Volsung and bound his sons in the stocks. There plus of them were devoured by an old she-wolf—the mother of Siggeir, who had taken this form. Through Siggy’s craft the tenth son, Sigmund, overcame this werewolf and went into hiding. Sigr exchanged form with a sorceress, and had a son by a sorcier, called Sindolf. He and Sigmund took to wandering life, and, on one occasion, came to a house where two men were sleeping, with wolf-skins hanging above them. For nine days they were wolves and on the tenth day came out of their skins. Sigmund and Sindolf donned the skins and became wolves, and each went his way to see if either of them had the wolf-skin on. Later these were more than seven men without bowing for the other. In the sequel Sindolf slew three men without Sigmund’s knowledge, and hearing of this, flew to his throat and wounded him. When he was healed his brother had done for doing their wolf-skins, they agreed to lay them aside for ever, and burned them in the fire. Of this wild tale Baring-Gould (p. 58) has said that it is ‘divested of its improbability, if we regard these skins as worn over their armour.’ While this is true, and while wolves, ‘will,’ means also ‘will,’ the story is an important witness to the belief itself, as is seen from the words of Gudmund to Sindolf, ‘Thou thyself hast eaten wolves’ meat and murdered thy brother. Thou hast often sucked wounds with cold mouth, and sunk, losthomme to all men, into the degrees of wild beasts’ (Vigfusson-Powell, i. 323). In another wild tale from the History of Irielh Kraka, Biren was transformed into a bear by his stepmother, who shot a wolf’s-skin glove at him. He lived as a bear and killed many of his father’s sheep, but by night he always became a man, until he was hunted and slain (See W. Scott, Minstrelsy, London, 1839, p. 304).

LYCANTHROPY

190

The poet Ari has a curious tale of two "skin-changers," Darleg och Dedal, in which a woman transforms herself into the latter of a bear. They fought, and next day were found in bear form. Modern collections of Scandinavian and German Marchen contain many werewolf stories.

In one Swedish tale a coffin was transformed by a Vargorgoed or "wolf-god", because he had defiled himself when tending a cow. Years after, he appeared at his house, and regained his human shape when his wife gave him food.1 In a Danish tale a man, when in his wife's company, noticed that the time of the accustomed change drew near. He had her stand upon a chair when his shape changed. When he returned, she was a wolf with a twisted head, and Satan himself she was.2

Spoken of in many Germanic folk-tales, the werewolf assumes human form at will. He is often found, with the moon, in the form of a wolf, with the form of a sheep, or in human shape. The most celebrated cases of werewolves in literature are of the following:

In a Norwegian tale a shepherd found a wolf-skin by the sea, by which he became a wolf at night.3 In Brittany, a peasant was transformed into a werewolf by the gods and became a god himself.4

In the old German literature, the werewolf is called a werwolf, stuffed with straw and made to resemble a wolf. In modern times, the word "werwolf" is used in connection with the wolfman, a human being who assumes the form of a wolf, and is usually known as a werewolf.5

The legend of St. Roman in medieval Brittany told how he had taken the form of a werewolf and had eaten children.6

Cervantes, in his Don Quixote, tells of a certain Don Quixote de la Mancha, who, in his adventures in the province of La Mancha, is transformed into a werewolf by the devil.7

In English and Scotland werewolf stories are scanty, but there are traces of the superstition in early literature. The word werewolf in the sense of 'rober' occurs in the Laws of Canute, and it is also found in the Roman de la Rose, in which a young lady is changed into a wolf by the wolf-god, and rescued by a young man who had been transformed into a wolf in the form of a deer.8

In the early Middle Ages, the werewolf was believed to be a child of the devil, and was regarded as a thing to be feared and hated.9

The werewolf is a popular theme in literature, and is found in many works of fiction and poetry. The most famous werewolf story is probably the one told in the novel "The Wolf-Man" by Jack London, in which a man is changed into a werewolf by a curse. The story has been adapted into films and other media, and has become a popular icon of popular culture.

9 A. K. Lycanthropy, from the Greek lycans, meaning "wolf," and anthropos, meaning "man," is a term used to describe the mythical or actual transformation of a human being into a wolf, or the belief in such transformation. The term has been used in various cultures and time periods, and has been associated with various beliefs and practices, ranging from religious and spiritual beliefs to superstitious practices and cultural legends.
grows in them. They devour their children, then those of relatives, then children of strangers. Doors and locks fly open before them by night. In the morning the skin is doffed. If the skin is found and burned, then the woman suffers fearful agonies. Thus Passangers in Malaya. In Asia Minor generally werewolves are feared especially at Christmas and in Holy Week.

In India, the tiger is the fiercest creature known, its form is supposed to be adopted. A resemblance to tigers is the monomaniac is said to be consecrated to the man-tiger. In most instances the Hindus attribute the power of shape-shifting to the aboriginal tribes. Numerous stories are current regarding man with the power of becoming wer-tigers—e.g., among the Khonds (with whom, by the aid of a god, one of a man's four souls becomes a milepa tiger), the Lahsals, Kuki.

Tylor describes how a Kol, tried for murder, maintained that his victim was a wer-tiger, which he had followed to the man's house after it had killed his wife. The relatives of the victim had admitted that they had suspected him of such power and had handed him over to the priests, who slew him.

Sometimes the eating of a root is believed to produce the change. Occasionally the witch assumes the form of a badger and carries off children. Witches also-rich黑白 about on tigers or in the water at crocodiles, desecrated with glaring eyes, and heads turned round. Wizards also have tigers as familiars, or, as a Thana belief has it, mediums are possessed by a tiger-spirit. The souls of these slain by tigers are believed to pass into tigers to slay and devour in their turn, or to sit on the heads of tigers and direct them to their prey, calling out in a human voice so as to attract the unwary.

In Indonesia the wer-tiger is very commonly believed in among the Malays, Dayaks, etc. Sometimes the power of transformation is thought to be current among the same tribe, even among the Korinchi Malays. There are many tales of men leaving their garments in a thicket, whence a tiger has presently emerged, or in human form vomiting feathers of owls eaten when in their tiger form. A wer-tiger slain was found to have gold-plating in its teeth, as the man who assumed tiger form had. The Laivas of Burma are also regarded as wer-tigers.

While the wer-tiger is very dangerous in Java it is believed to guard plantations against pigs, and the change is effected by spells, charms, fasting, etc. In Malayia the medicine-man is sometimes possessed by a tiger-spirit, and acts as a tiger when exercising a spirit from a sick man.

A gruesome Malay story of a Semang who became a tiger (Si Riau) tells of how the man was hanged, and sucked blood rather than a fish, is told by H. Clifford. The tiger burst into a hut where several people were collected. One of them was able to reach a shelf near the roof, and from there he saw how the tiger killed them all and drank deep draughts of blood. One girl he first played with as a cat with a mouse, and all night he tossed the bodies about and tore them, disappearing at dawn.

Another story tells how the transformation was seen taking place. A bride saw her Korinchi husband returning home as a tiger, which thrust its head above the top rung of the entrance ladder. It pulpitomed and changed, and the face of the husband came up through the face of the beast. Later this wer-tiger was caught in a trap, but escaped, when it was tracked to the house. There the man was said to be sick, and

The tiger familiar spirit is also possessed by certain men, and after their death their spirits appear as tigers, or the medicine-man has subject to him an actual tiger which is immortal (Benua of Johore). The soul of a dead wizard enters the body of a tiger, and its purpose is left in the tiger for four days until the change is effected.

A curious Malay belief concerns the fold in which tigers possessed of human souls are penned. Periodical attacks of fierceness come on them, when they break bounds and go after their prey. Passing through another door they become men, and on returning through another tiger they become tigers again. Their chief is always in human form, and enters the bodies of sorcerers when they invoke the tiger spirit.

The transformation into tiger form is effected in different ways: by sympathetic magic—e.g., donning a sarong (yellow with black stripes) and repeating charms—by offerings to evil spirits, by charms, or by a mysterious poison which is supposed to affect the soul: or the power is conceived as hereditary. Among the Semang the medicine-man heightens incense and maintains himself on it. Presently fur and a tail appear on him, as he himself believes, and he goes about for twelve days destroying cattle. Then he returns home and is sick, vomiting bones. During the twelve days his wife must not look at him. If after two years keep the fire burning and burn incense, else he would disappear. Such a wer-tiger cannot be shot, as it disappears so quickly.

Various beliefs are held regarding the transformation among the Malays—the whole body takes part in it, or merely the soul substance, the body remaining at home.

Among the wild Malays of the Patani States there is a belief in badi, or mischief, caused by a body after death and devours the semangat or, sometimes, the liver of passer-by. Birds and beasts also have badi or, in the case of tigers, leopards, and jungle cats, seguang or secur; and, if a man is affected by this, he goes mad, and either imitates the actions of the creature or is subject to an abnormal growth resembling one natural to it.

In the Lombok the crocodile form is assumed by certain men in order to destroy their enemies, and many strange stories are told of them. This form is also taken among the Klemantas, one group of whom claim the crocodile as a relative. One man found that his skin become rough, his skin as a crocodile’s, and a tail forming, until he was completely transformed. He made his relatives swear that they would never kill a crocodile. Many people saw him in crocodile form.

In China there are various wer-animals—tiger, wolf, dog, fox, etc. The change is usually a bodily one, but an ethereal human double may pass into an animal either before or after death. There are many literary notices of such transformations.

An early instance is mentioned in a document of the 2nd cent. B.C., in which, after the crisis of evil spirits, a man changed to a tiger and killed his brother.

Such transformations are often ascribed to delinquent patients, and, if the patient does not kill a man, he may return to human form. This suggests a popular confusion between the fancies of insanity
and actual belief in the power of shape-shifting. Sometimes the transformation is ascribed to a community of aborigines, and is effected by magical means. In other cases the cause may be divine dispensation, or be because of the neglect of religious duties. Here the victim goes mad and turns into a tiger. In some instances he is covered with a spotted skin by the god, as in European cases, where a wolf-skin is used. Stories of transformation by the witch are current in China. Weasels and tiger-skin are said to be found in China.

A 14th cent. writer tells how he saw a man slowly becoming converted into a tiger, and his face adorned with spots and stripes. During the night he ate a hog. Other cases of this kind are of frequent occurrence. Wer-tigers and tigers are sometimes favourably disposed and give presents. This is especially the case with wer-tigers on behalf of those who excite their love.

The wolf transformation is also known. In 1880, an old man was found lying on the ground, and his life was supposed to be taken away by a wolf. The people believed that if the man would return to his house, the wolf would come to him. The man agreed, and when he came back to his house, the wolf transformed itself into a tiger. The tiger then devoured the man.

In 1890, there was a case in Japan where a man was transformed into a tiger and was devoured by a tiger.

The Ninko fox can also take various forms, especially that of a pretty girl, in which shape it will even marry a man. These foxes also possess magical powers, and can cause death or illness, but they are dangerous if ill-treated. Some Samurai families are believed to own foxes, which steal for them or torment their enemies. Foxes to whom some kindness has been shown, or who have been treated kindly, will eat the door of it with money, etc., part of which turns to grass. Often the house in which the fox lives is illusory and cannot be found again (see FAIRY, vol. v. p. 679). Men possessed by foxes run about yelling and eating only what foxes eat, but the possessing goblin-fox may be exorcised.

The same fox-belief exists in the Ainu, and with them the fox has both good and evil powers, and can cause death. Foxes also exhume and eat corpses. But the same powers of transformation to human form are ascribed to the hou, mole, crow, etc. The possession of the hou, for example, and especially the case, can enter into and bewitch a man as a punishment; the victim eats a cat, wastes away, and dies mewing like a cat. This may occur when a man has killed a cat. To prevent possession by its spirit, he must eat part of its liver.

The Eskimos and some American Indian tribes also possess the fox superstition. The wer-animal superstition is found in Africa in connexion with a variety of savage beasts. All over N. Africa it is believed that the jinn can take animal forms—wolf, jackal, lion, serpent, scorpion. This is also true of the giilas, who appear as men, women, and animals, and feed on dead men. They are also called the Nogitsune, or the goblin-fox. It is also known that the jinn can assume the shape of the budos, which change into hyenas and kill and devour. They are distinguished from ordinary hyenas by greater malodour. The budas are sorcerers: they are found among the Falashas and Agoss, are supposed to be budas. Hyenas have been killed with earrings in their ears, and these are believed to be budas, though it has been thought that sorcerers put earrings in the ears of young hyenas to bolster up this superstition. The budas have a king in the neighbourhood of Abolo to whom they bring offerings of corpses daily. As blacksmiths are a hereditary folk, their sorcery is also hereditary, but a budu confers the gift on his children by a mysterious subscription of herbs. Cases of transformation are believed to have been actually witnessed. In one such case...

1cf. the Raihnanthi belief that the black bear 'takes the form of a beautiful woman at night, and to be able to eat her if they are not wary' (M. L. Danes, FL. xii. (1903) 265).

4 Dennys, p. 96; H. J. Rink, Tales and Traditions of the Eskamo, Edinburgh, 1893, p. 141.

5 E. W. Lane, Avarition Society in Middle Ages, London, 1883, pp. 34, 45.

the buda sprinkled ashes over his shoulders, and the change began. Besides killing men and drinking their blood, the buda takes possession of his victim, entering his body by a look, or when he is eating. He can kill by a single glance. He lives on the remains of dead animals, and sometimes digs up corpses to eat them. This is also done by actual hyenas.\(^1\)

The belief in the wer-hyena occurs from the Soudan to Tanganyika, and is perhaps strengthened by the fact that wizards at their meetings bow and Caper like hyenas, eat horrid food, and commit excesses of fright which makes the onlooker mad. Even in the daytime their glance causes a deadly sickness. Certain tribes in the Soudan are supposed to possess this power of transformation, but it is dangerous to shoot them. One of them who was shot was seen to enter the hut of a wizard, who then cried out and the man went after the man who followed him to the grave.\(^2\) Generally among the black races the usual animals, besides the hyena, are the lion, leopard, and crocodile. In Nubia old women are considered hyenas, and antelope, and the bodies of these animals by night.\(^3\) In the Soudan the hyena shape is supposed to be assumed at an ant's nest. The Aveinda wizards receive powders of wild beans from spirits called vibanda.\(^4\) The Manyamwesi of E. Africa think that sorcerers can transform themselves into animals in order to injure their enemies.\(^5\) In E. Central Africa the bewitcher (mfti) can turn himself into a hyena, leopard, crocodile, etc. He then digs up dead bodies and eats them. Sometimes the change takes place after death, and, if the creature kills people, some method of appeasing it is necessary. He can be driven away by the infirmity of Makanga to have a wife who at night opens the door of the kraal to admit him and then runs off with him to feast. In one case, when a goat was carried off, tracks of a hyena and of human feet were seen together.\(^6\) Among the Tumbuka of Central Africa certain women wander about smeared with white clay, and are believed to have the power of changing into lions.\(^7\) In W. Africa the Yoruba think that the wer-hyenas assume their animal shape at night to prey on cattle and sheep, and, if possible, on human beings, who are sometimes compelled to go out to them when they utter certain howls.\(^8\) In Londa the belief existed that the chief who could change to a lion, kill some one, and then resume his own form.\(^9\) The Ibo believe that a man's spirit can leave his body and enter into one of the many supernatural beings, as the iisi anu, 'to turn an animal,' and it is done by means of a drug. If the animal is killed, the man dies; if wounded, his body is covered with boils.\(^10\) Wilson says of sorcerers and witches: 'They sometimes turn into leopards and change their enemies into elephants, in which form they kill them.\(^11\) In Senegambia, a sorcerer who changes to an evil animal is kept off by means of salt; or, when transformed, he leaves his skin behind him. If it is rubbed with salt, he suffers, and comes to beg that the grains of salt be removed.\(^12\) In W. Africa generally the power of certain persons to change into leopards or to send their souls into leopards, which are then guided by the human possessor to kill such persons as are obnoxious to them, is very commonly believed in. The person so changed is called a nyunger and cannot be killed. Many persons actually believe that they have thus metamorphosed themselves and done harm. Other animals—lion, panther, crocodile, or shark—are occasionally made use of.\(^13\) One family, living in a kraal, kept a leopard in their kraal. When it changed into leopards, but, if once they lap blood, they remain leopards forever. The Ariadne wervolfs. In Calabar a man may become a leopards. If he becomes a leopards, the man who, after marriage, went to the wilds and lived like a hyena on dead bodies. Returning home, he ate his child. His brothers killed him, but the woman's second husband also became a hyena and ate her and his child.\(^4\) In British Central Africa the bewitcher (mfti) can turn himself into a hyena, leopard, crocodile, etc. He then digs up dead bodies and eats them. Sometimes the change takes place after death, and, if the creature kills people, some method of appeasing it is necessary. He can be driven away by the infirmity of Makanga to have a wife who at night opens the door of the kraal to admit him and then runs off with him to feast. In one case, when a goat was carried off, tracks of a hyena and of human feet were seen together.\(^6\) Among the Tumbuka of Central Africa certain women wander about smeared with white clay, and are believed to have the power of changing into lions.\(^7\) In W. Africa the Yoruba think that the wer-hyenas assume their animal shape at night to prey on cattle and sheep, and, if possible, on human beings, who are sometimes compelled to go out to them when

---

LYCANTHROPY 213

both living and dead, with power to change to an animal—hyena, lion, serpent, or alligator—and to do harm to men or cattle.\(^1\) Among the Baronga a secret society exists the members of which send out their spirit-bodies or go out bodily at night to devour human flesh. They leave their shadow, or the appearance of themselves, behind, but this is in reality a wild animal with which the person has chosen to identify himself. If this appearance is still, a hyena or wolf is known from it; but, the real man falls through the roof with a similar wound. Such persons enter huts, take the true self of the occupant, and eat him. Only his shadow is left, and dies next morning, so that such wizards are not aware of their night work. Those who have long practised it, however, are aware. Perhaps the basis of the whole idea is to be found in the dream-conceptions of hysterical subjects.\(^2\) The Basuto also believe in wer-animals, mahlilhoumes, men who turn temporarily into animals and kill and eat human beings. They have the tradition of the introduction of sorcery through a queen who could transform herself from Africa. In Missouri the Negroes think some cats are devils, i.e. witches in disguise.\(^3\) The Voodoo is credited with the power of changing to a black wolf, dog, cat, owl, or bat at will. To stop this the human or the animal skin must be found and salted. This assumes a real change of skin.\(^4\)

With all the N. American Indian tribes it was believed that wizards and witches could take the form of wolves, foxes, bears, owls, bats, or snakes—a belief which was probably strengthened by the wizards wearing skins of animals and imitating their howls, etc.

A man had a legend of a medicine-man who was seized with a spasm and went on all fours. His nails grew long and sharp, a tail grew on him, hair covered his body, and he became a bear. This transformation lasted until the spasm passed.\(^5\) A similar belief to that of the Chinese fox superstition exists, as with the Narraganset, and the Tlaxcalans believed in a wer-dog. The Musqueakis have curious tales about trees which appear as human beings, each bearing the marks of injuries done to the other, and of an old man who, denying that he was a bear, is proved to have taken that form by the fact that his tracks and those of the bear both have traces of grease. He is therefore killed because he has "a devil in his nose."\(^6\) Laidau
tells of wizards who, having taken the form of birds and animals, have been shot with identical wounds, while the magical bolts with which the birds were shot are found in their bodies. The Chipewa sorcerer for a fee will turn into an animal and inflict injuries on the person described to him.\(^1\)

In a Chipewa story a boy left by his father in charge of his elder brother and other children is neglected and eats the laving of wolves. Tosses pitty him, and he follows after a one day heard a child's voice crying, 'I am turning into a wolf,' followed by a howling. When they saw the boy they saw the boy as a wolf. As he watched, the change became complete, and with the words, 'I am a wolf,' the werewolf disappeared.\(^7\)

Among the higher American Indian peoples similar beliefs prevailed. Maya sorcerers could turn into dogs, pigs, etc., and their glance was death to a victim; in Guatemala the name of the priest was derived from the fact that they could take animal forms. In Yucatan sorcerers claimed to have such powers, and one in dying confessed to a priest that he had often so transformed himself.\(^8\) Among the Tarabumare Indians of Mexico, if a sorcerer sees a bear, he will beg an Indian not to shoot it, as it is he, or, if an owl were, he says, he will, 'I is who am calling.' The European belief in the transformation of witches into cats was carried to America.

Following the belief in S. America, we find that the Abipone keeket, or priest, was believed to turn himself into an invisible tiger which could not be killed through any method. He could then transform himself and began to roar like a tiger, the onlookers fled, believing that the change was actually taking place. The people of Guiana believe in the kenatina, a being who can send forth his spirit to injure or cause wasting disease, or place it in the body of any animal—jaguar, serpent, bird, or insect—which follows the victim and slays him. His spirit may also enter a man in the form of a caterpillar, and cause disease. Such a caterpillar is often withdrawn from a patient's body by a paeuton, or doctor, and killed, but the spirit escapes, so that the kenatina does not die. The animal in which the kenatina usually places his spirit is the jaguar or tiger—the kenatina-tiger—which it puzzles an Indian to kill. A certain small bird is also much feared as a kenatina-bird; this is shot and every scrap of it carefully burned, so that there may be one enemy the less. Certain paeuton are thought to have the power of sending their spirit into an animal.\(^9\) The wer-jaguar is believed in by many of the tribes.\(^10\)

A Tuscan story tells how a man saw his brother take three grains of salt, spread a jaguar-skin on the ground, and dance round it, when he became a jaguar. Much horrified, he later obtained the skin and burned it. Returning home, he found his brother dying, but was asked by him to procure a piece of the skin. He did so, and the dying man threw it over his shoulders, and became a jaguar, which fled into the forest. In this case bullets merely rebounded from the wer-animal. In a Paraguay story the man becomes a man-eating jaguar by falling prone, and is re-transformed by reversing the process. Once he was wounded by a youth, who followed him up and killed him in his den, which was filled with human bones.\(^11\) In another tale from the Paraguayans the men who visited a village when the men were absent decamped when they heard from the women that they would soon return. When they returned, they said that the visitors were jaguars, who had come to deceive and destroy them, and they had seen the marks

---

1. Laidau, Tales from the West Indies (1880), p. 151.
of their claws near the village. They were then pursued and killed.1

Among the Melanesians in Banks Islands the nearest analogy to the werewolf is the talamavii, the soul of a person which leaves the body to eat a corpse. A woman threatened to do this. Watch was kept, and, when a noise was heard near the corpse, the watchers threw a stone and hit something. Next day the woman was found to have a bruise on her arm caused by the stone which hit her soul.2 In Lepers’ Island wizards transform themselves into blow-flies and cause sickness to their victims, or into a small wolf to eat enemies. In Aurora magicians take the form of sharks, owls, and eagles.3 A story from this island illustrates the belief.

Tarkeke devoted men by turning into a fish, or entering a fish or a kind of magic image of a fish. His son found this image and got into it, when it went out to sea. Tarkeke then vanished.4

In the examples quoted it is interesting to note in how many ways the change is thought to be effected. In many instances—Scandinavian, German, Slavic, French, Chinese, and the Tucumans of S. America—it is by donning an animal skin or girdle (see GIRDLE), presumably after removing the clothing, as this is a necessary preliminary in other methods. Eating a drug or root, or rubbing the body with a salve or oil is found in ancient Italy, the Netherlands, England, India, Indonesia (where also a poison infecting the soul is thought to be the cause of the change), and in Africa, and in many cases tried judicially in Europe. Charms, spells, and other magical methods also affected the change in Celtic, Slavic, Chinese, Indonesian, Cambodian, and other places; and the use of spells accompanied the other means referred to. The power might be given by the devil (Russian), or by spirits (Avebiu), or the change might be caused in a man by a witch. It might be the effect of a divine or saintly punishment or other curse (ancient Greece, China, Celts of Ireland, Normandy); or it might be the result of eating human flesh (ancient Greece), or of making use of some particular action (ancient Greece), as falling prostrate (Paraguay), yawning (ancient Greece); or it might be the natural gift of a seventh son (Portugal), or of one born on Christmas night (Naples) or between Christmas and Twelfth-night (Greece).

In some cases the power is ascribed to a special tribe or to a people living in a special district—Arabs (Malay, Indo-Chinese), aboriginal tribes in China, Sf. or Hadramaut. This has perhaps an equivalent in the appearance of epidemics of lycanthropy in certain places, so common in the Middle Ages and later.

Very often it is said that, when the wer-animal is wounded or killed, the human form comes back spontaneously. This is found in many European instances, and also inversely in that of the fox and dog superstition in China.

In general, when the animal skin may be separated from the man, there is still a sympathetic relation between it and him. Thus, if it is burned (French, Russian, American, S. American instances), or rubbed with salt or pepper (Sengambia, Calabar, Negroes of America), he suffers terribly and may die, as in the case of the lembi of the Celebes (p. 218 f.). On the other hand, this may release him from being a werewolf, as in the case of other men under enchantment who lose their beast nature when the skin is burned. Conversely, the real or mermaid wife recovers when she discovers her skin.

While in Europe the man who is a werewolf is known by his eyebrows growing together over his nose, or by a small wolf’s tail growing between his shoulder-blades, in Indonesia the man-tiger as a man lacks heels or the furrow of the upper lip, or is marked by twisted feet or by peculiar actions.5

There are various methods of effecting the transformation. Burning the skin and wounding have already been mentioned. Another method was for the witch to cover the werewolf with a skin, which hair turned outwards (Serbia). In the case of wounding, some special methods are referred to—the werewolf had to be scratched above the nose so as to extract three drops of blood (Bilitski), and in Germany stone with three blows with a knife or pitchfork. The effusion of blood as a cure here corresponds to the drawing of blood from a witch as a well-known means of destroying her power. Naming the werewolf by his baptismal name and reproaching him were also effective.6 In one story cited above the wife shaves her apron at her husband and so restores him. In Cambodia the werewolf is deprived of his power if struck with a hook on the shoulder.7

2. Lycanthropy as a theological doctrine.—Throughout the Middle Ages, but more emphatically in the 16th and 17th centuries, theologians turned their attention to lycanthropy as an evil of sorcery. The general doctrine was that by the help of Satan sorcerers could transform themselves into noxious animals, particularly wolves, for purposes of evil. In the 16th century, theologians expressed these views, and many treatises were written on the subject, while it was also discussed in general works on the evils of sorcery. Of these the organs J. Bodin is the best examples; in his De Magorum Daemonomania (Frankfort, 1603) he maintains the reality and certainty of the transformation. Theological opinion then had gained popular ascendancy, and many of the instances cited as proofs are little better than the popular tales referred to above—e.g., where a wolf is wounded and a human being is found with a similar wound, soon after. The severest measures were therefore taken against lycanthropes, especially on the part of the Inquisition, and this authoritative announcement of the reality of the transformation added to the popular terrorism. People easily imagined the truth of the charges brought against those charged with them, or came forward as witnesses of the alleged facts. Indeed, the prisoners themselves often maintained their truth, showing that insanity and hallucination had much to do with the matter (§ 3). The peculiarly heinous aspect of the crime is seen in this: H. Boguet, a judge who tried many cases and who wrote many works against sorcery, drew up a code in 1601 in which he stated that, while sorcerers should be first strangled and then burned, the loup-garou should be burned alive.8 The belief in sorcery as well as the theological animus against it often led to epidemics of sorcery; the people in a district, e.g., became terrorized by the idea that all around them were sorcerers, or many persons, half crazy, maintained this regarding themselves. For instance, at the beginning of the 18th century, in Lombardy, during such an epidemic, witches were freely accused of having changed into cats and entered houses to suck the blood of children.9 Reports of murdered children and trials of reputed lycanthropes are still extant, and afford sad evidence of human credulity.

LYCANTHROPIE

In 1621 Pierre Burgot and Michel Verduin were tried by the prior of the Dominicans of Poligny, in the diocese of Besançon. The former accused himself and his cattle had strayed, a black cavalier had brought them together—after he had signed the confession the judge had signed it. Verduin too had strayed, but he never had a devil. Later Verduin taught him the Subbot how to become a werewolf by rubbing himself with a certain ointment. Then he saw himself with a large black dog with his body covered with it, while he could run like the wind. Verduin also transformed himself into the same dog. The same evidence was obtained immediately from his demon master. In the form of wolves they killed several children, sucked their blood, and ate part of their flesh, finding it excellent meat. It was also said that he had sexual relations with wolves. Both men were burned alive at Besançon.1 In the same year before the same court these three werewolves were executed for the same crime. One of them had been wounded as a wolf by a hunter, who, following the trail, came to a hut, where he found him having his wound dressed by his wife. These lycanthropes are represented in a painting in the chapel of the Dominicans.2 A further case is that of Gilles Gurrer, a hermit of Lyons, who, finding his solitude irksome, had taken a female companion. They had several children and lived in great misery. In 1623 a wolf terrorized the district, and the bodies of several children were found half devoured. A boy was attacked by a dog as a wolf put to death. More than 500 lycanthropes. His Discours extraorl car des sorciers (Lyons, 1602) contains many instances of alleged lycanthropy, with the confessions of those accused. The belief is firmly in lycanthropy, which by rubbing an ointment or otherwise, some chapters of his work dealing with this subject. It is remarkable also, as showing the state of feeling at the time, that on 3rd Dec. 1677 the Parlement of Françoise-Cornet gave a ruling for the pursuit of loup-garous.3 Towards the end of the 16th cent. Pierre Stumf was executed at Edinburg, in the diocese of Glasgow, on his own confession of having lived with a werewolf, who gave him a girdle by which he could become a wolf, not only in his own sight, but that of others. He had six small children in his wolf form, and had tried to eat two of his daughters-in-law.4

The beginning of the 17th cent. was marked by new cases of lycanthropy, and hundreds of executions took place. In 1600 Jean Grenier, a boy of 14, alleged before the judge of Rocourt-Challon that he was a werewolf, as a result of a demonical gift, and that he had eaten some children. He also accused his father of being a vanwyend, possessing a wolf-skin, and another man, Jean Pirey de Thalivière, of having his skin and ointment. The conduct of the boy in court showed that he was insane, and he was detained in a convent. Nevertheless the charge was continued against the two men. The youth was visited in his convent by De Lacre, in 1610, who found that he could run on all fours with ease, and that his method of eating was disgusting. He still persisted in his delusion of being a werewolf.

In 1604 at Lannamoe five persons were burned as werewolves. A peasant of Cresoz had caused his child and, as a result, five sorceresses in the form of wolves had carried him off to the devil, who sucked his blood. The sorceresses then cut him up, belled him and made a casser of one of his flesh.5 These will suffice as examples of the trials and executions for alleged lycanthropy which were so numerous at this period. Not the least noteworthy fact in the whole sordid business is that some of the writers on the subject show the most extraordinary credulity regarding the cases. Petrus Marnormus, in his De Sorcellis, maintained that several hundred cases of lycanthropy had been observed in Savoy.6 Boudin, procureur general of the king, assured Bodin that there had been sent to him from Belgium the proofs, signed by judge and witnesses, regarding individuals accused of lycanthropy. Soon after a man was found in bed with the arrow in a wound, and, when it was drawn out, it was recognized for his own by the person who had shot the wolf.7 Other cases are related in which cats attacked a man, who wounded them. Women were then found in bed with similar wounds, and they were at once believed to be the cats in question.8 While the whole was generally attributed to diabolical influence, there were different ways of accounting for it. Some writers thought that there was a real transformation, or that the devil clothed the men with an actual wolf-skin or with one condensed out of air.9 Others, however, thought that the devil brought about or by means of unguents on the man or on the outlookers, so that they imagined that the man or woman was an animal, while he or she was similarly deluded.10 Others again, suggested that the devil caused the person in sleep to imagine that he was a wolf, and that he actually did the deeds of which he dreamed.11 This is akin to the theory of St. Augustine, who refused to believe that the demons could actually change man's corporeal substance. In sleep or trance the man's "fantasum" went from him and might appear to others in corporeal, animal form, while to the unconscious man himself it might then appear that he was in such a form and acting in accordance.12 The effect of such drugs as stramonium caused hallucinations of riding through the air or fantastic transformation, such as witches confessed to, and this may have been the food given by women to others in Italy so that they believed themselves beasts of burden. Such a drug might occasionally be responsible for lycanthropic hallucination. Still others, more rational, regarded lycanthropes as lunatics who imagined themselves wolves. The last is probably the true solution of the whole matter.

3. Lycanthropy as a form of mental aberration. —Both in earlier times and even in the period when severe sentences were being passed against alleged werewolves, there was evidence of a condition in which the patient imagined himself to be an animal—a form of melancholia with delirium—was clearly recognized by some. The popular belief in werewolves was not accepted by scientific writers in antiquity. Herodotus (iv. 104) would not be persuaded of the alleged transformation of the N eians. Theby, admitting the transformation of Lyco as a divine punishment, refused to believe in the recurrent transformations in Arcadia. Pliny (HN vii. 34) was equally incredulous. Medical writers regarded lycanthropy as a form of mental derangement. Of these, Marcellus of Sibyl wrote a poem in which he treats lycanthropy in this fashion. The poem has not survived, but a prose version, attributed to the man who exists.

LYCANTHROPY

According to Marcellus, those afflicted by the lupine or canine madness go out at night in February, insinuating wolves or dogs, and bark and howl; they have been called alycanthropes, a term that merely means "a human wolf"; and alycanthropes that went by the name of "showmen".

The existence of such a form of madness was known to the Semites, as the account of Nebuchadnezzar (Dn 421) shows. Several 18th and 17th cent. writers made inquiries into the origin and nature of madness. Of these is the best known, though he still believed in demoniacal influence. According to him, those who believed themselves wolves were really troubled in their minds by the devil, so that in some cases they appeared to themselves as they actually appeared to themselves. He also cites the passage of Marcellus just referred to. J. de Nynau, a doctor who wrote on lycanthropy, thought that the lycanthropes were deluded by the devil, or that he actually gave them unguents, liquids, or powders, by which their sense impressions were affected. There were, however, natural lycanthropes, persons afflicted with "ficts loci". He denies any actual transformation, as was insisted on by Bodin. The possibility of persons, more or less imbecile, hallucinating in this way, is denied; for even those among wild animals, such as wolves, was also suggested by some later writers. Modern alienists take the view that lycanthropy was a form of insanity, often epidemic. The patient suffers from a disturbance of the personality, and imagines that he is a beast. The disease was common in the Middle Ages, because people believed such a transformation possible. Now such melancholia is very rare, because this belief hardly survives in Europe. Sporadic cases, however, are still known; in one instance the patient imagined that he was a wolf, and ate raw meat.

Further examples of possession from all stages of culture are worth citing.

2. Galen, x. 307.

3. Some theologians thought that there was a real change, others that it was imaginary, and others that his soul had passed into the body of a beast.

5. De Nynau, ch. f. For other writers who took the view that madness was the cause of lycanthropia see Bruckelet, p. 206. Voltaire appears to regard the demoniac of Scripture, who wandered among the tees, as lycanthropia, who also had that habit (Essai sur les Moeurs, in Oeuvres, Paris, 1816, xiii, 165). See, e.g., I. P. Calvini, De la Fole, Paris, 1815, ch. 14; Reuss, p. 117.

A. Werner, writing of the tribes of British Central Africa (among whom the possibility of transformation is firmly believed), tells of a man who had a stuttering that was known—pale face, tearsless eyes, dry tongue, burning thirst, etc. He also suggests various remedies for this disease, which he regards in large part as the work of the devil. Those who were cured were said to have been transformed; i.e., they were not cured, but only changed. There were also the "Khoâapuras," the man who imagined himself to be a dog.

In the Malay peninsula and in the Mountain of the Tiger, men believe themselves to be tigers. Many women believe themselves to be tigers or tigers and shun society. This is known among tribes as transformation into a tiger, and is not imagined. Several tribes are believed to possess themselves of the tiger-god, and will fall on a kid and devour it alive. In the Malay peninsula as real is the belief in the wer-tiger that boys play a game based on the belief. In this boy is hypnotized, and the others run off, imitating cries of fowls. Then he rises, pursues, seizes, and bites any whom he catches, or climbs trees in his assumed character. Any one who sees him is believed to have been possessed by the spirit, but it is obvious that this is on a par with actual cases of insanity, and that the boy is not more phlegmatic, and of the same species as a man who imagines himself to be a tiger. The game is also played in Sumatra and Java, where other animals are also imitated. Among the Hayman men who eat forbidden flesh are liable to penalties. They will run about the woods naked, imitating a deer, if they have eaten deer. In Annam as a man who wishes to see something from the tiger-god prays it to incarnate itself in him. He falls on all fours, claps his hands as a tiger, and sticks the teeth of the vessel which contains it. When he is coined down, he is rubbed with alcohol so that he may come to himself.

Most of these cases from low latitudes are monsters, and are obviously temporary cases of insanity, actual or assumed, explained in terms of current belief regarding shape-shifting, etc. They suggest that even among savages, with whom actual shape-shifting belief in very strong, insanity may, partially at least, have suggested actual wer-animal ideas.

In Europe, during the period when the werewolf superstition was most prevalent, the belief in the possibility of transformation an animal existing among men. The cases of lycanthropia are evidently sporadic, but they are examples of what may be called the "lycanthrope". The cases of Jacques Bullet, arrested as a werewolf at Condé in 1565, is an example. Two wolves were seen devouring a child's body, while a third rushed off into a neighbouring field. There was a man of wild appearance found, who claimed to be the wolf and maintained that the two wolves were his brother and cousin, and that they had killed and devoured the child. His answers at his trial were contradictory, but he clearly believed that he sometimes became a wolf. His life was one of great poverty and misery, and it is not impossible that he had killed the child said to have been devoured by him, and that his ghastly meal was interrupted by wolves. He was sentenced to death, but the Parlement of Paris annulled the sentence, and sent him to the country. As a case of transformation, it is remarkable, for by Lerch Mere, he describes how he visited an alleged werewolf in prison. He was a realist, but unusually bold, at Easter, through the power of his master, the devil, he became a wolf, took off his chains, and flew out of the prison window. This man would have been burned alive, but he obtained his release. In another, a man in Ælia, in 1511, a man maintained that he was a wolf and had killed several persons, and that he had suffered from other wolves merely in the fact that their skin was covered with hair, while his hair was between his skin and his flesh. He was given over to the doctors for treatment, but died soon after. In more modern times such cases are sporadic. Curnyn recounts that of a young man at Corfu who in a state of maniacal frenzy imitated a serpent, crawling burton, Anatomy of the English Wolf, London, 1816, p. 184.

4 Dalton, p. 323.

6 F. X. (1829) 2:409 f. (imitation of a toad-call). See also the case of the Cora man, mentioned in the text, who claims to be a tiger.

7 F. X. (1836) 2:409 f. (imitation of a toad-call).

8 J. K. W. H. Le Lacheur, Souvenir de manger, Strasbourg, 1836, p. 120; cf. the case of Baruguay transformation and flight, § 4. It may be based on dream experiences and hallucinations, as this obviously was.

9 Werner, p. 452; cf. the curious description of a mad lycanthrope in Webster's Duchess of Malfi, act v. sc. 2.
Lycanthropy 217

through the donning of an animal's skin, there may be a trace of the fact that insane persons with lycanthropic delusions did have their delusions heightened by such an act, as we see in the case of the werewolf. In the Irish instance mentioned by Grattan, the human body was visible underneath the skin. As far as the popular belief is concerned, it is by no means certain that the clothing was first removed. This may point to what actually occurred before the animal skin was put on. It may be the relic of an older belief that the human skin was first removed, cf. the Voodoo rituals. *Vampire* ii. 212

Perhaps the werewolf belief was also aided by such phenomena as imbecile children, brutalized, and having animal appetites. These 'wild boys' were often believed to have been stolen by animals—the bear, the wolf—and to have been brought up and suckled by them. While many stories about such children are not authentic, there are some cases in which boys were actually found in the dens of wolves in India. They could not stand upright, went on all fours, ate raw meat, and tore clothes into shreds. Various theories have been suggested to explain their having been thus brought up, but, if some cases are authentic in wolf-haunted districts in India, there may have been instances from time to time in similar districts in Europe. This would in part explain the numerous folk-stories about animal imitations of men, e.g., that of Romulus and Remus. The cases are of the kind described as 'idolcy by deprivation,' and, if such children survived, they would hardly differ from the insane persons who imagined they were wolves, went on all fours, and ate raw flesh.

The case is parallel to that of women carried off by baboons or orang-outangs, which has doubtless some foundation in fact (see C.F., p. 277).

4. Werewolf and vampire.—While both werewolf and vampire have a liking for human flesh and blood, there is a marked difference between them. The werewolf is a living person assuming animal form for the sake of gratifying his desire. The vampire, on the other hand, is a resuscitated corpse, which rises from the grave to prey on the living, the reasons for the resuscitation being of various kinds (see Vampire). But here and there links of connexion exist. Thus in Germany, Serbia, and modern Greece it is thought that the man who was a werewolf in life becomes a vampire after death. Hence the werewolf was burned, not buried, lest he should do mischief.

Again, the dead sometimes appear as werewolves. King John Leckfall was said to have been a werewolf after his death, on the evidence of a monk of Worcester. In Normandy within the last century priests watched at the grave to be sure of the ghost conduct of the dog-leaved. If some lost person was about to become a werewolf, they cut off his head and threw it into the river. A ghost may also appear as a wolf, like the wolf of Anspach in 1654, which was the ghost of a dead burgomister. This corresponds to the Malayan belief that ghosts of dead wizards enter the bodies of tigers, unless the son of the wizard by certain rites attracts his father's spirit to himself. Similar beliefs have already been noted among the Slavs, Bena, Chinese, natives of British Central Africa, Rhodesians, etc. (§ 1). In New Zealand lizards were feared because the souls of those whose death had been unexpected had become malign and entered such creatures. They then gnawed the entrails of living men. Demons and

5. A recent authority suggests as an explanation of lycanthropy a joke played by a young peasant who covered himself with a wolf-skin to frighten old women and so to gain the reputation of a werewolf. (Dict. philos., s. v. werewolf, p. 267.) He also produced effects of necrophagy by witches is already found in Apuleius.
6. Derrama, p. 245.
spirits of all kinds frequently take animal forms and act as the werewolf or vampire. Thus the French labun was a spirit in the form of a wolf, which haunted churchyards to prey on the dead, like the Arabian ghâl, which takes the form of men or animals and eats corpses. 1 In Ethiopian lives of saints the king of the devils rides on a fire-breathing wolf and is followed by fiends in the form of wolves, while in Meroe the wicked are thought to be visited by evil spirits as wolves, serpents, or dragons. 2

5. The ‘sending’—A phenomenon analogous to that of the werewolf is that of the ‘sending’—a thing or animal, sometimes animated or even created, by the sorcerer or some part of the sorcerer himself (his soul, etc.) and sent out by him to annoy or injure people. Examples occur over a wide-spread area and at various levels of civilization. The ‘sending’ is a kind of familiar of the wizard. In S.E. Australia the lizard is such a wizard familiar and is sent out to do injury. 3 Among the Roro-speaking tribes of British New Guinea snakes and crocodiles are sent by sorcerers to kill. A fragment of the victim's garment is put beside the snake in a pot; then heat is applied to the pot, and the snake sends its fragments there. This is let loose near where the victim passes, and attacks him because it recognizes the smell of the fragment on him. More magical is the method of the Battey Sorcerers. ‘Sending’ from whose body causes death. It leads a separate life since the death, or may pass over to her daughter. At Gelaria this ‘sending’ is called labunii, and resembles a shadow. It leaves the woman's body when she is asleep, and causes disease by inserting into the patient's body in various ways. Should any one see it, it turns into an animal, and then again takes its human form. At Collingwood Bay the ‘sending’ is called jij/m, and is like a, woman. It turns into a mosquito and sucks the victim's blood, resuming human form at dawn. 4 In Banks Island, if any one eats a piece of a corpse, its ghost will go forth to harm a victim at the will of the eater. The Here also and in the New Hebrides the moe, or sea-snake, acts as the familiar spirit of those who profess to have had intercourse with it. 5 Among the Malays and in Java insects and even horned creatures, including the Yoruba, ‘send’ or to their victims. Sorcerers use the owl as a ‘sending,’ and, should it be caught by the person whom it is intended to destroy, and its claws and wings broken, a similar injury is done to the sorcerer's limbs. 6 In the Cameroon a man selects a hippopotamus, leopard, elephant, gorilla, etc., as a friend, and the animal is then supposed to harm his enemies by stealth. But, if the animal dies or is slain, the man dies. Hence such animals are usually not hunted by fellow-tribemen. 7 Matahele wizards dig up corpses, transform them into hyenas, and use them as messengers or steeds. A wounded hyena escaping into a kraal is thought to show that this is the dwelling of a wizard. 8 Baronga wizards send forth crocodiles, lions, snakes, etc., to kill or wound their victims. The Calahaw each wizard has two owls as messengers, or sends forth insects—stinging ants, beetles, etc.—into the house where he is to find his victim. Then he sends his ikim—a gourd—to examine the things, and report whether there is any dangerous juju, or medicine, in it. 9

Eavill sorcerers will leopards and crocodiles to go and destroy, having obtained this power through a medicine rubbed into their eyes. Then the animal becomes visible to them, and they know that it is at their service. 2 In British Central Africa wizards create lions, or sometimes inspire existing lions, to go forth and destroy. 3 Among the Bondi ‘dolls’ of Indian corn are animated by the sorcerer, and go forth to seek the blood of a victim, who turns sick and dies. 4 Zulu wizards send out owls and other rarer animals, and crocodiles, to injure their victims. These are called their amanzwa, ‘attendants.’ 5 The Eskimo angabok sends a tundlabak—a seal made by him. Should the victim kill it, he loses all strength and becomes a cripple. This seal is made of bones of various animals, covered with turf and blood, and charmed into life by a magic song. 6 A Siberian shaman will send out a ye-koba, or witch-animal, to fight that of another shaman. The shaman whose ye-koba is worsted shares its fate. Lepland wizards send flies and darts against their enemies, and also to eat a man's heart so that he dies. 7 The Tyznas explain sickness as caused by an evil animal sent forth by a sorcerer, as being the same as eating the patient's life. 8 In ancient Scandinavia it was believed that sorcerers could raise a ghost or a corpse by their magic power and send it to do harm to an enemy. 9 The Indian, Japanese, African, or Indonesian witch-animal, cited above (§ 1), should also be noted.

Danish witches were believed to make a hare out of some wooden pegs and an old stocking, and send it to steal milk from cattle. 10 The Estonians believed in magic packets made by wizards and sent forth to do all kinds of mischief—e.g., to transform the victim. 11 Among the Celts the druid and the sorcerer drew by similar spells over a victim's head a blade of straw and flinging it in their victim's face, to cause him to become mad, and all madness was attributed to such a ‘sending’. 12

Not dissimilar to this conception of the ‘sending’ is the belief entertained in Celebes regarding the wer-man. The Torajas believe that a man's spirit or insule, lamboyo, can go forth from him as a deer, pig, cat, ape, etc., while he is asleep at home. The lamboyo then assumes human form (this resembles the New Guinea labunii). Its victim is first made unconscious; then in human form the lamboyo eats him up, eats the liver, and joins the body together again. Soon after the victim wakes,

hold to have a *kurna* which enters him at birth, and another, its counterpart, which enters an animal. The death of the one causes the death of the other. The whole belief in the bush-soul is not unlike the Ioran belief in the genius. A man's health depends on the harmony of his bush-soul, which often resided in a snake. If that was killed, the man whose genius it was also died.

The *nagual* belief is found in Central America. In this case a youth obtains his *nagual* by dressing of an animal after a period of solitude and fasting. The *nagual*-animal is closely bound up with the man henceforward. When it dies, the man dies; when it is sick, he is sick. He has also the power of appearing as his *nagual*. Any wound caused on the animal form is then found on the man. This resembles the belief in Motu, Melanesia. A lizard, snake, or stone, etc., is selected as a man's *tamanui*. His life is bound up with it. If it dies, or gets broken, or lost, the owner dies.

As already seen, the *taloomaur* may be the soul, and, if it is wounded, the body is found to have a similar wound. In an Eskimo story the spirit of a witch who has made a young man ill is wounded in the heel. At the same moment the witch dies in the next house.

Between the werewolf superstition and the various beliefs cited in this section there are certain similarities. Of these that recurs constantly is the belief in repercussion.

Injury to the *sending* entails injury to the sorcerer (Torbi, Egypt), Siberia; injury to the animal friend entails injury to the owner (Cameroon); injury to the bush-soul, *nagual*, *tamanui*, *wer-animal*, etc., to the owner (Cameroon); injury to the soul which takes the form of an animal entails injury to the owner; injury to the soul which enters an animal temporarily entails injury to the owner; injury to the soul absent from the body for some miscellaneous purpose (injury to the owner (Edison, Melanesians)); injury to the werewolf or other *wer-animal* entails injury to the man in his human form.

The real point of connexion between all the beliefs is that something belonging to the man, some part of the man, or the man himself in another form is injured. The injury then, because of the vital connexion between the part and the whole, or thing owned and owner (sympathetic magic), is seen on the man himself. But it is not clear that, as Frazer supposes, the wide-spread belief in wer-animals may be found to resolve itself into a belief in the external soul. These beliefs are clearly to be found in a very few instances (Khonds, Orangs, Malays, Chinese, Ilois and other W. African peoples, Indians of Guiana), the man himself transformed, not his soul. And it is possible that the owner of bush-soul or *nagual* is supposed to change himself into the animal containing it, or an animal of the kind, the transformation is a bodily one. The external soul, injury to which causes injury to the owner, is one thing; the wer-animal, which is really the man himself transformed, is another. But the same theory or belief in repercussion is applicable to both. It is not by any means certain that the instance on which Frazer bases his theory of the wer-animal and the external soul can support it. There is no evidence that, when the Ntaka novice is supposed to die and come to life
again becoming a member of the wolf-society, he has exchanged souls with a wolf, so that he is a wwer-animal himself, and wolf people, or the wer-wolf, there is nothing anywhere akin to the bush-soul.1 Nor again is it clear, as N. W. Thomas maintains,2 that lycanthropy is connected with negamism rather than with the wer-wolf, for that the wer-animal was originally the familiar of the medicine-man. The comparatively few instances of the spirit going forth as a wer-animal suggest that we are here in the presence of a different kind of analogous super-
stition to that of lycanthropy with its supposed bodily transformation. Again, the familiar is hardly a form of the man himself, as the werewolf is, but rather sometimes of part of the man, or it is his messenger, which the werewolf does not seem to be.

There may, however, be a connecting link if we regard the phenomenon of lycanthropy as an example of hallucinatory directives. Where a medicine-man is supposed to send forth his spirit either in its own shape or in that of an animal, while he remains quiescent at home, this may also be suggested by a hallucinatory directive.

It seems better, therefore, to regard lycanthropy with its bodily transformation as distinct from the transformation of the outgoing spirit, and also from the 'werewolves'3 familiar. They are analogous beliefs, to which similar conceptions — e.g., that of repercussion — have attached themselves. But they are in origin different. In the one case there is, as it seems, a moral message, or badge, as it were, to the medicine-man's agents, and, therefore, is derived from the medicine-man's own spirit or soul. In the other case, it seems to be the transformation of the spirit of a deceased person, perhaps a close relative, into the form of a lower animal. The result is a familiar in the one case, a demon or witch in the other. In this way they are on the same level of development, the familiar being a spirit that has taken a human form, and the demon or witch taking a human form either for this purpose or for some other purpose. It seems better, therefore, to regard lycanthropy with its bodily transformation as distinct from the transformation of the outgoing spirit, and also from the 'werewolves' familiar. They are analogous beliefs, to which similar conceptions — e.g., that of repercussion — have attached themselves. But they are in origin different. In the one case there is, as it seems, a moral message, or badge, as it were, to the medicine-man's agents, and, therefore, is derived from the medicine-man's own spirit or soul. In the other case, it seems to be the transformation of the spirit of a deceased person, perhaps a close relative, into the form of a lower animal. The result is a familiar in the one case, a demon or witch in the other. In this way they are on the same level of development, the familiar being a spirit that has taken a human form, and the demon or witch taking a human form either for this purpose or for some other purpose.

5. Conclusion.—The wide diffusion of the wer-wolf idea and its different forms in various places is an excellent example of a universal belief being worked up into a superstition or story bearing a common likeness in different regions. Without the belief in shape-shifting the werewolf superstition could not have existed. But, this being granted, persons of diseased mind in all stages of civilization easily conceived themselves to be ferocious animals preying upon other human beings. The belief itself was easily exploited by interested persons — medicine-men, sorcerers, etc. — or some of these might themselves be half-crazed, as medicine-men often are through their austerities (see AUSTERICIES). In certain cases — e.g., that of the Norse berserkers — the insane fit was heightened by the wearing of animal-skins; or, in others, totemism, in its later stages, may have helped the form of the superstition, as in the Aryan and similar examples.

Literature.—Of the numerous works written on this subject in the 18th and 19th centuries, the following are the most important: B. de Chavignac, Discours de la Lycanthropie, Paris, 1759; J. de Nynaud, De la Lycanthropie, Louvain, 1596; J. Nynaud, De la Lycanthropie, Leu-

LAUGING. — The English word 'lie' with its con-
geners and derivatives represents a concept which, if hard to define, is yet unique and irreprovable into any other language. It is not easily claimed either that all persons are agreed as to what precisely constitutes a lie or lying, or (b) that anything like the same ethical significance has at all times and in all communities been attached to the practice. It is generally understood to be denoted by the Tonteniean word and by the words commonly regarded as its equivalents in other languages, yet in English at any rate this term, and in a somewhat less degree any word or periphrasis which is thought to be more or less a covert alternative for it, is viewed and, by those to whom it is applied, is resented as conveying a reproach, or at least an opinion, generally different from any other. It would probably be well not to conceal that the word has acquired a very high degree of analogy and sensitiveness to the imputation of it reached a higher intensity than among ourselves, and a study of the import of the term in our own language may therefore be taken as in a manner typical and representative.

1. Sources of modern conception. — Historically the English lie has, if we may so speak, a fourfold pedigree — Saxon, Jewish, Greek-Latin, and Christian. It signifies, that is, a vice or vicious act, which derives its peculiar reputation partly from the language and sentiment of our pagan forefathers, partly from conceptions that find expression in the Hebrew scriptures of the OT, partly from Greek and Roman thought and literature, and, as we shall contend, partly from the specific teachings of Christianity. If it be alleged against this analysis that our sensitive regard for veracity is rather of feudal origin, the objection, even if well-founded, is of no moment, that feature of feudal ethics being itself derived from some of or all the four sources enumerated.

1) Saxon. — The presence in all the Teutonic languages of a substantially identical word of like meaning attests the perennial importance of the thing meant, 'to lie' is to say that which is not. And we cannot doubt that the true sake and the heart, on occasion to do this undetected was held in different esteem from the man who could not or would not; whether in higher or in lower esteem, we cannot but believe the existence of adequate evidence so that might perhaps depend on, and change with, the varying circumstances of the community.

2) Jewish. — When at length on British soil the Anglo-Saxon invaders were gradually led to profess the Christian faith, that faith brought with it a moral code derived in unequal degrees from the three other sources named above, of which the most ancient and explicit was the Hebraica. Although the Decalogue contains no precept 'Thou shalt not lie,' the prohibition of 'false witness' reproaches the most frequent and injurious forms of lying. Prophets and moralists held it to be a reproach. 'The voice of the Lord crieth unto the city,' says Micah (6), 'for the inhabitants thereof have spoken lies, and their tongue is deceitful in their mouth' (6); cf. Is. 30:5 (b); Jer. 23:1: 'Lying lips are an abomination unto the Lord; (Pr 12:22); 'A righteous man hateth lying' (13); cf. Ps. 119:11. Especially guilty are 'false prophets' who in the name of the Lord prophecy lies . . . a lying vision . . . a thing of naught, and the deceit of their own heart' (Jer 14:14; cf. Zec 13).

3) Greek-Latin. — Meanwhile early Hellenic sentiment viewed lying without horror; virtually, as craft, it had in Hermes a patron-god. Perjury, however, was deemed perilous, incurring the wrath of Zeus. Subsequently, as witness the gnostic poets, civic morality coupled veracity with justice as laudable. (cf. Plato, Resp. i. 351 D; and Sophocles proclaimed the ugliness of falsehood:

'Honourable (eunêvous) it nowise is to speak lies; though when the truth itself is far dire destruction, it is not possible to say even what is not honourable' (frag. 223).

Finally, philosophy pronounced falsehood intrinsically vicious. Plato (Rep. ii. 392 A, 380 B-D), while permitting his 'guardians' to use it, now and again, medicinally and officially 'for the benefit of the State,' bids them punish it rigorously in private individuals. In a 2) practice permitted, it is a vice from which it is inadmissible for him to abstain, (2) e.g., Minnermen, frag. 8: 'With thee and me be truth, most just of all things.'
of the commonwealth,' and in his latest work (Laws, 730 B) extols truth as 'foremost of all good things'; for the truthful man is 'trustworthy, whereas he who loves wilful falsehood is untrustworthy (πιστός), and he who loves involuntary falsehood is foolish.' Aristotle (Eth. Nic. iv. 7 6) deems 'lying' (τὸ ψέδων) essentially 'mean (μικρὸν) and blameworthy.' The 'truth-lover' (θεόλαβης) stands in notable contrast with him who rejoices in falsehood (λογία ψευδοτῆς) as a type of character distinct from himself who lies for the sake of gain or glory (ib. § 12). In Stoicism the viciousness of falsehood, although not expressly affirmed, is tacitly assumed. Thus ideal good is in effect defined by Seneca (Ep. lxvi. 6) as 'a mind set on truth.' To the consistent Stoic acceptance of unverified 'opinion' as a substitute for truth or real knowledge would be equivalent to inveracity. Altogether, Greek philosophy bad energetically discomfated the art of lying, and, when Latinized, had found an ally in old-fashioned Roman prejudice against wilful untruth.

(4) Christians.—The NT endorsed and deepened the injunctions of Jewish theology and Gentile ethics. 'Lie not one to another,' writes St. Paul to the Colossians (3:9); the Christian is to forgo all lying, and a little later and more characteristically Christian reason that 'we are members one of another' (Eph 4:30). And with this Pauline pronouncement the warnings of the Apocalypse agree. Into the NT, religious liars especially, the outcast thence is 'every one that loveth and maketh a lie' (Rev 21:27), where nothing is lost to the ethics of truth if by 'lie' be meant idol or counterfeit god; that, theologically, is the typical lie—idolatry false worship. In the Synoptic Gospels 'hypocrisy' (Mt 23:27, Lk 11) would appear to express what in St. John is called simply 'lying' (ψέδος), of which the devil (Jn 8:41) is first cause. Thus for Christianity the spirit of lying is opposed to the spirit of truth as darkness is to light. It is antagonistic to God and incompatibility with fellowship in the Church of Christ. And this abhorrence of lying as deadly sin, though too often grievously violated in nominal Chris- tendom, has endured throughout the centuries, permeates our finest literature, and is reflected in the law and conduct of many a plain, honest man to-day.

2. Philosophical theories.—Theology and custom-morality apart, moral philosophers of different schools condone, condone by exception; the intuitionist as intrinsically repugnant to 'right reason' or 'moral sense' or 'conscience,' the endemontist or perfectionist because it impairs well-being and self-development, the utilitarian because on the whole, if not in every instance, it would tend to the diminution of the sum-total of pleasure experienced. Whether the utilitarian sanction is well-founded in fact may be questioned. It is argu-

able that the wide acceptance of utilitarian ethics has been attended by an increased indifference to truth. Whereas lying is demonstrably contrary to other ideals—universal benevolence, perfection, or the beautiful, as when truth-seeking will bring either to the individual or to the community a surplus of pleasure, or that more pleasure may not be secured by an admixture of well-timed falsehood. But, even if utilitarian theory could demonstrate the all but universal inexpediency of lying, such calculative disapproval of it as hedonistically impolitic is not the same thing as having the lie as such disbelieved. A 'story' here would seem to be ethically the point of main con-

sequence, distinguishing man from man—the presence or absence of a deep aversion to lying as such. Of less real importance is the much debated question, too complex to summarize here, of exceptional contingencies in which, notwithstanding that aversion, it may be right to speak falsely, just as killing is sometimes right. But we may consider whether lies can be classified, and attempt a more exact determination of the essential constituents of lying.

2. Analysis and classification of lying.—The aim of a lie is to misrepresent facts, or purpose, or feeling. To be a liar is to do this habitually and will-

fully. Of each particular lie the motive is normally some gain foreseen or conjectured as attainable by deceiving somebody as to (1) what has happened, (2) what one purposes, or (3) how one feels. In popular usage the term 'lie' is apt to be limited to the first kind. But I lie no less really, if (2) I promise what I have no intention of doing, or if (3), being glad, I feign sorrow. This is sometimes overlooked or even denied. With regard to declarations of purpose, it is tightly argued that unforeseen circumstances alter cases, and to promise what one may eventually see reason not to perform is no falsehood. But it is lying, if at the time of speaking I have not the intention professed; or if I deliberately, but unforeseen circumstances will it, allow the circumstances to change my mind; or, if having changed it, I allow those concerned to go on believing my purpose to be unchanged. The last is a very common form of falsehood. When I disregard feelings, many people who would be ashamed to state that they had seen what they had not seen, make no scruple about pretending goodwill towards persons for whom they have none, with the object sometimes of getting them tolerated. A falsehood of heart which is not theirs, sometimes of misleading the victims of their dissimulation.

Not all deceit, however, is lying. For, although the essence of lying is intent to deceive, there must be also, to constitute a lie, either (a) untrue words, or (b) such reticence as in the context (of speech or action) amounts to false statement—e.g. if I say 'He gave me twenty pounds,' when in fact he gave me fifty (cf. Aesop, §), or if I adopt and publish as my own an essay largely written by another man. To lie is, as Kant well says, 'to communicate one's thoughts to another through words which (intentionally) contain the opposite of what the speaker thinks.' It matters not whether the false belief is created by positive affirmation or by omission of words necessary to the establishment of a true belief.

Allegory is not falsehood, provided it is designed and adapted to embody truth. It was because early Greek mythology did not in Plato's judgment fulfil this condition that he regarded allegorizing interpretations of it as in no way bettering the case for Homer and Hesiod (Rep. ii. 378 D). As with alle-

gory, so with all fiction. Stage-plays and novels exhibit in the form of 'stories' events that are not history, present or past, and yet mislead nobody. A 'story' is a lie, then, only when it falsely disowns its fictitious origin. Even pseudonymous author-
ship does not necessarily involve falsehood. Not all illusion is dramatic, but a forger; and forgery is falsehood. It is doubtful whether equivocation, where a state-

ment is equally susceptible of two meanings, one false and one true, is, strictly speaking, a lie. To deceive, be accounted lying. As an isolated act, it probably should not. But the man who habitually

1 'Animus vera instans, peritus furiusendorum ac potestatorum, non ex opinione, sed ex natura pratica rebus imponens.'

2 E. Caird, Critical Philosophy of Kant, Glasgow, 1859, ii. 337.
equivocates is an untruthful man. Under the head of equivocation may fairly be brought many of those partially deceptive utterances which are sometimes, but unconvincingly, defended as mere social conventions on a par with the customary phraseology of address and other 'common forms of speech generally understood.' If, e.g., in declining an unwelcome invitation I express regret at being unable to accept it, the defence that this is a usual and well-understood way of notifying my intention, with the implication that what is meant by the regrew is inadequate. But, supposing I do regret the disappointment which my refusal may cause or the circumstances which render the invitation unacceptable, the phrase employed is equivocal rather than actually false. If, instead of declining, I profess 'pleasure in accepting' the invitation, the pleasure need not be wholly fictitious; for it is in my power by an effort of goodwill (a) to feel pleasure in accepting, and not refusing, the civility offered, and (b) to find altruistic pleasure in a visit not naturally attractive. By thus choosing to be pleased, a man determines on the side of truth what would have been equivocation.

Even where there is an actual element of falsehood, we recognize degrees of insincerity. A statement which in the main reveals the speaker's purpose, feeling, or knowledge of fact, but disguises some truth which is not in the same degree vicious as an entirely misleading utterance, unless, of course, the point misrepresented is the most essential, in which case the saying may be exemplified that 'the worst lies are half truths.' Yet we cannot altogether reject the widely spread view of 'common sense,' that a direct lie stands on a different footing from any indirect device whether of hiding the truth (soppressio veri) or of creating a false impression (sagitatio falsi). There is a common understanding that, when we speak, we do not state what we know to be untrue. Socially regarded, then, a direct lie is a graver breach of faith, and a worse blow to mutual confidence, than any statement, however evasive, which does not actually violate this understanding.

4. Conclusion.—On the whole, the main difference between ancient and 'modern' views of inveracity is that in the latter censure is directed primarily on discrepancy between statement and thought rather than on the divergence from reality of a spoken or written utterance. 'Modern' prudential morality tends to be severe upon mis-statements, apparently wilful, of particular facts, but is strangely lenient wherever 'ignorance' can be pleaded—e.g., if ignorance was not often wilful, or reckless, indifference to truth. Many persons will habitually declare as fact anything that they do not positively know to be untrue, and, when con-

LITARATURE.—In addition to the authorities quoted in the text, see H. Sidgwick, Methods of Ethics, London, 1907, bk. i. ch. vi. (On the intellectual standard of truth); J. Martineau, Types of Ethical Theory, Oxford, 1886, section on 'Virtue' (p. 116); W. J. Green, Prolegomena to Ethics, 2nd ed., 1883, p. 344 f.; J. S. Mill, Manual of Ethics, London, 1887, pp. 189, 219 f.; R. H. Rashdall, Theory of Good and Evil, Oxford, 1907, i. 90, 102-106. For the attitude of non-Christian peoples towards lying see MF, ch. xxx. i. J. M. SCHULHOF.
to quit the capital, there seems to be little doubt that he took this step on account of an indignity which he suffered at the hands of the thieves, whom he was so kind as to offend. The remainder of his life was passed in teaching and writing. His picture of himself as a misanthropic recluse covering himself with a false humility, and armed with a reputation that not only made him the first man in his native town, but caused him to be spoken of all over the world, is the outcome of a procedure in Arabic philology and literature. He had many friends, and his letters to them show "a kindly interest both in men and things" (Lett. int., ed. Miélot, introd. pp. xxx). He complain of his poverty, but the Persian poet Nahj-i-Mahmudiyya in Luluvi, who has described himself as very rich (Safar-nama, ed. C. Scheyer, Paris, 1851, p. 208 of the Fr. tr.). Ma'arri died in a.d. 1057.

2. Writings.—Writing as the Soul's Art, already mentioned, Ma'arri is the author of another and far more valuable work of poetry, entitled Luluvi and tanqih pattern, in reference to a technical peculiarity of rhyme, and generally known as the Luwaniyyat. These poems, written after his visit to Baghdad, contain religious, moral, and philosophical reflections and deal with a great variety of topics. The prevailing tone is pessimistic and skeptical, but many passages occur in which Ma'arri speaks as an orthodox Muslim. The Risalat al-Ghadyat (described and partially translated in the present writer in J.I.A.S., 1969, pp. 387-790, and 1962, pp. 75-101, 267-363, 813-447; ed. Cairo, 1958) takes the form of an epistle addressed to "All the Munir of Allah, who is better known by the name of Ibn al-Quraysh. In this Luwani work Ibn al-Quraysh is imagined to have entered paradise, and he holds a series of conversations with pre-Islamic poets, and the author discusses the opinions of the leading Muhammadan freethinkers (tanqih). Its Letters, compared with his other poetry, are more artificial and above the style, have been edited, with Eng. tr., by D. S. Margoliouth. The long list of quotations, which comprise only a few are, includes a supposed imitation of the Qur'an, entitled l-ghadyat wa taphayat. Ma'arri is said to have boasted that, if it were "poisoned" by the teachers, or written in a manner in contrast with the original (see references in L. Goldscheider, Muhammad. Staaten, Einleitung, p. 407); but this aspect is to be an invention. What he attempted was probably a parody of Qur'anic style rather than a deliberate challenge to the dogmas of Islam, which claims for the Qur'an a miraculous and immutable perfection.

3. Doctrines.—It is difficult to give a clear account of Ma'arri's religious and philosophical beliefs. Not only are they, to a large extent, negative in character, and the evidence derived from some passages in his writings is counter-balanced by other passages which, if they stood alone, would lead us to the opposite conclusion. These contradictions are most strikingly exemplified in his attitude towards Islam. Any one who wished to prove him orthodox might quote from the Luwaniyyat numerous instances in which the poet unequivocally accepts nearly all the chief Muslim doctrines, yet his pages are full of denied paradigms, and he holds a series of conversations with pre-Islamic poets, and the author discusses the opinions of the leading Muhammadan freethinkers (tanqih). Its Letters, compared with his other poetry, are more artificial and above the style, have been edited, with Eng. tr., by D. S. Margoliouth. The long list of quotations, which comprise only a few are, includes a supposed imitation of the Qur'an, entitled l-ghadyat wa taphayat. Ma'arri is said to have boasted that, if it were "poisoned" by the teachers, or written in a manner in contrast with the original (see references in L. Goldscheider, Muhammad. Staaten, Einleitung, p. 407); but this aspect is to be an invention. What he attempted was probably a parody of Qur'anic style rather than a deliberate challenge to the dogmas of Islam, which claims for the Qur'an a miraculous and immutable perfection.

That seems incredible, except on the hypothesis that Ma'arri, while doubting the divine origin of Islam, also distrusted the human intellect, and hesitated to cut himself loose from the faith in which he was bred. Such an explanation, however, does not accord with his confident and emphatic appeal to reason as the highest authority. The following quotation from the Confessions of the Luwaniyyat (A.D. 1891) illustrates his views on this point. Ma'arri does not express what he wholly or partly believed, but were designed to mask his real convictions and to serve as a defence against any dangerous attack, are attributing to him a course of action that he himself openly professes.

Folly compels me to play the haute cour monde of the Orient;... (ii. 130, 4). 'I raise my voice to pronounced absurdities, but I only whisper the truth' (ii. 36, 13). Conceal thy thoughts even from the friend at thy side' (col. 272, 1).

His opinions were of a sort that could not be communicated without some disguise; and this necessity, which he disliked (cf. ii. 34, 2), is the source of many irreconcilable contradictions in his writings. The suggestion that his ideas were dictated and controlled by the complex form of rhyme which he uses throughout the Luwaniyyat is inadequate as a general explanation of the facts, although it may be true of something. Something also should be allowed for the influence of an Islamic atmosphere and tradition upon the language of the poems, an influence to which, perhaps, their author at times consciously surrendered himself.

While Ma'arri adopted certain ascetic practices and held certain religious and moral beliefs, his genius was essentially critical, and he was not disposed to destroy than to construct. He could think for himself, but lacked the power of developing and combining his speculations. Unable to find rest in any religious or philosophical system, he fell into a fatalistic pessimism, and always to some extent happens in such cases, by a good deal of active benevolence. He claims to unfold to his readers the secret thoughts of mankind (i. 250, 15), and it is true that his poems reveal the innermost spirit of contemporary Muhammadan culture in its many-sided aspects. We are here concerned only with his main points of view and with the opinions and beliefs to which he was led by reflecting on his problems of life. For the sake of convenience the subject may be classified under a few general heads.

b. Scepticism.—In several passages of the Luwaniyyat Ma'arri discusses the origin and nature of religion. He ignores, although he does not formally deny, the theory of divine revelation. Religion, as he sees it, is a matter of inheritance and habit.

"They live as their fathers lived before them, and bequeath their religion mechanically, just as they found it" (i. 248, 13). In all thy affairs thou'lt be satisfied in conformity, even when thou sayest, "God is One" (i. 252, 2). He disapproves of conformity (taqaddul), not because he is opposed to genuine faith, but on the ground that it is irrational. "It is not reason that makes men religious; they are taught religion by their next of kin" (ii. 403, 19); cf. the celebrated verses (ii. 201, 7ff.): 'The Muslims are mistaen and the Christians are on the wrong road, and the Jews are all astray and the Magians are all astray — the intelligent [without religion, and the religious without intelligence].'

The whole fabric of popular religion is raised on fear, fraud, and greed (i. 251, last line, 65, 9, ii. 196, 5). The poet characterizes the great world-systems as a mass of forged traditions and doctrines which not only are repugnant to reason but have undergone vital alteration at the hands of their own adherents (ii. 20, 15, 196, 3, 404, 2, 409, 9). All of them are tainted with falsehood; no community possesses the truth (kaeda) entire (ii. 177, 10). Ma'arri does not shrink from applying this principle to Islam, though here, as has been remarked above, he speaks with two voices and avoids positive statements of disbelief. In the case of other religions his criticism is less restrained; but, thus referring to the Crucifixion, he says (ii. 409, 7ff.):

"If what they [the Christians] say concerning Jesus is true, where was His father? How did He abandon His son to His enemies? Or do they suppose that they devoured Him?" He disbelieves in miracles (ii. 252, 11), anguished
While castigating his neighbours and contemporaries, Ma'arri does not spare himself (i. 48. 7). His pessimism extends to the future:

'If this age is bad, the next will be worse' (ii. 171. 17).

(c) Asceticism.—He earnestly desired to withdraw from a society of knaves and hypocrites and a world of bitter illusions.

'Would that I were a savage in the desert, silly smelling the spring flowers in flight' (ii. 29. 14). Be a hermit for me, or speak the truth in a bire to his friends' (i. 60. 11). The busiest man in the world is an ascetic who does childishness' (ii. 213.).

But the value of asceticism depends on the motives by which it is inspired: the humble father of a family is superior to the ostentatious pietist (i. 287. 17ff.). Ma'arri seems to have learned at Baghdad, if not during his earlier travels, some peculiar doctrines and practices of Indian origin, connected more particularly with the Jains. He thinks it wrong to kill animals for food or to hurt them in any way, and therefore excludes from his diet not only meat, but also eggs, milk, and honey (i. 232. 9ff.).

In his opinion there is greater virtue in letting go a captured flea than in giving alms to a beggar (i. 212. 9). He praises the Indian custom of burning the dead instead of burying them, and introduces practical arguments in support of cremation (i. 235. 5ff., 418. 20ff., ii. 407. 3).

The religious enthusiasm of the Indian ascetics who throw themselves alive into the flames fills him with admiration (i. 260. 9ff.). He characteristically enough, he alleges as a reason for abstaining from wine the fact that the forbidden beverage is destructive to the intellect (ii. 312. 14, 361. 11).

(d) Religion and ethics.—Though Ma'arri believed the whole conception of religion as a supernatural revelation to be false, he was nevertheless a firm monotheist (i. 47. 12, 279. 12, 281. 4ff.). Reason, he says, assures us of the existence of an eternal Creator (i. 249. 9), whom he seems to have identified with an omnipotent, all-embracing Fate. Whether his idea of God is truly expressed by the orthodox phrases which he employs may be left an open question. At all events, his religious beliefs were based on intellectual conviction, not on traditional authority (i. 128. 8, 129. last line, 335. 15).

'Truth is not to be found in the Pentateuch: follow thy reason and do what it deems good' (i. 394. 4ff.).

Religion, as he defines it, is fear of God, renunciation of pleasures, and avoidance of sin (i. 315. 12, 361. 17, ii. 298. 12, 329. 12), but also embraces the obligation of dealing justly with every one (i. 103. 11). He says that all acts and forms of worship are useless without obedience to the unwritten moral law which is prescribed by reason and conscience. It is evident that he regarded this law as supreme and self-sufficient, for he never made the pilgrimage to Mecca nor did he take part in the public prayers (i. 100. 8). Virtue consists not in fasting and praying and wearing ascetic garb, but in abandoning wickedness and purging the breast of malice and envy (i. 283. 18ff.). That man is ignorant of true piety who, when he has an opportunity of satisfying his desires, does not abstain (ii. 159. 131.). A trivial wrong to one's neighbour will be more severely punished hereafter than neglect to fast or pray (ii. 394. 9). Ma'arri had no sympathy with religious or sectarian prejudices.

He observes that, 'when a religion is established, its adherents contemn and revile all other creeds' (i. 405. last line), but his own fashion is that a Christian be more good than a Muslim preacher (i. 55. 7). 'Were it not for the radical hatred implanted in human nature, churches and asceticism would have risen side by side' (ii. 320. 11).

Worldly ambition causes theologians to write controversial books full of vain words and endless analogies (i. 249. 5ff.).
Macedonianism. — I. Introduction. — In the closing years of the 4th and the first half of the 5th cent. the Arians, Eunomians, and Macedonians were regarded as the most important heretical groups deriving their origin from the Arian controversies. Three laws of theodosius, dating from a.d. 383 and 384 (Cod. Theod. vii. v. 11—13), are in the main directed against them, and the latest of these speaks of the three heretical designations as 'byzantianic, eunomian, and macedonian,' or 'famous nomas.' About three years afterwards Jerome (in Eph. ii. [on 4th], ed. D. Vallarsi, Venice, 1768—75, vii. i, p. 610 C = PL xxvi. 525) and, as far as I know, the Nestorians (Lampridius, ed. F. Nau, Paris, 1910, p. 148) link together the names of Arians, Eunomians, and Macedonians in a similar way. Didymus of Alexandria, in his de Trinitate — a work which is distinctly named in Jerome's Catalogue of Authors (ch. 109), and which, therefore, cannot have been written long before a.d. 392, and may even be of later date — regards the Arians, Eunomians, and Macedonians, whom he sometimes connects (ii. 11 [PG xxxix. 661 E], ii. 12 [ib. 673 B and 688 B], as the most outstanding adversaries of orthodoxy. Augustine (c. 402) brings them before us as the non-Catholics of the East (de Unit. ii. 22). Jerome describes them in similar terms (Ep. cxxxii., ad Ctesiphontem 11 [Vall. i. 2, p. 1040 B = PL xxii. 1159]), and Socrates (440) recognizes them as the heretics of his time (Hist. Eccl. vii. 49, [c. 450]). As regards the heresy of the Eunomians, it is often labeled 'anarchia, eis twn Arminias, eisyn Eunomiani' (Council of Constantinople in 381; J. D. M. Sauer, Sacrorum conciliorum ... collection, Venice, 1750—98, iii. 560), we are so well informed that in dealing with them we can start from their date of origin. In the case of the Macedonians, however, the position is less favourable. It will therefore be advisable, first of all, to determine the standpoint of the Macedonians who, towards the close of the 4th and in the first half of the 5th cent., formed a definite sect distinct from the orthodox Church.

2. Sources for the history of the Macedonians from c. 383 to 450.—As sources for our inquiry we have, besides the historians of the 5th cent., the following works: (a) the de Trinitate of Didymus mentioned above (PG xxxix. 292—293); (b) the third of the five pseudo-Athanasian dialogues, de Trinitate (ib. xxvii. 1201—1249: Διαλογος της θεοτοκου μητρος της του θεον παραγωγης τιτο Μακε—

VOL. VIII. — II.
MACEDONIANISM

and His περιττόντιον ἔσω (frag. 32, II, 15–33, Dial. c. Maced. i. 4 [p. 1293 C, D]; frag. 13, Dial. de Trin. II. vii. 18 p. 515 B, C]; frag. 23, ib. II. x. [p. 641 B]).

Only τοῦ ἄγγελου τοῦ Πειραιαστος εὐφαλέως [ἐκ τῇ Ἱράκλ.] (frag. 33, II, 35–33, Dial. c. Maced. i. 6 [p. 1297 C]) on the positive side it was urged that in Tit. 3. 5 Paul does not mention the Holy Spirit when speaking of the angels, though Macedonia is said to be "οἱ ἀγγέλοι" (frag. 4, ib. II. iv. [p. 481 B]).

The Holy Spirit, however, was not regarded as merely one of the angels; He was described as θεὸς ἐκ τῶν ἄγγελων, ἀγγείον τινὰ φαινεῖ καὶ τῶν ἀληθῶν (frag. 17, ib. II. viii, 3 [p. 576 B]). Nor is it only orthodox writers who on these grounds ascribe to the Macedonians the doctrine the Holy Spirit is a created being, for we find it stated also in the Sermones Arianorum that Μακεδονίαν "οἱ Μακεδονικόν πνεύμα τόσον Πατρίς καὶ Φιλίππου contum the auctoritate του Θεοῦ" (frag. 19, ib. II. viii, 19 p. 548 B, C); cf. frag. 18, ib. II. vii. 160, "Ἄγιος Πνεῦμα ἐκ τῶν ἄγγελον φιάσον;" the angels, too, are σήμερα καὶ πεπραγμένα τοῦ Θεοῦ (frag. 4, ib. II. iv. [p. 481 B]).

In the Sermones Arianorum we read as follows:

‘Μακεδονίαν post haec omnia (there is, unhappily, a lacuna in what precedes) corrigunt sae se dicent: "Filium similiter per omnia et in omnibus, sae se Patri esse dicent; haue autem dicunt esse differentium inter human naturam et inter naturam non naturam, non communicandas, quia non communicanst esse inter deum naturam et inter Deum non naturam dicimus; εὐκαλέας hominum, εὐκαλεῖα τοιαύτης Soziphanes, princeps eccorum, scriptit." (Pl. xiii. 633 B, C).

Is it only the words here italicized that are ascribed to Soziphanes, or are we to regard the whole statement, i.e. also the affirmation of the doctrine θυσια κατά πάντα (and therefore κατά ωσάς), as a formulation due to him or some other Macedonian? Be this as it may, the present writer has now—formerly he was advocate a different view (cf. Hoek, "Zwei Schriften der Macedonier")—that the Macedonians (and it is of the sect only that we are meanwhile speaking) were Homoeousians, not Homoeousians, in their mode of thought. This is, in fact, distinctly stated—even if we leave out of account the Sermones Arianorum by Didymus (in De Trin. I. xxviii. [p. 437 A]: ὡμοοὐσια... καὶ όχλον καταλεῖψαι, by the author of the Dial. de Trin. (ii. 1 [p. 1294 C] among others, ‘they do not assert the ως οὐσία οὐχ ὄμοια καὶ φῶς ὑμωοτικον' and by the writer of the Dial. c. Maced. (ii. [p. 1336 B, C]); and there are good grounds (cf. Loofs, ‘Zwei Maced. Dialoge, p. 503 f.) that the iris solution is arrived at in Dial. de Trin. iii. 16 καὶ τῶν υἱῶν ἄνγγλων, τῆς οἰκουμενῆς (p. 1228 A) is borrowed from the longer Macedonian dialogue.

There is in addition the fact that the so-called Confession of Lucian (Athanassius, de Synag. xxiii. [PG xcvii. 721 B]), which the Macedonians, to judge from their own utterances (cf. Loofs, ‘Zwei Maced. Dialoge, p. 503 f.), would seem to have regarded as their own, is almost identical with the

"homousia... καὶ όχλον καταλεῖψαι, by the author of the Dial. de Trin. (ii. 1 [p. 1294 C]) among others, ‘they do not assert the ως οὐσία οὐχ ὄμοια καὶ φῶς ὑμωοτικον' and by the writer of the Dial. c. Maced. (ii. [p. 1336 B, C]); and there are good grounds (cf. Loofs, ‘Zwei Maced. Dialoge, p. 503 f.) that the iris solution is arrived at in Dial. de Trin. iii. 16 καὶ τῶν υἱῶν ἄνγγλων, τῆς οἰκουμενῆς (p. 1228 A) is borrowed from the longer Macedonian dialogue.

There is in addition the fact that the so-called Confession of Lucian (Athanassius, de Synag. xxiii. [PG xcvii. 721 B]), which the Macedonians, to judge from their own utterances (cf. Loofs, ‘Zwei Maced. Dialoge, p. 503 f.), would seem to have regarded as their own, is almost identical with the

"homousia... καὶ όχλον καταλεῖψαι, by the author of the Dial. de Trin. which the Macedonians distinguished between the θεός "οὐχιον Αγίου Αγίων, and which they held to be separable from God Himself ("Dial. de Trin, i. 23 [p. 1240 A]; Dial. c. Maced. i. 20 [p. 1328 B, C]; cf. Did. de Spiritu Sancto, xxiii. [PG xxxiv. 1053 A]).

As regards the Christology of the Macedonians, we have, as far as the present writer knows, only a single statement emanating directly from the Macedonian side, and unfortunately it cannot be detached with certainty from its context. In the Sermones Arianorum we read as follows:

‘Macedonians post haec omnia (there is, unhappily, a lacuna in what precedes) corrigunt sae se dicent: "Filium similiter per omnia et in omnibus, sae se Patri esse dicent; haue autem dicunt esse differentium inter human naturam et inter naturam non naturam, non communicandas, quia non communicanst esse inter deum naturam et inter Deum non naturam dicimus; εὐκαλέας hominum, εὐκαλεῖα τοιαύτης Soziphanes, princeps eccorum, scriptit." (Pl. xiii. 633 B, C).
that the Θησεακός, or Θησεακοσίων, had a human mother.

The relation between these Macedonians and the Homouniots of the 4th century.—What we know of the teachings of the Macedonians in the period between A.D. c. 351 and c. 430 (cf. § 3) would make it necessary to give a paragraph on the main points (even if we had not direct information on the point) that the sect was historically connected with the Homouniotian or semi-Arian party. In point of fact, however—even apart from the fact that some modern writers, whom meanwhile we leave out of account (cf. § 5, below)—that connexion can be traced in the older sources. Jerome, who, when referring (c. 350) in his Commentary on Scripture (PG 94, 542 [ed. R. I. 96], Leipzig, 1913, p. 235 ff.) to the installation of Macedonius as bishop of Constantinople, does not fail to add, "a quo nunc hæresis Macedoniana," regards the Homouniotian doctrine alone as the "Macedonianum dogma." (ad. anno. 350 [ib. p. 245 d]; and in the famous twenty-four anathemas of Damascus (A.D. 380 [2]), given by Theodoret (HE vi. 11 [ed. L. Parmentier, Leipzig, 1911, p. 208; and in Lat., PL xiii. 359 A.; cf. Parmentier, p. ixvii]), all that is said of the Macedoniaton is:

στιγμα της ἡροδιας μητις καταγεγραμμένον εκ της ἀσθενείας ἀλλὰ της προμαχών τρίου της πατριαρχείου.

Further, Auxentius of Dorostorum writes (c. A.D. 385) of Ulilias as follows:

'οντισι κατανοομασθει, ουδε... Filium similium esse Patri eto non secundum Macedonianum fracturam pravili

By c. 380, however, the 'Macedonianum dogma' embraced also the pneumatocentric thesis. The 'Hæresia Macedonica,' as it was called, was condemned by the Synod of Constantiopolis (381, can. 1; Mansi, iii. 539), were, like the Pneumatocentric Semiariani of Philastrius (Herr, ixvi. Corpus hér., d. Oder, Berlin, 1863, p. 11), indubitably, in part at least, the same as the Macedonians of Jerome. Nicetas likewise, hardly before 381, speaks distinctly of the 'Macedoniani vel eorum in hac curiositate participes' as those 'qui questionem de Spiritu induxerunt' (de Spirit. v. 2 [PL iii. 383 B].) As the anathemas of Damascus in their opening words impugn Pneumatocentric ideals—though without applying any heretical designation—may probably infer that Damascus was acquainted with the doctrine of the Spirit held by the Arians, Eunomians, and Macedonians. And the reason that Auxentius does not mention the Macedonian doctrine of the Spirit. That, like Ulilias, he had nothing to criticize in the so-called Pneumatocentric ideals.1 For, like Origen, all the theologians who in the Anian controversy rejected the Homoousia of the Son affirmed by the Nicene Creed—Eusebius, Arius, Homiousians, and Eunomians, regarded the Spirit as a κτίσμα subordinate to the Son. Even the Nicene Creed itself did not prescribe that view; all that it says regarding the Spirit is: και μεταφορούμενος κατά τὸ Ἀγνὸν Πνεύμα.

Moreover, its partisans were at first concerned to assent only the Logos-doctrine of their opponents. In the earliest it was in the Epistles to Serapion (PG xxvi. 629—676), written by Atha

nasius during his exile from 9th Feb. 350 to 21st Feb. 362, that the theologian contended also for the Homousia of the Spirit. The opponents of whom Serapion had informed him, and against whom these Epistles were directed—ἐκλέγεται ἀπὸ τῶν Ἀρετῶν διὰ τὴν κατὰ τὸν Τιτιανὸν διακόσμησιν, φρονούσιν ἐκ τοῦ τῶν Ἀγνῶν Πνεύματος καὶ λέγοντες αὖτο διὰ τὸ κτίσμα καὶ λέγοντες τὸν πνευμα
tόμον ἐν αὐτῷ εἰς Λευκα (Ep. i. 1 [p. 529 f.])—were obviously the precursors of the Macedonians of the 5th century. This is shown by the demonstrable similarity between the Dialogues of Didymus and the Epistles to Serapion in many of their ideas, although the former is, no doubt, dependent upon the latter (cf., e.g., ad Serap. i. 10 [pp. 556 C and 557 A] with Did. de Trin. ii. vi. 19 [p. 548 B, C]). Not only do they contain many theses which have been given by those of Macedonius make use of 1 Ti 521 as a 'dictum probans' (Ep. ad Serap. i. 10; Did. loc. cit.; cf. also Basilius, de Spiri. Sancto, xiii. 27 [PG xxiii. 117 C]).—Here, in the Serapion, whom we have removed from Athanasius—but we find also that Am 42 (ἐκ τῆς πνεύματος) and Zec 4 (ἐγγέλιον ὁ λαβὼν ἐν θαυμάι) are appealed to by the opponents of Athana

1 The bishops Anacletus of Cassarea and Patrophylus of Sicytho

2 Althoff, Vom Erfolge in der früheren Geschichte des Arianismus, Leipzig, 1911, p. 245 f.

3 The bishop Timotheus of Chalcedon, to whom he alludes in Ep. ad Serap. iv. 7 (p. 648 B), were also Macedonians.
according to Socrates (II, xi.), had as an aged deacon (τῆς ὁδού γερών) contested the see of Constantinople with Macedonius; but Macedonius, on the death of Alexander [installed, in all likelihood, while Constantine was still reigning], found himself in secure possession of the see after what the present writer (Str. 1909, p. 234) regards as the more stable position of Paul in the pastoral and liturgical communion with the latter (Atan. Hist. Ar. vii. [PG xxv. 701 A]). This does not necessarily imply that he had been an 'arian' for the later Homoioussians also belonged, till A.D. 358, to the 'russian' group of the opposition, and even at the event which ushered in the rise of the Homoioussians, Macedonius, as documentary evidence shows, is found in that group: the Epistle of George of Lodicea, written in 358, and preserved by Sozomen (IV, xii. 2 f.), names him first among the persons addressed. Epiphanius (Hier. ixiii. 23 and 27 [ed. P. Petavius, Paris, 1622, 870 D and 871 E, PG xvi. 345 A, 448 B]) recognizes him as one of the Homoioussian party which was (from 358) opposed to the Acacians, the later Homoioussians, just as his presbyter, Marathion, subsequently1 is known to have been, and of Eusebius, and of Eudoxius, and of Macedonius, of whom he makes the bishop of Cyzicus (Soz. II, xxvi. v, 4; Soz. II, xx. 2), were partisans of Basil of Ancrea and Eustathius of Sebaste.2 At the Synod of Seleucia (Sv. 358) he is associated with Eusebius and with the other Homoioussians in supporting Basil against the Acacians (Soz. IV, xxii. 7 ff.), and, like Basil, Eusebius, Eustathius, and other Homoioussians—as, indeed, the most prominent of them all—he was deposed by the Acacians at the end of the year 359 or in January 360 (Jer. Chron, ad ann. 359 [ed. Helm. p. 241 h]; Philostorg, v. I [ed. Rudez, p. 68; cf. p. 224); Soc. II, xii. 3; Soz. IV, xxiv. 3). He then retired, according to Sozomen (IV, xxvi. 1), to a place in the vicinity of Constantinople, and died there. He cannot have very long survived his deposition, as he does not appear in the important movements of his party after 360. In the interval between his deposition and his death, according to Socrates (II, iv. 1–3) and Sozomen (IV, xvii, 1.2),3 he founded a new party. (See below) is called upon his associates Sophronius (of Pompeipolis) and Eusebius (of Cyzicus) to adhere for the future to the Antiochian formula recognized at Seleucia, i.e. the Confession of Lucian (cf. C. G. Caspari, Alt. und neue Quellen, Christiania, 1879, p. 42 f.). Sozomen (IV, xxvi. 1) is more explicit: 

συνήθεια τῆς ἡδοὶ θεοῦ ἐκκλησίας, κατὰ πάντα τα κατὰ ψωμίν ἀξέραντα ἐν τῷ θεῷ διδόσασθαι καὶ τῷ ἰδίῳ ἐν ψωμίν ἀξέραντα ἐν τῷ θεῷ ἀξέραντα. Λαύριον καὶ ψυχήν καὶ ὕπερ τῶν φυλών ἀρχήν ταῖς ὑπὲρ τῶν φυλών ἀρχήν ταῖς ὑπὲρ τῶν φυλών ἀρχήν. 

Rufinus (HE i. 25 [ed. T. Mommsen, Leipzig, 1908, p. 990]) somewhat earlier makes a similar statement. The tradition is nevertheless true. It refers in reality to the earliest public appearance of the Homoioussians, not of the Macedonius party. It is based on knowledge even of the actual beginning of the Homoioussian party some two years previously than does Philostorius (IV. 9 [p. 62]). Then, in the further course of the name, according to Socrates and Sozomen, the term 'Macedonians' becomes, in conformity with that report, the regular designation of the Homoioussians generally. Thus the 'Macedonians,' in the reign of Constantine, lived in religious communion with the orthodox (cf. Soz. vii, ii. 2), until at length (cf. ib. 3), after the death of Valens, they once more stood out as a party by themselves. But, had the Homoioussians been in reality universally designated Macedonians, as Sozomen and others assume, we should certainly have found some evidence of that communion being in earlier times. Macedonians. One is prompted to ask, nevertheless, whether the statement of Sozomen (v. xiv. I), viz. that during Julian's reign οἱ ἰδιοί Μακεδόνες, χρήστες τοῦ προ- πάτου Μακεδόνων καλεθέντα δέκαμεν, can possibly be based up upon mere error. We are compelled to assume that, just as in Antioch, after the installation of Eunapius, the loyal adherents of Melchiades came to be called 'Macedonians,' so in Constantinople, the followers of the deposed Macedonius who did not attach themselves to the church of Eunapius, his successor (Soz. iv, xviii. 7, viii. 7), were presently designated 'Macedonians.' The connexion between Macedonius and the later 'Macedonians' would thus simply be that the latter gained accessions from the Homoioussian circles of the former, of whom they were, when he made his last stand at the metropolis, the best-known group in the Balkan Peninsula. This solution of the historical problem—a solution which surrenders the 365, as claiming to belong to the litoral signature of the name 'Macedonians' is certainly a possible one. For it was in the neighbourhood of Constantinople—on the Hellespont, in Bithynia, and in Thrace—that the 'Macedonians' were most numerous (Soz. iv, xvii. 2; Soz. ii. iv. 8, v. 3; Ath. D. 234 d) and from it and its neighbourhood that, with a single exception (Damaeus), our oldest authorities for the use of the name (Jerome, Auxentius, Nicetas) are derived, while both Sozomen (cf. v. xxv. 9) and Sozomen (cf. ii. ii. 10) wrote largely under the influence of the same local tradition. In view of the active intercourse between Rome and Constantinople, the simple exception of Damaeus does not mean much. Rufinus, again, may have gained his information from Jerome through literary channels [cf. J. CHRON. AD ANNA. 359 (ed. Hcbl, p. 243 d)] as well as personal contact; and Didymus had relations with both. Moreover, the random use of the name 'Macedonians' is confirmed by the fact that, according to Socrates (II, iv. 4) and Sozomen (IV, xvii. 5), the Macedonians were also called 'Marathionians;' and Sozomen (loc. cit.) even expresses the opinion that, in view of the personal and material support for which the party were indebted to Marathion, the name was not inappropriate. Still, it is quite intelligible that K. Holl (ZKG xxv. 338 f.), especially in view of the witness of Didymus, should put forward the question whether the connexion between Macedonius and the Macedonians was not, after all, of a more substantial character. The present writer is, however, of opinion that the information possessed by Didymus is less than Holl makes out. Didymus seems, e.g., to have regarded Marathionus as the successor of Macedonius (de TRIN. II. x. p. 633 A): ἀριστεῖ τῶν χριστιανῶν τοῦ κοινοῦκυρίων καὶ ἐν τούτω καὶ ἐν τούτῳ ἀνακοινωνοῦντα ὁ Μακεδόνειος καὶ ἐν τούτω καὶ ἐν τούτῳ ἀνακοινωνοῦντα καὶ ἐν τούτω καὶ ἐν τούτῳ ἀνακοινωνοῦντα καὶ ἐν τούτω καὶ ἐν τούτῳ ἀνακοινωνοῦντα καὶ ἐν τούτω καὶ ἐν τούτῳ ἀνακοινωνοῦντα καὶ ἐν τούτω καὶ ἐν τούτῳ ἀνακοινωνοῦντα καὶ ἐν τούτω καὶ ἐν τούτῳ ἀνακοινωνοῦντα καὶ ἐν τούτω καὶ ἐν τούτῳ ἀνακοινωνοῦντα. But, if it is possible (cf. Zwei maced. Dialoge, p. 544), the person addressed in de TRIN. II. vii. 1 (p. 613 C) is not the author of the Macedonian dialogue, but, by a figure of rhetoric (cf. Trac. I. Did. de TRIN. II. vii. 3 (p. 575 A), Macedonius himself, then, the information given in de TRIN. II. vii. 1, viz. that Macedonius was made bishop by the
Arians, but was previously a deacon of the orthodox Church, supplements that given in ii. x. only by the latter—and, indeed, correct (cf. Soc. ii. vi. 3)—statement. Nor is it inconceivable that Didynmus obtained part of the dialogue from Basil, and his information regarding Macedonians from the Macedonian dialogue used by him. Yet the correspondence between what that dialogue tells us regarding the Macedonians and viewing what Basilus and Agathias tell us have not been made known when he wrote his Epistles to Sabrion is striking. Can it have been the case that the above-mentioned summons of Macedonians to Eleusinians, referred to by Socrates (ii. xlv. 2), was contained in a letter, and that this letter had come into Sabrion's hands? This would explain how the Alexandrians had obtained information regarding the Macedonians at a relatively early stage; it would explain, the information possessed by Didynmus regarding the αλεποθραύσεως Μακεδόνων, and also the account given by Socrates (and Sozomen) of the origin of the Homoeonian party. The hypothesis is not impossible; for the first letter of Athanasius to Sabrion may quite well have been written as late as A.D. 361. The point, however, cannot be decided in the present state of our knowledge.

6. The persistence or recrudescence of Homoeonianism among the Macedonians.—There is still another question to be considered. Athanasius was aware that those who were known to Sabrion as εἰς Σάβριον ἔρχοντα λόγον ἁμαρτίαν the Macedonians, who for themselves repelled by the Arian 'blasphemy' against the Son (Επ. ad Sabr. i. 1 [p. 529 f.]), and that they were detected by the Arians (cf. i. 52 [p. 905 B]); this fits remarkably well with the situation from the beginning of A.D. 360. Somewhat later the Homoeonians ('Macedonians'), as a result of negotiations with Liberius at a synod held at Tyana in 357, passed completely over to the side of the Nicene Creed (Basil. Ep. cxxliv. 5 [PG xxxii. 917 D]; Soz. vii. xii. 21; cf. Sabinus, ep. Soc. iv. xii. 11). Thereafter, as we read (Soc. vi. 1; Soc. vii. ii. 1), the Macedonians, who at that time had neither a church nor a bishop in Constantinople (Soc. iv. xxvii. 6, vii. i. 7), maintained ecclesiastical communion with the Homoeonians. Thus the question arises how it came about that the later Macedonian doctrine was Homoeonian. Basil (Ep. cxxiv. 9 [PG xxxii. 924 B]) tells us that, at a synod held at Cyzicus in A.D. 376—otherwise unknown to us (Loofs, Eustathius, p. 17)—Eusebius, the Macedonian archbishop (cf. § 4), subscribed a formula which, together with Pneumatomachian clauses, contained statements pointing away from the Nicene Creed to the Homoeonian (τὸ Εὐσέβιον καταγάγων τὸν Πνευματικὸν ἀλήθειαν αὐτόν εἰς καταγώγων, and that from 375 he had drawn closer, ecclesiastically, to the Homoeonian court-bishops (Basil. Ep. cxxiv. 7 [p. 923 A, B]; cf. 5, 929 B, C; Loofs, Eustathius, p. 78 s.); Ptolemaius of Alexandria, who had been orthodox as regards their Christology (see above) proves nothing to the contrary, since that author wrote at a time prior to the synod of Antioch; nor is our statement refuted by the fact that Gregory of Nazianzus, in a Whitsunlute sermon of the year 381, addressed the Pneumatomachians as ὑπὲρ τὸν Τιν Σωτήρα (Or. xii. 8 [PG xxxvi. 440 B]). Gregory had as valid grounds for this friendly judgment as had the Orthodox when, shortly afterwards, at the synod of 381, they reminded the thirty-six Pneumatomachians who attended under the leadership of Eusebius of their schisms with Liberius (Soc. vi. vii. 7; Soc. vii. vii. 4). The breach which had been started by the rupture between Eustathius and Basil, and by the synods of Cyzicus and Antioch in Cresta, was rendered absolute by the Council of 381. The Pneumatomachians withdrew from the Council, and were condemned by it (cf. § 4). The amicable overtures made at the instance of Theodosius I. to the Arians, and of Julian to the Macedonians (Soc. v. i. 1; Soc. vi. i. 3), the Macedonians seconded again from the Homoeonians, with whom they had hitherto been in communion, abandoning the Nicene Creed, and trusting to be received for the θρόνοιος as against the θρόνοιος. From that time a section of the Macedonians (Homoeonians) had continued to exist as a distinct party (ἐν οἴκειᾳ ἡμῶν), while another, breaking away from the latter, had united themselves all the more closely to the Homoeonians. These statements are not altogether free from difficulties. The present writer would not lay stress upon the fact that the notice in Soc. iv. xxvii. 8 (cf. the words σωτηρίων εὐγενείας, &c.), which obviously refers to this re-appearance of the Homoeonians, points to the reign of Arcadius, as the notice in question is manifestly erroneous. Here, indeed, Sozomen seems to have wrongly interpreted the statement of his authority (Sabinus), which he renders verbally in vii. i. 7. May it not be the case, however, that in vii. xii. 4 of a later date of vii. i. 3, clearly derived from Sabinus, and providing fresh difficulties? In vii. xii. 4 likewise we read of a synod in the Carian Antioch, where, in opposition to the Homoeonians, the Heteroeonian of Lucian was made the standard; this synod, however, was held subsequently to the synod of Tyana (367), and in opposition to those members of the Homoeonian party who had gone over to the Homoeonians. The present writer must admit that he finds this 'doublet'—if it is a doublet—a disturbing element. Still, it is possible that, as H. Valensius (Adnot. to Soc. vii. xii. 4) assumes, there were two Homoeonian synods at Antioch in Castra (A.D. 383 and 378); and, in fact, if the bishop of that city was an intragenetic Homoeonian, there is much to be said for the theory. If we accept it, we must regard as possible that some of these synods likewise gave its adherence to the Confession of Lucian, which, as we have seen, was so highly esteemed by the Macedonians. It is in the period succeeding that date that we find the later Macedonians. For Macedonianism was simply the Homoeonianism which, on account of the doctrine of the Spirit, broke away from the Homoeonians adhering to the Nicene Creed. The fact that Epiphanius (ὁ παρακειμένος τῇ θρονίᾳ τῶν Πνευματικῶν ἀλήθειάς [cf. § 4]), published a formula which, together with Pneumatomachian clauses, contained statements pointing away from the Nicene Creed to the Homoeonian (τὸ Εὐσέβιον καταγάγων τὸν Πνευματικὸν ἀλήθειαν αὐτόν εἰς καταγώγων, and that from 375 he had drawn closer, ecclesiastically, to the Homoeonian court-bishops (Basil. Ep. cxxiv. 9 [PG xxxii. 924 B]) tells us that, at a synod held at Cyzicus in A.D. 376—otherwise unknown to us (Loofs, Eustathius, p. 17)—Eusebius, the Macedonian archbishop (cf. § 4), subscribed a formula which, together with Pneumatomachian clauses, contained statements pointing away from the Nicene Creed to the Homoeonian (τὸ Εὐσέβιον καταγάγων τὸν Πνευματικὸν ἀλήθειαν αὐτόν εἰς καταγώγων, and that from 375 he had drawn closer, ecclesiastically, to the Homoeonian court-bishops (Basil. Ep. cxxiv. 9 [PG xxxii. 924 B]; cf. 5, 929 B, C; Loofs, Eustathius, p. 76 s.); Basil is of opinion that the fundamental Arian tendency of Eustathius had once more manifested itself (Επ. cxxiv. 1 [p. 564 A]). This was a revulsion of Eustathius to the Homoeonian—an act (as he merely suppresses, without overtly rejecting, the Homoeonian) did not as such altogether exclude recognition of the Nicene Creed—a decisive factor in the line of thought of the Macedonians. Our sources do not enable us to answer the question. But to the present writer it seems beyond doubt that what is here said of Eustathius lends support to an account of similar parable given by Sozomen (vii. ii. 2), and less fully by Socrates (iv. xlv. 2), regarding a synod held at Antioch in Castra (375). These

3 Cf. Loofs, Eustathius, p. 78, note 2, where, however, the detection of Eustathius from the Nicene Creed is not sufficiently recognised.
Constantine in 383—Eusebius being once more the representative of the last-named group (Soc. v. x. 24; Soc. vii. xii. 9)—were unsuccessful in winning the sect back to the Church. The Macedonians, undisturbed by the laws against heretics that passed in 383 and 384 (cf. Soc. v. xx. 4; see above, § 1), still remained a distinct group apart from the Church, but how far beyond A.D. 450 they maintained their position the present writer cannot say.

MADAGASCAR.—The religion of the Malagasy is extremely simple. They believe in one god, whom they call Zanahary, ‘creator of all things’; but this god, being essentially good and, consequently, incapable of doing evil, is more or less neutral in his effects. He, therefore, is properly speaking, no cult connected with him. Indeed, with the exception of sorcerers, there are in Madagascar no individuals or classes of individuals connected officially with any religion or cult.

1. Ancestor-worship. —The shades of ancestors, however—for all the Malagasy believe in a future life, with rewards and punishments—enjoy a great veneration, and inspire their worshippers with extraordinary awe. They are credited with all power of good and evil over the living, whom they visit from time to time. A dead household, i.e., will sometimes pay a visit to his widow, and in this case the birth of posthumous children is considered perfectly legitimate. Offerings are made to ancestors, generally of a small piece of ox-blood, and a few drops of rum, which are taken to the grave of the ancestor whose favours are sought.

2. Sorcery and fetishism. —The Malagasy do not believe in death from natural causes, except in the case of criminals or common accidents. Their idea is that death is always the effect of witchcraft or evil spells cast by sorcerers, and they are, therefore, careful to collect all hair-cuttings, nail-pieces, or any other object of which sorcerers would find these things and use them to work evil on their owner. The Sakalava kings were always accompanied by a servant whose sole charge was to gather up the earth upon which they had spat.

Diviners or sorcerers play a very important part in the life of the Malagasy. The natives believe that they are in communication with the spirits of the dead and can cure diseases, foretell the future, discern whether the outcome of any enterprise will be favourable and what is the most suitable moment for undertaking it, indicate lucky and unlucky days, and warn against what is forbidden (fady). There are no fixed rules, even for the most important undertaking without first consulting the sorcerer, who makes use of sikidy—a ceremony in which a handful of seed is spread out on a cloth, according to certain well-defined rules, as to form sixteen figures, which are then interpreted with the aid of a code. The sikidy, which was introduced, or at least very frequently employed, by the Antimoroa, has been in general use throughout the island for a long time.

The sorcerers, who are called tsipesandily, ambiasa, oxasina, etc., according to the different provinces, have as one of their occupations—and that not the least lucrative—the manufacture of amulets or talismans (oby), which generally consist of small pieces of carved wood, bull’s horns ornamented with glass beads, or crocodiles’ teeth. The horns and teeth are usually filled with earth or sand and various small objects such as gilt nails, iron-filings, and cow-dung. After invoking the god and sprinkling the talisman with grease, the sorcerer, for a consideration, hands it over to the purchaser, who then hangs it round his neck. The result is especially to keep the wearer or is successful in all his undertakings, fortunate in love, immune from gun-shots or crocodile bites, and so on. The natives have the most implicit faith in these oby.

The Merina introduced the worship of national fetishes, which were very similar to the foregoing. These fetishes were regarded as royal personages, and had a special residence with officiating servants. The oldest and most famous of them was Kellimaza.

3. Fady.—In almost every case there is some fady connected with these amulets and fetishes—i.e., it is forbidden to do certain things and to eat certain foods. If this prohibition is not rigidly respected, the oby loses all its virtue and is useless. The fady, which occurs throughout the whole of Madagascar, and the Malagasy are vague about its origin. It is a taboo of the Oceanians. There are some places which are regarded as fady for every one, while others are fady only for certain families or even for certain individuals. There are then no one should begin anything new or start on a journey. If a child is born on one of these unlucky days, it is killed—or, rather, it was until quite recently, especially amongst the Malagasy general, and the island—because it is supposed to bring evil upon its family. There are also fady words, i.e. words which must not be pronounced; naturally, these are fast disappearing from the language. As an example of this we have the words which went to make up the names of the Sakalava kings, the use of which was prohibited after their death. These fady are really of a religious nature; their aim is to appease the wrath of spirits and otherwise gain their favour.

4. Human sacrifice.—Human sacrifice has now been abolished in Madagascar, but it is not very long since it was customary. To their idea is that death was always the effect of witchcraft or evil spells cast by sorcerers, and they were, therefore, careful to collect all hair-cuttings, nail-pieces, or any other object of which sorcerers would find these things and use them to work evil on their owner. The Sakalava kings were always accompanied by a servant whose sole charge was to gather up the earth upon which they had spat.

5. Crimes and punishments. —The Malagasy have no moral code. Their religion seems to authorize anything and everything, and the only recognized sin is failure to observe the external formalities of worship; such a sin of omission may be absolved by the penitent’s making a small offering to the spirit of the common ancestor.

Before the conquest of Madagascar by the French, justice was of an extremely summary nature (except in the case of the Merina, who had a code of laws modelled on European codes), based simply upon traditional use and wont.
Justice was meted out by the king or the village chief, and in certain tribes—e.g., the Betsileo—by an assembly of the leading men of the tribe. The lex talionis was in universal use. The principal crime was sorcery,—the greatest crime of all—sorcery, which was always punished by death.

6. Ordeals and oaths.—In cases of doubt, recourse was had to the ordeal. The poison test, or *tanghin*, which has made so many victims among the Hova, is one of the best-known methods, and another test consisted in making the accused orange the contents of an iron jar or an arm of the sea where sharks abounded, those animals being supposed to eat the guilty and to do no harm to the innocent.

Another interesting practice is the “water-oath.”

A number of water are put a bullet, some powder, earth from a sacred spot—e.g., the tombs of the old kings of Imerina—and especially a bit of gold. The accused, or the two litigants, in a law-suit, drink this water, vowing their good faith during the process; and all the [illegible] that flesh is heir to are supposed to fail on those who swear falsely.

There is another ceremony similar to this—the “blood-oath,” or *fatidra*—by which two persons promise each other mutual aid and protection throughout their lives, and enter into a voluntary relationship more intimate and binding than real blood-relations.

To the contents of the bowl described above are added a few drops of each individual’s blood, drawn from a slight cut made on his hand. The two parties then take it in their hands and, with the point of their spear or the ramrod of his gun, with the points dipped in the bowl, an orator announces the news of this fraternal union to their ancestors in an eloquent speech, and calls upon God to inflict the most severe punishment if either of them fails to keep his oath (ct., *tanghina*).

Exorcism.—The Malagasy have a peculiar ceremony which shows their belief in demoniacal possession and exorcism. Its aim is to cure certain maladies, and also to render thanks to God for the cure effected. This is practised chiefly in the west and south of the island, and is termed *bido* or *sala-mana.* Those who are submitted to treatment of this kind are supposed to be possessed of a devil, which must be expelled.

The patient is led out of the village to a large open space where a platform 10 or 12 ft. high, with a primitive ladder leading up to it, is erected for the occasion. At the foot of this platform all the inhabitants of the neighbourhood are gathered on one side, and the cattle belonging to the invalid or his family on the other. When he arrives, dancing and singing begin, and there are great illusions of toads (run), large quantities of wine which must be consumed by the patient. The unfortunate man is then led into the middle of the platform, where several large stones are placed, one of which acts as a kind of scape-animal and is sacred to the man’s parents, who treat it with every kindness, while the other is immediately sacrificed and eaten by the sacrificers. The patient, drunk with alcohol, noise, and the heat of the sun, has then to climb up to the platform—an operation not altogether free from risk. If he reaches the top without much help, God is supposed to be favorable to him and he will get better; if not, his case is hopeless. Once he is safely established on the mat covering the top of the platform, a woman, who has had to remain in a state of absolute chastity for twenty-four hours previously, gives him food which she has cooked specially for him, particularly newly-killed ox-flesh. If he eats it, or even pretends to do so, that is a sure sign of his speedy recovery to health and long life. The tumult of singing and shouting then begins again with redoubled energy. The sick man is left lying there, several feet above the ground, sometimes for a very long time. At the end of the ceremony, many inhabitants of the village surround themselves with rung and gorme themselves with meat. He is then carried back with great pomp to his dwelling, where, nine times out of ten, he succumbs to the effects of his treatment.

8. Death and disposal of the dead.—Among the Malagasy the custom of the mourning for those connected with burial of the dead. The funeral rites are not the same throughout the whole island; some peoples hide their cemeteries in the heart of the forest, among hills and rocks, in desert places, or are far from the coast, and sound

1 The Arabic word for “devil” is *Bila*, and from this the Malagasy have formed *bilo*, which is the name both for the evil spirit and for the ceremony of exorcising it.
laws came into force which had to be strictly obeyed, if one did not wish to run the risk of being considered responsible for the death of the king and of being subjected to capital punishment as a sorcerer. The following are some of the restrictions imposed on the people: all the inhabitants of the kingdom, with the exception of the heir to the throne, had to shave their heads, sleep on the ground instead of in beds, use their hands to wash each other, without greeting in the street, neither play any musical instrument nor sing, have no fire or light at night, do no work except in the fields, refuse to be carried in a palanquin, use no mirror, go about bare-headed, wear no fine clothing, and, lastly, practice generally two burial ceremonies— one consisting in simply burying the dead, and the other taking place some years after, when nothing but the skeleton remains, and when the body is finally placed in the family tomb. Sometimes, as in Imera, the body is put into the family vault at once, but it is wrapped round with several silk bands, after which it is covered and kept, till a certain time, the ceremony of the mana- dika takes place. This consists in changing the soiled bands, and the Merina say then that they turn the bodies on their other side so that they may not get tired of lying in one position.

Funerals in Madagascar are always the occasion of feasts in honour of the dead. The richer the man is and the more cattle he possesses, the more banquets take place the third day after his death. Candles are lighted, and bulls are killed, the flesh being eaten at the funeral feast, and the head and horns being placed with great ceremony on the tomb of the deceased. The funeral feast goes on for days or weeks, and there is anything left to eat or drink the feast continues; the funeral festivities of great and noble personages have been known to last for months.

The narrative of the events in the Kaliyuga, or present age of the world, commences in the 4th surge of Is., at first, the knowledge of the Vedas, as taught by Kṛṣṇa and Bhūma (Mm. v. 1), reigns supreme. Then the Aśvins aspire to spread false doctrines. The demon Sakuni, urged by Chakrāvak, the son of Lokanāta, points out that other heroes, such as those of the Chāndāgīva, Jatas, and Pāṇḍavas, had all failed (5-10). Therefore Mahāvīra, who alone had sufficient skill, must become incarncate as a Brahman ascetic, and must destroy the Vedants, under cover of explaining it (11-18). Mahāvīra is dispatched with instructions to abolish the Vedas and Purāṇas, to ridicule the theory that Vīra has made our qualities, and to establish the identity of the soul with Brahma (19-20).

See below.

1 It is called the Brahman-śaivismādhyādhyāya because it is said to have been first communicated by Vīma to Brahmanā, who spread it through the island of Vīma, by the help of his disciple, Vīma. See below.

2 E.g., by Wilson, Religious Sects of the Hindus, p. 140.

The Madhvas, Madhavāchāris.—The Madhvas or Madhavāchāris are an Indian sect, one of the four śaiva-prādhyāyas, or churches, of the Vaisnava Bhākhārman (Vīma, or Bhākṛti-Mārga, vol. ii, p. 545). It has usually been stated that this sect represents an attempt to form a compromise or alliance between Śaivas and Vaisnavas, but an examination of the authoritative documents of the faith shows that this is far from the truth. It is therefore advisable to include in this article an account of the life of the founder of the religion, and of the legends connected with his coming.

The authorities on which the following account is based are: (1) the Mahāvīrājātī (quoted as Mm.), which deals with the religious history of India down to the year 650 B.C.; (2) the Mahāprakritos (Mv.), which deals with the life of Mahāvīra himself; both these works are in Śanskrit, and are written by one Nārāyaṇa, who was the son of Tīrīṣṭuddhā. (3) The Vīmaṣṭiūti of the above Tīrīṣṭuddhā, and (4) C. N. Krishnaswami Aliyār's Śrī Madhvas and Madhavāchāris (K.), which includes a summary in English of (1) and (2).

I. Accounts of the founder.—The basis of the Madhva religion is, first, that Viṣṇu is the Brahmā of the Īyavānās; and, secondly, that, whenever he enters into the body of a mortal, he becomes incarnate as a man. He is the air-god, as his friend and helper. Accordingly, the first four purṣa or chapters, of Mm., after describing the order of creation, gives detailed accounts of the Ramā and Kṛṣṇa incarnations, Ramā's great friend and Kṛṣṇa's ally, being, not Arjuna, as we might expect, but Bhūma (cf. Mm. iv. 41), one of the five heroes of the Mahābhārata, and also a son of the Vīma, or air-god. In the Bhūma theology these are all ignored save one, which, compared with the others, is, in the epic, of quite minor importance. In the Vīma-prasūni (Mahābh. iii. 11, 66 ff.) is related that Mahāvīra, in a certain Vāya or aśāśās belonging to the country beyond the Himalayas, and killed their leader, Manimā. Mahāvīra had formerly offered a filch insult to the Indian sage Agastya (the prototype of the Vedic Brahmā). He was called by him to be slain by a mortal. Such stress is laid upon this story by the Madhvas that they maintain that the version, as we have it now in the Mahābhārata, was an invention of Vyāsa, the author of the epic, rewritten and completed by Mahāvīra himself (K. p. 42).

MADHVAS, MADHAVACHARIS

brought up in great poverty, and (as a slip at the monad sub-
sequently taught by him) it is related that in his boyhood he
could count only one thing at a time, never being able to see
a single idea of numbers. He is said to have been brought up
in a village, under the patronage of Shiva, he quickly masters the sacred books (41). He is
later tutor to teacher, but is lost to them for his heretical views. He invents his doctrine, described as
 daunting-spirit and nirgranthaputra, and is hailed by the demons as the
second coming of the great Vedantins and teachers Buddhism under cover of Vedantism. He makes the
Vedas without meaning, and equates Brahman with nothing-
ness (nityatvam) (6). He becomes a Saitaka, and messenger of
Bharavi, who confers upon him a magic spell (51).

The Bhagavata Purana further describes his pupils in
Sankara’s life. He reduces the wife of his Brahmanah house (41.),
He makes the wife of his Brahmanah house (41.)
his pupil, but falls to his death. His last words are instructions to his disciples to uproot the
learned Saitapraya, the last of the great teachers of the true Vedic

In the 8th sarga we have the doings of Sankhara’s followers. They penetrate their opponents, burning down monasteries,
deroying cattle-pens, and by magic arts killing women and children (5). They forcibly convert one of their chief opponents,
Brahman, and compel him and his disciples to adopt the
Madhavavais (6). These, however, still adhere to the
true religion, and, after consulting Saitapraya, determine to
cause one disciple to become thoroughly learned in the
Maya-system, who should start a line of disciples, outwardly Mayavais,
but really devoted to Hari (i.e. Vaisnava). In this line of disciples
come, in due course, Achyutapraya. In his time the Lord, i.e.
Vayu, was very much occupied elsewhere with Madhva, in the hounding of Madhyasa, and
studied under Achyutapraya (314.). The body ends with a
brief allusion to the account of Sankara’s death, and of

It thus appears that Madhva, like Bhima, was an incarnate
initiation, from the earth to
destroy all the followers of Sankara and all their

And

The ancient name of the country now comprising the
Districts of Dharvar and N. and S. Kanara, together
with the western portion of the State of
Mysore, was Tulava, the modern Tulun, and it
is here that the Madhvas have always been strong.

After the usual natal rites, the boy was named
Vasu, a name which at a later date he changed to
Madhva. The most probable date of his birth is the
Saka year 1119 (=A.D. 1197), but some authori-
ties put it as late as A.D. 1238. Numerous tales
are told of his youthful exploits and of miracles
which were referred to below. His prowess in
physical exercises was recognized by his school-
fellows, who nicknamed him ‘Bhima’ (Mr. iii.
42-48). When he grew up, he joined the
list of the Achyutapraya already referred to (Mr. iv.
6.), and in due course, amidst a burst of prophecy from
the assembled crowd, received initiation under the
name of Parvaka and Pratapaka (33). He
continued his studies under Achyutapraya in the
Anantusvara monastery at Udipi, and finally re-
ceived from him the name of Anandadhara (Mr.
v. 2), the title adopted by him in future as his per-
sonal name. All this time, it must be concluded, he
was studying the Vedanta, according to the
muyya-school of Sankara.

After further study, he made a tour through
southern India, having in the meantime developed
his own system of dualism in opposition to the
monism of Sankara. He journeyed along,
disputing with the doctors in each town, his most
important combat being at Anantagura (the modern
Trivandrum) with the head of the Sankara monas-
tery at Sringeri (Mr. v. 36). Here there seems to
have been a drawn battle. The combatants parted
in enmity, and the Madhva’s word, repeatedly repeated
that ever after existed between the followers of the
two systems. Madhva had to take refuge for four
months at Ramesvara (v. 41.), after which he
returned to Udipi. The result of this first tour was
to establish Madhva as the leader of a new sect
and to widen the breach between him and the
authorities at Sringeri (K. p. 32).

After some years of further study at Udipi,
during which (K. p. 23) he seems to have completed his

In Mr. the first sarga sums up briefly the con-
tents of Min., special stress being again laid on the
Mamnati story (s. 30), and on Bhima’s close con-
nection with Krupa (41). The incarnation of Vayu
is plainly stated in ii. 24. The rest of the work is a
prolix account of Madhva’s life, too long to
analyze here. The main facts are as follows: Madhva, son of Swenti, Madhva’s father
(Mr. ii. 9, 14), was a Brahmana living at Rajapatipura (6), close
to the modern Udipi, a town on the south-east
of the present district of S. Kanara, and about 40
miles due west of Sringeri, then, and still, the
head-quarters of the Smarta followers of
Sankaracharya.

The ancient name of the country now comprising the
Districts of Dharvar and N. and S. Kanara,
together with the western portion of the State of
Mysore, was Tulava, the modern Tulun, and it
is here that the Madhvas have always been strong.

According to the local authors of the

Mr. xii. and xiii.), in which the Smarta-philosophers, led by
the head of the Sringeri monastery, did all that they
could to destroy the new teacher and his followers.
They even went so far as to carry off Madhva’s entire
library, and it was restored only through the
intercession of the local prince, Jaya Sihita of
Vijnumangala. It was shortly after this that
Madhva converted Trivikrama (xii. 50 ff., xv. 64),
the father of the author of Min. and Mr. In his
last years Madhva again toured to the North, and
is said to have rejoined Vyas, in whose company
he still remains awaiting the conclusion of the
present age. His final journey is described in Mr.
v. 36. The date of his death was probably Saka 1118
(A.D. 1276), when he was 79 years old.

Thirty-seven different works are attributed to him,
of which the most important are his commentaries on
the Vedanta Sutras and on the Dharmasutra and
his commentary on the Mahabharata, entitled
the Mahabharata-tatparya-nirunya.

1 See Subha Rama, Bhagavat-Gita, p. xiv.; cf. Bhandarkar,
Vaiyavina, Saints, Stages, and Sects in the Ural, London, 1894,
p. 46.

2 It is, however, important to note that the Vaisnavas of Bengal,
formed by Chaitanya (p. 9), is an offshoot of Madhvas (see
Kalaipa-Siibha, Siibha-kalpa-purana, London, 1884,
p. 46).
2. Doctrines of the sect.—Mādhyāvism rejects not only the monism of Śaṅkara but also the Viśiṣṭādvaita, or qualified monism, of Rāmānuja (see art. BHAKTIVĀDA, vol. ii. p. 545). Its followers call themselves Sad-Vaiṣṇavas to distinguish themselves from the Śrī-Vaiṣṇava followers of the latter. The basis of the whole philosophical system is dīvīna, or spirituality, by this word understood the dualism of spirit and matter, or that of good and evil, but the distinction between the independent Supreme Being (Jiva-Mandnam) and the dependent principle of Being (Bhūta) remains. These dualistic distinctions (pañcakhañca), viz. (a) between God and the individual soul, (b) between God and matter, (c) between the soul and matter, (d) between one soul and another, and (e) between one particle of matter and another. The account of the order of creation given in MM. i. 2ff. closely follows the well-known Śaṅkara-Yoga system, as modified by the Purāṇas, and need not detain us. Vīṣṇu, Nārāyaṇa, or Parā Bhūvaṇa, not Brahmā, is the name given to the Supreme Being. He is endowed with all auspicious qualities (guna), and has a consort, Lakṣmī, distinct from, but dependent on, him. By her he has two sons, Brahmāna, the Creator, and the Vāyu mentioned above, who is the Saviour of mankind. Mokṣa, or salvation, consists in release from transmigration and eternal residence in the abode of Nārāyaṇa. Souls (jīva-s) are innumerable, and each is eternal, has a separate existence, and is subject to transmigration. They fall into three groups, viz. (a) the lesser gods, the pītha, pītā, kings, and a few other select classes of the asuras; (b) those who have already transmigrated and who are destined to salvation; (c) those who are neither sufficiently good to belong to the first class nor sufficiently bad for the third; these are destined to perpetual transmigration (jīvasatra); and (d) demons, etc., and sinners, especially followers of the mādhya-doctrine and other heretics who reject Vāyu; these are destined to eternal hell. Again, it must be noted that there is no salvation, except through Vāyu, i.e., in the present age, through Madhva. It is also noteworthy that in this religion the idea of eternal bliss, or mokṣa, is balanced by the idea of an eternal hell—a logical symmetry that is missing in the other religions of Mādhyāvā's time.

The natural soul is characterized by ignorance (avidyā), and this ignorance is despelled, and salvation is obtained, by right knowledge of God. This knowledge is obtained by the study of the Vedas. Of the first class and eighteen means are described as necessary for its attainment. Such are distaste of this world (samāvaya), equanimity (śaman, attendance on a gurru, or religious teacher, bhakti directed to God, due performance of rites and ceremonies (cf. the Pārva-Mimāṃsā), reprobation of false doctrines, worship (upāṣāma), and so on.

Service to Viṣṇu (i.e. to God) is expressed in three ways: (a) by stigmatization, or branding (ākāṇa) the body with the symbols of Viṣṇu; (b) by giving his names to sons and others (saŋma-karana); and (c) by worship (bhakti) with word, act, and thought. Worship with word consists in (1) veracity, (2) usefulness, (3) kindliness, (4) sacred study; with act, in (5) almsgiving, (6) defence, (7) protection; with thought, in (8) mercy, (9) longing, and (10) faith. Worship is the dedication to Nārāyaṇa (i.e. God) of each of these as it is realized.

The custom of branding symbols of Viṣṇu on the shoulders and breast is not peculiar to the followers of Mādhyāvā, being also adopted by the Śrī-Vaiṣṇavas, but among the Mādhyāvas, instead of being occasional, it is universal, and is declared to be necessary according to the bhātras. All classes, whether monks or laity, are branded. The mark itself, or

Sarva-darśana-saṅkhyāra, tr. p. 91.

1. It will be remembered that Mādhyāvā is said to have revised the Mahābhārata, and in this connexion it should be noted that in the southern recension of the epic, after XII. 308, six verses have been inserted in which it is declared that animals of flour should be used at sacrifices.

2. The present writer takes this opportunity of withdrawing the remark made in ERB ii. 549, that Alopen had visited the court of Siālutā. See J. R. A. S., 1914, p. 134.

3. The passage of the Mahābhārata is not quoted in the text, but the Ancient India, Calcutta, 1877. Garbe (p. 152) considers it probable that the Kāllina of Cosmas was another Kālīn, farther north, nearer Bānyā, but not the same as the Kālīn of Alop. The present writer that the wording of Cosmas connects Kāllina so closely with Male (Cuis.), that it must be the same as the Kālīn at Udipi. Garbe himself appears to accept this in his note on p. 273.
that there is little resemblance between Manichean
philosophy and Sanākara's philosophy. The one
is a materialist and the latter is monist. But Mani's dualism
taught the existence of two beings—light and
darkness. Light is God at its head, and dark-
ness has no god at its head. They are in agreement
in this resemblance to that and Sanākara's Brāhma
obscured by māyā. At any rate, it is possible that
Mani, who (K. p. 36) could speak the language of
the Mlecchhas (foreigners), may have become
acquainted with Mani, and he assimilated
it to this way in Sanākara's theory of māyā.

The question deserves more investigation than has
bitherto been given to it.

LITERATURE.—The Mahābhājārī and the Mahābhāṣya have
been already mentioned. Several editions of these have
been published in India. A useful summary of Mādhava
doctrines will be found on p. 16 of the present volume; cf. also, Pr. Rama,
an anonymous work published in the Benares Sanskrit Series in
1917. A fuller account will be found in Padmanābhaṣāri,
Madvandvisānta-sūtra, Bombay, 1882, quoted by Bhandarkar,
p. 69. Finally, there is Mādhavāchārya, Sāra-darśana-
sānyasika, of which many editions have been published
in India. Of this there is an Eng. tr. by E. B. Cowell and A. E.
Gough (2nd ed., London, 1894). The system of Purojaṇa, i.e.
Mādhava, will be found in Ch. v. 36 ff. of the present volume.

As for works in English, the earliest account of the Mādhvas
is contained in 'Accounts of the Mādhvas' or 'Vaiṣṇava
Sects' of the Religious Section of the Hindu, reprinted from vol.
vii. and viii. of Asiatic Researches, 1840. A useful
little book is C. N. Krishnaswami Aiyer, Sri Madhava
and Madhavachayu, Madras, 1894, also quoted by Bhandarkar,
p. 69. The system has been thoroughly studied in the
foreign press. See also the following: R. G. Bhandarkar,
Vaiṣṇavism, Śaivism and Minor Religious Systems (=GIL.
in Orientalia, 1913, p. 39; and vol. xx., Bharan, 1882, p. 59 ff. (full account
of the history, religion, and customs of the Mādhvas of the present
day); and G. Venkateswar Rao, 'A Sketch of the History of
the Mādhva Achāryas,' beginning in Id. viii, (1914) 233 (refers to
C. M. Padmanābhaṣāri, Life of Madvandv.)

For an authentic account of Mādhva's doctrines see S.
Subba Rao, The Vedanta-sūtras, with the Commentary by Sri
Madhavachāryu, a complete Translation, Madras, 1901, The
Bhāsapati-Gita, Translation and Commentaries in English
according to Sri Madhva, 1906. Several editions of these have
been published in India. The preface of the latter contains a life of
Madhva, the first point of view; cf. also, Pr. Rama,
The Brahman Sātrā: Concluded literally according to the Commentary of Sri Mādhva-Bhāṣya (Sanskrit
text), Kumārakonam, 1902.

MADHYAMAKA, MADHYAMIKAS.—Madhyamaka is the name of a system of Buddhist
philosophy, 'the system of the middle path,' the system of the Mean ' (madhyam) ; the adherents of this
system are called Madhyamikas.

1. Nāgārjuna.—The work upon which the Madhyamaka
philosophy is based, the Mahāyāna-mūlayupakāśās, still survives, and tradition is agreed
in ascribing it to Nāgārjuna; numerous commentaries
have been written upon it: Nāgārjuna's own, the Akṣara-kaya; those of Bhāvadvipa
and Candrakīrti, which seem to give a faithful rendering
of the author's meaning; and of Bhāvadvipa,
which transmits his personal views. There
are two branches of Madhyamika, but the difference
between them has not been studied, and seems
to consist in a mere divergence in the method of
demonstration.

All this literature is, or will soon be, accessible
in the editions of the originals or in English.

The Mūlayupakāśās is probably the authentic
work of Nāgārjuna, who flourished about the middle
of the 2nd cent. A.D. We know that this mysteri-
os and miraculous powers were attributed to
the Great Vehicle, or Mahāyāna (g.v.), and, in
particular, the revealer of the sūtras of the Prajñā-
pāramitā, the teaching of which is akin to that of
the Madhyamaka. It is even possible that some
of the sūtras of the Great Vehicle were written with
the sole purpose of stating the theories of the Madhyamaka
philosophy under the guise of 'words of

1 See Literature at end of article.
the Buddha. It is difficult to determine what part Nagarjuna took in the redaction of the sūtras, but respect for tradition would lead us to believe that his share was a major one. In any case, the Madhyamaka school must be held responsible for a considerable proportion of the Great Vehicle. All this must be assigned, probably, to the early centuries of the Christian era, from the first onwards.

2. The Madhyamaka system and its antecedents.

It is not difficult to show the place occupied by the Madhyamaka in the development of Buddhist philosophy from its beginning, and such a historical sketch is indispensable to a definition of the system itself.

The Buddha had given his revelation as a ‘path,’ or a ‘way’ (magga, patijñāda), and had qualified this path by ‘middle’ (majjhima = madhyama), doubtless, as has been often said, because he repudiated two ‘extremes’ (aata)—an exaggerated asceticism (tapas), and an easy sensual life (vākulākṣa). But he had also condemned other ‘extremes,’ viz. contradictory theories, such as: ‘Everything exists,’ ‘nothing exists’; ‘The person who feels is the same as sensation;’ ‘The person who feels is a different thing from sensation;’ ‘The Buddha does exist after death, ‘the Buddha does not exist after death;’ and some texts—few, but explicit—prove that, at the time of the redaction of the Pāli Nikāyas, ‘middle way’ meant a ‘way between,’ certain negations and affirmations. This way is simply the philosophy of the dharmas and of the negation of the individual (pudgala, ‘ris’), which is almost exactly the philosophy of the Madhyamaka school, as it is set forth in the great works of Master Dignāga, Drk, Madhyamakakārikā, ‘supramundane (lokottara) actions become possible, and these are different from thought itself, or the realization of nirvāna, which is to say, the collection of mental dharmas begins to become impoverished and finally disappears; desire is no longer present to give rise to it. This philosophy satisfied Buddhists for a long time. But it did not satisfy the Madhyamaka school, who put a more rigorous interpretation upon the word ‘void,’ so often applied by the Buddha to everything in general, and held that this philosophy is in its nature not free from the two ‘extremes’ of perpetual duration and annihilation (lokâta, unwelchheda), seeing that it inevitably regards nirvāṇa as the annihilation of a series of thoughts. The Madhyamaka school claims to find the true ‘middle way’ by declaring, not only the unreality of the individual (pudgalanirattaya), but also the unreality of the dharmas themselves; it denies the existence not only of the being who suffers, but also of pain.

Nagarjuna and his school seem to hesitate between two positions.

i. Everything takes place as if things and living beings were composed of substantial dharmas, and, to arrive at mental actions other than the latter, the ancients must be followed: eliminate the dharmas which generate new dharmas because they are associated with desire; and insert, in the complex series that began formerly actions to rewardment of the knowledge that destroys desire, and so arrest the renewal of the dharmas. Yet we do not put
an end to existence by this method, for existences is void of reality in itself, since the dharmas do not exist substantially; we put an end to a process of ‘void’ (śūnya) dharmas which renew themselves in ‘void’ dharmas; and it is important to know this, for the only knowledge that can be procured by concurrent causes (pratityasamutpādā), ‘dependently originated.’ The Madhyamaka school observes that ‘what is produced by causes is not produced in itself, does not exist in itself.’ The essential nature of things consists in not being produced in themselves, in being void of all substantial reality—i.e. in ‘vacuity’ (śūnyatā). This term ‘vacuity’ has been variously understood. For some it is ‘nothingness’; for others it is a permanent principle, transcendent and undefinable, immanent in transient and illusory things. It would be a long and difficult task to explain the mystical significance that it has in certain Buddhist books; we know that it ends by being confused with the term vijñāna, ‘thunder-bolt, diamond, male organ.’ One thing is beyond all doubt: for the Madhyamaka, ‘vacuity’ is neither nothingness nor a transcendent-immanent principle, but the very nature of what exists; ‘things are not void because of vacuity’ (śūnyatāvyāpāya)—conceived as the nature of things—‘but because they are void, and they are ‘void’ because they are produced by causes.’ ‘Vacuity’ means ‘production by causes,’ and is only an abstraction, a mere word; ‘void means ‘produced by causes.’

Existence (bhūtaḥ) therefore, is a complex process of dharmas which have no reason in themselves for existing and which cannot exist substantially by reason of their causes, i.e. former dharmas which do not exist by themselves. The following formula explains this clearly: dharmas resembling delusions of magic or reflections in a mirror (māyopama, pratibrīhīvopama)—we might say ‘contingent’ dharmas—give birth to dharmas that are equally illusory. Like begets like.

The objection of the realist against the Madhyamaka is, therefore, fruitless: if everything is void, then existence and nirāyana, impurity and purity, impure and pure, void and non-void, true and false, and the path of salvation does not exist.

Nāgārjuna himself formulates this difficulty, and answers it. Existence is the continuous production of phenomena. Impurity is attachment to phenomena, which induces attachment; wisdom is real truth, knowledge of the vacuity of things.

Nāgārjuna, Chandrakīrti, and Sāntideva very often took this point of view, which is quite within the logic of Buddhism and not unreasonable. But, in practice the Madhyamaka and Yogācāra schools of the Mahāyāna, in so far as it is, we must add that our teachers often go much further.

ii. Just as their criterion destroys all ideas of experience and religion—the notion of movement, of time, of ‘passion’ (since the connexion between the passionate man and passion ‘does not bear investigation’)—it also destroys the notion of causes. Neither exist substantially; they do not exist at all, either in reality or apparently. They are like the daughter of a barren woman, like the beauty of the daughter of a barren woman: this beauty evidently does not exist except in so far as it may be described; but, in reality, the object described, the description and the person describing are all similarly non-existent.

Absolute truth, which is, properly speaking, ‘knowledge of a Buddha,’ is a ‘not-knowledge’; it is midway between affirmation and negation. The dharmas are like the hairs that a monk with diseased eyes thinks he sees in his almsgown; he does not see them, for he knows that they have of them does not exist any more than its object. This is proved by the fact that a man with diseased eyes has no thought about these hairs at all; he neither denies nor affirms their existence, because he knows them in their true nature (which is ‘void’) by not knowing them. The legitimate conclusion of this system is formulated in our sources: ‘Absolute truth is silence.’

MADRAS AND COORG.—In the Government Census for 1911 the vast majority of the population in the Madras Presidency are classed as Hindus. Out of a total population of 41,570,100 in the Presidency and the small Feudatory States included in it, the Hindus number 37,230,034. The rest of the population are classified as follows: Musalmāns, 2,764,467; Christians, 1,208,515; Animists, 639,406; Jains, 27,005; Buddhists, 697; Parsis, 489; Brāhmaṇa Śamaj, 374; Jews, 11; while 42 are classed simply as ‘others.’

1. Christianity.—The most progressive of all these religions besides the Christian is the Roman Catholic Church the hope and possibility of new life, and for the last half century have been crowding into it in thousands. The great force behind the movement, therefore, is a natural human craving for life.
and freedom. At the same time, there is also a strong spiritual element in the movement. In almost every district where it is in progress it has owed either its origin or its power to a few men and women of true spirituality, and the fact that a large number of the converts have to endure a very bitter persecution for their views shows that the Church is in itself an indication that the movement is due to something higher than a mere desire for immediate temporal gain. This great movement is bound to have a vitalizing influence in the future, not only upon the Christian Church, but also upon the religious life and thought of India as a whole. A great Christian Church is steadily and rapidly rising up in India from the lowest stratum of Hindu society, and the conscience of educated Hindus is becoming awakened to the injustice and the social evils inherent in the caste system. Slowly and surely the work of the Christian Church is preparing the way for a great economic, social, and religious revolution throughout the length and breadth of India.

2. Hinduism.—Hinduism in the Madras Presidency does not differ greatly as regards either its doctrines or its customs from Hinduism in other parts of India. One striking difference observable between the Hinduism of S. India and that of N. India is the predominance of the Brâhmans in the South and of the Aryan, or the upper castes, in the North, and also the fact that the lower castes are prone to be divided along religious lines. The Vedântist philosophy and the monism of Saṅkara are more widely held in the South than in the North, mainly owing to the fact that Hinduism and pietism were more closely allied in the South than in the North. The stern and gloomy worship of Siva, the Destroyer, which has absorbed into itself many elements of the old animistic cults, is the predominant form of Hinduism; but the worship of Visṇu, the Preserver, in his manifold incarnations, has a larger number of devotees, and has a special attraction for the lower castes of Südras whom it has admitted more freely to its temples than the rival cult of Siva.

3. Animism.—The prevalence of Animism in the Madras Presidency is very inadequately represented by the small number of people (683,666) classed as animists in the Government Census. The large majority of the Hindus in the villages, with the exception of the Brâhmans, even when they are devoted of Visṇu and Siva, are also animists worshiping the village deities, the Grâma-Devâtâs, as they are called in the vernacular, and a host of spirits, good, bad, and indifferent. The worship of these village deities forms an important part of the conglomeration of religious beliefs, customs, and ceremonies which are often classed together under the term Hinduism. In almost every village and town of S. India may be seen a shrine or symbol of the Grâma-Devâta, who is periodically worshipped and propitiated. As a rule, the shrine of the village deity is far less imposing than the Brahmanical temples in the neighbourhood; very often it is nothing more than a small enclosure with a few rough stones in the centre, and often there is no shrine at all; but still, when calamity overtakes the village, when pestilence, famine, or cattle disease makes its appearance, it is to the village deity that the whole body of the villagers turn for protection. Siva and Visṇu may be more dignified beings, but the village deity is regarded as the one present help in trouble, and is more intimately concerned with the happiness and prosperity of the villagers. In the animal sacrifices offered to these deities the treatment of the blood, which is sometimes drunk by the worshippers, sometimes sprinkled upon their bodies, sometimes sprinkled on the houses or the gate-way of the village, and sometimes mixed with boiled rice and sprinkled all round the village site, and also the sacrificial feasts upon the day of the festival, are survivals of the Grâma-Devâta traditions to the Grâma-Devâta in India very closely with the primitive systems of animal-sacrifice which are found all over the world. Traces of human sacrifice, too, are found in connexion with these cults. In Mysore the present writer once saw a ceremony called ‘the human sacrifice ceremony,’ in which the man who represents the victim, instead of being killed, is simply touched with a bunch of eucalyptus leaves and the ceremony is repeated. Human sacrifices are found among the Coorgs in the hill country to the west of the Mysore State, whose religion is anti-Brahmanical and consists of the worship of ancestors and demons. With reference to the worship of Grâma-Devâtas among them, he says that, as among other Dravidian mountain tribes, so also in Coorg, the tradition relates that human sacrifices were offered in former times to secure the favour of their Grâma-Devâtas, who are supposed to protect the villages from all evil influences. At the present day a hogshead or a cock is often sacrificed instead of a man.

The special features which broadly distinguish the worship of the village deities in S. India from that of Siva and Visṇu are three. (1) The fact that the village deities are social and political rather than religious. The Vedântist philosophy and the monism of Saṅkara are more widely held in the South than in the North, mainly owing to the fact that Hinduism and pietism were more closely allied in the South than in the North. The stern and gloomy worship of Siva, the Destroyer, which has absorbed into itself many elements of the old animistic cults, is the predominant form of Hinduism; but the worship of Visṇu, the Preserver, in his manifold incarnations, has a larger number of devotees, and has a special attraction for the lower castes of Südras whom it has admitted more freely to its temples than the rival cult of Siva. (2) The fact that the village deities are almost universally worshipped with animal sacrifices. Buffaloes, sheep, goats, pigs, and fowls are freely offered to them, sometimes in thousands. In the Tamil country this custom is modified by the influence of Brahmánísm, which has tended to keep the villagers with the idea that the shedding of blood is low and irreligious. The animal sacrifices are regarded, therefore, as offered to the male attendant of the goddess and not to the goddess herself. (3) The fact that the Pujarias, i.e., the men who perform the worship and officiate as priests, are not Brâhmans, but are drawn from the Südra castes or sometimes from the out-castes. On the other hand, in the temples of Siva and Visṇu, the officiating priests are Brâhmans, no animal sacrifices are ever offered, and the principal deities are male and not female. The origin of these cults is lost in antiquity; they are certainly pre-Aryan, but have been more or less modified in various parts of S. India by Brâhmánísmal influence. Some details of the ceremonies used in them seem to point back to a totemistic stage of religion; some of the ceremonies are observances of the life and death of certain men, others are the spirits of women who have died in childbirth or of men or women who have died by violent deaths, others are connected with disease and pestilence, especially smallpox and plague, many of the deities are of quite recent origin, and it is easy to observe a deity in the making even at the present day.

Snake-worship and tree-worship are also widely prevalent throughout S. India and have become incorporated in popular Hinduism. Almost every village has its sacred pipal tree, representing a
female, and a mangos tree, representing a male, planted close to each other. These two trees are married with the same ceremonies as human beings. In every house of one section of the Brahman (called Madivaas, p. 253) the housewife has a small tree, which is supposed to be the source of delight to the Brahmans. The snake is closely connected with the worship both of Visnu and of Siva. A cobra forms the vahana (sacred vehicle) on which Visnu rides, and Siva is always represented with a cobra in his hand. In the entrance of almost every village of S. India there are figures of the cobra carved on stone in bas-relief erected on raised platforms for the adoration of the public.

Brähmans and Sudras alike make offerings to these shrines. The living serpent is very generally worshipped, and few Hindus will consent to kill one. If a cobra takes up its abode in the thatched roof of the house or in one of the walls of the compound, it is not only left undisturbed, but is fed with milk. A woman is often the priest in the worship both of trees and of serpents, and women are the chief worshippers, mainly for the purpose of obtaining offspring.

On the W. Coast in Malabar snake-worship is especially prevalent. Some families are supposed to be consecrated to the snake deity, and to exercise a peculiar influence over those who are reputed to be swarmed in their houses and crawl in and out among the members of the family without ever doing them any injury.

S. India particularly in the Southern part of the Tamil country, and devil-dancing, performed by a class of men who are supposed to have supernatural powers over the devils, forms a weird feature of the religion of the Tamil villagers. Some diseases, especially nervous maladies, are supposed to be the result of possession by an evil spirit. Devils innumerable surround the village—water-devils, cow-devils, horse-devils, and buffalo-devils—who are always ready to pounce down upon the unhappy villager. The poor people who are supposed to be possessed by these devils are often put to terrible tortures by the exorcist. Red-hot iron needles are sometimes stuck all over their bodies, or they are bound hand and foot and then beaten with sticks.

The innumerable superstitions connected with the worship of snakes in S. India have been excellently described by Professor Thurston in his Omnens and Superstitions of Southern India. The literature is immense, and cannot be here briefly touched upon.

MADURA.—Madura is the name of an important District in S. India—280 to 380 miles south of the town of Madras. Its capital, Madura, had a population of 134,510 in 1911, and is situated 10° N. lat. by 79° E. longitude. It is a prosperous town among whose progressive people are found about 50,000 weavers. Yet, apart from government and railway works and the Scottish spinning mill, there hardly one horse power of steam used in the whole community—by which it may be known that modern prosperity in the East is not necessarily connected with the use of modern industrial appliances and forces.

Madura is a town of considerable antiquity. It was known to Ptolemy (VII. ii. 89, VIII. xxvi. 17) as Mēkaopa, and was the centre of the ancient Pandya kingdom whose fame spread westward through the Greeks and Romans even before the advent of the Christian era. Many ancient Roman coins are occasionally discovered in the town and surrounding regions.

Madura has long been designated the Athens of S. India; the ancient and famed Madura College was the source and inspiration of Tamil classical literature for centuries. Many of its most popular legends gather round its poet-saints, the narrative of whose struggles and conflicts is a perennial source of delight to the Brahmanic.

But it is its great Minakshi temple that is the source of its pride and the centre of its life. The temple is built around its sacred precincts, all the main streets running parallel to the four walls of the temple. This temple has a past which runs far beyond history into the misty realm of legend and myth.

The first historical reference is to its partial destruction by Malik Kafur, the famous general of the Mughal emperor, Ali-ud-din, in 1310. He destroyed its outer wall and fourteen high towers, and left little but the inner shrines, which were saved only by an opportune dissertation among the vandals.

Perhaps all that now exists of this architectural pride of S. India (except the inner shrines and contiguous courts) is not older than the 16th cent., and is largely the gift of kings of the Nayaken dynasty, by far the most prominent of whom was Tirumala Naik (1623–59).

S. Indian temples are among the most spacious in the world. The Madura shrine is the third in size, but is the first in architectural excellence, best in its upkeep, and most thoroughly devoted to its worship. Its outer walls, which are 25 ft. high, form almost a square of 590 ft. by 590 ft., and enclose an area of about 14 acres. Each wall is surmounted at its centre by a richly embossed gopura, or tower, which is about 150 ft. high. These towers are the landmarks of the country around.

Granite is almost exclusively the material used in the temple, even the roof being of granite slabs. Its monolithic pillars are legion, and nearly all of them are elaborately carved, some exhibiting marvellous patience and skill. The 'Hall of a Thousand Pillars' (correctly speaking, its pillars are only 985 in number) is the culmination of its architectural claims. Of this J. Ferguson writes:—Its 'sculptures surpass those of any other hall of its class I am acquainted with ... but it is not their number, but their marvellous elaboration that makes it the wonder of the place' ('Hist. of Indian and Eastern Architecture,' l. 369).

This hall is elliptical, perhaps the oldest of the three, the so-called Choulry, or Putha Mandapam, which is outside and to the east of the temple proper and is the most imposing of all sacred edifices in S. India. It was erected by the famous Tiranala Naik about 250 years ago, is 360 ft. by 105 ft., and is supported by 124 richly sculptured pillars 20 ft. high. It is a worthy granite monument to one of the great kings of S. India. The whole temple is distinctly Hindu in its architecture—a style in which the arch is entirely absent and densely pillared halls predominate. Its many gopuras are pyramidal in form, and are a striking development of the ancient stūpas, or pagodas, of Buddhism.

The temple is one of the most distinguished fane of Saivanism, representing that type of the Brahmanic cult which first appealed to and was adopted by the Dravidian people of S. India. Because this is the more austere form of Hinduism, it is more closely allied than the mild Vaishnavism to the cruel demonology of the aboriginal people of that region. This temple and its worship also admirably illustrate the habits of the Brahmanic propaganda, which never antagonized a new and contiguous faith, but rather fraternized with it, then adopted its leading features, and finally absorbed it entirely. The reason why this shrine is rock-cut is Sokkalingam or Sundaresvara. The first name is Dravidian, revealing the non-Brahmanic or non-Aryan origin of the god who was adopted.
from the pantleon of the Dravidian cult to that of the Aryans. Later, this S. India manifestation of Siva popularized the northern faith among the people of Madura by marrying the most dreaded demoness of that region, Minakshi. The latter, doubtless, was an ancient queen who was slain in war, and was soon exalted to the highest place in the Dravidian pantheon. By this marriage the Aryan cult of the north was wedded to the supreme faith of the south, and a great and grand annual marriage festival of the temple celestially repeats the union of the two diverse cults in that region. In that most popular festival there is another interesting feature: Minakshi is said to be the sister of Anubha, a popular name given to deity a few miles from Madura, and this brother comes to attend the wedding ceremonies of his sister at Madura; but, unfortunately, he arrives a day late, and is so incensed by the fact that he will not enter the city or temple; his idol is thus kept for three days on the outskirts of the town, during which period all the people, both Saliytes and Vaisnavites, gratisize together and bring their offerings to the aggrieved god. Thus, upon this occasion, we find the three cults of that region, Saliyism, Vaisnavism, and demonolatry, most strikingly brought together.

The very nature of their famous Hindu temple reveals a fact which outsiders can understand only with much difficulty. In a certain way, all the Dravidian people are a part of Hinduism and are loyal to that faith. But it is a Hinduism which has no relics left to us but what is mingled with Dravidian and animistic ideas. The worship of the Aryan deities in S. India is a pleasing pastime; but the people are still obsessed with the fear of their myriad demons, and find their chief religious concern in appeasing them in the many demon shrines which are found in every town and village. Even Kali, the chief consort of Siva, who also finds a place in this temple, is no longer a demon and demonized with a bloodthirsty passion that no one can separate her from the many Dravidian ammanas, or demonesses, who haunt that region and terrorize the whole community. It is thus that we learn what the amorphous thing called Hinduism is in S. India. In outward form it poses as an Aryan cult, but in its inner spirit it reveals the pervasive animistic genius which has charaterized the Dravidian mind and heart from time immemorial. The Aryan has given to the religion its outer form and décal; but the Dravidian has retained and conveyed into it all the animism which his ancestors entertained and practised. It is largely the spirit of the south robed in the garb of the north. The Madura temple furnishes one of the best illustrations of this animistic type of Hinduism.

MENADS.—The character of the Menads was long a subject upon which the most mistaken ideas prevailed. The accounts of them given by poets, the Arya, authors, and historians are all mingled together, and were, moreover, mixed up indiscriminately with the representations of the cult of Dionysus in art, while, again, those artistic productions were so obscure and confused that any process of critical analysis. Thus arose the conception of a wildly fantastic religious service celebrated by delirious women in nearly all parts of Greece and Asia. The object of the rite was to make the women drunk, so that they might think they were actually at the Olympian feast, and the sacrifice of the victims. But it was not till later times; even Queen Olympias, the mother of Alexander the Great, was devoted to the wild Dionysus, the lord of the Menads, of the "Bacche," so named after him, was, as is now universally recognized, and as was already known to Aristarchus, not originally a Greek deity, but was derived from Thracians (cf. Horod. v. 7, and the notes of W. W. How and A. Wells, London, 1912). In that period he was worshipped under the name of Sabos or Sabazios (schol. Aristoph. Fespen. 9 ff.). It is true that Sabazios is also spoken of as a Phrygian deity (ref. in Rohde, ii. 7, note 3), but, as the Thracians and the Phrygians were, in the judgment of General Wells, a people who were, in their period of development, a half barbarized, savage and amorphous people, we need not be surprised that the worship of the Phrygian national goddess Cybele should show so many points of contact with the forms of the Thracian cult of Dionysus. The latter was a cult of Bacchi, or number of Dionysus, as it was called, with the more development of the Dionysian cult upon the mountain heights of Thrace in the winter of every alternate year (and in Greece, therefore, subsequently called the parrēsia). At these celebrations the women danced in wild furies and amid the glare of torches, whirling dizzyly to the clangour of rude music—the clashing of bronze vessels, the hollow roll of large drums (cf. CYBELE), the shrill whistling of flutes—on the hills of Thrace, and in the plain of anciently became elaios, eikos, and finally éos. These raving creatures (mauvodes; used generically as early as Hom. Il. xxii. 460), with their dishevelled hair streaming in the wind, were clothed in long flowing drapery (whence they were also called keraunodéia, over which they wore the reins (cf. Aesch. frag. 64, and the pictorial representations), and in their hands they carried serpents (animals sacred to Sabazios [Thucyd. iii. 38. 7, 48. 10. 52. 5)], daggers, or thyrsi. In their religious frenzy they threw themselves upon the sacrificial animals, tearing them in pieces with their teeth (Thucyd. 52. 5). Hesych. Thes. 37. 5, etc.) and afterwards became eikos, eikos, and finally éos. In these riotous scenes the fumes of wine played no part; the women used no strong drink to stimulate their frenzy, but, on the contrary, were able to work themselves into such a condition of over-excitement as would bring about the ecstatic state. Their delirium was regarded as a means of compelling their god to appear (Eur. Bacch. 141 ff., 300 f.; Paus. vi. xxvii. 1: εξ αυτων φαιναι ἐπιφάνειαν ἐν τοιούτῳ ταύτῃ λιτανείᾳ). A notable analogy to these practices is found in the leaping of the Perchta in the Tyroli here, and in the Shrove Tumblers of Eastern Europe. The Bacchantes (so named, like the Bacchi, after the deity whom they thus honour) work themselves into a frenzy. Their raving is distinguished by the fact (cf. Bacch. 750 ff., etc.) that they think that they actually see Perchta herself in their midst, and it is even said that she has sometimes mangled her worshippers (F. A. Voigt, in Kosemer, Geschichte der Interior and art, 1912, do. 225 ff., esp. p. 229), for the Perchta (so named, like the Bacchantes, after the deity whom they thus honour) work themselves into a frenzy. Their raving is distinguished by the fact (cf. Bacch. 750 ff., etc.) that they think that they actually see Perchta herself in their midst, and it is even said that she has sometimes mangled her worshippers (F. A. Voigt, in Kosemer, Geschichte der Interior and art, 1912, do. 225 ff., esp. p. 229).
practices of the Thracian religion, and her tame snakes, which would suddenly wriggle out from amongst the ivy or from the sacred winnowing-fans, not seldom startled the court of Philip (Plut. Alex. 2). In that form, however, the cult certainly met with opposition as it spread through Greece. What mythology tells us, now of Lycurgus and the struggle which he made against Dionysus and his ποιεῖσις (so Hom. Il. vi. 132 ff.; concrete details regarding his efforts among the Pelasgi, e.g., in Rohde, B. 45, note 2); and Galen (De Anit. 8, vol. xiv. 45 [Kühn]) could speak of snake-rendering as still practised at the Bacchic festivals.

The name of power of Delphi was now at work, and Apollo exercised his softening influence upon the raging Bacchus. It was with very different rites that the women performed their worship of Dionysus on Mt. Parnassus. Here, every two years, about the time of the shortest day, the Thyidians ‘awaked’ Δαιμόνια, the god who lies in the sacred winnowing-fan (Plut. de Is. et Osir. xxxviii.; here [Rapp, Rhein. Mus. xxvii. 6] a case of the first import in the slight fragment to the rite of the winter festival on Parnassus. With such rites, too, the Attic Thyidians celebrated at similar intervals the orgies of the god at Delphi. Thus the celebration had now to do with Dionysus only, but with Apollo as well (Paus. x. xxx. 7). Of this cult, whose Bacchic ecstasy had been refined by Apollonian moderation, we find a picture in the celebrated frieze of the Antigone of Sophocles (1126 ff.), which tells indeed of the torque-swinging Θώα; and of their dancing by night on Parnassus, but does not speak of the mad fury of the Thracian observance—*the Bacchic* raving that in the precincts of Delphi this element no longer had a place. Then Euryipides, who, in contemplating the unstrained frenzy imported from the North, broadened and enriched that poetic sense with Dionysus, and made a permanent memorial of the thrillingly graceful activities of the Menads. In his Bacchae the actual and the poetic run naturally into each other. Here the enthusiastic troops of women, crowned with wreaths of ivy and smilax, garbed in the many-coloured *ρέθι*, and holding the thyrsus in their hands, plunge madly through the mountains, and fall to the ground in the fulness of their rapture; while, again, they rush to the slaughter of the goats, the ground flows with milk and wine, and the stroke of the thyrsus upon the rock causes a spring to break forth for a friendly feeding with the Menads, who offer the bread to fawns and young wolves, while ill-disposed men flee before the insatiable thyrsus (Bacch., passim).

Investigators have had great difficulties also in the portrayal of the Menads still in art. In this field, too, it was necessary to disengage the mythological aspects from the presentation of the real. As a whole, it is only the general impression to be felt in the literature of the literature of the ancient account. On the artistic side it is pre-eminent the Attic vases that merit consideration. On the earlier specimens of these we see the orgiastic dancing of women to the cadence of flutes; later additions are the swinging of torches, the beating of drums, and the head thrown back upon the shoulders. According to the more recent explanation, the celebration thus represented is the Lenaea, the festival of the raving women (Σαρπίδας), which had been brought from Boeotia (on all this cf. A. Frickenhaus, Lydenwesen [Programm zum Winzelsmannfeste der archäolog. Gesellschaft. xii. i], Berlin, 1912). With these designs are mingled others showing a different branch of mythology, and here we also find names of the Menads, such as Μαυράς, Ονόπι, etc. (cf. C. Fränkel, Satyr- und Böckenmänen auf Vasebildern, Halle, 1912). Then latter art brought the depiction of that furious, almost hysterical, ecstasy of most vigorous expression, and even extended it, most unnaturally, to the uncouth satyrs; this intense expression of feeling is seen in its finest form in the Menads of Seopas (M. Tren. in Mittheil. Parrot, Paris, 1905, p. 347 ff.).

Naturally everywhere in art, however, the representation of the Menads is an expression of early religious emotion, and the vase-paintings designedly set forth the strict reserve of the Bacche in contrast to the loose merrymaking of the satyrs. The introduction of the Bacchic procession, with its troops of men and women rolling madly along, and the formation of the primitive festival, attended by females only, into a turbulent orgy were the work of the superficial art of the Hellenistic age.

Deserta.-This has been sufficiently indicated in the article.

J. G. WILKENS.

MAGADHA.—Magadha, an ancient kingdom in India, was the scene of the greater part of Buddha’s mission and the scene of the birth of Buddhism in India. It was equivalent to the modern districts of Patna, Gaya, and Shāhābād in S. Bihār. The name Bihār itself, which is now that of a vast district, is evidence of the pre-eminence of Buddhism in these lands, for it was originally the name of a town with a celebrated Buddhist monastery (Skr. vihāra). Buddha was not born in Magadha, but in the country to the north of it, at the grove of Lumbini (q.v.), near Kapilavastu (q.v.), the Sākya capital in the Nepalēse Tarā. Magadha was the home and the nucleus of two of the greatest Indian empires, the Maurya and the Gupta. It is celebrated for long as primary in India, as one of the richest, most fertile, and best irrigated districts in India. As the home of Buddhism and Jainism, it is full of archaeological remains of the greatest religious undertakings.

Its earliest capital was a very ancient hill fortress named Girivraj (Pāli Giribāja), built, according to tradition, by an architect named Mahāgovinda; its place was taken in the 6th cent. B.C. by the better known Rājagṛha (Pāli Rājagaha), built at the foot of hills on which Girivraj stood; Rājagṛha is the modern Rājgir, which, however, stands about a mile to the south. Its walls still exist, and are probably the oldest stone buildings in India. Rājagṛha had reached its zenith about Buddha’s time, soon after which it began to decline with the growth of Pāṭaliputra (the modern Patna). The modern town of Gaya, east of Patna, on the Ganges, an ancient place of pilgrimage for Hindus, has no ancient religious associations; 7 miles to the south, however, are the remains of Bodh (Buddh) Gaya (see GAYA, vol. vi. p. 181 ff.), one of the most interesting sites in India, where Gautama Sākyamuni finally attained enlightenment (bodhi). To the south of Gaya is the hill of Dhongra, the Prāgəbodhi (Fo-lo-ku-ja-t-li) of the literati, the legendary site of Buddha’s once rested. Punāwān, 14 miles east of Gaya, is rich in Buddhist sculptures; to the south of it is Haśrā hill, which has been identified with the Kukkuṭapādaṇi of the Chinese pilgrims.

VOL. VIII.—16
A. Cunningham, however, recognizes the latter in Karliki, which being miles to the north of Gaumeta (or Magh), the district of Chittagong, and as 'Hill Much,' and are to be carefully distinguished from the true Magh. The latter is in the Chittagong District, otherwise called Rajshahi, who are the offspring of Bengali women by Burmans, when the latter possessed Chittagong. They supply the famous Maghs cooks, well known in Calcutta and other parts of the country. Maghs believe in the doctrine of metempsychosis or transmigration of souls; but their Buddhist worship is of a simple character—the presence of a priest is not required and offerings of flowers, food, etc., are placed before the shrine of Gautama by the people themselves. Many villages have no priest, except wandering priests, who are not so much ministers of religion as recipients of alms. Each village has a temple (khiong), a bamboo structure built under the shade of some trees, inside which, on a small raised platform of bamboo, stands an image of Gautama, made either of gilded wood or of alabaster, the figure being in a sitting posture, with a pagoda-shaped hennadess indicative of superior power. Before it the village girls lay offerings of flowers and rice every morning, and, at the same time, bring the daily food of any priest or wayfarer who may be resting there. By the side of the image hangs a small steed of bells, which each village, and the Government, paid for to commemorate the presence. Each one prays for himself, except that now and again a father may be seen leading his young sons up to the temple to pray. Each year, before the commencement of the burning of the jungle for the purpose of sowing their crops, the boys are clothed in yellow robes of the priesthood, have their heads shaved, and go through a rite before a priest which seems to be an assumption on their part of religious responsibilities. Women do not participate in this rite; but it is common for a monk to visit three times during his life. If a relative is sick, or he himself has escaped any danger, he performs the ceremony as a supplication or as an acknowledgment of the mercies which he has received.

LITERATURE.—The authorities are quoted in the article.

W. CROOKE.

MAGI.—I. The name (Gr. Μάγος, Lat. Magus, from Old Pers. Maga) is familiar to us from the classical writers, and from two appearances in the NT. It meets us first on the Bohéam Inscription of Darius, where the king describes (Dh. [Pers. text] i. 35 f.) the usurpation of 'Gaumata the Magus' (Gauma-ata, or, more accurately, the Magha-ata) as a political plot against him, by which he restored the Achemenian dynasty to its ancient throne. There is nothing in the inscription to show what Maga meant, and we must fall back on our Greek sources; Herodotus first, and the rest longo intervallo. In Herod. i. 101 we are told that Αρματορά, Μάγος, and four others were Μάγοι γερά. The six names were explained as Aryan caste-titles by J. Oppert long ago (Le Peuple et la langue des Medes, Paris, 1879, p. 7), and again, on different lines, by J. A. Carney (Mésheh, new ser., ix. [1865] 121 f.); the tolerable certainty that five are Aryan makes a strong presumption that Μάγος must be interpreted from the same language group. The etymology, however, must be left undecided. Putting aside some modern theories about the connection of the two plausible accounts from the Indo-European side. Carney (loc. cit.) compares avaru and May-hew with the meaning 'helper, healer,' while Monier (The Hindu, ii. [1892] 401; see his Early Zend-Avesta, pp. 428-430) connects Magha-ata with the Avestan ogra, i. e. auga—auga—connexion, which Carney explains as of a different sense. The Gothic word translates raven once, and ræz (or 'servant') elsewhere. The latter meaning is that of the Irish word; we may probably compare the development of our 'maid' and local uses of 'boy.' That 'boy' is the primitive meaning connected by the later Avestans with the ogra, Μάγος is connected with the same word. The significant fact that maga (= O. Pers. maga) occurs only once in the Avesta, and that in a prose passage (Ys. iv. 7)
2. While the Magi were thus a distinct caste of Medians, and apparently, recognized the leaders of the Medes as their chief Aryan (Parsii) dominion, there is no reason for doubt that their ascendancy was essentially religious, like that of the Brahmins in India. Darius writes of his relations with the Magi whom he had destroyed (Th. Pers. text) i. 63–66), and so the inscription favours the existence of a marked difference of religion—of course, its scanty reference does not definitely prove anything one way or another. But the testimony of Herodotus and all later classical writers is so unanimous and precise that we need no other. It would appear that, having failed in their bold bid for political supremacy, as leaders of the people against Aryan invaders, they began to build up power upon their popular vogue as shamans. It was easy to insinuate themselves into the open place of priest in the unreformed Iranian unzara-worship, which Herodotus (i. 131 ff.) had only to emphasize clear points of resemblance between their own religion and that of the Aryans, veneration of the sun and fire being the chief. There is one important detail of which their leaders sometimes vied, and which can vouch for the high probability trace an appearance of Magianism separate from Aryan connections at a very early date. Ezekiel describes, as the greatest of three 'astronomers,' one who had brought Jahweh's wrath on Jerusalem, the sun-worship of men in eastward position, who 'put the branch to the nose.' To hold a bough before the face in solar cultus is a natural action; its special interest for us lies in its coincidence with the Parsi use of the barban (g.v.), a bunch of tamarisk twigs held by the priest before his face in worship. The name, and the peculiar use of the verb to describe the preparation of the instrument, alike take us to something quite different—the Aryan carpent of stalks of tender grass (Ier. i. 132) on which the offering was laid (Skr. bhris, Av. barasan). We may infer that the Magi adapted the Aryan use to their own by prescribing that a bunch of the sacred stalks should be picked up from the ground and held reverentially before the face.

This does not enable us to trace the Magi in a separate activity as far back as 591 B.C., when they seem to have secured prostacks in Judea. This is quite in keeping with what we know of them. Their contemporary appearance in Babylon is probably attested by Jer 39-13, in which ‘the Rab-Mag’ appears among Nebuchadrezzar’s officers (for alternative views of Rab-Mag see the Oxford Lexicon and E. H. Winckler (Kat. 416) explain the Rab-Mag’s name, Nergal-sharezer, as ‘Nergal, protect the king’; and in the account of Nergal they expressly compare Ahriman, who in the Later Avesta has features which are very closely connected with Babylon. The head of a caste of exorcists, who by their charms can keep the Satan from harming the King, is wholly in place at court. We compare at once the apotropaic operations of the Magi in Plutarch, De Is. et Osir. 46. We may add to this small but important peculiarities several other traits by which the Magi may be distinguished from the Persian religion, whether in the earlier or the later stages of what we now call Parsii. First come two conspicuous features recognized from the first by Greek writers as Magian and not Persian; (1) their exposure of the bodies of the dead to birds and carrion dogs was distinguished by Herodotus (i. 140) from the Persian custom of burning; (2) it has promonounced aboriginal affiliations, and was neither Semitic nor (almost certainly) Aryan. Coupled with this was (2) their insistence on next-of-kins, for they believed extravagantly for its accumulations of merit. It was never accepted by the Persians, and never found its way into the Avesta (see on this Mouliou, p. 295), first appearing in the Pahlavi writings of the Sassanian and Sasanian period of Iranian, and not Persian origin, which suits our theory. See, on the Magi, art. SANSAR AND MAGUS.
dualistic in Zarathushtra's Gathas. The very name of Ahirman (angre and dvana 'Hades', see p. 493) occurs only once there (Ys. xlv. 2), as a casual epithet and not a fixed title. The good and evil spirits make their choice in the beginning, but there is never any real question as to who is on the side of the strife between them; one whose perpetual counsel is 'Resist the devil and he will flee' can never be called a dualist. But the Magi, on Plutarch's express testimony, offered sacrifices to the demons. The practice is entirely absent from the Avesta—a fact that does not discredit Plutarch, but only shows the survival of distinct usages among the Magi, whose genius is well suited by the nature of the divided land into creations of Ormazd and creations of Ahriman. This is practically absent from the Gathas, and even from the Yashts, where a pure Iranian nature-worship shows small sign of influence from Zarathushtra on the one hand or the Magi on the other. The prose Avesta (excluding the early Gatha kapotanghavi)—which by the loss of metre and the presence of much dubium grammar proclaims itself composed in a virtually dead language—is full of this dualism. Even words have to be distributed between the two camps; different terms are used for the head, hand, voice, etc., of an Ormazd-worshipper and his Ahriman counterpart. Zarathushtra has a demoniacal opponent; but we note that the balance is imperfectly completed, and that the poem is often manifestly late origin and vague function, so that we may be sure the word of correlation has been rather half-heartedly undertaken as a concession to theory. The type of dualism implied suggests affinity with that which Euclid had called forth with the declaration of Is 45. The presence of such a system in Babylonia during the Exile suits our view of the Magi as shamans exercising influence far beyond their own immediate circle, and the assumption that something to the case for recognizing the RabMag as an apotropaic. We may observe, that if Jahwism emphatically denied this dualistic assigning of darkness to an evil demolishing, Zarathushtra himself was no less clear in his claim that Mazda made the night as well as the day (Ys. xlv. 5).

5. We are reduced mainly to conjecture when we ask what was the Magian eschatology. That death was not the end of the story is at least the conquer Ahirman—poouf-mahra, 'many-slaying,' according to his standing Avestan epithet—seems a natural inference from their first principles. We know further, that they pictured a regeneration of the world in which such unsymmetrical features as mountains would disappear, and the earth would become a 'sleepless plain.' But how far they pressed their form of the doctrine of immortality, we have no means of knowing. Our early Greek witness, Theopompus, according to an important statement of Diogenes, declared that the Magi taught the future resurrection of men to a deathless existence. This excellent 4th cent. authority may, of course, be describing only the doctrine of Persian religion in his own time, when the Magi were their long-established priests. But the extract apparently quoted by the older author with a doctrine that looks rather characteristic of the Magi themselves. The loci clandestini in Plutarch, already quoted, is ordinarily taken as silent as to any doctrine of a resurrection among the Magi. But E. Buley (Die Verwandtschaft der jiidisch-christl. mit der pers. Eschatologie, Gottingen, 1902, p. 102 ff.) argues that in Plutarch's quotation from Theopompus, we should translate 'Hades is to be deserted,' which agrees with the other accounts of the history of Theopompus. The absence of any doctrine of immortality in Tobit can hardly be regarded (as in Moulton, p. 416) as a contributory argument. For, whether the book, as originally intended (as by Moulton, ch. vii. and p. 332 ff., and D. C. Simpson in the Oxford Apocrypha) as containing a Median folk-story re-written by a Jew, we must admit that the Avesta is entirely absent from the Avesta—a fact that does not discredit Plutarch, but which, if the date was early, he would not do. It is clear that, if Zarathushtra's eschatology came before Jews during the Exile only in an adaptation determined by Magian ideas, it was very likely to attract the thinkers of Israel. The common belief that the rise of the doctrine of immortality in post-Exilic Judaism owed some real stimulus to Persian influence becomes less and less probable as the history of early Zoroastrianism is investigated more thoroughly.

6. Such, then, in outline were the Magi as a sacred tribe, so far as our information allows us to isolate them for separate portraiture. Most of what we learn of them naturally belongs rather to the religious system upon which they fastened and tenaciously clung. That they had compensated for their failure to regain political ascendency by making themselves indispensable to the ritual of Persian religion. It involved, as we believe, the adoption of the ancient traditions of beliefs and usages traditional among themselves. These they continued to practise in their own community, with or without attempts at propaganda. They could easily use genealogies similarities between their religion and that of the native Iranians so as to prove to the latter their fitness to serve their altar; and the people to whom they ministered, including a large proportion of their own kin, would be slow to realize how much change the proselytes were bringing to the religion which they so zealously adopted.

7. Later developments of Magianism belong to the history of Zoroastrianism as established under the Sassanian dynasty. It only remains here to add a few words about the Magi as they figure in the Nativity story of our First Gospel. To discuss the historical reliability of that story, or the various theories that have been devised to explain the star, must be left to the Dictionaries of the Bible. Here it suffices to connect the foremost traits of the Magi, as described above, with points in the story of Mt 2. That these Magi and ἀνάβασις answer to the picture as experts in dream-interpretation and in star-lore is clear. It is noteworthy, therefore, that the Magi, far from its expression of belief, isolates the Magi from Persian religion, which, as we saw, has practically no room for either (see art. FRAYASH, ed fin.). This constitutes within its limits a rather striking witness, when we remember how little we are able to discover about the Magi as apart from the religion with which even four centuries earlier they were almost completely united. Naturally we must not be tempted to make too much of evidence so limited in its range.

LITERATURE.—Greek and Latin books eschatologici are collected in A. Rapp's two papers, ZDMG xix. (1865) 59 and xx. (1866) 40-50. These are conveniently brought together in A. W. V. Jackson, Zoroaster, the Prophet of Ancient Iran, New York, 1899. The account given depends largely on the writer's full discussion of the whole subject in Early Zoroastrianism (II), London, 1911. JAMES HEPPE MOUTON.

1 de Is. et Osir. 47: ταύτα γ' ἀπελέκτωσεν τὸν Ἀλφέων, καὶ τοὺς μὲν ἀνθρώπους ἐκδοθεὶς ἔσωσαν, τοὺς δὲ ἐρημουμένους μετὰ σεισμόν. D. D. see, as it were, the Pers. hymns, which have been attributed to Zarathushtra, but this almost demands the alteration of ἀπελέκτωσεν.
MAGIC (Introductory) — 1. History of the term and problem of its definition. — In any general treatment of the subject of magic the problem of its definition must occupy the chief place, seeing that it constitutes a veritable storm-centre in the anthropological literature of the present day. As so often happens when a word belonging to the common language, and used in vague and conflicting ways, is taken over by science that it may correspond to some precise concept, theorists interested in different and more or less incompatible concepts claim exclusive rights over the same technical term; so that, if they are at all equally matched, the term becomes for the time being ambiguous, i.e., it answers to more concepts than one. Something of this kind has occurred in regard to the word 'magic.' It is so clear that it is safe to glance at its meaning as a popular expression. It is, of course, the linseed descendant of the Gr. μαγια and the Lat. magia, which in their strictest sense refer simply to the religion, learning, and occult practices of the Persian Magi, or priests of the sect of Zoroaster, in the form in which they became known to the West (see art. MAGI). Such matters, however, being both foreign and ill-understood, would naturally be more or less suspect. Hence the word tends from the first to carry with it the unfavourable associations summed up in the notion of witchcraft (see arts. Incant., Hesychius, s. v. μαγια, which he identifies with μαγευς, and Pliny, HN xxx. 11; and for further references cf. H. Hubert, in Darenberg-Saglio, s. v. "Magia"). These associations the equivalent words in the various languages of modern Europe have never lost. Bacon's attempt to rehabilitate magia as natural science in its operative aspect (de Augmentis Scientiarum, iii. ad fin.) proved quite abortive. Thus it comes about that the modern anthropologist in attributing 'magic' to a given people can hardly do so without at the same time implying that it is something inferior and bad—something that, however prevalent it may be, belongs to the lower levels or even to the pathology of mind and society. A survey of representative views on the subject will bring out the fact that, in this respect at least, most, if not all, theories tend to be at one.

2. Representative views. — As far back as 1879 E. B. Tylor laid it down that the 'confusion of objective with subjective connexion, ... so uniform in principle, though so various in detail, ... may be applied to explain one branch after another of the arts of the sorcerer and diviner, till it almost seems as though we were coming near the end of his list, and might set down practices based on the same mental process as exceptions to the general rule' (Researches into the Early Hist. of Mankind, p. 129). He adds that the same state of mind will account for tabus, many of the food-prejudices of the savage, for instance, depending on the belief that the qualities of the eaten pass into the eater (ib. p. 133). Such an attitude of mind he characterizes as one of 'gross superstition and delusion' (ib. p. 119), even while allowing that at a stage of development when human life 'was more like a long dream' such a system of error was perfectly 'intelligible' (ib. 139 f.). He pursues the same line of explanation in his later work, Primitive Culture, where magic is described as 'occult science,' i.e. a 'pseudo-science' (3rd ed., i. 112, 119). 'The principal key to the understanding of occult science is to consider it as based on the association of ideas, a faculty which lies at the very foundation of human reason, but in no small degree of human unreason also' (i. 115 f.). He adds a disquisition on the futility of magic arts, in which he maintains that 'in the whole monstrous farrago there is practically no truth or value whatever (i. 133). Meanwhile, he holds that the laws of mind are as unchanging as the laws of chemical combination, so that 'the thing that has been will be' (i. 156). The 'symbolic magic,' as they be called, may be more a matter of spiritualism are alike hurtful superstitions born of fallacies to which the human mind is naturally prone (see ch. iv. passim, esp. ad fin.).

J. G. Frazer (The Golden Bough) maintains a position which in most respects is identical with that of Tylor. In the first edition (1890) he credits primitive man with two views of the world that exist side by side, the one view being that it is worked by personal beings acting on impulses and motives like his own, the other view amounting in germ to the conception of nature as a series of events occurring in an irrevocable order without the intervention of personal agency. The latter is the view involved in sympathetic magic (GB I. 9), though the savage acts on it, not only in magic art, but in much of the business of daily life (ib. 31). In the second edition (1900) Frazer lays far more stress on the 'fundamental distinction and even opposition of principle between magic and religion,' being influenced especially by the theories of H. Oldenberg (Die Religion des Veda, Berlin, 1894), F. B. Jevons (Introduction to the History of Religion, London, 1896), and A. C. Lyall (Asiatic Studies, 1st ser., London, 1890). More than that, he is now disposed to affirm that, 'in the evolution of thought, magic, as representing a lower intellectual stratum, has probably everywhere preceded religion' (GB II. p. xvi). He still represents magic as 'next of kin to science,' since the two have in common the 'general assumption of a succession of events determined by law.' Magic is nevertheless only 'the bastard sister of science.'

All magic is necessarily false and barren; for were it ever to become true and fruitful, it would no longer be magic but science.

All cases of sympathetic magic resolve themselves on analysis into mistaken applications of the laws of the association of ideas by similarity and contiguity. 'Legitimately applied' these same principles 'yield science; illegitimately applied they yield magic' (ib. p. 65). Religion, on the other hand, 'is opposed in principle both to magic and to science,' since its fundamental assumption is that the course of the natural and human life is controlled by personal beings superior to man. Towards such beings conciliation must be employed, whereas to exert mechanical control is the object of magic and science, though the former often essays to control spirits, treating them, however, exactly as

MAGIC (Introductory)

if they were inanimate agents (ib. p. 63 f.). Finally, the human race are assumed to have passed through an "intellectual phase," in which they "attempted to force the great powers of nature to do their pleasure," and lend not yet thought of counting their favour by offerings and prayer. Such an "age of magic" finally gave place to an "age of religion" only because mankind at length were led by experience, and to such a "clearly recognition of the inherent falsehood and barrenness of magic," whereupon the more thoughtful part of them cast about for a truer theory of nature (ib. pp. 78, 79). In the third edition (1911) these main theses are retained, but the following scheme of the principal branches of magic (taken over from Lectures on the Early History of the Kingship, ch. ii.) is added, in accordance with the view that magic is simply missapplied association of ideas:

**Sympathetic Magic**

(Law of Sympathy)

- House-cauply Magic
  - Contagious Magic
    - (Law of Similarity)
    - (Law of Contact)

while 'the whole erroneous system, both theoretical and practical,' which answers to the name of magic is classified under aspects according to the following tabular form:

<table>
<thead>
<tr>
<th>Positive Magic</th>
<th>Negative Magic</th>
<th>Sorcery</th>
</tr>
</thead>
<tbody>
<tr>
<td>Theoretical (Magic as a pseudo-science)</td>
<td>Practical (Magic as a pseudo-art)</td>
<td>Tabo</td>
</tr>
</tbody>
</table>

(See GD, pi. 1, The Magic Art, i. 54 and 118.)

The view that tabo is a negative magic did not appear in earlier editions of The Golden Bough. Frazer holds that, if not the whole doctrine of tabo, at all events a large part of it, would seem to be but a special application of sympathetic magic, with its two great laws of similarity and contact (ib. i. 111 n.).

E. S. Hartland (Ritual and Belief, London, 1914) enters on a full discussion of 'The Relations of Religion and Magic' (p. 28 f.). He insists at the outset that they spring from a common root. 'I venture to suggest that in man's emotional response to his environment, in his interpretation in the terms of personality of the objects which encounter his attention, and in their investiture by him with potentiality, atmosphere, aura, mana —call it by what name you will—we have the common root of magic and religion' (p. 96).

Correspondingly, magician and priest are differentiated from a common type, namely, the medicine-man.

Roughly and provisionally it may be said that the professional magician is he who in the course of the evolution of society, by birth, by purchase, or by study and practice in the conventional methods, has acquired the most powerful aura. Similarly the professional priest is he who in these ways, or by prayer and fasting, has obtained the favour of the imaginary personages believed to inhab. in the control the affairs of men—who has, in a word, possessed himself of their aura. The union of these two professions in one person is not advediately; it is probably fundamental (ib. p. 132).

Hartland, while thus differing from Frazer on the question of origin, is disposed in other respects to follow the latter's method of delimiting magic and religion.

Magic 'conveys the notion of power, by whatsoever means acquired, wielded by the magician as his own, and not as that of a higher being whose cooperation is only obtained by prayer and self-abasement' (p. 18).

On his view prayers and sacrifices are magical processes just so far as a constraining power is attributed to them; and he asks, 'Have analogous beliefs in the magical powers of a rite even disappeared from Christianity?' (p. 87).

Religion, on the other hand, is 'confined to cultual systems whose objects, as far as they are perceived, are the general will, free will, are to be approached with true worship, and may or may not grant the prayers of their suppliants.' Where the object is impersonal, or is but vaguely personal, it is none the less treated with reverence and submission, as something transcending man; it is the object of an emotional attitude, devitalised towards it. The object thus, even where it is not personal, tends to be spiritualised (ib. p. 19).

A. Lehmann of Copenhagen (Aberglaube und Zauberer von den äussten Zeiten an bis in die Gegenwart, Stuttgart, 1898) defines superstition (Aberglaube) as any belief which either fails to obtain authorisation from a given rite, or stands in contradiction with the scientific conception of nature prevailing at a given time. Correspondingly, magic or sorcery (Magie oder Zauberere) is any practice which is unengendered by superstition, or is explained in terms of superstitious notions (p. 6 f.). By insisting on the essential relativity of these two ideas he claims to have avoided many difficulties that puzzled former inquirers. For instance, it may be asked how magic is to be distinguished from miracle, the reply is that it is all a question of standpoint, Aaron performing miracles while his Egyptian rivals are mere jugglery (p. 9). In the rest, he finds two more or less independent theories to be equally at the back of magical practice, namely, the spiritist, which relies on the intermediation of personal agents, and the occultist, which calls into play mysterious powers of nature (p. 314).

H. Hubert and M. Mauss ('Esquisse d'une théorie générale de la magie,' in Asoc. vii. (1904)) start from the conception of rites. Rites are traditional acts that are educations in a non-mechanical way, thus involving the notion of mana (q.v.), or wonder-working power (p. 14; cf. p. 138). Such a notion underlies the idea of the sacred as implied in a religious rite, but not in a magical one, a more restricted definition, non-religious, involves ideas of the same order (p. 21 f.). The differentiation of magical rites consists in the fact that they do not form part of an organised cult, and the effort tend to be regarded by the society concerned as illicit (p. 19). Thus religion and magic tend to stand to one another as two poles representing severally the social and the anti-social way of controlling the miraculous. Finally, magic, as being always the outcast of society, becomes charged with all the effects of decomposition and rejection, and so is gradually differentiated from religion more and more. This very ingenious and weighty argument, however, cannot be accepted. The sketch cannot pretend to do injustice, is made, it must be remembered, from a strictly sociological standpoint, and throughout regards magic and religion not as phases of mind, but as social institutions, having as such a reality of their own determinable in terms of form and function.

Arnold van Gennep (Les rôles de passage, Paris, 1909) treats the magico-religious as an indivisible whole, distinguishing only between the theoretical and the practical activities which it comprises, and assigning the term 'religion' to the former and 'magic' to the latter. It is essential, in his view, to insist on the indivisiblity of the relation between the theoretical and the practical sides, since the theory divorced from the practice passes into metaphysics, while the practice founded on another theory becomes science. For, of the rest, the mysterious forces which are the objects of magico-religious theory may be conceived equally well under an impersonal or a personal form, and, corresponding to magical practices, whether it issue in positive acts or in abstentions—viz., in the observance of tabus—may seek to deal with things either directly or indirectly through personal agents having power over the things, while the mechanism of association by
similarity and contact is involved in both cases alike. The theory is stated (p. 18) in tabular form as follows:

1. Theory (Religion)

- dynamism
- animism
- totemism
- spiritism
- polydemonism
- theism

2. Practice (Magic)

- sympathetic
- contagious
- direct
- indirect
- positive
- negative

Wilhelm Wundt (Volkpsychologie, vol. ii, pts. ii. and iii., Leipzig, 1895-96) makes myth or belief the ultimate source of cult or ritual, since the latter is but the former put into practice. There is but one mythical idea at the back of all rites, namely, the idea of soul-influence, as from it are generated in succession three forms of cult, magic, fetishism, and totemism, which by reaction cause the idea of soul to develop correspondingly. To deal only with the first of these, magic in its primary form consists in the supposed direct action of soul on soul, as when the evil eye is feared, while the secondary form consists in supposed action from a distance, when the soul-influence makes itself felt indirectly by means of a symbol (ii. 46f.). Thus Wundt is entirely opposed to the Frazerian theory that magic implies a theory of natural causation on the part of the savage. On his view, while ordinary events are accepted as a matter of course, extraordinary events, demanding as they do a theory that will account for them, are at first ascribed to the soul-power or will of a man, and later (when the stage of magic is transcended) to that of a magnified man, or god, similar soul-power or will being ascribed to inanimate objects and to animals at the intermediate stages of fetishism and totemism.

Here follow the survey of representative views, those selected for examination at least exemplifying the wide diversity of the notions which it is sought for purposes of science to impose on a highly plastic, since popular, term. Now the purely verbal side of the question need not be a source of trouble. If the things are envisaged distinctly, the words may be trusted to look after themselves. Thus in the present case there are evidently different concepts answering to separate aspects of human life; and it will be sufficient for the present purpose if these aspects are discriminated, so that terminology may be given the chance of adjusting itself to the facts.

3. Magic as a general name for rudimentary cult.—On any theory of the evolution of religion which represents it as a single movement falling into distinguishable stages, there will always be a first stage of minimum development immediately preceded by a stage of which Bacon would call absentia in proximo—a 'pre-religious' stage, as it might be termed. Now, since the word 'magic' tends to bear an unfavourable sense, nothing is more natural than to dub magical whatever fails to come up to the evolutionary standard which religion is more or less arbitrarily taken to embody. It hardly matters whether, after the manner of Frazer, an age of magic is held to have preceded the age of religion, or whether, in the style of Wundt, magic is identified with the lowest form of religion. In either case magic answers to something to which is assigned an unfavourable, because inferior, place in the evolutionary scale as compared with religion at its most characteristic. Anthropological science, however, is becoming increasingly clear of constructing such scale lines so simple and so drastic. Human evolution is a tissue of many interlacing strands; and, again, the savage of to-day is no older or earlier than the civilised man, so that the modern and historical primitiveness cannot be identified off-hand. At most, then, it is with the help of psychological and sociological considerations of a general type that a primordial stage of mind and society can be theoretically posited, out of which determinate religion may be shown to have emerged by some sort of subsequent process. Such general considerations suggest that, just as Jourdain talked prose before he realized the fact, so the primeval savage acted before he thought about his action. Correspondingly, therefore, in the sphere of nascent religion there must have been a stage of cult or ritual which was the product of sheer unreflective habit, which preceded the growth of ideas concerning the how and why of what was being done. Certain recurrent situations in the social life of the savage, or, as for that matter, of any animal life, it is wholly subordinate to the social so long as mere gregariousness prevails—induce states of emotional intensity. The emotions must find a vent somehow. This they do either through activities directed towards the production of social effect, in fighting, love-making; or else through secondary activities such as are not immediately practical in their object but serve simply as outlets of superfluous energy, such as the dances that simply play at hunting, fighting, or love-making. In either case habit entwines with the activities in question all sorts of more or less functionless accidents; and the presence of some accountable details helps to make the whole performance seem mysterious to the performers and still more so to the civilized onlooker. When the activity is of the directly practical kind, say, hunting, when the tracking, the killing of the game, and so on, explain themselves, the accompanying observances enjoined by custom which do not explain themselves so readily—for instance, wearing such and such a garb, using certain words—may well seem to call for justification even to the unthinking savage, who will at least translate his sense of the value of custom into the vague doctrine that there is 'power' in these things, that they 'work.' When, on the other hand, the activities belong to those of the secondary type which are not immediately practical, constituting 'proreptic' rites, as they might be termed, which, while affording emotional relief, act likewise on the whole as preparations for the business of life—very much as play does, in the case of the young—then accretions in the way of accidental features due to custom are likely to be more pronounced, inasmuch as there is no discipline of hard fact to impose bounds on the action. Meanwhile, in proportion as these secondary activities conform to the same stimuli as the primary activities of which they are the by-product, as, for instance, when the hunting interest overflows into a pantomimic rehearsal of the chase, they will wear an imitative appearance, though in reality more 'reperceptions' rather than imitations. When, however, an ex post facto justification of them becomes necessary, it is quite natural that the doctrine may grow up that they have some definite hold on belief, that their seemingly imitative character has something to do with their efficacy. It is putting the
cart before the horse to say, as Frazer seems to do, that the belief that 'like produces like,' or what not, generates symbolic ritual. It is, on the contrary, symbolic ritual—i.e., a ritual that involves a more or less realistic reproduction of some practical activity—that generates the doctrine of 'sympathetic' causation in one or another of its forms. As such, however, not even natural symbolic rites usually include all manner of details the mimetic bearing of which is at least not obvious; and the generalization that an 'age of magic' indules in ritual and religion, is, in fact, one general heuristic through which we may determine how far, and along what lines, the differentiation of the magical and religious elements involved in the complex needs to be pushed (see *Notes and Queries on Anthropology*, issued by the Royal Anthrop. Institute, London, 1912, section on 'The Study of Magic-Religious Facts,' p. 251 f.).

4. Magic as a name for the black art and allied developments.—The view which has just been discussed and deprecated, that identifies magic with rudimentary cult as a whole, may be said to draw a horizontal line between magic and the later and more evolved products of the same tendencies which rudimentary cult embodies. The other view, which will now be examined, differs altogether from the former in that it draws a perpendicular line between magic and the social and religious energy need any supporting doctrine, they would seem to find it, not in any philosophy about like producing like, and so on—ideas that appear quite late in the history of thought—but in vague notions of 'superstition' as practice with the barbarous. In other words, the savage comforts himself with no theory of how these ritual practices work, but is content to feel and know that they work—that, despite all appearances to the contrary (since their non-utilitarian character may be supposed to become gradually manifest), they have power and efficacy in them or behind them. It is just this faith in their efficacy that distinguishes them as Natal religious practices from such as are merely aesthetic. The former are so closely related to the practical activities that a sense of their contributory value runs through them, and they thus suggest and foreshadow practice in all sorts of ways that make for hope, courage, and confidence, whereas aesthetic enjoyment, though possessing a recreational function, does not thereby go beyond itself. It remains only to ask whether 'magic' may not serve for the designation of the most rudimentary type of cult. On the whole, it would seem a pity for the evolutionist to apply a term redolent of disparagement to what on his view is a genuine phase of the serious life as lived under certain conditions of culture. It is far less question-begging to predicate religion throughout (unless, indeed, one is prepared to follow Van Genep, and predicate magic throughout as well as a general name for the practical side of religion—which is surely an abuse of language). The science of comparative religion, if it is to do its work properly, must impartially embrace the cults of all mankind in its survey.

An observation may be added for the benefit of the field-worker, who, as a rule, has to take over his classification apparently ready-made from the hands of the theorist. If such a one has learnt to identify magic with the sympathetic principle or with those early forms of cult in which this principle appears to predominate, he will be inclined to label his collections of specific cases of sorcery as being of magic. 'Productive magic' (a term often used to describe rites of the intichiuma type, which hear on the increase of food-animals and plants), 'agriculture magic,' 'animal magic,' 'magic of hunting and agricultural rites,' or 'ritual'; and it is much more likely to lead to an unprejudiced description of all the relevant facts, whether they be of the sympathetic order or not. So, again, tabus are better treated as a part of ritual, namely, as observances of negative prescriptions, which will invariably be found to form one context with sundry other positive prescriptions; to make them a part of magic is neither necessary nor does it in the proper use of language. It may even be said to be now a recognized working principle that the first-hand observer should class all magico-religious phenomena under a single general heading and test all the phenomena by the same standard of how far, and along what lines, the differentiation of the magical and religious elements involved in the complex needs to be pushed (see *Notes and Queries on Anthropology*, issued by the Royal Anthrop. Institute, London, 1912, section on 'The Study of Magic-Religious Facts,' p. 251 f.).

(a) Magic as the rival of religion.—Starting once more from the fact that the word 'magic' tends to stand for something bad, we realize at once that it is possible to treat magic as a general term, and to look at all the bad kinds of trafficking with the occult and supra-sensible in vague in a given society, while, conversely, religion may be taken to comprehend all the good kinds of such trafficking. Obviously the power of bringing wonders to pass is a two-edged sword, since surprising things may happen for weal and for woe, while, again, immoral as well as moral persons may seek benefit from miracle. It is, indeed, entirely within the discretion of the culture, on other words, the mana type that they are, from a moral point of view, ambiguous and two-sided, covering all manifestations of the efficacy of rites, whether they be beneficent or maleficient in their intention (see MANA). Now it is easy to see how rites of an ill-intentioned kind will come to be practised and will have efficacy imputed to them. Hate, greed, and the other types of anti-social attitude being more or less endemic at all levels of society, they are bound to find expression in habitual activities that assume the character of mystic rites in proportion as they abound in accretions and in secondary activities of the expositive order, such as cursing in set phrases or destroying an absent enemy in pantomime. Moreover, the very fear which hate and malice awake in the breasts of those against whom they are directed is enough to create an atmosphere in which the natural seeds of black magic cannot but germinate freely. The almost universal dread of the evil eye illustrates very well how the responsibility for the existence of a belief in sorcery often rests with the credulous victim just as much as, or more than, with the alleged aggressor. Anthropological literature is full of striking examples of natural phenomena being ascribed to supernatural agency in this way. Roth (*North Queensland Ethnography*, Bulletin no. 5, Brisbane, 1903, p. 23) calls thanatomania,
MAGIC (Introductory) 249

namely, the suggestibility leading sooner or later to death on the part of one who satisfies himself that he is doomed. Roth has had personal experience that this belief is commonly held among the Queensland natives. Thus it comes about that, by an extension of the same line of thought, 'evil magic' becomes the stock explanation offered for anomalies of a mysterious and unaccountable character.

* An individual becomes incapacitated through some chronic and painful illness which does not answer to the various medical and surgical treatment or materia medica which the illness weighs upon his mind, and after a time he becomes more and more physically feeble. "You go "sweet" [i.e., death]—the mungapu (death-bone) at him—i.e., that a "bone," pebbles, flint, etc., has been put inside him and his blood removed" (W. E. Roth, Ethnological Studies among the North-West-Central Queensland Aborigines, Brisbane, 1897, p. 164).

Indeed, it has often been observed that the savage scarcely recognizes the fact of 'natural' death, so ready is he to impute the event to the sinister arts of some particular individual or at least to the machinations of persons unknown (cf. art. Life and Death [Primitive], § 7). From these vague attributions of ill-will to one's neighbours it is but a step to the conception of an evil magic independent of the will and intention of any person at all. Such beliefs, and the acts of evil—such as the arungqugulhia of the Arunta (Spencer-Gillen, London, 1890, p. 548 n.), the oqon of the Hurons (J. N. B. Hewitt, Anth. Anthropologist, new ser., pt. i, 1875, p. 7), and the goings of the Malays (W. W. Skeat, Malay Magic, London, 1900, p. 94)—are regarded as malignant and destructive agencies in their own right, very much as one thinks of the plague or the influenza. In short, the white man always more or less of black magic 'in the air' for the panic-ridden savage. For this reason, and seeing how much the healer of diseases and, again, the witch-finder do to foster the evil reputation of the magician by their highly-coloured accounts of the dreadful arts which it is their professional privilege to be able to counteract, one might almost be tempted to declare that the sorcerer is a mere bogy, the creation of abject fear welded to ignorance and credulity. But this would be to go too far. There seems good evidence that in Australia men and even women, despite the fact that black magic practised within the group is normally held to be punishable by death, wreak their vengeance in this way on their private enemies. Roth's own black servant, a mere layman, actually dared to point the bone at a native child. The latter of course, took the law into his own hands (N. Queensland Ethnography, Bull. no. 5, p. 30).

At most, then, it may be surmised that for every case of genuine guilt there are far more false accusations. There is a part of the Australian witch-haunted society, whether it be native Australia or 17th cent. England, that the proofs of witchcraft mainly rest on an argument from effect to cause.

As for love-magic, it may not seem at first sight to have the anti-social character of the magic of hate; but, if closely observed, it will be found on the whole to minister to hardly less disruptive purposes. Thus among the Arunta of Central Australia such magic is chiefly resorted to in order to bring about a runaway match. It is true that, according to native ideas, it is merely a case of one tribal husband trying to entice the woman away from another tribal husband, so that, as Spencer and Gillen say, 'it is a breach of manners but not of custom' (p. 544). Even so, however, it would seem to be extremely liable to lead to a general fight within the group, or between one local group and another, so that its anti-social tendency is bound in the long run to become tolerably marked.

So much for what are perhaps the clearest instances of types of ritual acts generated by passions and desires which society is bound to try to suppress in the interest of its own self-preservation. Such rites can be placed in a more or less determinate class by themselves, whereas over against this class can be set in contrast another class of rites, entirely similar as regards the general nature of their mechanism, but embodying motives of a kind heir to be socially desirable. Broadly speaking, all public rites have this common quality of being licit and reputable, since the fact that they are the recognized custom of the community is taken as evidence that they exist for the furtherance of the common weal. Thus the totemic ceremonies of the Central Australians, the object of which is the increase of the food-animals and plants, occupy exactly the same place in the life of the people as is filled by the rites of the Church in a Christian country. Hence E. Durkheim (Les Formes Élémentaires de la vie religieuse, Paris, 1912) takes the totemic system of Australia as the typical instance of an elementary religion, whereas Frazer, adopting what has been termed the horizontal line of division between magic and religion, would assign these totemic rites wholesale to magic. For, as we have seen, there is no better instance could be cited to illustrate the incompatibility between the horizontal and the perpendicular methods of viewing magic and religion, than the case of the less complicated societies and the more general rules of conduct. The totemism among the simpler societies at all events, public rites always rank as good and licit, does it follow that private rite as such will tend to be regarded as bad and illicit? According to Robertson Smith (Religion of the Aboriginals, London, 1894, p. 236 f.), it well-nigh amounts to this:

* 'It was the community, and not the individual, that was sure of the permanent and unfailing help of its deity. It was a national not a personal providence that was taught by ancient religion. So much was this the case that in purely personal concerns the ancients were very apt to turn, not to the recognised religion of the family or of the state, but to magical superstitions... Not only did these magical superstitions be outside religion, but in all well-ordered magic lines there were regarded as illicit. A man had no right to enter into private relations with supernatural powers that might help him at the expense of the community to which he belonged. In his relations to the uneven he was bound always to think and act with and for the community, and not for himself alone.'

Granting, however, that in the small undifferentiated society private enterprise is suspect, we must recognize that, as the division of labour develops and the individual asserts himself more and more, the law of the tit-for-tat is broken, and at least, the use of ritual forms for securing personal ends, such as the protection of property by taboo-marks having the force of conventional curses (see for example P. H. Hulme, 'Religious witching in New South Wales,' in Asa x. [1907] 1 f.; and cf. M. Mann and M. H. Beuchat, ib. ix. [1906] 117, on the magico-religious significance of the Eskimo property-marks). For the rest, there will always be in every society a number of ceremonial practices to which a certain amount of magico-religious value attaches that fall most naturally under the category of folk-lore, having no place in the official cult, yet being too insignificant to call for much notice favourable or unfavourable, and, on the whole, tending to be despised rather than condemned. In short, for certain purposes of this sort, they are accepted by magico-religious rites as generally akin, even while making due allowance for their tendency to group themselves round the opposite pole of beneficence and maleficence, of social service and individual greed or spite. More especially is this so when the interest passes from intent to content, from motive to mechanism. Social and anti-social rites are hardly distinguishable in respect of their external form, the standard of the most rudimentary culture. Thus the latter bear the closest resemblance to each other, the
sorcerer and priest often meeting in the person of the medicine-man. The rites are of the same general pattern, whether they be manual or oral. Lastly, the ideas that are bound up with the rites conform to a common type, new to that of mana and now to that of spirit (cf. Huxley, op. cit., p. 2). After all, it is no wonder that differentiation should hardly have begun, seeing that, so long as society is represented by an aggregate of small groups, the practice of a single spirit would be evil if practised on a friend becomes good the moment it is directed against the people just across the way. Or, again, society may halt as it were before two ethical 'cases,' when the result that ritual practices of contradictory intent may obtain something like equal toleration; the moral status of love-magic was especially ambiguous, so that, for instance, among the Kurrum tribe of Victoria, where marriage by elopement verges on the position of a recognized institution, 'while there were medicine-men who assisted those who wished to elope, there were other medicine-men who aided the pursuing kindred to discover them' (A. W. Howitt, The Native Tribes of S.E. Australia, London, 1904, p. 277). Once more the medicine-man is in a position in which the self of the sorcerer's power to punish offenders against the laws of the group, such as the novice who behaves improperly at the initiation ceremonies, or the man who attacks another by means of evil magic, but he will likewise find all his personal power use his power against his enemies, and will even bring to bear on them the power of Daramnun, the great anthropomorphic god of the mysteries, the 'eyes' of this or that religious organization, in the eyes of the tribe (Howitt, pp. 545, 692). Clearly, then, it is not to the simpler and more undifferentiated societies that we must look for an account even of these early types of organization, the rites, leading sooner or later to their organization in rival systems that henceforth to some extent develop independently. Organization and system, however, are terms that perhaps are hardly applicable even to the later developments of black magic.

It is religion that has all the organization to itself, because public approval affords it every chance of free expansion. Magic, on the other hand, as the enemy of organized and, indeed, of the social organization as a whole, must lurk in dark places, and grows not by internal systematization, but merely as does a rubbish heap, by the casual accumulation of the waste and 'dregs' from all kinds of all kinds. At most it may affect a certain definiteness of form by imitating religious ritual in a spirit of blasphemous parody, as in the case of the 'black mass.' On the whole, however, it is a kind of utter deficiency on the side of theory, and consists simply in a congeries of practices which by perversion and distortion have lost most of the meaning that they once had. Only in this sense, do they rest on the principle of compulsion as opposed to conciliation, that, being mere rites, lacking the support of any consistent scheme of thought, they have to depend for their validity on their own inherent power. Religion, on the other hand, though never wholly escaping the tendency to impute value and efficacy to its ritual as such, is free to develop an ethical conception of the godhead in which the action of divine power is gradually converted into that of a power that makes for righteousness, and is therefore to be moved and conciliated not by rites but by righteous conduct.

(b) Magic as the rival of science.—The view advanced by Frazer to the effect that the fundamental conception of magic is identical with that of modern science (cfr. op. cit., The Magic Art, i. 220) will hardly bear close inspection. The magician surely does not postulate that the same causes will always produce the same effects. On the contrary, his art is based on the supposed possibility of miracle—on what might be termed super-constitution as contrasted with normal causation. In other words, he seeks to help out ordinary action by means of an increment of power borrowed from a supra-sensible source. This is what Taylor means by characterizing magic as 'occult science.' In many of its aspects, what was, to the modern mind, the 'black art' may be regarded as a complete reversal of the idea of magic, as a science, and be associated with processes of the most scientific character. Thus, in the chapters on the magico-religious way of thinking may be held to correspond to sciences or pseudo-sciences, inasmuch as they severally represent a body of organized lore intended on the whole for the furtherance of secular and purely technical ends. Of these the most characteristic types are faith-healing and the divination (q.v.). Faith-healing is in its most typical form a direct counterpart to sorcery, which is in essence a faith-hurting. While magic and black magic are integrated rites, the magic of the other's, since the natural procedure of the healer is first to establish by his diagnosis what exactly the wicked magician has done, and then by dramatic reversal of the action to undo it. Indeed, as has already been suggested, witchcraft is in no small part a pure invention on the part of leechcraft. To bring about a faith-cure it is essential to show that what is wrong is something that will answer to the proposed method of putting it right; and what more plain than that medicine-man may checkmate medicine-man, diamond cut diamond? Meanwhile, the occult sciences of the faith-healer in Ceylon (Cf. J. G. Frazer, Religion in the Making, ii. 299) and the known to the savage. On the contrary, it may be more or less sharply distinguished from the ordinary folk-medicine, towards which it stands in a certain attitude of intercourse.

Thus, Roth, who, as a medical man, went very carefully into the various methods of dealing with disease that prevailed among the aborigines of North Queensland, shows that "no 'doctors' attend specifically to all ailments. Being left to individual caprice, e.g., a woman looks after her husband, a mother after her child. Nor do they specially prescribe, the knowledge—where known to all—of the therapeutical value of plants of common occurrence, etc., they are the tribe's (cf. Queensland Ethnol., Bull. 8, p. 299). It is only when the ordinary treatment fails that the aid of the medicine-man is called for (q.v.).
Among the specifics in common use among the natives observed by him, Roth enumerates more than forty different plants, for some of which at least genuine medicinal properties can be claimed. Likewise, ligatures, bleeding, massage, poultices and fomentations, dressings for cuts, the use of splints for fractures, and the methods of treatment which rest on a basis of what we too would be ready to recognize as 'science,' i.e. a more or less organized common sense. At the same time, the lay mind is likewise directed to what the modern doctors would regard as a superstitious, such as reliance on charms, amulets, the sucking-string, etc. But at any rate the atmosphere of mystery with which the professional faith-believer surrounds the science of which he is or has been a part is purged away. A medical man, harmless, goes to the place where the accident happened, is shown where the snake bit, dig it out, and lets it glide away a few feet before commencing to cut it up. In this process the snake gradually diminishes in size, and gradually becomes harmless, when it is carried back to camp, where the medicine-man, turning its skin half-way inside out while still alive, throws it into water, and so makes an end of it. It is needless to say that no layman is allowed to witness any part of this procedure (p. 42).

It only remains to add, in fairness to the medicine-man, that a reputation for magic in the sense of a more or less bad and anti-social kind of wonder-working is thrust upon him by the very fact that he is a professional and hence has the public against him, according to the principle that whatever is not for the good of man is bad.
by association with the productive arts has taken into its hands the entire control of the mechanical and material sphere of human life, and within this sphere will brook no rival. In the moral sphere, on the other hand, it has no signs of making headway against the claim of religion to be the supreme authority. Meanwhile, neither science nor religion can afford to tolerate the anti-social and immoral person, who man tries to make good use of. The delinquent, therefore, finds himself in a weak humanity. In practice, however, both find it hard to distinguish between the delinquent and the innovator, so that the line between evil magic and popular praxis, on the one hand, and mere ho- doxy, on the other, tends to be even now of a somewhat fluctuating kind. As for black magic, it has almost disappeared from view in civilized society. As the folklorist knows, however, a permanent possibility of demoralizing superstition lurks in human nature, and only education in regard to both physical facts and moral truths can keep the monster down.

MAGIC (Arabian and Muslim).—The word used in Arabic for this notion is sihr, connected with the Arabic prefix s- 'to produce ill.' on the croup (Qur'an, vii. 113): It seems, therefore, to be in origin the causative of the verb hāra, 'to be bewildered,' and is explained by the verb 'to frighten' ('Jihaddhu'), whence the whole phrase resembles un+yēhēn to kalīrīn in Ac. 54. It is probable that the Hebrew shahar, used twice by Isaiah for 'conjure away,' is identical, and the Armenian shārum, 'marvel,' may be borrowed from this word.

The passage in the Qur'an which contains most information on the subject is ii. 96, where it is stated that the sihr was revealed to the two angels in Babel, Hārūt and Mārūt, who taught it to mankind, without concealing the fact that they were tempting them; the sihr showed how to separate a man from his wife, i.e. was the contrary of a love-philtre. Isaiah (44:16) connects the shahar with a magic which according to classical writers also, was the headquarters of magic:

'una Babyloun Peres Host, secretare Memphis
Omen vettunorum solut pennterea Magorum.'
(Lucan, Pharsalia, vi. 449 f.)

Hārūt and Mārūt seem from their names to be Arahame personifications of mischief and rebellion, with which their recorded operation corresponds.

In the Qur'an, as might be expected, it is not clear whether the results of sihr are always subjective only or may be objective; and some commentators think both possible. When, therefore, a miracle is branded as sihr, it may be regarded either as an optical illusion or as an illicit process due to the employment of demonic forces, as was also revealed employed them (according to the Qur'an), but this may have been a prophetic privilege. And a theological difficulty arises from the statement that sihr was revealed to all and idels fear always to be evil. The orthodox view is that magic can be objective; but some Mu'tazilite doctors and some members of the Shi'te and Hanifite schools took the other view; and even those who believed that it was objective thought that it could affect accidents only, and could not transmute substances.

The practice was forbidden, and, indeed, under penalty of death; Malik held that one convicted of sorcery should not even be given the option of repentance, whereas Shâfi'i confined the death-sentence to the case where examination of the accused proved him to be guilty of unbelief (Qustalâni, Commentary on the Manâwih. Ladmâniyâh, Cairo, 1278, vii. 116). Acquisition of the theory was, however, permissible, and, according to some, a duty incumbent on all members of the community, as protection against those who practised the art.

The recognition by Islam of the existence of jinn fârlâsh as a basis for the belief in sihr, to which, however, the attitude of the educated and of serious writers is about the same in most countries; it is not ordinarily recognized as an agent in the course of events, and has been admitted into tales of wonder and delight, whereas the superstitious may resort to it for a variety of needs.

It figures on one occasion in the biography of the Prophet, when an illness was brought upon him by a Jew named Labîd ben al-Asâm; according to one account, the latter obtained possession of some hair left on the Prophet's comb, which he hid with some other objects in a well; according to another, the object hidden was a string with a number of knots upon it. The latter version is doubtless suggested by the penultimate sihr of the Qur'an, 'the employment of men into animals by a witch's notion is found as early as the Odyssey. In Arabic there is a special word for this process, masūm.

عِلَى كِلُّ كَنْا وَلَا نَسْتَنْبَطُ مِنْهُ أُوْلَـيْدَ" (عَلَى كِلُّ كَنْا وَلَا نَسْتَنْبَطُ مِنْهُ أُوْلَـيْدَ)

The classification cannot be maintained, though it is possible that the tendency in the case of the different nations corresponded to the methods assigned; thus, the doctrine that augury practice was introduced among the gods who were created to greater lengths by the Indians than elsewhere, whereas the theory of mysterious words may be particularly Jewish, and the Hermetic
MAGIC (Babylonian)—For the purpose of this article we may regard the term 'magic' as connoting practices which have their origin in the belief that man is able by their exercise to control the unseen powers and force them to act in accordance with his own will. Without attempting to discuss the vexed question of the relationship of magic to religion (see 'Introductory' section above), we may say that this generally accepted view of the term is based upon the adaption of a material concept. And it corresponds, moreover, to a distinct contrast in attitude towards the supernatural. Magic may be said to be present wherever power over the unseen is believed to be inherent in the ritual, whereas, according to the religious concept, the seat of power is regarded as resting outside the sphere of man's deliberate control. When the term is used in this sense, it must be admitted that a great body of the religious beliefs and practices of the Babylonians and Assyrians should be more accurately described as falling under the category of magic.

It is true that, when reading the Babylonian religious compositions, one is struck by the resemblance which many of the phrases bear to ethical passages in the Hebrew Psalms and prophetic writings. Quoted apart from their context, such passages suggest an extraordinarily high standard of morality and great depth of feeling. But it is dangerous to judge any literature merely by extracts or anthologies; and, when studied in their own surroundings, they are at once seen to have a background that is largely magical rather than moral. To take a single example, the Babylonian penitential psalms and many of the prayers to the gods show that the Babylonians had a very keen sense of sin. The contrition and misery of the penitent are expressed with great beauty of metaphor; but it is essential to examine the precise meaning of the words employed, and not to read extraneous associations into them. In this connexion it is important to realize that the moral character of sin which we find emphasized in the Hebrew prophets is quite foreign to the Babylonian conception. In almost all their religious literature the expressions 'sin,' 'sickness,' and 'possession by evil spirits' are employed as pure synonyms; they denote merely an evil state of the soul or body. In fact, a man could be said to be believed to be due to the attacks of evil spirits, under.....
whose power or influence the sufferer had fallen, whether by his own act or through the machinations of a hostile sorcerer or sorceress. Such spirits and powers of evil were legion, and were ever on the look-out to inflict bodily harm on men. They might be ghosts of the dead, or gruesome spirits half-human and half-demon, or, lastly, fiends and devils of a nature corresponding to, but lower than, that of the orthodoxy. The sole object of the magical texts was to enable the priests to control and exorcise these demons, or to break in some way the malignant influence which they exerted upon their victim. And, in order to give to the exorcism the utmost importance that the spirit or evil influence which affected the sick man should be mentioned by name. To this end the magician repeated long lists of ghosts and devils, any one of which might be the cause of the sickness. Thanks to this practice, we know a great deal about the Babylonian demons and their characteristics. In order to illustrate the manner of their attack, and how dissociated this was from any moral offence on their victim's part, it will suffice to refer briefly to one class of spirits, the ghosts of the dead. These spirits were those whose death was violent, or for some reason or other, could not find rest, but wandered as spectres over the earth. After death the spirits of men and women who died in the ordinary course of nature and were buried were believed to enter the Underworld. There they found existence of a miserable existence with the help of offerings and libations paid to them by their descendants and relatives upon earth. But, if the offerings were neglected and forgotten, the ghosts were rendered into dangerous fiends—such as the ghosts of women who died in childbirth. As a rule, such spirits haunted ruins or desolate places, and, if a man wandered there, they might select him as their victim and claim him. A spirit of this sort could also fasten himself on any one who had been in any way connected with him in this life, by the sharing of food with him or by the mere act of eating, drinking, or dressing in his company. From these instances it will be seen that a serious spiritual liability, through no fault of his own, to supernatural attack, and precisely similar results were believed to follow both ceremonial and moral offences. To touch the dead body the generality of mankind were considered as being affected by such evil influence or ban was, according to the texts, quite as dangerous as committing a moral offence, such as theft, adultery, or murder, and the resulting condition of sickness or misfortune was the same. In order to escape the ban and cure his sickness or misfortune, the sufferer had recourse to the magician, who, by his knowledge of magical words, prayers, and ritual, could invoke the help of the great gods, and so gain control over the demon itself, or, in cases induced by human intervention, over the hostile sorcerer or sorceress who had instigated it. The second class of texts prepared for the use of the magician their purely magical character is sufficiently apparent from their contents. In others, where the contents refer more to the condition of the sufferer than to the possible causes of his misfortune or the means to relieve it, the essentially magical character of the compositions may sometimes be detected in notes or rubrics which give directions for preparation of the objects collected by the magician for that purpose synchronized with the destruction or removal of the evil influence under which the patient suffered. The rites sometimes required substances of some value or rarity, such as fragments of gold or precious stones; and it is probable that, except for powerful or wealthy clients, the magician would make the same fragements do again and again. But the materials of the rite also included plants, pieces of wood, various sorts of seeds, vegetables, dates, palm-spathes, sheepskin, wool, etc.—all perishable substances which could easily be consumed. And in their case the sympathetic connexion between the destruction of the ban and that of the object is obvious. That this is the correct explanation of this whole class of ritual is shown by their subsequent use of the object in the sub-section, in which the employment of images is prescribed in place of unfinished natural objects or substances. The images were to be fashioned in human form, to represent the hostile sorcerer or sorceress, and the destruction of these by fire, to
and, largely through Jewish, Syrian, and Mandaic channels, contributed in no small degree to the great and continuing development of Buddhist ideas.

**MAGIC (Buddhist).**—If we rightly understand the real character of Buddhism, what Buddhism ought to be according to its cardinal tenets, there is no possible connexion between Buddhism and magic. The only aim of the Buddhist monk is nirvana, to be attained in this world by the exercise of will power, a state of freedom from passion in order to reach freedom from rebirth, i.e., eternal, blissful nirvana. All the machinery of the intellectual and moral life is organized with a view to this. Buddhism does not deny that there are good (bodhis) acts that ripen into happiness in a future life (svarga, paradise), but monks consider them not as of so much avail for, but even as obstacles to, nirvana. Asect and religious acts (dharma, darsana, puj2) have no place in the training for nirvana, and it is an ever grave and delusive herecy to lay stress upon them. A fortiori, in contrast with Vedism and Brahmanism, Buddhism ignores all the magical theories connected with sacrifice, worship, or asceticism as a means of salvation. As far as everyday or trivial magic is concerned, its efficiency is acknowledged, but Buddhists are strictly forbidden to practise it; all kinds of magical arts and performances—e'en of a benevolent nature—are regarded as pernicious.

*But historic Buddhism* is not, in every respect, what Buddhism ought to be. Buddhists are Hindus, regular (Hindus); and no large religious body has ever been found that was always scrupulously faithful to the true spirit of its creed, the more so as the Buddhist creed implies supernatural disinterestedness and a non-Oriental disregard for any kind of superstition.

1. *Rddhi.*—There is a large category of 'superhuman' activities, which to some extent would be understood by Europeans as magical, and which are 'very good Buddhism.' We mean rddhi (Pali iddhi)—in the words of Rhys Davids, mystic wonder, 'wondrous gift,' magic power,' a mastery (prabhavah), which is only the exercise of a power acquired by pious works, by penance, and also by 'formula,' and especially by contemplation.

There is nothing 'preternatural' in the rddhi, and the natural character of the 'miracles' performed by rddhi is clearly shown in the following passages:—

---

1. These are 'mundane' (suddha) good acts, in contrast with *supranatural* (lakkhana), those which lead to nirvana, i.e., the votations connected with 'trances' (חקפיא) and other 'concentrations' (kammaddhi).

MAGIC (Buddhist)

Utān-kurna (see art. Rũra, Asok or your Buddhist), or to the Brahma world ... But how can they?" 'Do you admit that I have jumped even six or three feet in air?' "Yes, I do admit that I can jump twelve feet." "But how?" 'I cause this idea to arise in my mind, that, because of this idea, the body becomes buoyant to me.' "Just as does a monkey, who has attained mastery over his thought, travel through the air." 1

Birds, etc., are, by nature, endowed with magic power, as is proved by the fact that they go through the air. Their rddhi is 'born from the ripening of acts,' i.e., the special character of some of their acts in a former life, imparts them this special 'superhuman' faculty. Gods are, of course, magicians; they go through the air, they create at will palaces and pleasures (bhoga). Sovereign kings or world-emperors (chakravartis [g.n.]), too, are magicians by nature. Ordinary men obtain momentary magic power by many devices, and are 'superhuman' at some time and for some object. 2

As a matter of fact, Buddha was looked upon by his followers—as he was by the unbelievers—as a great magician; and it is recognized by all Buddhists that magic power is one of the natural possessions of the saints, since they are holy men, just like the gods of old and the modern fakirs. Magic power ranks therefore with the divine eye, the divine ear, the knowledge of the thought of others, the knowledge of former births, the know-

ledge of future births, and, i.e., with the most desirable gifts of saintship. And it is no mean eulogy of Māndālayāna that he styled the 'best of the Buddha's disciples with regard to magic.'

It is evident that the admission of the reality of rddhi is beset with many dangers. Buddhists were, accordingly, strictly forbidden to boast of possessing such 'superhuman' faculties; that was one of the gravest sins.

There is nothing specially Buddhist in the manifestations of rddhi. Buddha's disciples win success in the phantasmagorical shows which have long been familiar to Hindu romancers and dreamers: 'Being one, he becomes many, or having become many, becomes one again; he becomes invisible or visible; he goes, feeling no obstruction, to the other side of a wall or rampart or hill, as if through air; he penetrates up and down through solid gold, silver, or air; he walks on water; ... he travels cross-legged in the sky; even the sun and the moon, so mighty they are, cannot approach his feet; and he is also known to reach the body in even up to the heaven of Brahmā.' 3

Stories of miraculous exhibitions intended to convert the incredulous are frequent. Buddha and his disciples willingly condescended to give 'signs.' When the Tibetan writer Taranatha narrates the medi-

teval miraculous tournaments between the Buddhist and Brahmanist scholars, which often conclude with the Buddhist victory and the conversion of kings, he only testifies the continuance of an old tradition. But—and this restriction is of paramount import—when narrating miracles, the old texts add that miracles, by themselves, prove nothing; the unbelievers, conquered by the more powerful magic of Buddha, used to say: 'Ganatama'—the 'prince'—name of the Buddha, and the one used by un-

believers—Ganatama is the magician (mārya): every thou-
sandth year there appears in the world a great magician who eats or enjoys the world (AŚvādhanakaraṇā); or, in the words of the Kandaliyavata: 'We saw Siry here a magician performs all these.'

There is in the Bodhivattvadvāmi, a text-book of the Viśṇuavānās (by Asanga, 4th-5th cent. A.D.?), 1 a complete survey of the magical power of the bodhisattvas. It is said to be twofold: puraṇaṃ rddhi, power of transformation, when a bodhisattva or Buddha acquires the nature of an existing thing; and nirmāṇakaraṇa, power of creation, when he can assume some thing or some person. The 'created persons' (nirmita, nirmāṇakaraṇa) are frequently mentioned in the Mahāyāna works; but they are not unknown in the Hinayāna, both Pāli and Chinese. Elabo-

rate theories on the nirmāṇakaraṇa are to be found in the Abhidharma treatises of the Sarvāstivādins (Lokaprajñāpā, 1st cent. A.D.), which embody the views of the school of the Vīra Hinayāna; and in the Abhi-

dharmakośa (ch. 6), where the creative power of Buddha and of the gods (nirmāṇakaraṇa, etc.) is discussed.

2. Paritta.—Another very orthodox form of magic is parītā, or rakkh, 'guard,' 'safeguard.' It forms an important part in Shīh-halasee Buddhism under the name of spirit (spirit, Eastern Monachism, London, 1850, p. 146, Manual of Budhism, ed. D. J. Gogerly, Ceylon Buddhism, ed. A. S. Bishop, Colombo, 1900, pp. 327-393). Good examples are found in Pali literature.

Taking refuge in the three 'jewels' (ratna, ratana), Buddha, the Dharma, and the Sangha, forms a charm called 'sutta of the jewels,' which is very efficacious against illness: 'Whatever aperception we have come together here, either belonging to the earth or living in the air, let all spirits be happy, and let them listen attentively, i.e., with the most desirable gifts of saintship. And it is no mean eulogy of Māndālayāna that he styled the 'best of the Buddha's disciples with regard to magic.'

So also, it is said, the Peacock Jātaka, sun-worship ('the only king, the one who beholds, the light of the world') is connected with that of the Buddhas: 'wheeby tree, golden and luminous being! May I spend this day under thy care! Homage to the conscious sage! May they protect me! Homage to the Buddhas and to the illumination, to the delivered and to the deliverance!' 2

When Śākyamuni was a large golden peacock, he recited this half-solar, half-Buddhist prayer morning and evening, and consequently avoided all dangers. And, as the peacock is the born enemy of serpents, the 'sutta (or charm) of the peacock' is used as a preventive and as a cure for serpents. 3

In these examples the magical character is not very prominent: there is nothing pagan in the formulæ, which are, above all, acts of Buddhist faith; there is nothing mechanical, nothing really magical, in the efficacy ascribed to the bird. The non-Buddhist gods are clearly subordinated to the Buddha: it is almost a dogma that the Buddha converted gods and demons; 4 and it is quite reasonable to believe that they will grant their favour to the disciples of Buddha. It is believed also that benevolence (mātrī) possesses a power in itself (mātriśe), which is capable of protecting the benevolent person against all the attacks of the wicked; in order to avoid serpent-bites, it is not a bad plan to sleep on a raised bed, but the right method is to declare to all the tribes of serpents that they are being enveloped in a universal sentiment of benevolence. 5

1 A summary of the Bodhisattvadvāmanavịvas (by Asanga, 4th-5th cent. A.D.?)

3 Batanasthāna (Sutta-Nipata, ii. 1); Rūpa (Sutta-Nipata, ii. 1); Sattā (Sutta-Nipata, ii. 1); Rūpa (Dīgha, xxxii.)

6 A dogma for the Sarvāstivādins (see A. Couma and L. Ferron, 'Analyse du sūtra de bhājanīdīrjāva,' AMO, ii. 1910, 295-315). All sources admit: that there are still wicked gods (Dīgha, xxiii.).

8 See Gālāvānāga, vi. 2, 3, and v. 6 (SBG xx. 1637, 761.)
violence is the most noteworthy invention of Buddhism in connexion with the subject which we are discussing. Among the results of the order, which was exclusively a warlike and oriental one, are:

3. Hindu influences.—All practices tainted with magic or superstition, from the most trivial to the most serious, are strictly forbidden: astrology, divination, charms, incantations, the winning of a name, a word, or a letter, in the belief that any one may accomplish with the help of certain secret recipes and a technical method. Holy men, in ancient as in modern India, priests or others, have sought too much opportunity for making huge profits by giving horoscopes and practising white or black magic. The Buddha—the first Order—was anxious that the monks should be separated from these practices, and drew up a long list of "wrong means of livelihood," of low arts, that were strictly prohibited. The Brāhmaṇas also made an effort to distinguish themselves from sorcerers.

Among these "low arts" we may mention specially:

1. Arranging a lucky day for marriages; using charms to make people lucky or unlucky, to procure abortion, to bring on dumbness, deafness, to keep a man's jaw fixed; obtaining answers by means of the magic mirror, or through a girl possessed, bringing forth flames from one's mouth, causing virility; making a man impotent; invoking Sīri (his), the goddess of the worship of sin, etc.

Whatever precautions the Order took to avoid all paganism and superstition, there is, nevertheless, a Buddhist magic. It was impossible to guard against the influence of the Buddhist faith, since the time could have been completely ignorant of the sun or the inferior deities; a day came when the infiltrations became "streams," when paganism—gods, rites, deities—under a thin Buddhist veneer, took the place of an original literature. Of course, we find popular magic always condemned in principle (love-rates, elixir of life, etc.). What is more serious, official worship and mysticism are permeated with Hindu elements; the sun, for instance, becomes a sacred name; this is properly speaking, what is called Tantrism (q.v.).

Among the earliest of these infiltrations we may mention:

1. In some very orthodox books of the Mahāyāna, the great value attached to the sacred texts, to the stūpas, the mere reading of which effaces sin; (2) the great value attached to sacred names (e.g., the name of Amātikā); devotion turns to superstition pure and simple; (3) the name replaced the strength of the spells. (For instance, Avalokiteśvara, represented, when carried to an extreme, by the Tibetan 'prayer-wheel'; it has been noticed that, in the Lotus of the True Law, in which there is no mention of a female deity, the formulas are made from feminine vocatives; these invocations or litanies are undoubtedly borrowed from rituals; (4) the coming of a day when the rituals received the consecration of literature, and were put at the service of the great work of identifying the faithful with the Buddha

MAGIC (Celtic).—1. Wielders of magic.—Magical rites resembling those used by other races abound in Celtic paganism. They were performed by the gods, the Taitha De Danann being later regarded as supernatural wizards, by kings (a reminiscence, perhaps, of the origin of the kingship in the magic-wielding people), and by all members of society, but, above all, by the druids as the official magical class. There is evidence that they had curing women as the earlier magic-wielding persons. The rite of agricultural and the possession...
priest in rural French parishes was believed capable of causing rain in time of drought, or of averting tempests. 2. Magic affecting human beings. — The druids could make themselves or others invisible, and this was also done by Celtic saints. 2 A spell used for this purpose, by which causing it to appear in another form to his enemy and so escaped, as well as the effect produced, was called fiadh fades (the ’wild beast’s cry’). By it he and his followers appeared as deer to their foes. 3 The power of such an incantation is said to have been used in remote parts of the W. Highlands. Still more common was the power of shape-shifting, which was also ascribed to women. The evidence of Irish texts shows that the druid could take any shape, or invest others with it, while the same power is also ascribed to divinities.

The children of Lorc became swans through the arts of their stepmother, the daughter of the god Bodh Déirc, while Oisin’s mother became a faun through the power of the druid. Fear Delchea P.W. Joyce, Old Celtic Romances, London, 1894, p. 185. F. Kennedy, Legendary Fictions of the Irish Celts, do, 1868, p. 52. The princess of Sénus could take any shape (Pompeia, ill. 0), and many tales of goddesses or women assuming the shape of birds are found in the sagas. In some instances the belief that a druid was connected with totemism is shown by tales upon eating certain animals by saying that they were human beings transformed.

3. Rilming’ people to death—a practice used by the fliad as well as by the druid—was connected with the power of the spoken word, though it may also have been used with the actual power of violence. Emotion to affect the body. It was usually the result of a satire spoken in verse to the victim; black, red, and white blotches arose on the face, and were followed, sooner or later, by decay or death. This is also probably a magical spell, and the fear of such a spell brought about the result automatically. Coirpre pronounced the first satire in Ireland upon Brés, king of the Faemorians, and many other instances occur in the texts. 5 To the power of the satirist was attributed a quelling force over nature itself. A magical sleep was also produced in different ways. Sometimes it was done by music, which produced first laughter, then tears, then sleep. These three results are uniformly ascribed to music in Irish sagas; they were brought about by Dagda’s harp, as well as by the song of the fliad. All this probably reflects the power of music upon primitive minds, especially since it is so frequently connected with religious or magical dances and orgiastic rites, in which the motion and the music produce delirium, that is, a confusion. But it may also suggest the soothing power of music. Similar magical sleep was caused by the music of divine visitors (see BLYST, A BOEDE OF THE CELTIC, §§ 2, 8). In other cases sleep was produced by a ‘drink of oblivion,’ probably some narcotic made from herbs; 4 but sometimes the effect was curious, as when Céchulhus, by the drink given him by the druids, was made to forget his fairy mistress, and his wife to forget her jealousy. Another ‘druidic sleep,’ in which the victim is made to forget or is rendered motionless, and occasionally in that state is caused to tell secrets, is of frequent occurrence, and is suggestive of hypnotism, the powers of which are well known to savage medicine-men, and may quite well have been employed by the druids. 2 The power of ‘glamour’ produced by

5. P.Col. vaux, O’Curry, p. 255.
7. P.Col. vaux, O’Curry, p. 255.

magicians, by which stones or trees seemed to be armed men and were attacked by the victim, is also strongly suggestive of hypnotic influence. It may, however, be merely the record of actual hallucinatory cases, since the ‘glamour’ in which the modern Celt believes is little else than hallucination. The druid could also turn a man into the lunar by throwing a wisp of straw at his face after saying a spell over it. 7 Even more primitive was the method of killing a person by throwing a spear into his throat, 2 or of making him fall by hitting him and sticking pins into him or placing it in running water, so that he might suffer or waste away. This image is the corn ered, still known, and used in remote Celtic regions.

4. The Airgead Druid. 3 ‘Druid’s hedge,’ was an invisible magic barrier made by the magician round an army, probably by circumambulating it sunrise and singing spells. Its effect was that the ranks could not be broken, but, if any one was bold enough to break through its power was gone, though the act usually cost the trespasser his life. 3

5. Magical rites connected with stones and trees. — The cult of stones and the sepalchral stones were the abode of the ghosts of the dead probably gave rise to many magical rites, the origin of which must be sought in remote times. Many of these are still practised, or perhaps much is incarnated in the barren woman who performs the rite. The woman sits on the stone, or slides down it, or thrusts her head or body through a hole in one of the stones, or holds the stone. Pregnant women do the same to ensure an easy delivery, or unmarried girls to procure a husband. Similar practices are used in connexion with boulders or stones which are not sepulchral, and probably these were anterior to the use of megalithic monuments. In these cases the rocks were believed to be the abode of spirits, or perhaps manifestations of the power of the Earth divinity, which gave vitality or fruitfulness; this power was to ensure an easy delivery, or unmarried girls to procure a husband.

Similar practices may have already been used by the Celts, though they necessarily adapted them to existing stones and monuments in the lands conquered by them. Other practices were the passing of sick persons three times through a holed dolmen or a weather-worn hole in a rock, to obtain strength and healing. In other cases a slit was made in an oak or ash sapling, through which the patient was passed, and the slit was then carefully closed and bound. The underlying idea is complex. The spirit of tree or stone was expected to cause healing, or there was a transference of the disease to either, or perhaps there was some idea of a new birth with renewed strength to the re-born.

Certain magical stones had the power of producing rain or wind when turned with appropriate rites, or in other cases the water in which stones of a fetish kind had been dipped procured healing when it was drunk—a method used by St Columba. Other magical rites with stones were used in cursing an enemy.

5. Schilb, 1. 334.
6. Celtic sants and magic.—Much of the magic of the druids was popularly ascribed to the saints who inhabited the lands where their influence, that is, their power was held to come from God. In the Lives of Celtic saints we find them opposing druids with their own weapons—neutralizing their magic, controlling the elements, producing rain, rendering themselves invulnerable, and providing supplies of food, and causing transformation or confusion through their curés. The popular belief in magic could not be eradicated, and they who now filled the places of the ancient priests were freely dowered by the people and by their biographers with the ancient powers.

See also CHAIRS and AMULETS (Celtic).

MAGIC (Chinese).—Magic in all its forms is a subject which has always fascinated the Chinese mind. The literature which deals with the theory and practice of magic is enormous; and, if much of this literature is wearisome to the modern reader on account of the child-like credulity of its author and the extravagance of their speculations, it is nevertheless worthy of more patient scrutiny and analysis than it has yet received from anthropologists. Their collection of facts, their authorship of books, and the existence of serious Chinese students of life and character. In this article we cannot do more than touch the fringe of a subject which derives much of its interest from the fact that a belief in magic is still a living force in the China of to-day.

There are many early references to a class of sorcerers or witches known as wu. This name is often applied to male as well as female witches, though in the more correct designation of the former is chi. The term chi is rarely found outside the old books, but the term wu (usually in such combination as wu-p'o, which means witch-wife) has persisted throughout the ages, and is still in common use. In pre-Confucian days the wu held a recognized position in the social organization of the country. They were entrusted even in the courts of kings with certain quasi-sacerdotal functions, and in public ceremonies they had stated duties to perform in connexion with divination and exorcism. Judging from the somewhat meagre accounts which we possess, we may suspect that the rites observed by the wu were in many respects identical with those practised to this day by the shamans of Central Asia and Siberia (see BURIATS, SHAMANISM). Their methods included mimetic dancing, drum-beating, chanting of mystic formulae, and trance-mediumship, and their efforts were directed towards the foretelling of the future, the conjuration of spirits, and (in general) the invocation of good influences and the expulsion of evil. In the course of ages their position gradually deteriorated. This was largely the result of the rise of Confucian culture, which always aimed at reducing every non-Confucian ideal and practice to a position of inferiority; but it was also due to the fact that many of the magical notions and methods of the wu fraternity were taken up and systematized by the Taoists. This is one of the reasons why the popular Taoism of modern times concerns itself with magic and sorcery to an extent which seems quite unwarranted by early Taoist philosophy, and why the illiterate village witches and fortune-tellers of the present day usually profess to act in co-operation with one or more of the innumerable Taoist deities, in spite of the fact that they are the sole surviving representatives of the ancient system of witchcraft.

There is reason to believe, however, that besides the officially-recognized wu there were always numerous ‘free-lance’ witches who carried on a lucrative business among the superstitions multitudes, and whose connexion with the State cult or predominant religion of the time was no more than nominal. It was probably sorcerers of this type who were aimed at in certain anti-witchcraft regulations (reminding us of Plato’s Laws, xl. 533) which we find in the Li Ki—the canonical ‘Book of Rites.’

Those who gave false reports about spirits, about seasons and days, about consultations of the tortoise-shell and stakes, so as to perplex the minds of the people, were severely punished (ib. xxviii. 257 f.). It may be added that the same fate befall inventors of ‘wonderful contrivances and extraordinary im- plementias,’ because such things raised doubts among the multitude (ib.).

But it seems that even the official wu were not always free from peril, for the very fact that they were supposed to have a mysterious controlling power over the forces of nature rendered them liable to terrible punishment if those forces seemed to be showing hostility to mankind.

In the year 683 B.C., e.g., there was a disastrous drought, and a certain reigning duke expressed his intention of dealing with the situation by burning two persons—an emaciated or deformed man and a witch. Evidently this was a familiar practice in such emergencies, and, if we take into consideration the endurance of its author and the extravagance of their speculations, it is worthwhile of more patient scrutiny and analysis than it has yet received from anthropologists. From this story it appears that the practice had been modified to the extent that the witch and deformed man were no longer burned alive, but were merely exposed to the scorching heat of the sun.

One explanation of these customs is that by burning a deformed or emaciated man, or by exposing him to the sun, the pity of the heavenly powers would be aroused, and rain would be sent to alleviate the wretched man’s sufferings; and that the same happy result would follow the burning or exposure of a witch, because a witch was a person who was able to compel spirits to descend to earth. A sounder explanation is based on the belief in the supposed interaction of the principles of yang and yin—the male and female, or active and passive, forces, which by their alternating pulsations or activities give rise to all natural phenomena. In time of drought the yang principle shows excessive activity and disturbs the harmony of nature’s processes; steps must be taken, therefore, to restore the balance of forces. The intricacies of the yang-yang-theory are necessarily bewildering to a Western reader until he has acquired some knowledge of the principles of feng-shui (q.v.); but it is this pseudo-philosophy-belief in which is slowly decaying in China. But is still true that the teaching supplies some of the most important hypotheses on which the edifice of Chinese magic has been erected.

No doubt it was only in extremely serious cases of drought that the witches were tortured or put to death. The regular method of obtaining their assistance in rain-making was to send them out, under the guidance of their official leader, the sei-wu, to perform a ritual dance. The dancing of the witches formed part of the ordinary ritual observed on the occasion of the official rain-sacrifices; and, if we may judge from similar practices in other parts of the world, the dancing partook of the nature of mimetic magic.

2 See SBE xxvii. 201. It has been suspected by commentators that the two stories refer to the same historical incident.
3 Ch’uan Li (Biot’s tr., ii. 195).
4 The ceremonial dancing of ancient China was not always magical. There were temple-dances officiated by the Chou dynasty, of which only one (the huang) had anything to do with rain-making. Ceremonial dancing is not yet extinct in China, for it still forms part of the ritual proceedings at the Confucian sacrifices. For an interesting account of the ancient Chinese dances see H. A. Giles, Aftergings Siviot, Shanghai, 1906, p. 119 f.
accompanied by music; and, if there is any truth in such ancient legends as that of King Mu (whose reign ended in 947 B.C.), we may suspect that music preceded dancing as a means of producing raves. But in the method adopted by that monarch for putting an end to the disastrous drought was to play magic music on his flute.

Many of the observances still carried out at the popular festivals in China are undoubtedly of a much more recent origin. They are intended to regulate the rainfall, to expel disease and misfortune, to ensure good harvests, and to attract good luck. communal magic of this kind is sometimes official in character, as in the case of the spring-welcoming ceremonies presided over by the local district-magistrates; but for the most part the rites are conducted by the villagers themselves, under the guidance of their own clan-committees (k'hi-shen), or headmen. Ceremonies which at one time were doubtless carried out with punctilious care and with something like religious awe have in many cases become mere village games and pastimes of which the original significance has been partially or wholly lost. Such are the lantern-dances and still-walking of the children of N. China at the full moon of the first month of the year. Few of the parish priests understand that by the skilful manipulation of their paper lanterns they are supposed to be helping and encouraging the moon to go successfully through the day and night before dawn on a certain day and cooking a dumpling which 'rises' as they are assisting nature to stimulate the dormant activities of animals and vegetation; and that in walking on stilts over ground destined to produce a crop of grain they are helping the wheat and millet to grow to their full height. It is perhaps a significant fact (when we remember the belief that the sun is played by spirits in fertility magic in other parts of the world) that many of the men and boys who take part in these festival-ceremonies are clothed for the occasion in women's garments.

Magical notions are also traceable in numerous simple acts which practically every family performs with a view to the well-being of its own members. Such are the hanging of certain plants above the doorways on certain days, the entwining of red threads in the queues of children to protect them from the demons of disease, and the affixing of pieces of scarlet cloth to the scrub-oak bushes to prevent their fruitrots and to reflect the silkworms against hurtful insects and noxious influences. At the New Year it is customary to cover the outsides of doors and windows with paper scrolls containing sage mottoes, quotations from classical and other literature, and words expressive of virtuous aims or suggestive of material prosperity. These scrolls may fairly be regarded as magic charms which will not only prevent evil from entering the house, but will attract the influences which make for good fortune and happiness. Many of the usages connected with death and burial, the ceremonial summoning of spirits to a funeral, the naming of persons by magical names are also essentially magical, though their intimate connexion with religious beliefs and observances makes it difficult to decide where magic ends and religion begins.

In China, as elsewhere, magic arts are practised for private and personal as well as for public and family purposes, and many persons who know of no formal method whereby they may bring about the fulfilment of their desires will not fail to seek the aid of magicians and witches. The witches of China have had many illustrious clients. One of them was the T'ang emperor Hsiian Tsung, who ordered certain Taoist necromancers to summon before him the shade of his dead consort, the beautiful Yang Kuei-fei. Very similar stories are told of the emperor Wu of the Han dynasty and the emperor Hsiao-Wu of the earlier Sung dynasty. As for the self-styled 'First Emperor', who reigned in the 3rd century B.C., the assertion that he consulted necromancers in his case was unnecessary, for he—like the king Solomon of Muhammadan legend—was himself a king of magicians. Returning to more recent times, mention may be made of a dowager, who died in 1908, but took steps for a time in the magical attainment of the 'Boxers'; and, though the 'Sacred Edict' of the emperor K'ang-hi bids men refrain from all kinds of heterodox teachings and practices, among which the arts of magic are included, and though in quite recent years proclamations have been issued warning the people not to allow themselves to be deceived by witches and soothsayers, it is beyond question that a belief in the reality of magic is by no means confined to the ignorant peasantry.

The official attitude towards 'black magic' (to use the convenient Western term) is clearly demonstrated in the anti-witchcraft clauses of the Penal Code of the late Manchu dynasty. The punishments inflicted on persons convicted of this crime were extremely severe, and it is not easy to add (in the words of a scholarly student of the subject) that 'the pages of Chinese history have never been stained by such a mad epidemic of witch-killing as has swept Europe and America in the seventeenth century.'

As recently as the summer of 1914 an alleged case of 'black magic' occurred in the territory of Wei-hai-wei, at present administered by Great Britain. The inhabitants of a certain village approached one of the British Courts with a petition in which they complained that a fellow-villager 'had been possessed by an evil spirit,' which resided in his head. It was stated that he had quarreled with the village headman, and had foretold the headman's death. 'And sure enough,' they said, 'the headman died, though there was nothing whatever the matter with him.' Two or three other enemies of the accused subsequently died in the same mysterious way; and, to crown all, a villager, on going to the shrine of the guardian-spirit of the village, discovered there a slip of paper on which were written, in the accused's handwriting, the names of various people with whom he was known to be on bad terms. This discovery created a panic among the villagers, who took it for granted that the list comprised the names of all those unfortunate persons whom the wizard had condemned to a speedy death. They therefore seized him and brought him before the magistrate, and we are told in this article, who is in his magisterial capacity had to perform the somewhat delicate task of disentangling between real and imaginary wrongs.

From the point of view of the student of magic, the special interest of this particular case centres in the unexpected part played by the tutelary deity of the village. Here, it would appear, we have an instructive example of the intermingling of religion and magic, and the junction seems to have been brought about in this way. One of the principal functions of the t'ou-ti, or village deity, is to receive the spirits of the newly dead and to act as their spiritual friend and guardian. Each village has its own little shrine dedicated to the local deity, and this shrine usually stands by the road or some place of resort of all the villagers. When a villager dies, the members of his family go in procession to the t'ou-ti shrine to make a formal announcement of the death, in order that the deity may take arrangements for the reception of the dead man's spirit. Now, at first sight, there seems to be no obvious reason why an
Magic (Chinese)

expert in black magic who wishes to bring about the death of his enemies should expect the t'un-ti—who is regarded as friendly to men and interested in their welfare—to give him help and countenance in carrying out his nefarious designs against his adversaries. We may therefore place in a list of the names of his intended victims on the little stone altar of the village t'un-ti? The theory seems to be that, when the t'un-ti receives the name, it will assume itself that the persons bearing those names are already dead, and will make preparations in the under-world for the reception of their souls. These preparations will act with a powerful attractive force. It is believed that this will create in them an irresistible inclination to sever their connexion with their respective bodies. The non-arrival in the under world of the spirits of persons whose death had already been announced in a formal manner would cause bewilderment to the well-meaning t'un-ti, and perhaps arouse its wrath; and, as it is strongly advisable, in the interests of the community in general, to ‘save the face’ of the t'un-ti and maintain friendly relations with him, the only reasonable course for the spirits in question to adopt is to bow to the inevitable and remain in the premature loss of their physical bodies.

Magical and semi-religious theories of this kind are hardly likely to find Western parallels; but many of the ordinary magical practices of the Chinese seem to fall into the category of forms of sympathetic and mimetic magic with which we are familiar in Europe.

The great artist, Ku K'ai-chih (4th cent. of our era), one of whose paintings is among the most treasured artistic possessions of the British Museum, was himself a graduate in magic. When he painted the portrait of a girl whom he loved, he drew her portrait, and in the place where the heart should be he stuck a thorn. Thereupon the girl, who knew nothing of the portrait and the thorn, fell on her knees and kissed the portrait, and in the place in her countenance which the heart occupied, there sprang a thorn which, after she had kissed it, caused her to bleed profusely, so that she died of the bleeding, with the portrait in her hand. This is surely a magic conception, though not a very well-organized affair, for the purposes of magic.

That many of the poets and artists of China have been credited with a knowledge of magic is no matter for surprise when we know how frequently their passionate love of wild nature brought them into contact with the Buddhists and Taoists. The artists’ favourite mountain-dwelling-places have always been the caves and forests and ravines of the mysterious mountains. These mountain-dwelling ascetics have been for ages regarded by the Chinese as possessing occult secrets of various kinds, and, though their disciples and biographers endowed them with faculties which they never possessed and which the best of them never pretended to possess, it is highly probable that there were some who, in the course of their own heart-searchings and their solitary communings with nature, not only made valuable discoveries as to the properties of plants and herbs, but were also successful pioneers in various untrdden fields of psychology and mysticism. To some extent, at least, the popular belief in their supernatural capacities and attainments was justified.

When Buddhism first came to China, and for some centuries afterwards, the relations between Buddhists and Taoists were often strained to breaking point. The victories of the Buddhists—If we may credit the Buddhist historians and biographers—were often brought about by miraculous occurrences which non-Buddhists would perhaps describe as magic if not as mere conjuring tricks. But, in some cases, to draw a distinction between miracles and magic. A miracle, as F. S. Hartland remarks, is ‘legitimate magic,’ while magic is ‘a forbidden miracle.’ However this may be, many of the marvellous doings attributed to Buddhist monks and hermits bear a close resemblance to those recorded of Christian saints. But we know from the earliest Buddhist scriptures that the brethren were not encouraged to engage in magical operations, and that was certainly not by the help of miracles or of magic that the Buddhists achieved their most substantial successes in China. The Taoists, however, did not scruple to employ such operations as would yield forms of magic and sorcery, and it is their fatal readiness to meet the popular demand for signs and wonders that is largely answerable for their present degeneration (see TAOISM). If we had space to deal with matters of detail, it would be necessary to describe the various magical uses made of plants and animals and also of manufactured articles such as metal mirrors and weapons. An authority has stated (see EB 11 viii. 577) that magic mirrors are mentioned in Chinese literature of the 9th cent.; but they are mentioned and their uses fully described much earlier than that. The curious book known as Pao Po-i-tzii, which was written by the famous wizard Ko Hung in the 4th cent. of our era, contains full accounts of how to detect the presence of evil demons and other spirits by the use of magic mirrors. The belief once prevalent in the British Isles that a witch could turn herself into a hare is paralleled by the Far Eastern belief (still extremely common in China) that demon-witches can change themselves into birds, butterflies, and other beasts. A book could be filled with the magical notions and theories which in China are based on the habits and peculiarities of animals. Even insects are not exempt from the necessity of making a contribution to the treasury of magical lore. There is in China a destructive little insect known to Europeans as the silver-fish (Leptisma saccharina), which is a most unwelcome visitor to libraries. It is believed that, if one of these insects gets into a Taoist classic and eats the two characters shên-hsin ("spiritual-immortal"), its silverly body will become five-coloured. If the coloured insect be subsequently caught and eaten, the man who eats it will have the happiness of attaining the goal of Taoist ambition—he will overcome death and develop into a spiritual being.

As to trees, plant-fanciers and gardeners believed to possess some magical property or to be adaptable to magical uses. The cypress, pine, and similar trees are supposed to be conducive to immortality, and various kinds of herbs, the principal of which was the hemic, was in the habit of sleeping on a bed of pine-needles, we may be sure that this was not done merely as a means of mortifying the flesh. The willow is much used as a rain-charm. In times of drought in Shansi and neighbouring provinces adults and children may be seen going about with willow-wreaths on their heads. The peach-tree is famous for its magical properties, and for this reason peach-twig and peach-blossom are frequently mentioned in Chinese fairy-lore. The use of peachwood for the exorcism of evil spirits is very ancient, for the brandishing of peach-wands was a part of the prescribed procedure of the imperial examination at royal courts under the Ch'in kings and probably at a much earlier date.

That large and important subdivision of Chinese magic which concerns itself with charms and amulets and invocation is dealt with elsewhere (see Literature below). Here it must suffice to mention that the principal purveyor of charms is

1 Ritual and Belief, London, 1914, p. 84.
2 Pig's full cheek is likkle, p. 73. (in pamphlet de Groot, Religious System of China, iv. 162.) see also art. LIEUTENANT.
the 'Celestial Master'—usually described by Europeans as 'the Taotist pope'—who lives among the Dragon-Tiger Mountains in the province of Kiang Si; or deriving magic lore largely in the hands of Taotist specialists and shu-pao; but Confucianism has always had under its patronage the complex systems of divination which are based on that ancient classic the I King, or 'Book of Changes' (SBE XVI.). There is a grass known as zhih-tiao which grows on the grave of Confucius and is carefully gathered and put into vials; the dried stalks of this plant are believed to retain some of the ling, or spiritual efficacy, which lies latent in the sacred soil, and they are or were highly valued for divining purposes. For years a very interesting discovery of 'oracle bones' and tortoise-shell fragments was made in the province of Honan. They are believed (mainly on the evidence of the archaic script) to belong to the 12th cent. B.C., though certain authorities assign some of them to a somewhat later period. An inspection of these fragments throws a most welcome light on the classical and post-classical references to the ancient methods of forerun and astrology.

Divination by the tortoise-shell and by the dried stalks of certain plants 'were the methods by which the ancient sages learned the future; because they believe in sacred days and days, revealed spiritual helps, stand in awe of their laws and orders; the medicine and divination get their operations, their plexities and settle their misgivings' (Li Ki, i. 5. 5. 37 [SBE XXVII]).

The forms of magic which are or were popularly supposed to be associated with astrology and palmistry, and with automatic writing, telepathy, clairvoyance, and 'possession' by gods or demons, are too ample for the present, and there is good reason to believe that any society for 'psychic research' which showed itself enterprising enough to conduct some patient investigations on Chinese soil would be rewarded by interesting and perhaps valuable results.

LITERATURE.—The subject of magic and allied topics is exhaustively dealt with in J. J. M. de Groot, The Religious System of China, London, 1902, esp. vols. v. and vi. E. Blois's Fr. tr. of the Chou Li (Le Tchou-Li, Paris, 1851) should be consulted for information regarding the official standing and functions of the shu (see esp. ii. 70-74). There are many references to magic and mystery—some of them shrewdly critical—in Wang Ch'ing, Jen Hsing, an Eng. tr. of which (by A. Forbes) has appeared in two parts (pt. I, London, 1897; pt. II, Bombay, 1897); also in Li Jen, Hui Deng t'ien, ts'ao-ml, 1861, 72, and SBE vii. [1858], xxvii. [1885], xxviii. [1886], and xxxix. [1891], and XL [1891], English readers will find all the references to magic and mystery in the text amply discussed in the above article. Students of the subject will also do well to consult the following: H. F. Blodget, Chinese Traditions, Shanghai, 1911 (Voritza sinnologicae, no. 22), and L. ویگر, Folklore chinoise moderne, Paris, 1909. From a more popular point of view the subject of Chinese magic has been dealt with in N. B. Denny, Folklore of China, London, 1876, and F. E. Bates, The Magic and Mystery of China, London, 1894. Interesting sidelights on popular actions of magic can be gathered from the collection of stories known as the Liu Ch'iu, tr. H. A. Giles, under the title Strange Stories from a Chinese Studio, London, 1899, new ed., Shanghai, 1908. The Chinese literature dealing with the subject from every conceivable point of view is voluminous, and hitherto only fragments of it have been translated. Good Chinese bibliographies will be found in the works of de Groot, de Boe, and Wigger referred to.

K. P. JOHNSON.

MAGIC (Egyptian)—I. The Egyptian view of magic.—If the Egyptians had been more self-analytic than they actually were, they might, from their own point of view, have described all their actions as either original or magical. By original action we understand the various modes of coping with inanimate things and living beings which were suggested by habit, mother wit,

1 See, e.g., various passages in the I King, Shu King, LI KI, and Shang Kung's Commentaries on the Shang Kung. A very good account of the way to catch crocodiles (e.g., Book of the Dead, tr. E. A. W. Budge, London, 1898, ch. xxxvii) is to be found in BAS (North China Branch) xiv. (1914) 661.
MAGIC (Egyptian)

From the Egyptian point of view we may say that there was no such thing as 'religion'; there was only magic, i.e., the equivalent of which is 'magical power.' The universe being populated by three homogeneous groups of beings—the gods, the dead, and living human persons—their actions, whether ethical or unethical, or used for or against one group and another, were either ordinary or uncaney (hike). The gods and the dead were somewhat uncaney themselves, so that all dealings with them or performed by them were more or less hike. It was only when men treated them ordinarily, and as man to man, that this quality of hike was reduced to a minimum, as in the case of spontaneous prayer and the letters to the dead— in fact, in those rare instances where the solemn phraseology of ritual was avoided.

3. Magic defined for Egyptian purposes as privata religio.—We shall hardly be able to avoid rendering the English words 'magic' or 'magical power'; but, if the Egyptian conception of hike be taken as the criterion of what is magical and what is not, we shall have little or no use for the word 'religion,' and a multitude of forms and conditions for which we cannot naturally describe as 'religious' will fall under the head of 'magic.' It is advisable, therefore, in defining 'magic' for Egyptian purposes, to strike a compromise between the Egyptian connotation of hike and the English connotation of 'magic.' Taking our cue from the former, we shall restrict the sense of 'magic' to those actions which clearly have the implications of mystery and the miraculous; at the same time we shall attempt to maintain the distinction between magic and religion, or, rather, between magic and other kinds of religious acts and formally in accordance with the practical of Egyptologists, instinctively adopted but inconsistently carried out, to contrast 'magic' with the 'cult of the dead' and the 'cult of the gods,' as referring exclusively to those rites which dwell in the temples of the dead and the instance almost at the advantage of living human beings, the cults of the dead and of the gods being this division implicitly classed together as 'religion.' Magical acts are those performed by or for men, as those actions which men performed for their own benefit or for the benefit of other living men, and which demanded certain miraculous powers for their performance. Variously arrayed against two misconceptions: in the first place, it must be clearly understood that the gods and the dead may, as indeed they usually do, enter into the dynamic processes of the magical rite; the principle of division is that of 'de quo' but not 'enfome'; in the second place, magic as thus defined did not differ essentially in its mechanism from the cults of the dead and of the gods, nor was it necessarily regarded with any such awe as that of the latter.

For a similar definition see A. H. Gardiner, 'Notes on Egyptian Magic,' in Two, Third Internatl. Congr., Hist. Rel., Oxford, 1908, i. 208-210. Erman ("Egyptische Religione," Berlin, 1869), though forming a very different estimate of magic from that here adopted, accepts the same tripartite division of the active aspect of religion into Gotterkultus, Totenkultus, and Zauberkultus. Magic as thus defined has a whole native literature of its own; various hieratic papyri in Leyden, Turin, London, Berlin, Cairo, Rome, Vienna, and elsewhere, mostly dating from the New Kingdom; several similar papers of the Middle Kingdom, in the Kansensu find of 1869, still unpublished and in the writer's hands; numerous ostraca in various collections. Besides these there must be named the medico-magical papyri (see art., DOREAU and MERCURIE [Egyptian]); and the so-called Omp of Horus, of which the type is the Metternich Side (ed. v. Gollmisch, Leipzig, 1877).

The abstract concept of hike is once or twice found described in the Pyramid Texts as resembling neither the restricted meaning assigned to 'magic' in this section. Two physicians of the Old Kingdom bear, besides the honorific title 'priest of Horus in Hundred-towns' (whence cigar'), and such men as Mariette, Les Moutons de l'ancien empire, Paris, 1889, p. 96; R. Lepsius, Denkmaler, Berlin, 1849-58, ii. 91a.)

The defined concept of hike is figured in the form of a man in some sculptures of the Vth dyn. (L. Borchardt, Das Grabmaleont des Königs Sekhem, Leipzig, 1914, ii. pl. 50), and in the occasional occurrence also in the human form of Hapi, the Egyptian name for the god of those maladies; and the same general similarity also runs through the old chronicle of the annals of the Pharaohs and the Egyptian History (see A. Mori, La Rituale du culte divin journalist in Egypte, Paris, 1909).

4. The purposes of magic.—In theory the domain of magic was as wide as men's desires themselves, magical art supplying all those things that were not procurable by simpler means. Our existing materials, which illustrate only a limited number of purposes, are probably very one-sided. The Egyptians believed, or feigned to believe, that their wizards could work all kinds of wonders; in a late tale a charm is made to bring the viceroy of Ethiopia up to Egypt, to the place where Pharaoh dwells, where he is to be beaten with five hundred blows with the stick, and also humiliate the land of Ethiopia again, 'all in six hours thither' (Griffith, Stories of the High Priests, p. 59). It is said to have been related at the court of Cheops how one magician could not only give devoured an adulterer, how another parted the waters of a lake into which a jewel had accidentally fallen, and how a third cut off a goose's head and replaced it in a twinkling (Erman, Die Münzen des Papyri Westcar, Berlin, 1891, i. 8 f.). The magical contest of Moses with Jannes and Jambres (Ex 7-2, 2 Ti 3) is this quite Egyptian in spirit. Passing from such fabulous reports to practical magic, we may classify the above uses under a comparatively small number of heads:

1. DEFEATING.—How important this class was may be judged from the fact that the most and common usage is 'down' (ib.) is said to have 'made magical spells for men for defence against things that happened' (P. Petersch, 1120 A ed. Gollmisch, Petersburg, 1871, p. 112).

(1) Prophetica.—To avert death, W. Pluete and F. Rossi, Papyrus of Theban Ebers, 1925-26, pl. 45b: 10; C. De Witte, Geschichte und Myth. London, 1857, pl. 25f; and against sorceries, Pop. Turin, 123; Pop. Leyden, 122; and 'all long-tailed animals that eat flesh and drink blood,' the Papyrus magica Harris (ed. F. J. Chabas, Chalculon-sur-Saône, 1861; also DODD, Egyptische Lieutenante Papyri, pl. 100 and crocodiles and other dangers of the river, such as drowning, ib. recta; against soakers, L. Stern, Papyrus Ebers, Leipzig, 1875, pl. 97, 17.}
The magic which was rejoining, the hearts of multitudes grieveth for it; Horus has slain it by his magic. He who murdered is to stay. Stand up, Osiris, and he who would protest is taken by force to life. He who came as one is carried forth of himself, Horus has slain him. They are consigned upon the earth. All men, when they behold Ra, praise the son of Osiris. Turn back, thou maketh, confused art thou which poison was in any limb of the son of Ra. Behold, the magic of the garment of life hath been performed. The poison, come forth upon the ground.

To be recorded—Two hands with the two feathers on its head, being made of topwood and painted. Open its mouth and offer to let it break all bonds and incense. Fill two vessels, one suffering from the bite of any maket and rectify from beginning. It will repeat the poison. A successful epoch! (Pap. Turin, 251, 3. and in Berlin, 1385-8.)

7. Analysis of the magical rite. —Except in certain border-line cases (prognostics, medical treatment, etc.), the magical rite is always two-fold and consists of an oral rite, consisting of certain words to be recited, and (2) a manual rite, consisting of certain actions to be performed. These two portions must be discussed in detail.

(1) The oral rite. —The task that lay before the magician was to entitle the text to effectiveness, the difficulty, which might consequently be regarded as a hostile and aggressive force. This force is not always completely personified, but more often than not it is treated personally, being commanded, persuaded, cajoled, warned, threatened, or cursed, just like a human being.

A leading idea in defensive magic, which embraces no small part of our modern superstitions, is that magic antagonists are often enumerated in a long ransom—a, the souls of a god, the souls of a goddess, the souls of a man, the souls of a female, the souls of a female, the souls of a dead man, the souls of a dead woman, etc. (Pap. 30, 12); the enemy male or female, dead man male or female, adversary male or female (Pap. Turin, 222, 5). Any god could doubles the attack human. As a result, the savage or malicious delle, like that, the murder of Osiris, or Sakinum, the ‘lady of pestilence’ (ad - dib), was doubtless most to be feared. The dead were specially to be his enemies, being the cause of his unhappy or embittered that might torment the living, for the magician sometimes warms them that their tombs are endangering (Zauberpruiche, recto 8, 7-9; Pap. 12, 18, 13). The possessing spirit was particularly likely to be of foreign origin, a negro or an Egyptian, the tombs of which he might discover, 8-10; and it was wont to come secretly, arriving in darkness, gliding in, its nose backwards and its face turned (4, 1, 94). Its mode of taking possession is, as a rule, vague; the ‘demon’ or ‘Gh, Bohrohe [2] doubtless often dwell with or in the afflicted one (Robben Steele, 11, 19 = Budge, Egyptian Reading Book, London, 1935, p. 271), but sometimes it was protected some kind of poison, such as its semen, urine, or the like (Pap. Leyden, 656, verso 6, 61; cf. especially the word ‘Whe’ in Ebers, 24, 34, 10, etc.). Or else, again, the hostile power might attack with arrows (Pap. Leyden 656, 1, 5). The evil influences were most easily eradiated through the excercises of the spell, such as the sweat or urine (Zauberpruiche, recto 2, 8-10); or they might come out in the shape of winds (Pap. Leyden 656, verso 12, 9). All the members of the body were subject to attacks of the kind, whence their frequent enumeration in magical texts (see below); here they are classified under the rubric called upon as a subject of comment and venom forth, which is in them (Pap. Leyden 656, verso 2, 2, 12-14).

The malignant force was sometimes merely informed of its defeat:

* Thou flyest before the sorcerer, before the servant of Horus, as soon as he mentions the named Horus, or the name of Seth, the lord of heaven. He seizes his scissors, and smitest thy foreman and thy heart. Thou fallst upon the ground on which thou lovest to spend, and thou requistest thy heart. So dost thou die, and the prophet forth to the house of Ra! that Horus has conquered the disease (Pap. Leyden 656, verso 2, 2, 12-14).

Sometimes the magician frustrates the aims of the enemy by a simple voto:

* Dost thou come to kiss this child? I suffer thee not to kiss it (Zauberpruiche, verso 2, 1)."

Elsewhere, as in the example quoted in § 6, the poison is bidon to flow forth upon the earth. Warnings frequently supplemented and reinforced such commands as this:

* Fall not upon his tongue; it is a serpent at the mouth of its hole (Zauberpruiche, verso 2, 11, in the midst of a long series of similar phrases.)

Commands and warnings falling in their effect, a more persuasive means is tried:

* Come, lay thee down, departing to the place where thy
beauteous women are, on whose hair is nayrth, and fresh incense on their shoulders (Zauber-Wörterbücher, recto 3. 5–6).

Or else the demon is made to understand that in delaying too long he holds the whole order of nature in suspense: "Rē' waits for thee in order to shine, and Atom to set, that then mayest quit the arm of N son of M" (Pap. Leyden 254, verso 4. 2–4).

In the last resort curses are employed:

"Every god curses thee, every goddess curses thee. ... The goddess Eunund curses thee, the Little Eunund curses thee (Pap. Leyden 254, verso 1. 1–2).

It often happens, indeed almost in every spell, that gods are taken sides to the sorcerer's(1) aid. They are involved with salvations and praises:

"Hail to thee, Horus, thou art in the town of Hundreds, thou sharp-horned one, whoショクed to the mark. ... I come to thee, I praise thy beauty; destroy thou the evil that is in my limbs" (Pap. Leyden 251, 3. 10–13).

A trait characteristic of Egyptian magic noted Origen of Lycaon (ed. G. Parthey, Berlin, 1857, p. 245) is the threatening tone often adopted towards the gods; examples are very common:

"On the night that the wife of Horus (Sobk, the serpent god) was near to die, I suffer not the Nile to best upon its bank, I suffer not the sun to shine upon the earth, I suffer not the heat o' the day, and I suffer not to be kept by the beer of the gods, who are hungry by both day and night—on that night of the burial of Osiris" (Pap. Turin, 137. 1–4).

The most daring menace of all is the following:

"I will throw fire into Baalz and burn up Osiris" (Pap. Turin, 135. 10; ed. Ehres, 39, 8).

On such occasions the magician is apt to disclaim his responsibility:

"It is not I who say it, it is not I who repeat it; it is Isis who says it, it is Isis who repeats it" (Pap. Leyden 256, recto 11. 7; Pap. Turin, 136. 8–9; Pap. mag. Harris, 9. 11). Elsewhere the gods are referred to in the third person, and the more numerous they are, the more ominous the threat. Thus it is likely to be seen, that as the limbs of the body are enumerated,2 it often happens that each separate limb is identified with, or said to belong to, some special deity; and the last ends with the words:

"There is no limb of his without a god" (Pap. Leyden 258, verso 6. 2).

"Avast thou, for I am Horus; retire thou, for I am the son of Osiris. The magic of my mother is the protection of my limbs" (Heart medical Papysus, 11. 41.)

At other times he merely claims to be 'the servant of Horus' (Pap. Leyden 345, verso F 1; Pap. Turin, 134. 1).

Often a mythical precedent was alluded to or narrated at length, and the mere mention of a parallel case seems to have been considered a usefull expedient for ensuring the success of the rite. Thus the magician declares:

"I will banish all bad and evil things which come to fall upon M the son of M, even as Rē' saved himself from his enemies, even as Khnum saved himself from Loke, even as Horus saved himself from Seth, and even as Thoth saved himself from Beh3" (Pap. Turin, 118. 9–10).

More often the point of the narrative is merely implied; in the following short incantation against burns even the names of the interlocutors, namely a messenger and a magically efficacious messenger, are left out:

"'Try so Horus has been burnt in the desert.' "Is water there?" "There is no water there. "There is water in my mouth, and a Nile and a Jordan, I give thee a magical fire" (Ebers, 60. 3–4; see H. Schäfer, in ZA xxxvi. (1895) 159–151).

Many valuable fragments of myths have been preserved to us by these means.

Especially frequent are tales that turn upon the revelation of the true name of a god; a well-known instance is the story of how Isis devised a stratagem by which the sin-god Rē' should be compelled to divulge his name; this she brought about by causing him to receive a small little which might could care save herself (Pap. Turin, 131–133).

Less well known is the narrative of the attempts made by Seth to provoke Horus into betraying his real name, which would have given the mischievous god power over his nephew; Horus, however, invents various absurd names, and so manages to elude his wicked uncle (Pap. Turin, 134 f.).

The importance of names in Egyptian magic was very considerable; the knowledge of names gave control, whether for good or for evil. It was not a rare proverb that 'a man lives who is concealed by his name' (Pap. Turin, 137. 9, etc.). Thus to be familiar with the names of the epagomenal days (Pap. Leyden 329, 2. 6) was a safe method of protecting oneself against their perils. This is a topic that might be greatly elaborated (see art. NAMES [Egyptian]).

Closely akin to the question of the importance of names is that of the importance of language. Certain formulae were supposed to possess particular efficacy, such as the words 'Protection behind, a protection that comes, a protection!' (Zauber-Wörterbücher, recto 9, 2). The magical potency of anything depends in a large degree on its mysteriousness, and it is therefore not at all surprising that cabalistic gibberish (Pap. mag. Harris, verso C) and foreign spells were held in high esteem (Der Londoner mythologische Papysus, ed. W. Weszinski, Leipzig, 1912, nos. 27, 28, 32, the last being in the Kafi language).

The significance attached to names and language is an aspect of the doctrine of sympathy, by far the most fertile conception of all those underlying the magical rite. This doctrine, which gives to things that have once been associated in any way remain henceforth connected and almost interchangeable for practical purposes; its chief varieties are (1) the principle of contiguity, which affirms that things that belong together or have once been in contact continue to influence one another even when separated; and (2) the principle of homoeopathy, according to which like has special power to affect like. These and other forms of sympathetic magic not so easily classified are of constant recurrence in the Egyptian magical books, both in the oral and in the manual rites; the recital of mythical precepts also clearly comes under this head. The very idea of the oral rite is an instance of homeopathic magic, for language may be said to imitate and image the things which it expresses, and in so doing verbal references to a desired effect may have been considered instrumental in producing it.

Sympathetic magic takes curious forms at times; one or two instances may be singled out. In connection with the importance of language reference may be made to the suggestion of the magician that:

"I make a charm for him against the 'afri-plant, which does injury, of which a leaf destroys the beast, which is sweet to men and sour to the dead" (Zauber-Wörterbücher, recto 7. 4).

The virtues here ascribed to the 'afri-plant and to honey are of obscure origin, but the destructive

---

1 For similar examples from the funerary books see H. Grabow, ZA xlix. (1911) 45–54.
2 See Erman's remarks, Zauber-Wörterbücher, p. 23.
property of onions is clearly due to the fact that the Egyptian word for onions was ḫḏḏy (the vowel is merely guessed), while 'to destroy' was ḫḏḏw. In order to tell whether a five-month-old infant would live or not, the following incantation is to be recited:

"If it says yes, that means it will live; if it says no, that means it will die" (Ebers, 97, 13).

The sound ḫḏḏy resembles the emphatic Egyptian conjunction for 'no' (see Za xlv. [1907] 182).

A widely different example of the supposed influence of like upon like is illustrated by the following words, addressed to a demon that is causing sickness:

"Thy head has no power over his head, thy arms have no power over his arms, thy legs have no power over his legs" (A. H. Gardner, I. O. Miles, and H. Thompsett, Thothian ostraca, London, 1914, p. 144).

A conditional curse that runs upon similar lines may also be quoted:

"If he is dead to this decree, may Osiris provide, may Isis pursue his wife, and Horus pursue his children" (H. Sottas, Description des papyrus funéraires, Paris, 1912, p. 125).

The mystical potency attaching to certain numbers doubtless originated in associations of thought that to us are obscure. The number seven, in Egyptian magic, was regarded as particularly efficacious where final curses are to be pronounced to the seven Hathors (Pap. med. Berlin, 21, 8; Pap. Turin, 157, 12; cf. ἡ ἑκάστη θεά ἔχει ὁμορροφίαν [A. Dieterich, Eine Mithridatargurie, Leipzig, 1910, p. 71]):

seven days must be observed, seven times and seven. Additional words were added to some of the seventh knots in their seven books (Pap. Turin, 159, 141); and, similarly, we read of:

"the seven hawks who are in front of the barque of Rē" (ib. 136, 5).

Oral rites have occasionally to be recited seven times (ib. 138, 9, 10), but the more usual number is four (Pap. Leyden 348, verso 3, 5, 4, 10, etc.; Pap. Turin, 29, 6, 11, 1, 7, 4), a number doubtless associated with the 'four pillars of heaven' (ὁ ἕκτωρ στροφῶν [Dieterich, p. 71]), or, as we should say, the four cardinal points.

A characteristic feature of the oral rite is its complexity. This is shown in various ways, and not least in the love manifested for enumerations. Reference has been made to the long lists of parts of the body, and to the formulae naming all the possible enemies from whom attacks are to be feared. Similarly, lists are found of the various ways in which a man might meet his death (Pap. Turin, 130, 123; Pap. Petrie, Gisch and Rifsh, pl. 27 c); and of the various exorcisms through which the demon might transmit his baneful influence (Pap. Leyden 345, verso 6, ff.). This quasi-legal tautology is to be explained partly by the desire to cover all eventualities, and partly by the necessity of compelling respect for the learning and skill of the magician.

(2) The manual rites.—(a) Active elements.—The employment of images played an important part in the ancient side of magic. Sometimes it is the hostile power to be destroyed that is thus counterfeited and done to death; so, in the Book of Overthrowing Apophis, the words of the oral rite are:

"to be recited over as Apophis made of wax or drawn on a new sheet of papyrus and thrown into the fire" (30, 29; cf. 22).

More often the object imitated represented a means of effecting the purpose of the rite.

Thus in a spell to assist childbirth there was made 'a dwarf of clay to be placed on the forehead of the woman who is giving birth' (Pap. Leyden 340, recto 12, 6).

Miniature hands, seals, and crocodiles were powerful to ward off evil, doubtless by playing it, sending it up, or devoring it (Zaubersprüche, verso 2, 4; cf. Za xxxix. [1901] 87). A great number of the amulets found in such abundance in Egypt is the evidence of a magical nature, all, indeed, except those whose purpose was exclusively funerary. Like the images mentioned above, amulets can, if explicable at all, always be interpreted by the principle of sympathetic magic in one or other of its various forms (see Pettit, Amulets, in 1914).

The materials of which such images and amulets should be made are nearly always specified, and it is evident that this was considered a matter of vital importance. Here we meet with a new aspect of sympathetic magic, namely the doctrine of properties; every plant, stone, metal, and colour possessed its own peculiar virtue, which prompted its use in the diverse cases. Wax and clay were very commonly employed, and perhaps not only because they were easy of manipulation; their plasticity may have been thought symbolic of a wide adaptability. Astrological myths assign a divine origin to various substances; thus the bees that supply the wax are said to have sprung from tears shed by Rē (Pap. Salt 335, 2, 5-6, [unpublished]), and the cedar-tree emanated from the sweat of Osiris (ZA xlvii. [1910] 71).

Images were not immediately potent of themselves, but had to be charged with magical power in one way or another. The oral rite is usually recited over them (ὁ μὲν ἀριθμόν πάσην, and this transitory element of magical magic seems to have sustained their continuous efficacy.

A fabulous story the magician: Her, the son of Pa-nehe, made a lithe image of four hearers and provided writing upon them, gave them breath of respiration, and made them live' (Erman, Stücke, Leipzig, 1899, p. 87).

Elsewhere the ceremony of 'opening the mouth,' familiar from the funerary ritual, was performed over the magical figure (Pap. Turin, 151, 7), and offerings and incense were presented to it in token of its power animating condition (ib.; Pap. Leyden 346, 2, 3). Drawings upon papyrus or rag were treated in exactly the same way, and seem to have been equally effective (Pap. Leyden 346, 4b; Pap. Turin, 51, 7, 3); or the figures of the gods whose help was invoked could be sketched on the patient's hand, and licked off by some one (Pap. Turin, 6b). At times the mediating image could be dispensed with; the magician pronounced his spell, and then spat on the diseased limb (Ebers, 30, 17).

Magically charged amulets, images, or beads were often attached to the person whom they were designed to protect or locales; some kind of contact was a prime necessity of Egyptian magic; e.g., we read of spells that were fastened to the left foot (Pap. Leyden 345, verso 4, 3); but the neck was actually the spot where magic images were worn (Zaubersprüche, recto 1, 3, 8, 3, and passion). The string or strip of rag employed for this purpose was usually tied into magical knots (gυμένα), seven being the favourite number. Such knotted strings have often been found and are to be seen in many collections (Erman, Zaubersprüche, p. 31). In other lands than Egypt the idea of the magical knot is frequently to 'bind' the hostile force; but, though references to binding demons can be found in Egyptian magical texts (Pap. mag. Harris, verso A 9), it is not in connexion with knots. One view that seems to have been taken of the knot was that, whatever were obstacles, as e., in the following words put into the mouth of a magician:

"If the patient is between these seven knots, which Horus has made on his body, I will not allow the sun to shine," etc. (Pap. Turin, 158, 8).

Particularly interesting is a spell where twelve gods were invoked.

These were drawn 'on a rag of fine linen to be tied into twelve knots, and fastened to them bread, but it has no effect. To be placed on the neck of a man' (Pap. Leyden 346, 2, 3).

Here evidently each knot was put under the guardianship of a special deity, and thus formed a divinely warded protection between the malignant influence and its possible victim.
Initiative or significant actions were frequently performed with the apparatus of the magical rite; we have seen how a waxen image of Apophis was thrown into the fire and destroyed, and similar cases could be multiplied.

At this point may be mentioned the composite stele known as Clêp of Horus; these are of comparatively late date (fact that medicine and after), and are covered with magical texts of the kind described above, and with sculptured figures, chief among which is the figure of Horus with his feet on which stele. So often, have been placed in buildings for their protection, and especially to rid them of snakes and scorpions (see Golenischeff, Metternichstele; G. Daressy, Textes et destins monopoles, Cairo, 1903).

Magical rites could not be performed at any time and under any conditions, but strict rules and restrictions had to be observed. Of these some, like the injunction to the magician to stand "with his face to the East" (Pap. Leyden 347, 12. 10), are of so many different types that they elude classification. Times and seasons, like every other aspect of Egyptian life, have their own specific properties; some days were lucky and others unlucky, in part at least through mythological associations (for such calendars on papyri see art. CALENDAR [Egyptian], § 2). Such considerations had to be borne in mind with magical accounts, where magical rites were concerned, and perhaps more attention was paid to the question of time than is indicated in the brief instructions usually given as to the performance of the manual rites.

Of one spell we learn that it had to be recited "at even tide, when the sun is setting" (Zauberprints, verso 3. 7); in another case seven knots have to be tied, "one in the morning, and another in the evening, until seven knots are complete" (Zauberprints, verso 3. 5).

Magical rites were also in demand for safeguarding men against dangerous periods of the year. plannations, it explains by superstitions reasons. So far as medicine was practised without a sense of mystery and without making appeals to faith, it was the work of the latter but, wherever there was consciousness of its exceptional, occult nature, it might be said to lapse back into the domain of magic. Egyptian medical incantations are best known in its physical and logical speculations; the *materi media*, on the other hand, remained permanently under the influence of magical conceptions.

The Egyptian alchemic treatise quoted by Maspero (PSBA xiii. (1891) 502) exactly defines the difference between the physician (sensu) and the practitioner of magic. The former exercises his functions as a physician, 'mechanically and by book,' while the latter is a 'priest' (papésis), 'acting through his own religious feeling' (διὰ τῆς ἰδιαὶς ἰδεῶν καὶ τῶν). There appears to be no common word for 'magician' (σεμ, 'charmer,' e.g., in Ebers, 99, 3, is very rare), and magicians certainly formed no caste of their own. It is in accordance with the homogeneity of religion and magic emphasized above (§ 2) that the priests should have been the chief repositories of magical knowledge, and particularly those priests whose function was to be versed in the sacred writings. The subjects of many of the books kept in the libraries of the temples could not be described otherwise than as magical (see H. Brugsch, Aegyptologie, Leipzig, 1889-90, p. 156; cf. Clem. Alex. Strom. vi. 263). The 'lector-priest' (chrest-kos) is specifically known as one versed in the sacred incantations (Pop. med. Berlin, s. 10), as having discovered important incantations (Pop. med. London, s. 12), and as being endowed with the gift of prophecy (Pop. Philo, 82). In short, priests, doctors, and sacred scribes alike received the final touches to their education at colleges called 'the house of life' (per-ōnkhô); of these we know but little.

Socho, Pap. eg. 93, describes how he was summoned by Pharaoh to restore the per-ōnkh (in Sais) *because the king knew the value of that art* (i.e. the medicinal art) (ZA xxxvii. (1859) 74). There was a per-ōnkh at Abydos, apparently attached to the temple (Loure. A 25 = ZA xxvii. (1859) 110). The word *per-ōnkh* among the bilingual decrees is rendered in the demotic as 'scribes of the house of life' (see Griffith, Ptolemaic Papryi, Manchester, 1909, p. 31, n. 13, Stories of the High Priests, p. 19). Magic could be learnt as the per-ōnkh (ib.; Pap. mag. Harris, 6, 19).

On the whole, we receive the impression that less importance was attached in Egypt than in other lands to the personality of the magician; his powers might in some cases be due to special gifts, but, broadly speaking, the belief in magic was a tribute to knowledge, and not to the supernatural powers of certain men. The instructions appended to magical incantations usually presuppose that private individuals could use them for their own profit if only they observed the right precautions. Thus the magician's presence was not essential, and his authority lay solely in the fact that he was the possessor of magical knowledge; the epithet *magician* (râtsh, rodsh, rodsh-hi) was commonly applied to him (Bek. Stel. 11; Ebers, 1. 9).

This point is well brought out in a passage describing the all-wise of the Pharaoh Amosis:

"An oracle was obtained from Sothis, one of the gods of writing; the reverence of Thoth is beside him, and he gives to him knowledge of things, so that he guides scribes according to his wish in one great of hi, 20 = 10, 9; Thoth, Urbanitae, iv. (Leipzig, 1900) 19 f.

10. *Celebrities in magic._—Egyptian-wise, we will begin with the gods. Thoth was the most powerful of all magicians; in the west and the north the invention of his name gave rise to the name of Hermes Trismegistos (q.v.); see Griffith, Stories of the High Priests, p. 58). The skill of Thoth as a magician is associated with his reputation as the inventor of hieroglyphics and in its physical and mathematical speculations; in the myth of Osiris he played the part of 'physician of the eye of Horus' (Pap. med. Horae, 14, 5). Isis enjoyed great fame as a sorceress, manifestly an account of the nurse device to protect her infant son Horus (Pap. Turin, 31+77. 6; Ebers, 1. 12 and passim). Horus himself was not devoid of magical ability, though it was mainly in his skill Boee of the Beothos that this was displayed; the Horus of Letopolis is described as the 'chief physician in the house of Re' (Pap. Turin, 124. 5). The eye of the sun-god, which was subsequently called the eye of Horus and identified with the Uraeus-snake on the forehead of Re' and of the Pharaohs, the earthly representatives of Re, finally becoming synonymous with the crown of Lower Egypt, was a mighty goddess, Ptah or Rê by name; she is often referred to as Wret-hi, 'she who is great of magic' (Sethe, Untersuchungen zur Gesch. und Altertumsws. Aegypt., v. (Leipzig, 1812) 129). Her temple was at Abydos, and Thoth, god of the 11th dpyn, practised medicine and composed anatomical books. Under King Zoser of the 11th dpyn, lived the wise Inthepet, whose skill as a doctor led to his identification with the Greeks Asclepius; like Amenhotep, son of Hepu, a famous man of the reign of Amenophis III. (XVIIIth dpyn), Inthepet was in late times worshipped as a god (see art. HEROES AND HEROINES, 1. 2). The prince Hardeleft, a son of Cheops, was similarly noted for his deep learning and wise utterances; he was the reputed discoverer of various books of hik' incorporated in the Bible (Seth, Märchen des Papyrus Westcar, i. 18). Another royal prince, who was high priest of Ptah, because the hero of many tales in which he appears as a great magician; this was Khamwese, one of the innumerable progeny of Flanesees it. (see Griffith, Stories of the High Priests, p. 21). In the later Greek and patrician literature reference is made to various Egyptian magicians of note, which is the last native Pharaoh, who plays an important part in the legend of Alexander the Great.

11. *The nature of Egyptian magic._—The magical rite, as described in § 7, was by no means wholly irrational in its methods; indeed, granting its premises, namely the existence of gods and demons, the theory of possession, the principles of sympathy, and the doctrine of properties, their manner of setting to work was perfectly logical and businesslike. Here, at first sight, we are face to face with a paradox; the essence of hik' we stated to reside in its opposition to the mechanism of ordinary action (§ 1), yet now the methods of magic are declared to be simple and straightforward. The fact is that no explanation of the magical rite is afforded by the consideration of its parts either critically or collectively; its explanation can be sought only in the concept of hik', which is a thing apart from, and, as it were, superimposed upon, the methods and premises of the magical rite, a sort of general principle making this what it is.1 Without the concept of hik' the magical rite would doubtless have seemed to the Egyptians no more than what to us it appears to be, a puerile, though not wholly meaningless.

principles, is more primitive and, for that very reason, more cosmopolitan, more literally devoid of attrihbuteable national traits, than magic. Anything which might be considered indigenous is usually secondary as well as comparatively unimportant, and, in any case, can rarely be identified with certainty. This is especially true of the two examples of classical antiquity, namely, Homeric magic and the records of classical magic in general. Here, as elsewhere, magic was believed and practised by the common man, and even the literary record of magic theory and practice begins with Homer and covers every imaginable variety of particularity until the latest times. But, rich as they are, the records of classical magic are too incomplete and the possibility of filling the lacunae is too remote to warrant us in hoping that a search for the indigenous would meet with any success. We shall therefore omit all reference to this aspect of our subject. For this reason, too, as well as on account of the intimate cultural relations between Greece and Rome, it seems best to deal with the two nations as one.

r. Magic and religion.—From more than one point of view the civilization of classical antiquity is still quite familiar, though far more new, than the corresponding period of history, and it is still possible to distinguish with that of any other period in history. No civilization has shown such remarkable ability to observe, reflect, organize, and create in so many and so various ways, that it has been called the greatest genius of the world in any previous period of history. Yet and among all the higher civilizations of the world there is none in which magic—of all things the most relentlessly and essentially primitive—had such an abiding influence, none in which men had such a perennial interest in the subject, none in which the progress of magic from the lore of the farmer to the incantations of the philosopher is more clearly marked and more profoundly illustrated.

The paradox, however, is only apparent. Owing to its exaggerated conservatism, the religion of both nations always remained amazingly primitive, so primitive that it was always possible to distinguish it from magic on the basis of any essential details of ceremonial or of the generalizations from which they were derived. Even the doctrine of incarnation, with all the conclusions for which it is ultimately responsible, was never distinctive of the one as opposed to the other. It is obvious, therefore, that the Greeks and Romans were always in the position of their primitive ancestors—that they were utterly unable to distinguish clearly between magic and their religion on the basis of this or of any other criterion which, when seriously applied, would have left their traditional and religious ideas unimpaired. In the primitive religions of the world, men have transformed their once redoubtable magic into an interesting but harmless fossil. Their only course was to cling to the ancient distinction of official recognition.

According to this distinction, religion is prescribed, official, or organized cult. Magic is prohibited, secret; at most it is permitted, without being prescribed (N. W. Thomas, EBr ii 850, summarizing H. Hubert). Magic cannot be distinguished from religion by the doctrine of sympathy, or by any supposed necessary sequence of cause and effect, or even by its malevolent character. Religion, then, is the orthodox, magic is heterodox, it being understood, of course, that for the Greeks and Romans the criterion of orthodoxy was the official recognition of their own State. The god must be officially recognized by the State, and his ceremonial must be the one prescribed by the official experts of the State. Other gods, and therefore their ceremonies, are heterodox. Even orthodox gods must be approached only by prescribed ceremonies.

This Greco-Roman retention of the primitive distinction between magic and religion is part of the ancient root system of human thought which, in its unchanging essential combination of words and pantomime. There was perhaps once a period when even the most glib \-wasiworded" of attributible national traits, than magic. Anything which might be considered indigenous is usually secondary as well as comparatively unimportant, and, in any case, can rarely be identified with certainty. This is especially true of the two examples of classical antiquity, namely, Homeric magic and the records of classical magic in general. Here, as elsewhere, magic was believed and practised by the common man, and even the literary record of magic theory and practice begins with Homer and covers every imaginable variety of particularity until the latest times. But, rich as they are, the records of classical magic are too incomplete and the possibility of filling the lacunae is too remote to warrant us in hoping that a search for the indigenous would meet with any success. We shall therefore omit all reference to this aspect of our subject. For this reason, too, as well as on account of the intimate cultural relations between Greece and Rome, it seems best to deal with the two nations as one.

r. Magic and religion.—From more than one point of view the civilization of classical antiquity is still quite familiar, though far more new, than the corresponding period of history, and it is still possible to distinguish with that of any other period in history. No civilization has shown such remarkable ability to observe, reflect, organize, and create in so many and so various ways, that it has been called the greatest genius of the world in any previous period of history. Yet and among all the higher civilizations of the world there is none in which magic—of all things the most relentlessly and essentially primitive—had such an abiding influence, none in which men had such a perennial interest in the subject, none in which the progress of magic from the lore of the farmer to the incantations of the philosopher is more clearly marked and more profoundly illustrated.

The paradox, however, is only apparent. Owing to its exaggerated conservatism, the religion of both nations always remained amazingly primitive, so primitive that it was always possible to distinguish it from magic on the basis of any essential details of ceremonial or of the generalizations from which they were derived. Even the doctrine of incarnation, with all the conclusions for which it is ultimately responsible, was never distinctive of the one as opposed to the other. It is obvious, therefore, that the Greeks and Romans were always in the position of their primitive ancestors—that they were utterly unable to distinguish clearly between magic and their religion on the basis of this or of any other criterion which, when seriously applied, would have left their traditional and religious ideas unimpaired. In the primitive religions of the world, men have transformed their once redoubtable magic into an interesting but harmless fossil. Their only course was to cling to the ancient distinction of official recognition.

According to this distinction, religion is prescribed, official, or organized cult. Magic is prohibited, secret; at most it is permitted, without being prescribed (N. W. Thomas, EBr ii 850, summarizing H. Hubert). Magic cannot be distinguished from religion by the doctrine of sympathy, or by any supposed necessary sequence of cause and effect, or even by its malevolent character. Religion, then, is the orthodox, magic is heterodox, it being understood, of course, that for the Greeks and Romans the criterion of orthodoxy was the official recognition of their own State. The god must be officially recognized by the State, and his ceremonial must be the one prescribed by the official experts of the State. Other gods, and therefore their ceremonies, are heterodox. Even orthodox gods must be approached only by prescribed ceremonies.

This Greco-Roman retention of the primitive distinction between magic and religion is part of the ancient root system of human thought which, in its unchanging essential
the bewildering array of phenomena with which we have to deal. For instance, it will be seen at once that the only effect of magic, so far as magic itself is concerned, is, so to speak, to define its social position. It does not necessarily destroy or even impair the belief in the reality and power of magic as such; on the contrary, from the very nature of the case, that belief is necessarily borne along with it. Hence the persistence of magic in a civilization otherwise so advanced as was that of classical antiquity.

To anticipate a little, but not to argue this test of orthodoxy, e.g., in the case of Cato's cure for a sprained hip (de Agr. 160). By any other test it is patently magic; but Cato did not consider it magic, or he would not have recommended it. It was orthodox, i.e., it was Roman, it had an immemorial tradition in the Roman countryside; at the most, it had become secularized. By the same test the old Roman ritual for calling out and appropriating the gods of a conquered city (Macrob. III. ix. 7) is religion, and the operation known as 'calling down the moon' is magic. Again, the same criterion is responsible for the well-known method of raising the heterodox to the orthodox by a process of official recognition. This device of naturalizing foreign cults and thereby encompassing within the sphere of their influence heaven and hell as well as humanity, is several times illustrated in the religious history of the Romans.1 All foreign religions, therefore, were classified as magic. The foreign cult, as such, was occasionally despised, but quite as often it was thought to be full of terrible possibilities in the way of mysterious knowledge. This was especially the case if its possessors were an older nation or a nation far away in space or time. Despite their narrowly good sense, the Greeks were much impressed by the pretentious wisdom of the East, as after them were the Romans by the complicated mummeries of the Eleusines. Nations living far away, particularly those who live at or near the place where the sun rises from the under world in the morning or goes down into it at night, are notable for their knowledge of magic. Under such circumstances as these whole nations may be endowed by nature with magic power, especially for some given thing. Remoteness in time is, if anything, a more powerful factor than remoteness in space. When a faith has become current thereby becomes magico-religious. In Italy the term la vecchia religione is known to be used as a synonym for 'magic.' So the elder and alien race is apt to be looked upon, especially by those who superseded it in the same country, as a race of formidable magicians—so formidable, in fact and, by reason of their antiquity, so much nearer the days of the gods, that they themselves are sometimes believed to have been of supernatural origin. But they are still heterodox, they belong to the old order of things, they are more or less allied to the Lords of Misrule.

One of the most characteristic features of magic is a direct result of this persistent association of the heterodox and the foreign. From the very first, there is no magician like the one from foreign parts (Theocritus ii. 162 and often), no magic like the image of the other. Homer (Hymn. to Demeter 210), as the poet is careful to tell us, was 'Egyptian'; the very word 'magic' suggests the influence of Persia; and to the end of the Empire the native practitioners had no vogue as compared with that of his rival who was, or pretended to be, 'Egyptian.' 2 It is true, of course, that 'magic is prohibited, save to the most, not prescribed.' But, so far as classical antiquity is concerned, these distinctions seem to be secondary and derivative. Magic was prohibited because it was heterodox. The Roman, in his characteristic secret rites of any sort, above all, foreign rites with mysteries, were those Greek cults so much affected by the Greeks themselves. If the Greeks objected to the secrecy of magic, it could only have been because magic itself was implicated in them both for the

1 E. Schmitz, 'Kultübertragungen,' in RVV vii. 1199.

2. Magic and legislation.—The general reputation of magic at all times was due to the same criterion; it was always illicit, it was always distrusted, it always had a bad name. And when the law stepped in as it did at an early date in both Greece and Rome—the orthodox and the legal, the heterodox and the illegal, became synonymous terms. Magic was then criminal, and punished accordingly. The reason, before the law began at an early period, but, so far, at least, as Greece is concerned, our records are too incomplete to give a very satisfactory idea of the question. In Greece, however, as in Rome, it concerned itself most seriously with the matter of strange religions—a burning question as soon as communication with the outside world became possible and extended; still further, the fact that, after a long period of war, alien beliefs and rituals came pouring in from every side. From the Decenniviri to Theodosius and beyond, the Roman laws against magic were confirmed and reinforced, the domain of magic was at once particularized and extended, new laws were frequently passed, and the jurisprudence of the subject grew steadily in volume and importance. And, so far as the legal aspect of magic is concerned, it may be emphasized now that, whether in Greece or in Rome, the ultimate foundation and guide of procedure was always the old criterion itself becomes magic.

In Italy the term la vecchia religione is known to be used as a synonym for 'magic.' So the elder and alien race is apt to be looked upon, especially by those who superseded it in the same country, as a race of formidable magicians—so formidable, in fact and, by reason of their antiquity, so much nearer the days of the gods, that they themselves are sometimes believed to have been of supernatural origin. But they are still heterodox, they belong to the old order of things, they are more or less allied to the Lords of Misrule.

One of the most characteristic features of magic is a direct result of this persistent association of the heterodox and the foreign. From the very first, there is no magician like the one from foreign parts (Theocritus ii. 162 and often), no magic like the image of the other. Homer (Hymn. to Demeter 210), as the poet is careful to tell us, was 'Egyptian'; the very word 'magic' suggests the influence of Persia; and to the end of the Empire the native practitioners had no vogue as compared with that of his rival who was, or pretended to be, 'Egyptian.' 2 It is true, of course, that 'magic is prohibited, save to the most, not prescribed.' But, so far as classical antiquity is concerned, these distinctions seem to be secondary and derivative. Magic was prohibited because it was heterodox. The Roman, in his characteristic secret rites of any sort, above all, foreign rites with mysteries, were those Greek cults so much affected by the Greeks themselves. If the Greeks objected to the secrecy of magic, it could only have been because magic itself was implicated in them both for the
considered dangerous, and no doubt it was largely for this reason that magic was so rigorously proscribed and its practitioners sought to live as an illicit, secret affair alive.\(^1\)

The recorded history of Roman legislation on the subject of foreign rites begins with the cause célèbre of its type, the Senatorius consultum de Sacrificiis in 15 B.C. (Liv. xxxvi. 35).\(^2\) In connection with which it was ordered that all books of divination and magic should be destroyed. The history of Roman legislation on the subject of magic, whether directed against specific persons or groups, is a long one, beginning with the Decennviri (Leges XII. Tit. viii. 5).\(^3\) Notable in later days was the Lex Cornelia de Scelestis et Veneficiis in 82 B.C.\(^4\) Dio Chrysostomus (50) tells us that in 32 B.C. the triumvirs, Octavius, Antony, and Lepidus, banished the magicians and astrologers, and refers (ii. 36) to a speech by Maccenas against foreign religions and secret societies for purposes of magic. In A.D. 16 Tiberius banished the magicians and mathematici, and in the same reign L. Pittanius was thrown from the Tarpeian Rock and P. Marcus was executed 'more priestly' outside the Walls (Str. ii. 33).\(^5\) Manco Sciarus committed suicide to escape a suit for magic (ib. vi. 29). Under Nero, Servilia, the young daughter of Soranus, was accused of selling a certain 'power to prolong the means to have her father's life by magic rites (ib. xvi. 31).

The prescriptions of Tiberius were renewed by Claudius (ib. xii. 52) and Vitellius (Suet. Vital. 14).\(^6\) After the death of the last of the Julio-Claudian emperors, magic was marked down by the laws of Diocletian against the mathematici, Manichaei, and mathematici (Coll. xv. iii. 1 [Huschke]). Sometimes the law prescribed severe and punishable penalties, and how far the Roman law on its own account had been extended by the 3rd cent. A.D. may be seen from the Sententiar of Julius Paulus\(^7\) on the Lex Cornelia de Scelestis:

\textit{nullum dam, si eit id donec laciunt, tamen maiam exempli res est, tulliores in metallos, ··· seminestere in manchum anibus parte bonorum requestare; quod si ex «hoc mulier aut homo peribet, summo supplicio adhibitur. Qui sacra impia nocturna ut quem obruentium, deligentum, ··· fecerint facendas curam, aut ··· religiosum aut ··· incensore. Qui hominem inomoventem esse eis saeulique ··· templumve eius movitur, ··· templumve puerorum hostia oblicuit, vel si hominum sit capta peccatum. Magia artis ··· seminum saepissimo afficit placuit, ··· est, bestias obici aut ··· magis salutis.}·

It is sometimes in fact true that the magic of the time was used to bring about evil to others.

**3. Derivation and definition.**—The words for 'magic' in Greek and Latin record some real or supposed fact or power of the human organism which was sometimes not recognized as such by the average person, or was recognized only by a few, and this fact or power was not always clearly defined. What these words indicate is that there existed in the ancient world a certain type of activity which was given certain names, but these names do not always correspond to the modern terms for 'magic'.

The word for 'magic' in Greek is 
\textit{muqai,}, a sense that appears to go back to the mythical and religious practices of the ancient Greeks. The word 
\textit{muqai} is used in a variety of contexts, including in the context of religious rituals, divination, and the like. It is often used to refer to activities that are considered to be magical or sorcerous in nature.

In Latin, the word for 'magic' is \textit{malorum}. The word \textit{malorum} is derived from \textit{malus}, meaning 'evil' or 'bad'. It is often used to refer to activities that are considered to be malevolent or harmful in nature.

The term \textit{malorum} comes from the Latin word \textit{malus}, meaning 'evil' or 'bad'. It is used in a variety of contexts, including in the context of religious rituals, divination, and the like. It is often used to refer to activities that are considered to be magical or sorcerous in nature.

excellent illustration of the Greek and Roman attitude towards an alien faith to which allusion has already been made. In its original and restricted sense θεια is nothing more than magic or alchemy. Porphyry (C. C. 3, 5, 8 f.); Plato, Ath. 1. 229 e. It is well known that this faith, which was imported to Greece by means of the Phoenician Macri (so called, Plut. Flam. 105 b. 5) and was, as such, not only an indirect illustration of the great religions of the world. It was importuned, and had no official standing; even though impressive, it was unauthorized. Between these two extremes stands the well-known Roman sect of 'magic,' as contrasted with the genuine, so-called 'pagan' religion. This sect, so-called, was often of the family type, kept up in one's own house or on the street corner, and was not looked upon with great respect by the great religions of the world.

It is often true that a man has the right to call himself a magician, and to escape from its old associations with magic (see ALCHEMY).

It has already been noted that divination, even by the criteria of official sanction, occupies a more or less indeterminate position between magic and religion. Indeed, parrela and magic are so thoroughly commingled that even in ancient times there is often merely a syncretism for the one and the other. The difference is in the manner in which the sub-division is supplied by official sanction. Nekyomantia, for example, was religions if used in a family cult, i.e., it was presumed that a man has the right to call himself a magician, and to escape from its old associations with magic (see ALCHEMY).

Under any other circumstances it is not only magic, but one of the most formidable and characteristic operations of magic. The same distinction holds good in another very important and extensive branch of divination, one in which every one was interested and which all the schools of philosophy, especially the Stoics, investigated and discussed at great length—the source, valuation, and interpretation of dreams (σνασοπωρία; see DREAMS AND SLEEP, vol. v. p. 301, and cf. Artenidorus, Onomasticon, a curious practice of the 2nd cent. AD, which is still living). The method officially sanctioned for securing true and prophetiie dreams (σνασοπωρία, σνασοπορία) was incubatio, but the magic papyri (esp. the Papp., Amsterdam, Hug. Bos.; see also the papp. 1. 62) hold the aforesaid formulae and charms for obtaining such dreams. Hubert would also include within the sphere of magic such practices as divination per fortes with verses of Homer, Vergil, or the Scriptures, (πράγματες, ἀριστοτέλους, Athen. 1. 9, 261 F) and, in general, any ceremonial for purposes of divination which implies the use of magic rites in our sense of the word. By that criterion he should agree with Hubert that divination in private cults was strongly tinged with magic. The same was true even of official divination, although this was when the oracles were revived in the 2nd cent. and was for historical reasons. In all these cases, however, magic was distinguished from religion by the usual criterion of official sanction.

II. MYTHOLOGICAL PERIOD.—Until the age of Pericles the history of our subject is largely confined to what Hubert calls the 'mythology' of magic. This is partly due to the fact that our record is of the fragmentary and incomplete kind. The evidence belongs to types less likely to be concerned with such a subject. But it is fairly certain that not far from the time of Pericles magic itself rapidly assumed greater importance in the everyday life of the nation. By that time the average man's faith in the old gods was rapidly diminishing; and among the factors contributing to the growth and spread of magic and kindred ideas in any people the decay of orthodox belief is by no means the last to be considered.

1. The magicians.—Among mythical magicians, the Telchines (of Telchines), the Dactyls, the Curetes and the Corybantes (see KOUETES and KORYBANTES)—hold a position which amply illustrates the fundamental ideas about magic already mentioned. The first of these were related to the Hellenic inhabitants of Greek lands—the Telchines, of Rhodes (Strabo, p. 472; Diod. Sic. v. 55, though here, as with the others, there is a tendency in the text to carry away the truth (of origin); the Dactyls, of Cretan or Phrygian Ida (Strabo, p. 355; Apoll. Rhod. 1. 1129); and the

MAGIC (Greek and Roman) 273

Curetes, of Arcasmania.1 As such, they were all regarded as servants of the gods and, indeed, as themselves more or less divine; and, in some cases, they actually had a cult.2 Even the Telchines, a community of smiths mentioned in the myths of Greece, were in their time founders of cults (Diod. Sic. v. 55; cf. Paus. ii. ix. 5). But they all belong to the old order, they are all heterodox; they are all chthonic; they are all laced (Strabo, p. 601).3 Indeed, the Telchines are inimical to the gods and spiteful towards men. They use the water of the Styx in their charms (Nomus, Dione, xiv. 36); they are malignant sorcerers, who wither the plants, ruin the crops, and make barren the most desirable animals.

Most notable is the possession of these clans in the history of the arts. As the Cyclopes were the servants of Hephaestus, so these semi-divine corporations of smiths were the first workers in iron and copper, gold and silver; in fact, they were the inventors of metallurgy. Hence the Telchines in particular are aptly compared by W. Pape4 to the Koboide of Germanic mythology. These clans of demonic master magicians know all the secrets of nature. The Daityli were masters of music and of music (Plato, Theaet. 152a). They were regarded as inventors of the famous Ephesiaca (Gree. Myth. ii. 15 [PG viii. 751]). The Centaurs Chiron and Nessus are also masters of the healing art. The gift of prophecy, though naturally common to all by reason of their magic powers, is especially associated with the Curetes. Among all nations the most notable symptom of the power to prophecy is an ecstatic state of mind.

The assumed origin and pattern of the Corybantic worship, the birth of the most widely spread cult of this nature among the Greeks and Romans, was the wild noise and clatter of the armed dance of the Curetes around the baby Zeus—really a primitive spell, an άρφοράς, to keep the child from harm (see KOUKIES and KOBYNTAI).

The great individual magicians of Greek mythology are Prometheus (Apoll. Rhod. iii. 845; Val. Flacc. vii. 366), Agamemnon,5 Melampus (Apollod. ii. ii. 2), Oenone (ib. iii. xii. 6), Promethoe (ib. iii. xvi. 1), Agamem or Perimede (Roscher, s.v.); Theoc. ii. 16 and schol.), Circe (Roscher, ii. 1193), and Medea (ib. s.v.). The special, though not the exclusive gift of all inventors of magic, Prometheus, the wise and kindly Titan, belongs to the old regime. Melampus comes from Thessaly, the distant land of magicians. All the rest (except Oenone, and even she is a water-nymph) are in some way connected with the sun or—what amounts to the same thing—with the sea or the moon. Agamem or is the grandson of Poseidon. The rest are descendants of Helios. Agamem or is also the beloved of Poseidon. The greatest of all are Circe and Medea—both of the seed of Helios and Poseidon, both from Colchis, the distant land where the sun god himself rises at dawn from the ocean stream.

Circe. In the Homerid account—the most marvellously correct and sympathetic portrayal in all literature of her curious, abnormal, not quite human type—Circe dwells far away in the mystic and trackless regions of Circe, but no more consciously cruel than the child who separates some luckless fly from its wings, this ίγνατας, whose special power is metamorphosis, amuses herself with enticing such wandering mariners as come within her sphere to drink magic wassail made straight

way turn them into swine. Like any other queen of the mermaids, Circe is immoral rather than immoral. Nothing could be more in harmony with her type than her first meeting with Odysseus and their subsequent life together, or than the fact that, in the long run and all things considered, the Wanderer never had a more disinterested friend among women.

Curetes.—Medea is a relative of Circe and, like Circe, was sometimes worshipped as a goddess (Hes. Theog. 955 ff.; Alcman, cited by Athenag. Legat. pro Christ. 14); in fact, the Romans identified her with Angitia and the Bona Dea (Macrob. i. xii.; Serv. on Aeneid. iii. 209). Mythical magic is most distinctly the sorceress, and her powers as such are the most varied and terrible. As Hubert says,6 she is evidently the most highly developed personality in a group of homonyms. It was therefore the constant tendency of tradition to make her the originator of rites and charms which previously had no definite pedigree at all or were attributed to some more obscure rival. At all events, in song and story, in the long annals of magic itself, there never has been a sorceress to compare with Medea. Medea, the beautiful daughter of Aeetes, the king of the Curetes, was mistress of the goddess of the crossways, Medea τρακόρωτισσα, daughter of Λετώ, and granddaughter of the sun-god, is still the arch-enchantress of all the Occident. She is first and foremost a φάραγες. It is therefore to her enchantments, particularly to her knowledge of φάραγες that her power is derived. Her box of magic simples is often mentioned (Apoll. Rhod. iii. 802, iv. 25), and in art she is often represented as holding it in her hand. Her charms are innumerable.7 She can restore youth, bestow invulnerability, hurl the dragon of the golden fleece to slumber, quiet the storms, make the rivers pause on their course, call down the moon from heaven, etc. Indeed, Apollonius's description (iv. 1665-72) of her procedure when, from the deck of the Argo, she cast the evil eye on the giant Talus far away on the cliffs of Crete and brought him down to his death is enough to chill one's blood. But Medea is also beneficent, and K. Seeliger (in Roscher) even suggests that this was really her primitive character. She heals the wounds of the bewitched savages, cures Hercules of his madness, frees the Corinthians from famine, and is even a prophetess.

Even in the fancy of the unlettered her memory never fades. She is the subject of a popular tradition of her continued to grow in its own way (Tib. i. 51, note, ed. K. F. Smith, New York, 1913). Special feasts of magic were supposed to have been her invention (e.g., Paus. ii. xii. 1), and, as the line just cited from Tibullius suggests, we may be sure that the litori

* carinimum valentium

Refax aequo devocere sidera∗

of Candida, to which Horace refers (Epod. xvii. 4) contained more than one charm claimed to be Medea's own. So, too, the magic plants and simples for which Thessaly was so famous were supposed to have sprung up in the first lane from the box of charms lost by Medea as she was passing over that land with her winged dragons (schol. Aristoph. Nuob. 749; Aristides, i. p. 76 [Dindorf]). Her fame in the Occident is so great that she is obliged to agree that she never lived among men; she was merely a child of popular fancy and the foster-child of a long line of literary artists few of whom were men of transcendent genius; and yet she reaches and dominates the most wonderful women in all classical antiquity. Poets, historians, orators, philosophers, even unimpressionable grammarians

2 Roscher, ii. 2463, for list and references.
and commentators—few fail to mention her. Ovid never escaped from her spell. From Homer to the last feeble echoes of rhetoric, and again in the renaissance of the modern world, here is a dominant personality, and the story of her love and her lover, her betrayal and her terrible revenge, has never grown old or lost its interest and charm.

For the guess, Medea is the typical Graeco-Roman enchantress. Her connexion with Hecate, her methods of discovering, securing, preparing, and administering her φάρμακα, and the large preponderance of φαρμακεία itself in her theory and practice of magic are all typical of every other enchantress both in literature and in life from Homer to the end of the classical world.

2. Their methods.—φάρμακα are either to be swallow, adulatoria, i. e. drinks to inspire love—or plasters. The distinction is medical, but it also Hecatean, and applies equally well to magic at any time. Circe uses a salve to restore her victims to human shape (Od. x. 391); Medea uses another to render Jason invulnerable (Apoll. Rhod. iii. 1041 ff.), and still another—in the form of an aspersion—to put the dragon to sleep (ib. iv. 156); in the old Lesbian folk-tale Apollodorus gave Panax a box of salve which, when applied as directed, gave him youth and surpassing beauty (Aelian, Var. Hist. xii. 18; Serv. on Aen. iii. 279; Palaemon, Apoll. Rhod. x. 117; Dial. Mort. i. 27; Roscher, s. e. 'Phœon'). The shirt of Nessus and the robe of Creusa belong to the same type. Pamphila (Apoll. Met. iii. 21) so far went as to have a box filled with little caskets, each containing a special salve for given morphomachy.

Quite as ancient and characteristic is the φάρμακον taken as a drink. So Helen, herself a sorceress, administered her Egyptian nepenthe (Od. iv. 229-232) to every one who had been subjected to all her transformations (ib. x. 257); so Medea performed some of her feats. And here, again, the method is typical of later times. One branch of it—the use of φάρμακα or φάρμακον, i. e. drinks to inspire love—or perhaps the commonest and most characteristic feature of all ancient magic. It is to be noted here in Circe's case the process is not completed until she touches the victim with her ἑξητρητής, or magic wand. In art Medea is frequently represented with a wand; with a wand Athene makes Odysseus look young again (Od. xvi. 172); so Hermes overpowers our senses (II. xiv. 243; Od. v. 47) and, in fact, every one knows to this day the magician's outfit, even if he is nothing more than an ordinary sleight-of-hand performer, is complete without this ancien and dramatic accessory. The use of the wand seems to be an application of the doctrine of sympathy. It facilitates the transfer of the magician's power to the object upon which he wishes to exert it. But in all cases the wand is a help rather than an actual necessity. Exception, perhaps, in the case of the gods just mentioned, who, as such, are too powerful to need it, the really essential thing is the φάρμακον, and, as we have seen, the Graeco-Roman theory of magic presupposes that Circe had already prepared her φάρμακα to the accomplishment of the proper charm, and that Helen's nepenthe had been similarly treated either by herself or by the specialists from whom she had procured it.

The same rules hold good for φάρμακα in the art of healing. The sons of Autolycus bind up the wound of Odysseus, and stop the flow of blood with a salve (Od. xix. 457); the divine physician Asclepius, follows the same methods (Pind. Pyth. iii. 52; cf. iv. 217; schol. Isthm. vi. 53; cf. Soph. Oed. Col. 1194 (Jebb), and at all times the use of incantation as the usual and a remedy was so characteristic that one of our richest sources for the study of φάρμακα as magic is the works of the physicians from Hippocrates to Marcellus. Not that men like Hippocrates and Galen were much impressed by the magic of medicine; but their patients were, and any good doctor learns that his most powerful allies are the patient's own determination to recover and his belief that he is going to succeed. In popular medicine, of course, the survival of magic is much more marked. Here, too, the practice of Greek-Roman times is typical. The case of Iphicles.

(Apollod. i. ix. 12; Roscher, ii. 306) is an excellent example.

For ten years Iphicles could have no children. At last he consulted Melampus the seer. Melampus, whose specialty, like that of Moses the Arizonaut (Apoll. Rhod. iii. 916 ff.), was the language of birds, consulted the 'fares.' Taravias said that ten years before, while casting raisins, Iphicles had threatened his father Phylacus with the knife. It was then discovered that the knife had at that time, and presumably by Phylacus himself, been struck into the tree with which the life and well-being of Iphicles were bound up: and it had stuck there ever since. The knife was removed, the rust scraped off and prepared as a φάρμακον, and when Iphicles had taken it as prescribed, he immediately recovered his powers. Similarly, the wound of Telephus could be cured only by the rust on the spear of Achilles by which the wound had originally been inflicted. The principle is, of course, frequently illustrated in the later history of Graeco-Roman magic, and still survives in our own manner saying that 'the hair of the dog cures his bite.'

Other branches of magic referred to in this period are equally typical. According to Homer (Od. x. 516 ff.), Odyssey learned from Circe how to call up the dead, and the ceremonial of νομοδοματία, as the poet pictures it, always remained practically the same, of indeed the same, as in the Odyssey of dodecs, as described by Diog. Laert. (vill. 59, 82 ff.), show clearly that the type of the νομοδομί became finally fixed at a very early period. Again, the bag of winds, given by Zelus to Circe (Od. i. 16 ff.) repeats the symbolism of wind and weather magic in all times and countries. The same is true of the primitive rustic magic attributed to the Thracian Dionysus, particularly, the earliest of moulds, as described by Apollod. (ii. 28, 29), that 'drawing down the moon' was certainly familiar long before the time of Sophron, who, according to Suidas, was a contemporary of Xerxes. Presumably this charm was from the first looked upon as the special property of the Thessalian witches. At all events, the idea was firmly fixed in the time of Aristophanes (Nubes, 749) and was never afterwards forgotten.

III. FOREIGN INFLUENCES.—We have seen that, in conformity with the law of distance in time or space or both, the early Greeks attributed special magic powers to their alien predecessors, the Thracians, the Phrygians, and Curetes; and the Persians, and the Pelasgi—and that unusual activity and ability in magic were attributed to what at the time were felt to be such distant countries as Colchis, Egypt, Thessaly, that, even the islands of the mysterious nations of the Far East, and the still more mysterious peoples of the Far North took their turn as redoubtable magicians.

But the privacy always remained with Thessaly.

In the time of Aristophanes as in the time of Apuleius, Thessaly was par excellence the realm of magic and magicians. The literature is full of it, and evidently the literature was in this respect a faithful reflection of average opinion. And such opinion was at large. Numberless passages might be cited to show that in the Athens of Pericles, as long afterwards in the Rome of Augustus, the average professional enchantress found it 'a profession' to advertise herself as a 'genuine Thessalian.'

Orpheim.—Thrace too, though Pliny (HN xxx.

1. Plut. Sympos. viii. 8; Apul. Apologia ii. 32; Diog. Laert. ix. 7; Lucian, Neopy-
manes, 6; Apoll. Tyran. Ep. xvi). We now know 
that Pythagoras was a pupil of Zoroaster; indeed, 
there are told still later movements but a religious movement of 
the most momentous importance in the spiritual development of classi-
cal antiquity, and ultimately of the entire Western world (see p. 307). It was 
a heterodox and, therefore, 'magic.' This seems to 
be the first great and definite example 
within historical times of the implantation of a 
supernatural religion on Greek orthodoxy.

MAGIC (Greek and Roman)

The usual term for a magician is μάγος, but the word does not occur in the law of Dioscorides. 1 Veneraculae is the generic name for any magical ceremony, whether local or legal, and sometimes of σευδεία as the epithet of a magician is used in the same way. The same in Chronicles there was still more or less associated with his Persian origin, but with the first year of Titus 2 he comes under the ban of the law, and after Trajan's time is supposed to apply to some who practised illegal magic (Cod. Theod. xvi. 16; Cod. Justin. xi. 37.). Sages, 'wise woman,' is probably one of the oldest words for a 'witch' in the language, and the fact that it also means a 'tawd' is a sufficient indication of the ράγος social position as well as the real function and origin of a magician. She is one of the standard characters of the Roman elegy. Strabo (geog. v. 4. 4), Menander's 'screech owl,' was a name for women witches which records the popular Roman explanation of vampire.

As the Greeks looked upon Thessaly, so the old Romans appear to have looked upon Etruria, as a land of magic and magicians. Among other accomplishments, the Etruscans knew how to call up the dead, bring on rain, and discover hidden springs (Wissowa, in Pauly-Wissowa, s.v. 'Aquilex'). So, too, such ancient and mysterious peoples as the Sabines, Marsi, and Peligni were particularly famous for certain magical powers (Verg. Aen. vii. 758; Hor. Epod. v. 76, xxvi. 29, 60, Sat. i. 19 f.; HN xxi. 78; Ovid, Fasti, vi. 141 f.). The Romans saved the Etruscan haruspice even to an early date by naturalizing in Cato (de Agr. v. 4) classes it with the rituals of the augures, karioli, and Chaldaei as a matter which any solid farmer would do well to avoid; but, all the same, the name of Macrinius, who was unaware of its own charm for a spined hip has a suspiciously foreign sound. Even then Roman magic had been exposed for some time to the influx of foreign religions which set in soon after the Second Punic War (c. 218 B.C.). An overpowering influence of Hellenism began still earlier; and, as we have seen, Greek magic itself had been thoroughly commingled and overlaid with foreign elements. Finally, our principal Roman source for the details of magic practice is the poets—and the poets confine themselves for the most part to the Greek tradition. The result is that after Cato's time we are dealing not so much with Greek magic or Roman magic as with the magic of the Graeco-Roman Empire.

Before referring to the ancient literature connected with this subject—originally enormous and still formidable—it should be observed that no small amount of magic of a certain type had already passed into the category of what Hubert aptly calls 'mages éternelles,' 3 i.e., magic too old to have a definite origin, and so common that the fact that other material magic has long since been forgotten—in short, magic that has been secularized and is reckoned merely so much scientific knowledge already acquired. This explains why Pliny, a hard-headed Roman who had no use whatever for what he would define as magic, is for us a principal source for those magic formulae and incantations which long usage had made part of medicine and the various sciences with which he deals. And to a greater or less extent similar material may be found in any other ancient authority who deals with the same matters. One of the most important themes of Graeco-Roman science was the tradition of the given subject. Perhaps this explains the curious fact that in the course of time the very word φαραγός itself acquired the same meaning as 'magic.' 4

For these as well as for other reasons already given, few sources are so valuable to the student of Graeco-Roman magic as the ancient treatises concerned with medicine, especially if, like Pliny, the reader turn from an inveterate collector of useless information, or if, like the de Medicamentis of Parcellus, the book is intended for home use. One of the most notable and characteristic developments of antiquity, especially during and after the Alexandrian age, was the extent to which every conceivable subject of a scientific or quasi-scientific nature was treated as literature, particularly as a theme for verse. In such cases whatever magic there was in the subject was rarely forgotten. Valuable sources for the magic of medicine, therefore, are the Θηρηα and Alexipharmaca of Nicander (for in more famous works we look on the same subject by Aemilius Macer) and the long passage on snakes in Lucan, ix. 607-657, which doubtless owed much to Macer. Particularly valuable, too, are those writers who deal with some homelier branch of medicine, such as the art of the veterinary—like Palladius and the authors of Hippocrasia and the Mulomedicina. Especially notable among physicians are Zosimus of Amida, Theophrastus Nonnus, and Alexander of Tralles, but, above all, Cyranides and Dioscorides. Serinbonus Largus and Serenus Sammonicus also might be considered. In short, an ancient doctor, however wise or learned, is likely to contribute something to medical magic.

The writers on agriculture and kindred themes (e.g., Cato, Varro, Columella, the author of the Grieginae) made also contributions to botany, beginning with Theophrastus (Historia Plantarum), the naturalists, and the writers of φαραγός, like Neptunals, are valuable. The same is true of the Etruscans like Celcius, the poet of the Paradoxa, of the Aphrodisiaca, and of the Paramagni. In short, omitting for the present that large and important class of writers who deal with the subject merely as a literary asset, any ancient author, no matter what his theme may be, is likely to contribute something to our knowledge of contemporary magic.

It is the philosophers, however, especially the philosophers of a certain type, who are most intimately associated with the most remarkable phase in the history of our subject. We have already seen at how early a date the spiritual life of antiquity began to feel the impact of foreign ideas and systems. The Orphics, the Magi, the worship of Mithra, the Assyrians, the Babylonians, the Phoenicians, the Egyptians, the Hebrews—these are merely the most important. And the process was facilitated to an indefinite extent by the conquests of Alexander, as it was again later by the extension of Roman power to whatever seemed worth while in the way of territory; the laws were passed and, as we have seen, were severely enforced. But they appear to have been practically powerless. The classical world was a babel of creeds, and in the time of Augustus the great capital was alive with a dozen different kinds of magicians, from the lowly saga to the impressive Chaldaeus. As yet the average man of birth and education was not, as one might say, dangerously affected by these different varieties of heterodoxy; but already powerful disintegrating influences had long been at work. As early as three hundred years before Augustus, the great tide of mysticism and related ideas was already rising. Orphism was prominent in it. But Orphism (and, for that matter, any other specific creed that one might name) was perhaps quite as much a symptom as a cause. Spiritual unrest was much-widened. Men needed wine and the old bottles could not contain it. The craving which for generations had been more or less vague grew in volume and intensity, and finally reached its acme in the 2nd cent. of our era. There were creeds then—like those of Isis and Mithra—that would seem to have just missed becoming great religions of the future. Then we have, too, in that same period, Apollonius of Tyana and the Perigrinius of Lucan, who were philosophers of the contemporary type,
MAGIC (Greek and Roman)

Theurgical philosophy was violently attacked by the Sceptics, Epicureans, and Cynics (Philostor. Apoll. Typos, viii. 39). Among the most important works were the Karâ Mâyâ of the Epicurean Celsus (probably the adversary of Origen, and the one to whom Lucian dedicated his Pseudomathema), and the Faîtrés Êphak of the Cynic Cœnasus. The Iphid Matheoueoros of Sextus Empiricus still survives, and it is unusually dreary reading. Like Lucian (e.g., in his Alexander seu Pseudomathema, Deorum, Philos., Philol.) he did not pretend to be only magic, but everything marvellous in either religion or mythology. Lucian feels that the wandering priests of the Syrian goddess are no better than any other magicians.

The Christians.—The attitude of the Christians, as we have seen, was different. According to Origen, Celsus had no right to deny the reality of magic; Augustine was quite certain that the rites used for summoning demons were efficacious (de Circ. Dei, xxi. 8); and, indeed, the Church Fathers in general are far from denying the existence and power of magic (Epiph. Har. xxxiv. 1; Tert. Apol. 35, de Anima, § 7; En. Prop. Evang. v. 14), especially in those early days when it was the duty of each individual to make the sharpest possible distinction between the Christians and the Gnostics. All heretics in general and Gnostics in particular were magicians, and their faith was magic (Iren. v. 14 3 f.; Justin Martyr, Apol. i. 26). Paganism in any form was magic. For the Alexandrian theurgia the difference between gods and demons was merely a difference in degree; for the Christians there was an absolute opposition between the two: God was good, all the demons were evil; the pagan gods were all demons, therefore all the pagan gods were evil. Any and all marvels which did not happen to be orthodox were the work of the demons.

It will be seen that this is really the familiar old distinction between the orthodox and the heterodox, with a much greater emphasis on the second. The conclusion, also ancient, that the one was good and the other evil, per se. And the same old distinction carried with it the same old assumption that the one was just as real as the other. The Christians never dreamed of a character of the combination, but, as Augustine (loc. cit.) saw, and as Porphyry himself acknowledged (quoted by En. Prop. Evang. v. 10), they could make no satisfactory distinction between gnostia, magia, and theurgia. Their principal characteristic was the character and intentions of the individual performing the given ceremony—a criterion hard to apply and of no real value in itself. Their theurgia became dissociated from religion; its position in society, like that of the theurgia of the old Egyptians, was not such as to give it the character of a religion; in fact, even without it the Alexandrian philosophy had all the outward appearance of religion. The attack on Apuleius was supported more by the various initiations of which he was so proud and the sanctity of the traditions which he invoked than by any specific acts of magic with which he was charged. Theurgia did afterwards enter religion, but it entered by the Gnostics, not by the philosophers—and this only in so far as the Gnostics who transformed it into a cult were recognized as a religious organization. So, too, the cult of Mithra gave a religious character to theories and ceremonies that in Pliny’s time (HA xxi. 17 f.) were described only as strange and fantastic and the Poinandres of Hermes Trismegistus, Asclepius, Diotyus Hortetis Trismegistis, the Hieroglyphica of Horapollon, and the astrological works.
The magic of Egypt.

The magic papyri.—But most important of all are the magic papyri which continue to turn up from time to time in Egypt. Hubert gives the list of those published down to 1904; for later finds and their discussion, the reader is referred to Von Chr.," etc., by H. Wilcken, "Papyrkunde" (Leipzig, 1912), the "Archivo für Papyrys suche," and the occasional reports in "Borsa"n's Jahresbericht des klassischen Altertums." The magic papyri belong to the latter part of the period between A.D. 300 and 500. Their discovery is peculiarly fortunate in view of the fact that they belong to a type which came under the ban of the law, and which some of the later emperors, notably Diocletian, made sedulous efforts to destroy. They are not original and independent works, but merely handbooks of magic, and, as might be expected, the editorial tradition is very poor. There are often different versions of the same thing; sometimes the hymn or formula in one version will be considerably abbreviated as compared with the same formula in another version; again, certain habitual formulae are often merely inverted. It is therefore extremely difficult to reconstruct any complete and trustworthy text of this type.

The authorities habitually quoted and the sources, so far as we can trace them, seem in some respects to bear out Pliny's statements in his account (HN XXX, 1 ff.) of the growth and development of magic. Pliny distinguishes the different primary sources of ancient magic: (1) the Persian school, founded by Zoroaster; his 2,000,000 verses on this important subject (note the childish exaggeration characteristic of the Chinese papyri) were translated into Greek by the Greeks of Athens, Pythagoras, Empedocles, and Democritus belonged to this school, and also certain ancient Medes, Babylonians, and Assyrians. Democritus explained the magic books of Dardanus, which he had found in his tomb; they were written in Phoenician. (2) The second is the Jewish school, descended from Moses, lamesses, and lotapes ("Ap. Meg. p. 755; Apul. de Mag. 3; Ex. 71°-72"); and (3) the third is a Cypriote school.

It will be observed that Pliny makes no reference to the Egyptian school, which was particularly important and which, of course, is often mentioned in the papyri themselves. One of the most important authorities in magic alchemy is Maria, the Jewess, but the papyrus also refer to real philosophers like Thales, Anaxagoras, Heracleitus, and Diogenes. The genuine magicians, i.e. the contemporary or recent authorities, are generally referred to under such names as Zosimus, Synesius, Olympiodorus, Pelagius, and Iamblichus. Now and then we find such curious and characteristic documents as a letter of the magician Nephtos to Pammachitos, a charm of Solomon, or a letter of Pithys, the Thessalian, to Osthanes. This gives some idea of the activities of the Alexandrian magicians towards the tradition which they followed.

It is no longer possible to trace the Persian, druidical, and Brahmanical elements in this strange compound. Assyro-Chaldaean influence, of course, has been strong, but it appears to have been indirect. Jewish influence, on the contrary, was both strong and direct, the magic papyri being strongly affected by Jewish influence. The influence of the Hermetic tradition of real magic. But, as Hubert remarks, they brought no organized system to bear upon the Greek-Roman type, but merely introduced certain important elements of magic. Especially important here was the Bible, which was introduced into the Egyptian by way of the Hermetic tradition, after being translated from Greek, and furnished part of the more or less peculiar mythology of magic at this time. There are also extensively mentioned in incantations, especially the different forms of his name (Aoth, Abnath, Athabath, Abrian, Adonis, etc.). Especially frequent, too, are the names of Moses, Abraham, Jacob, Solomon, and the various archangels. F. G. Kenyon has explained 'Abraxas' as a corruption of the Hebrew benediction hab-brenkak dachrav, 'pronounce the blessing,' which still survives in the magic of modern times as the familiar 'abracadabra.' Hebrew words more or less corrupted are frequent in the papyrus, and Christian influences also evident; it followed in the wake of Judaism, and, though naturally not so strong, is of the same general type.

But one of the most remarkable contributions of all is that of Egypt, as we might expect of a country so ancient, so full of pretentious wisdom, with a language so full of optical arrastra, utterly strange, which to the ordinary outsider seemed so hopelessly complicated and mysterious. The last two qualifications alone—both sovereign for charms—are enough to establish the reputation of Egypt as a land of magic and magicians. It may be observed, however, that, unlike the Jews, the Egyptians contributed a complete, organized system of magic to the combination. The fact that, as we learn from the 'Book of the Dead,' a magician could be prosecuted shows that the old Egyptians had long since separated magic from religion by the familial criterion of official recognition. So far as the Greeks and Romans are concerned, the great name here is Hermes Trismegistus. He is not only the principal vehicle and interpreter of Egyptian magic, but, as we have seen, the Hermetic tradition is quite as powerful in the articulate presentation of the Hebrew contributions.

All these foreign influences on the theory and practice of Greek-Roman magic of this later period are more or less clearly traceable in the magic papyri. But it is to be observed that they are never clearly differentiated. Isis, e.g., reveals the wonderful art of magic to Horus. This is all well enough; it is all well enough; but Isis and Horus were one of the same. But Isis and Horus were one of the same.

V. THEORY OF MAGIC.—The procedures of magic, especially of magic so highly developed as was that of Greece and Rome, are, at first sight, bewilderingly complex. To the main ideas, the essential principles from which they all derive and upon which they are based. To the main ideas, the essential principles from which they all derive and upon which they are based.
are all founded, are simple, universal, and eternal. The fundamental purpose of magic is to compel by supernatural means; the primary object and supposed result of every charm is some form of constraint. Possession or obsession (παράγως) is a constraint, any form of constraint, as lyanthrophia, a constraint, 

The language of plants and the details of ritual are largely suggested and guided by some form of this fundamental idea. One sees it most clearly in such symbolic acts as the tying of knots, the driving of nails, and the binding of images.

The object of every magic act is to put beings or things into or take them out of a state in which certain movements, certain changes, certain phenomena must inevitably ensue. A character or condition is either produced or suppressed, a spell is either imposed or removed.

The doctrine of sympathy.—One of the great fundamental principles of magic art is the doctrine of sympathy; but, while the doctrine of sympathy exists, not indeed to explain all, this would be expecting too much of such a phenomenon as magic, in spite of the fact that its deductions are, in their way, so amazingly logical. It is also true that magic is supposed to work in two ways; it either reaches its object independently and directly and acts at once, as it were, automatically, or—and this was the prevailing theory of the Greeks and Romans—it reaches its object indirectly through the agency of some intervening power to whom its behests are addressed and by whom they are executed. The distinction is important and enlightening; but here, again, we must not expect too much of the magician; he is not always a clear thinker, and he has an inveterate habit of calling all known powers to his aid, whether they happen to be logically related or not.

The doctrine of sympathy is most clearly seen in the direct method. The simplest and most common form of the doctrine of sympathy is that in which the magic power possessed or acquired by a given thing works upon the desired object by contact. The virtue of the amulet (see CHARMS AND AMULETS) is shared by the person who wears it, the virtue of philtres and φαραγωγεῖν of any kind is appropriated by those who take them as directed. It may be observed, however, that even here, so far as the general natural power had already intervened in the preparation of the given article; and the magician's characteristic method of phalalizing for power is naïvely illustrated by the rule that in preparing a φαραγωγεῖν one should combine ingredients which individually are capable of producing the desired effect. The reasoning is evident. The large use of magic of this type, i.e., φαραγωγεῖν, helps to explain the magic of the Greeks and Romans, which was considered the supernatural power had already intervened in the preparation of the given article, and the magician's characteristic method of phalalizing for power is naïvely illustrated by the rule that in preparing a φαραγωγεῖν one should combine ingredients which individually are capable of producing the desired effect. The reasoning is evident. The large use of magic of this type, i.e., φαραγωγεῖν, helps to explain the magic of the Greeks and Romans, which was considered the

Primitive medicine is a fearsome adventure for the patient. In rare cases the mana inheres in the object as such, but this is generally a secondary condition. As a rule, the mana is acquired, or merely accidental. Some objects are only conductors of mana—which explains why they can be used for apparently contradictory purposes. Other simple ingredients in a large number of charms—such as honey, flour, rain-water, etc.—have lost their original significance. Objects are according to the usual rules—some real or fancied resemblance, some association (such, e.g., with the name of a god, etc. A certain thing, e.g., is yellow, therefore it is good for jaundice. Such odd names for plants as 'Love's Beard' or 'Venus' Ears' record associations and found widespread originally secret. The place from which an object comes is often a decisive factor: articles found in the public baths were magic. The Christians considered certain filthy animals magic because they were associated with the devil. Certain names of plants and minerals are magic because they correspond to the planets. Sometimes the decision is made from etymology, true or false; the reseda owes its power to its name only (/HN xxvii. 131).

The virtue of lead for certain purposes is due to the fact that it is heavy or cold or indestructible, etc.

One of the most important applications of the doctrine of sympathy is the use of symbolism. As we have already seen, symbolism is even more characteristic of magic than it is of religion. Hubert defines two methods. In the one, which is particularly characteristic of primitive magic, in which we wish our magic to act is represented by a substitute. The most notable example of this class is the use of clay and waxen puppets. The second consists in predetermining the desired action and result (Tib. i. vi. 53 f.; Soph. Aias, 1715)—e.g., apply a stone to a wart (contact and sympathy), throw the stone away (symbolism), and the wart goes with it. Or, if you have a pain in your stomach, apply a stomach to the part affected, and your pain becomes his pain, etc. (/HN xxii. 140; Hesiod, xviii. 18 N.)

The same idea of contact and sympathy creates the familiar rule of magic homoeopathy, that the cause of a given thing is also its remedy.

But, so far as magic is concerned, perhaps the most momentous deduction from the doctrine of sympathy is the rule that the part may stand for the whole, that the two are inseparably connected; the part is able to draw the whole to itself, if aided by magic. What Vergil called the caeaeus of Anacates had a special function and a special significance in the pretended solutio aurumis of the unhappy Dido (Aen. iv. 494 f.). Without assuming the active co-operation of this principle, we cannot appreciate the power of the inwardness of the striking performances of magic in classical antiquity. If, for instance, a magician can secure bones of the dead, he has a special and powerful means of calling up the soul to which these originally belonged (Tib. i. ii. 46)—which is one important reason why witches were so often accused of haunting the gravesyards (Hor. Sat. i. 8; Lucan, vi. 590), and in primitive times the principal reason why the corpse was so carefully watched until it was safe in the grave (Petron. 63; Apul. Met. ii. 21).

So, too, if we wish to reach the living, it is very important to possess a lock of their hair, the parings of their nails, or anything nearly or remotely associated with them. Nothing is more intimately and entirely part and parcel of a thing than its real name. 'Home, it is said (Tib. i. ii. 57 f., with the precision of a precise rule; /Macrob. iii. ix. 2; /HN xxviii. 18, iii. 65; /Plut. Quest. Rom. 61 [p. 279 A]; Serv. on Aen. i. 277; Celinus, 1; Lydus, de Mens. iv. 73), is only the abode of the greatest city with world dominion. The true name, i.e., the name which would have enabled her enemies to conjure against her with magic, was a religious secret. So the clay or waxen image may be comparatively harmless until it has been

1 Hubert, op. cit. p. 1505.
cereemonially named with the true name of the person whom it is meant to represent.¹

Names are not the only words which are an integral part of the things which they represent. A similar relation exists between the verb, or the sentence in which it is contained, and the act it describes. Hence, of course, the theory of incantation as opposed to that of prayer in the modern sense. From this point of view the lines of Euripides (Hippol. 473 f.),

\[ \text{Euripides, I. Virgil.} \]

are true not only of magic theory in general, but of the Greek-Roman conception of magic in particular. Incantation is rarely, if ever, absent from some stage of the act. The influence of the indirect method is seen even more clearly in the fact that sympathy is often created by the ancients which accompanies the act (e.g., INN xxvi. 93). In the exorcism of disease the incantation is often sufficient in itself. Again, a mere verbal comparison is sufficient, especially if accompanied by a gesture.

² *Psalms* 15:16 tango! extenuates Trimachlo piously (Petron. 39), to avoid possible consequences when he touches it. It is true that the words are the elements which are associated with the unfortunate character in his story was touched by the witch.

Given, therefore, the right words in the right order, the indirect method is, in reality, the desired result must ensue. But which words? Ancient formula connected with or naming the appropriate gods are, of course, valuable, but in many cases not applicable with another words in an utterly incomprehensible tongue. The most famous example in antiquity was the so-called *Epiassos Grammatra* attributed to the Dactyl.²

But it is important that an incantation should consist of what, even in the most general sense, could be termed articulate speech of any sort. More music, e.g., as such is distinctly magic. The great musicians of mythology—Amphion, Orpheus, Valmódemón, etc.—are always magicians. We no longer attribute the power of music to magic in the literal sense, but primitive man hardly be blamed for doing so. The ancient doctors made considerable use of music in their practice, and we ourselves have learned that it is sometimes distinctly beneficial in certain obstinate nervous disorders of long standing.

Here our peculiar dream is with a class of sounds which are anything but musical, but which are mentioned again in the literature of the Empire as being especially powerful and efficacious in magic incantations. Lucan, vi. 686 f., tells us that all the sounds of nature were imitated by such an expert as Euchartho, and does not fail to add his usual and characteristic catalogue. But Lucan is too anxious to tell us all he has read in his uncle's library to be of any great value in a matter like this. Whatever they afterwards may have become, we can be sure that those phenomena were simpler and more specific, that they were probably inspired by some aspect of the doctrine of sympathy, and used for a special purpose.

The Romans habitually describe them by *stirxor* and *stirides*. The sounds to which these words are applied are modern trite, the file of a saw to the cracking of a door and the shrilling of a locust. But they are all alike in being inarticulate, high-pitched, and disagreeable. The obvious and inductive parallel is rich, we think, from Grecian *goyria*. The *goyria* were specifically necromancers and, as we saw above (p. 271), they were supposed to have received their name from the most notable peculiarity of their magic, viz. from their wailing and crying among the tombs.² So, long afterwards, in Graeco-Roman times the charms described by *stirxor* and *stirides* are very characteristic of *nekyomantia*. If so, and we can hardly doubt it, the inarticulate and disagreeable sounds of the two words should be just those described as "wailing and crying among the tombs," and their purpose should be to call up the dead. Such being the case, the two most common and characteristic uses of *stirxor* and *stirides* outside the sphere of magic itself are illuminating. (1) One of these is that sneaking and gibbering of the dead to which the ancients so often refer:

³ Ecce inter tunulos atque ossa carentia bustis *embrum* facies dire *stirides* inanitum (Petron. xxix. 137); *auribus incertum* funerales *stirides* umbrae (Lucan, vi. 652; *cit. Stat. Theb. vii. 779; Sil. Ital. xii. 600; Claudian, in Buc. I. 116; Ovid, Fast. vi. 892, *pap. 743*; Hor. Od. iv. 331; and Hor. Sat. i. viii. 501.²

By the doctrine, therefore, of sympathy the *stirides* of the necromancers were an imitation of the wailing and crying of the dead in the bannish, the moaning of souls that can find no rest, the ominous cry of the *pseon* or *stirinx*, quelling ghosts of those who died before their time (see *P. linealis* of Lucan's *Sid. em. II. 39*; the most remarkable and ill-omened bird in classical folklore. Owls, disembodied spirits, or necromancers calling up those spirits—so far as the cry alone was concerned—be sure which was which? As a matter of fact, all three were more or less ineffectually confused with each other, and there can be no doubt that the cry had much to do with the situation. The *stirix* is associated with all sorts of witchcraft in antiquity, but especially and above all with vanipirism in its various forms (see the present writer's note on Tib. I. v. 42). The classics are rich in examples of the type which happens to be more familiar to us, especially in the erotic sphere. The return of Proteus Glauca is a case in point (Roscher, s. v.), also the story of the *Lamia* (Philostr. Apoll. Tyss. iv. 25) immortalized by Keats, and the simple and touching tale told by Pliny of *Tris* (Mirab. 1) which is the prototype of Schiller's *Brant von Korinth* and Gautier's *Morte Amoureuse*.

But witchcraft is characteristic whenever they like, and they do so regularly, when their object is some form of necromancy.

Ovid, *Amor*. i. viii. 13-18, speaking of Dippus, the reprobate sage with eyes of different colours (*papula duplex*),¹ says:

³ Hanc erro nocturnen versam voceque per umbras
Susipero et piuma corvus amica tegi;
Susipero, et fama; oculis quoque papula duplex
Fulminant et gemino lumine ab orbe minat;
Eosal antiquis procos stavaque squarit.
Et solidam longo carneum fiant hominum.

But the ever present and most gruesome side of this idea, as of magic in general, is the sexual side. Most frequently the witch is like Pampilha in Apuleius (*Met. iii. 21*). She assumes the form of a *stirix* to fly to her lover; she never comes to him as a human and normal woman. The fire of hell are in her veins, the taste of blood and death is on her lips. She is the erotic vampire—the *sucudan* as she was called in the Middle Ages—who haunts her victim in his dreams and little by little draws towards her by the narrow in his bones. Hence it is that the Graeco-Roman screech-owl, who, even at her best, as Flinney substantially says (*IN* x. 34), seems to make no effort to be a person or set like a burning and self-respecting fowl of the air, belongs quite as

² See E. Rohde, *Psyche*, Tubingen, 1907, p. 61; often in the later.
much to the kingdom of dreams, as to the kingdom of the mind. (Jowett, p. 174) For instance whether the *strīa* is a real *strīa* or a witch in the form of one (Ovid, Fasti, vi. 141)? Indeed, as early as Plautus (Pseud. 820) cf. Procl. v. v. 17) *strīa* already meant ‘wicked, ’ as well as ‘screen of mist. ’ It is evidently the Roman parallel of the old Greek ἄγάμας records a popular belief which showed no tendency to diminish in later days. 

So the magician. Our surviving testimony is insufficient to give us a very clear idea how the powers of the classical magician were defined or from what sources they were supposed to be derived. For the Egyptians, as Hultsch remarks, the magician was like the priest in being closely associated, if not actually identified, with the god whose power he was utilizing, and perhaps in the ultimate issue this is everywhere the explanation of his power. Particularly notable was the development of this principle among the Alexandrian theurgi. Here, of course, the characteristic Greco-Roman preference for the indirect method afforded a favourable soil, but, without doubt, the chief factor was the direct influence of the Egyptian theory just mentioned.

But, granted that he does identify himself with the god, how does he get it, or does he acquire it, and, if so, how? The *theurgi* emphasized the theory that it was acquired, and the methods recommended indicate in themselves the religious and philosophical system permeated with the ideas and ceremonial characteristics of mysticism. Asceticism was recommended, but, above all, the magician must be a sot. Such persons may have a revelation, a vision, or more or less directly by way of fallen angels or the archangels (Tert. de Idol. 91, Apol. 35). Indeed, Maria the Jewess was instructed by God Himself: ‘Gods, kings, great philosophers, and sages of old even in this aspect of later magic. The ‘Book of Moses'4 gives us a good idea of the complicated ceremonial through which the candidate was supposed to pass in order to arrive at the perfection desired. There were purifications, sacrificial rites, invocations, and, to crown all, a revelation of the *Kēphāneia* (how the universe was made and the secrets thereof). This process is not so much special as to separate the mage from other gods, as appears to have been the idea of the Egyptian prototype, but with the stars and planets, i.e. the universal powers. The magician, especially the magician-alephemist, derives his power from the acquaintance with the forces of nature. He has established *rapport* with the universe; and, as there is also *rapport* between all the parts of the universe, he has extended his power over the entire universe as a whole. This, of course, is the old doctrine of sympathy on a particularly grand and impressive scale. The result of the ceremony is that the magician, the *theurgus*, is himself no longer a man, but a god.5

This is a conception calculated to appeal to any man whose imagination is still in working order, but it does not emerge clearly in ordinary magic. It belongs rather to mystical magic, which was the special development of serious souls, some of them really great, who believed that this path would lead them to the undiscovered secrets of life, death, and immortality. To speak in terms of the average man and of the history of the art as a whole, the idea which determined the powers of the magician were much the same as those which dictated the choice of a magic object or the con-

The powers invoked.—But the most characteristic feature of Greek and Roman magic is the universal prevalence of the indirect method and its influence on the development of the art. So far as Greece and Rome were concerned, the theory of demons—those spirits to whose action practically every phenomenon in life was ascribed, the corruption of the world at large as it was of Plato and his
followers (Plut. de Defectu Orac. 10). Diseases were caused by specific demons, panic was caused by Pan; such figures as the Erinyes, Nemesis, Panna, Empusa, the Moerai, Αρχάγγελοι, and Βασιλικοί are not only popular but very old. There are even demons whose only function is to execute the commands of the highest deities; they are called popos and there are others who are merely διάμαρτυριοι, or omen-givers. The efficacy, e.g., of the τέκτον demands, as Hubert observes, the creation of a demon or of a spell—a characteristic result of the primitive view that nothing in this world can happen or be except by the individual exertion in every case of conscious, energizing will.

The magician may find it necessary or advisable to consider other spirits besides the specific agents of the phenomenon in question. He cannot be sure of success beforehand. He may make mistakes, and a mistake in a ceremony is fatal. And, even if everything is correct, the ceremony may be entirely upset by something unexpected and unforeseen. In addition, therefore, to the specific energizing demon, he considers it prudent to summon to his aid such other powers as he may command. He calls on some appropriate god, e.g., to send him the necessary energizing demon, or he summons the spirit to whom the efficacy of the rite is supposed to belong. Hence the 'familiar,' the magician's own 'demoniac factotum,' which assumed such importance in the Middle Ages.

The object, therefore, of magic was to act upon such a god or demon, and would naturally be furthered only by energizing spirits or as auxiliaries. Some of these powers occur only in the tradition of magic itself, but the large majority are common to both magic and religion. The most important of all are the demons. Plato himself (Studios, s.e. μαγεία), as well as the average man, attributed to them the success of any magic rite. The magic charms of the later periods are full of invocations to demons, and names of demons, as well as of demons' names, in a formula. What is the function, the powers, the efficacy, the rank of these demons? What is the hierarchy of demons, and what are their functions and the order of the demons? These are questions which are both the most important and the most difficult in the study of magic.

If he wishes to teach the demon the rank of demons, became messengers of the universal deity (Aug. de Civ. Dei, i. 19), while the archangels, Michael, Gabriel, Raphael, have rank with the archontes of the Gnostics as tutelary gods of the planets (W. Anz. TU xv. [Leipzig, 1897] passim). With Christianity the old gods became demons, and demons now took rank with the conservative of conservatives, never gave them up, though all of them now without distinction were in the service of the devil.

One of the most important classes of demons connected with magic are the spirits of the dead, the νεκροφόροι, especially those who, like the δαιμόνια, died violent deaths or otherwise before their time. These demons may be attacked by the spell or charm by which one calls up the dead named. This is the domain of certain magic circles. These demons are the dead, the 'summons' of the dead, and therefore cannot rest in their graves. The heroes, so to speak, have a somewhat higher social position, but they too are important in magic. A notable peculiarity of paganism as contrasted with its successor was the inability to make a sharp distinction between gods and demons. The obvious criterion would be power or disposition. Neither were trustworthy. Some demons were greater than some gods, and some gods were as unmistakably malignant as some demons were beneficent. The demons, therefore, were not the only powers to whom the magician addressed himself. The gods themselves were often put in the place of demons, or demons were put in the place of gods. The preference is, of course, for the di inferi—Hades, Demeter, Persephone, Baubo, the Praxidikai, the Eryine, Gaia, Cybele, especially those who, like the gods, are the demons of the Middle Ages. If a demon is present, the demon may pass back and forth between the two worlds.

The greatest of all, the goddess per excellént was magic and magicians throughout antiquity, is the Semele of the Romance, the Despoina of the Oriental ways, and the queen of the ghosts, who sweeps through the night followed by her dreadful train of questing spirits. Her power is universal, but she is specially connected with the magic of love, metamorphosis, and ψάμμους. The most famous and dramatic incantations of antiquity are associated with her. The bimata, the τέκτον, the stenaditis, the redoubtable spuma lunulce, and the rhomboi are only a few of the objects of which she is especially associated with her. The school on Apollo. Rhod. iii. 478 even informs us that Circe was her daughter. At all events, Medea was her priestess, Minos was called her son, etc. The circle of the demons, especially in the magic papyri, comes Hermes Chthoniosus, often confused with Hermes Trismegistus (Diog. Laert. proem. 7; Porphyry. de Abstin. ii. 16).

But the Kýkos Oéi, the great gods, are also addressed, and not only the great gods of foreign races—which we should expect—but those of Greece and Rome. This habit, however, belongs more prominently to the Semele of the later period. Here the habit of calling on a number of gods at once, or of reinforcing the name of some Greek god with the names of all the strange gods of foreign lands who were supposed to be identical with him, or of calling Ἰάω as the name of the god of gods, or Ἰάω, in the feminine, to sum up, as it were, all the aspects of divinity, or of combining gods in the hermaaphroditic form for the same purpose—these are perhaps the most famous and the most complete of all the illustrations of the magician's intrepid habit of pluralizing for power. The result is, of course, that the divinities lose all personality and, as Hubert says, 'become mere factors of a divine total.' Nothing was left but the name, and even...
this was more or less concealed or defaced in the magician's characteristic effort to get at the true name, the name of power for the now somewhat vague supernatural force which he wished to utilize. Having the name and also the image of the god, he could use the force for anything desired, it being understood, of course, that the一大堆 ceremonial had been performed as were appropriate for realizing the mystic presence of the god.

4. Rites and ceremonies.—Thanks to this habit of magic or superimposition from every direction all kinds of strange and, therefore, particularly irresponsible forces, a magic ceremony was even more complex than a religious ceremony. Especially notable in all ages is the number of conditions and precautions which have to be observed. This is characteristic of any cult in which the theory of incantation still survives. Under such circumstances the immediate conclusion always is that religion is a perfect pursuit. Any man who approaches gods with an invocation so worded and presented that it is a command which must be obeyed knows that he is handling an edged tool able to cut both ways. The gods resent the imperative, especially from an inferior, and will destroy him if they can. The Roman account of the death of old king Tullus shows how dangerous it was in Italy, and the region, much more in magic—for an amateur to start the complicated machinery of invocation. There was an old Greek saying that 'the witch who draws down the moon finally draws it down on herself.' The saying is strongly emphasized in the Middle Ages, that the magician, of all people, is foredoomed to something like the fate of Tullus Hostilius in the end. The Greek is also apt as a specific illustration. It is generally held that of all charms one of the most difficult and dangerous was 'drawing down the moon'—so dangerous, in fact, that the magician is supposed even to have intended a counter-magic in the form of the moon and the sun, which is addressed, 'Our Lady Moon'—a suggestive forerunner of the 'magic circle' of which we hear so much in the more pretentious magic of the Middle Ages.

The magician must also observe certain rules, likewise characteristic of religion, which, to a large extent, are suggested by the nature of the powers with whom he has to deal. He, or the person in whose service the charm is being performed, or both, must be in such a condition that contact with the spirits evoked shall be without danger. Regulations vary, but among the most common are χειρας, 'purity,' ablutions at stated intervals, anointings with oil, avoidance of certain foods (esp. fish), fasting, temporary chastity (cf. Tib. II. 1. 11,); the regular ascetism so often referred to by the eisagoges poets, etc.). More rigorous and more numerous are the conditions attending the performance of the rite itself, and most important is the observance of nudity or its ceremonial equivalent. The ceremony of consecrating the wand, i.e. without knots or fastenings of any kind, or it must be coarse, or of linen, and in the last case, either white or white with purple streamers (the ceremonial significance of colours has already been referred to). Having gone through the preliminary purifications and donned the appropriate raiment, the operator must then consider the attitude to assume. This is vital. In most cases there are gestures which cannot be omitted. Equally important is the magician's own state of mind. The magician's practice indicates that his attitude must be, he must put all his soul into the accomplishment of the rite (Cædilus Martialis, 19).

The time at which the rite should be performed is also very important, and is largely determined by the habits and associations of the god to be addressed, and is an immediate deduction from the law of sympathy. For magic in general, but in particular for the magician, connected with Selene—Hecate, sunset and the few minutes just before sunrise are very favourable; so, too, any phase of the moon, but, above all, the new and full moon. The stars and planets for the most part became important only after astrology gave greater precision to the sort of influence supposed to be exerted by each. As a matter of course, night is a better time than day.

The place is quite as important as the time, and the choice of it is again a direct deduction from the law of sympathy, as regards either the god to be addressed or the person to be affected. Roads, streets, boundaries, and the threshold are all sacred in both magic and religion. The cross-roads suggest Hecate, the graveyard nekyomantia. Both are favourite spots so far as the magician is concerned.

Finally, as in all the divining ceremonies which the operator does not venture to perform unless he is armed with some sort of protective charm against the god whom he is addressing, or against any one who might interrupt the ceremony, or against the counter-curses of the counter-charms.

The best and clearest description of the ceremony, properly speaking, is given by Hubert. It involves the use of two kinds of rites. The purpose of the one is to accomplish the object itself of the ceremony by a logical application of the principles of magic action; the object of the other is to manufacture or, at least, to assure the presence of the actual magic power sufficient to work in the way prepared and thus to accomplish the purpose desired. In other words, to state it in terms of modern electrical science—the theory of which is curiously near to that of magic—he must construct the proper machinery and establish the proper connections; then, before turning on the power, he must see to it that the power is really there.

The first class of rites, the machinery and connections, calls for the use of a number of objects or parts which, in the end, generally come to be considered magic in themselves. One of the most common and dramatic is the magic wand, which is really a conductor of the magician's mana. The divining rod, though used in a different way and for a different purpose, derived its efficacy from a similar conception. The Etruscans used it in searching for hidden springs (Daremberg-Saglio, s. v. 'Aquilex'), and, as the writer of this article can testify from personal observation, as late as twenty years ago a similar method for discovering the best place in which to dig a well was still used occasionally in the American countryside. In addition to the magic wand and the divining rod, we have the apparatus of dactylophantis (Ann. Marc. XXIX. 1. 29), the lamps in lochomantia, the basins of water in locomboantia, keys in their symbolic use, cymbals, the various substances referred to above, threads of different colours, portions of the dead, the κόλπος (Pind. Pyth. iv. 213, and often), the famous rhombus, turia, or vertebrae, 'witch's wheel,' the rotation of which, by imitation and sympathy, was sovereign to influence the will of the person whom one wished to gain, etc.
All these end by being considered magic in themselves, but, in view of what has been said, it will be seen that this idea is secondary. Their real function and purpose was to facilitate or render possible the action of magic power and, at least originally, they were chosen from that point of view.

Sometimes the ceremonial proper needs the assistance of some other means besides the object itself to put the person interested in a state to receive the benefit of the action desired. A case in point is the ceremonial of incubatio. The purpose of incubatio is to bring to the person with the appropriate conditions to secure for him the true and prophetic dream which he desires. Conditions are, as often, dictated by the law of sympathy. And, except that the nature of dreams was never quite clear to the ancients—and perhaps will never be quite clear to any one—the nameless theorists and thinkers by whom these conditions were first discovered and formulated appear to have been quite familiar with the results of J. Börner’s famous dissertation afterwards incorporated and extended in W. H. Roscher’s *Epithelien: eine pathologisch-mythologische Abhandlung über die Alpträume und Apothe- monate von sonstigen Art* (Leipzig, 1901). Börner showed that, among other things, in a healthy person nightmare is usually due to partial suffocation caused by burying one’s head in the pillow; and, this, that the nightmare, the incubus, appears to approach the dreamer is always measured by the rate of suffocation, but, above all, that the appearance of the incubus itself is to a surprising extent determined by the material and texture of the coverings. Such being the case, though L. Laißner goes too far in his theory that the *Uralpiratismus*, the primordial nightmare, is the father of all mythology, we may at least suspect with Roscher that Pan’s legs were the inevitable result of the style of bed-quilts used by his primeval worshippers (cf. Laißner’s method of securing an interview with Fauns in *Verg. Ec. vii. 81 ff.*), and, for that matter, that the incubi, succubae, stripes, and all their monstrous brood must have entered this world in the first place by the Ivo (Iv). If so, it is certain that some of our most cherished legends, our best and most thrilling stories, and our finest poetry are literally the stuff that dreams are made of.

But all magic operations none is more common, characteristic, more dramatic and impressive, or a better illustration of the doctrine of sympathy than the casting of spells (cf. Hecatetes, xi. 14, and the examples noted below). The special feature of this operation is due to the theory that, if the person whom we wish to reach with our magic is absent or far away, his place may be filled by a puppet, or some symbolical substitute for him. If, then, the ceremonial is appropriate, whatever we do to the puppet will be exactly repeated, literally or symbolically, as desired, on the person whom the puppet represents. Consecration of the one is immediately followed by consecration of the other (*Verg. Ec. viii. 74 f.*), binding of the one by the desired condition symbolized by it in the other, running needles into the heart of the one by some effect on the other symbolized by such a process—as, e.g., wasting away to death with no apparent cause (Ovid, *Amor. III. vii. 29 f.*, *Heroid. vi. 21*, and often). Sometimes one figure may stand for an indefinite number, as in the spells of Nectanebo (pseudo-Cleomenes, l. 1). One may cast a spell on spirits as well as mortals by this means (*Eus. Prep. Evang. v. 12 f.*).

Hence we have cases in which two puppets are used, one representing the person to be acted upon, the other the spirit by whom the action is to be performed (*Hor. Sat. I. viii. 26 ff.*). Occasionally even three figures appear to have been used (*Schol. Bern. on Verg. Ec. viii. 75*). Often they were hollow, and their power was enhanced by putting written instructions to the intervening demon in the puppet, and the puppets must be made of clay or wax, but occasionally other substances were just as rigorously prescribed. Enesidem (*loc. cit.*) speaks of such an image of Hermes made of pulvinate earth and the roots of rue. A sheet of metal or even of paper upon which the figure has been traced is often considered sufficient. The value and philosophy of exvoto have already been mentioned. But one may use such arbitrary substitutes as the body of a bird, a sprig of myrtle or of rue, etc. Indeed, as we have already seen, the name is sufficient in itself. On the same principle, a written incantation placed in a tomb has the same effect as would a puppet (*Apul. Met. i. 10, de Mag. 53*).

The verbal portions of a magic rite are of the highest importance. In many cases they are the operator’s attempt to work his incantation in order that he may make no mistake as to the meaning and object of the symbolic rite. The puppet is inscribed with the name of the person whom it represents, and by a written statement of what is to happen to him. So, when one gathers a medicinal plant, one should be careful to utter the name of the patient who is to benefit by it. Again, in constructing a devoto, one should specify in order each and every part in which it is desired that the proposed victim shall suffer.

The indirect method is also directly responsible for the conclusion that incantations are a special help to the operator in the accomplishment of his second great task—the creation of magic power. Hence the use of the magic hymns and litanies, the object of which is to ensure the presence and active participation of the appropriate spirit, to indicate his duty, and, if necessary, to frighten him into doing it.

We have seen how various objects, plants, simples, etc., originally selected as facilitating in some way magic rapport, finally came to be considered magic in themselves. Names and incantations underwent precisely the same secondary development from being a means to an end they became magic per se. The further conclusion was then drawn that their power might be indefinitely increased by frequent repetition, by lengthening certain syllables to an extraordinary extent, by abstracting certain syllables and decorating them with affixes and suffixes, by rearranging them in different combinations, and especially by disposing them so as to form certain figures. Examples still surviving are *abracadabra,* and *sator arepo tenet opera rotas* (see *Theanuris Ling. Lat.*, a. a. * Arepo*). The Ephebia Grammatica belong to the same type (*Porphyry, de Myst. vi. 4*). Mystery and power were further enhanced by the use of magic alphabets, by certain sacred inks, and so on. Numbers pass through the same experience and acquire the same magic power per se—e.g., there are seven planets. If, therefore, we wish to invoke them, there is nothing so compelling as the pronunciation of the seven vowels or a sevenfold repetition of a ceremony.

MAGIC (Greek and Roman)  

Some dreams must be interpreted as the future, while others are intended to provide insight into the unconscious. In ancient Greece, dreams were considered to be divine messages, and their interpretation was an important part of religious and personal life. The Greeks believed that dreams could predict the future or reveal hidden truths. They often consulted priests oracles to interpret the meaning of their dreams. The interpretation of dreams was considered an important aspect of religious and personal life in ancient Greece.
MAGIC (Greek and Roman)

This article. It is the business of magic, as long as it remains magic, to speak only in the imperative. It must, therefore, retain and emphasize these primitive doctrines—notably the doctrine of sympathy in all its forms—which are supposed to enable it to use the imperative successfully in addressing the gods. It is also the business of magic, partly because it is an outlaw and bound to assert its impossibility to a reordered, to ordain ordinary, if not impossible, things—among them, things which the social and legal restraints of religion would not allow it to promise. In the course of its long and exceptionally brilliant history classical magic promises practically everything from a cure for warts to a receipt for personal immortality—all tried and true. Magic, therefore, was obliged not only to retain but to develop in every possible way those primitive aids to its imperative. It pluralized for power. And religion had done the same. But magic was an outlaw, it had no position in society. It was free to range at will, to gather into one portentous plural strange and terrible gods from the four corners of the earth, to combine them with the native gods, to rearrange, reorganize, mutilate, etc., in the ways described. In the long run, as we have seen, the pantheon of Greek-Roman magic was a pandemonium, and confusion worse confounded, in which the only relating principle seems to be the sheer expanse of the system as such. All its forms has been pushed to its uttermost limits.

To the very end magic was obsessed by the old imperative and, therefore, by the time-honoured magic for making it. Whether as a potion, as a charm, as a spell, as a rite, as an incantation, as a curse, as a jinx, magic was a force, and it appeals for the most part only to such persons as the special investigator and the historian of manners and customs. But the most characteristic and best example of a Greek-Roman magic is the deliberate exploitation of it in the interests of conscious literary art. One is inclined to assume, and perhaps justly, that this was particularly notable of such periods as the Hellenistic age, the time of Augustus and his immediate successors, and the Sophistic revival of the 2nd century. This use of magic was especially characteristic and striking, in that it was seen not only as a means for the attainment of personal ends, as is often the case with magic, but also as protest against social and political evils. Thus magic became a method for the expression of the individual's dissatisfaction with the state of affairs and a means of escape from the realities of life.

In an article like this it is impossible as well as inadvisable to attempt a thoroughgoing investigation of the debt of creative literature to magic in antiquity. We must content ourselves with a passing reference to a few of those magic operations which are most frequently mentioned, and which by reason of their dramatic possibilities are best suited to the purpose of literary art.

One of the most notable of these is nekyomantia, calling up the dead to ask them questions. Nekyomantia is rarely absent from that catalogue of magic feats with which so many of the Roman poets seem to be obsessed (see for instance, as an actual note), They also mention even more frequently three other feats which are particularly awesome, but for which the modern reader, at least, can see no adequate reasons. It always seems to them that they are merely a useful, though by no means necessary, preparation for nekyomantia. These are producing earthquakes, splitting the ground, and making the rivers either stand still or run backwards. The magician uses his own hands to split the ground; the behaviour of the rivers is
merely a consequence of the quake. He splits the ground so that the ghosts can hear his incantation (i.e. be reached and affected by it) and then can come straight up to him from Hades (Sen. Gaud. 571, Luean, vi. 729). As we have seen, the literary use of necyomantia begins with the famous passage of the Odyssey (xii. 24 ff.). The essential details of the ceremonial as Homer describes it were always the same not only in literary tradition but in actual life. Doubtless, Luean felt that his own long and lurid description of Erichthon’s special performance for the benefit of Sextus Pompeius before the battle at Agrigentum was the masterpiece of its kind. And so it is. It would be hard to find a more glaring illustration of what can happen to literature in an age when a furious lust for effect is not restrained by any principles of rhetorical self-control or common sense. Nekyomantia had a long and brilliant tradition in the drama. Examples still surviving are Aeschylus, Perses (the ghost of Darius), and Seneca, Oedipus, 560 ff. Indeed, ghosts were as common, it would appear, in the ancient as in the Elizabethan drama. Klytēs Χαρόπολος, ‘Charon’s step-ladder,’ was the popular name for the regular staircase by which the阴魂 passed into the world from the world below. Nekyomantia was also quite as characteristic of comedy. In the later days of the Roman Republic Decimus Laberius wrote a mime entitled necyomantia. This and similar themes were characteristic of the mime as developed by Philiotus and his immediate successors during and after the Augustan age. Brilliant examples in the satirical sphere are Horace, Fasti, v, and Persius, Sat. i. 

If we choose to emphasize the literary influence as such of the Homeric Nekyia, we can say that it is responsible for one of the most notable developments in critical literature. This is the theme of the Descent into Hades. The Homeric passage is directly responsible for the 6th book of the Aenid and its numerous echoes in epic and narrative poetry both ancient and modern. Nor was it the only department to be affected. The theme was a favorite in the Old Comedy of Athens, although, as it happens, the Fros of Aristophanes is the only example surviving. The same is true of the satirical literature of the Alexandrian and Hellenistic ages. It was characteristic of their didactic methods to appropriate for their own purposes the traditional folklore and mythology. One of the most notable was the Kαραβάς εἰς Άδην, which practically became conventionalized as a μική-αν- σένεια for the presentation of doctrines and opinions. Alluded to it are such examples as Horace, Sat. ii. v., Seneca, Apocolocyntosis, such works of Lucian as the Dialogues of the Dead, and Claudian’s attacks on Euripides. The Epicpharmicus of Ennius and probably certain of the lost satires of Lucilius and Varro were illustrations. The poet Natos used it to a notable extent. But, while necyomantia is the most prominent and pervasive aspect of literary magic, the most famous and popular was the love charm known as  ‘drawing down the moon.’ It is first mentioned in surviving literature by Aristophanes, Nubia, 760, again and again by later writers, and still survives, it is said, in modern Greece. It was the theme of no fewer than four masterpieces: a lost mine of Sophron in the time of Xerxes, the lost Tetralogy of Memorion (HN xxx. 7), the second Tetralogy of Sophron (found on Sophocles), and the eighth Oedipus of Vergil (found on Theocritus). Certainly, too, Lucian, Philopseudes, 14 ff., is a masterpiece of its kind. The atmosphere reflects to the life that aspect of the 2nd cent. which suggests the modern milieu in which these are spiritualism, and kindred ideas are wont to grow luxuriantly.

In this passage of Lucian we have the 'Professor's story' of how his disciple, Glaukon, was saved by the great 'Hyperborian' magician, Lucan. The legend that Glaukon, a prosperous young man whose father had been dead about a year, fell fairly ill with love for the dying Chloris. Chloris was the daughter of Zephyr and Lara, and was in love with the young man, and all the time the latter was unaware of her love. The story is then told of how Chloris was felled by a snake and was brought to Glaukon. Upon telling the student of his story, he was said by the 'Professor' to feel so 'light' that he immediately advanced to the services of the great Hyperborian. From henceforth, to be paid in advance—to supply the necessary sacrifices—and sixteen more if the operation was successful. This is the conclusion—which showed that the specialist was not only a great man but also a just and scrupulously conscientious man—he insisted on having an elaborate rite of necyomantia, to call up the boy's late lamented father and ask his consent. The old gentleman was furious at first, but finally told them to proceed. A dramatic description of the ensuing ceremony follows—how the moon came down, how Chloris came up, how the ghosts beckoned around, how, at the psychological moment, the distinguished operator 'told the sort of little figure of Cupid which he had fashioned out of clay to go and fetch Chloris.' Away flew the tiny thing at once. A few minutes later there comes a knock on Glaukon's door, in rushes Chloris, throws arms around him, and says 'μεγαλομεγάλη σοις ('like a girl utterly crazy with love'), and there she stays till cockcrow! Then up rose the moon to heaven, and the ghost of Glaukon's father and Chloris and the ghost disappeared.

But the 'Professor's' listener is not duly impressed. Beside, he knows the girl. He doesn't see the use, he says, of calling on one Hyperborian magician, one goddess, and one clay amadon to take his amorous caress. In overcoming his fear to do so, and who, as every one knows, is ready to follow a man to the North Pole and beyond for the love of him. 

Such books as the Metamorphoses of Ovid and the lost poem of the same name by his predecessor, Nicander, show that change of form was quite as characteristic of classical mythology and folklore as of the Thousand and One Nights. Transformation was Cioe's specialty, and the Homeric account of her methods (Od. x. 212 ff.) has always remained the most famous literary account of the performance of the magic. Apart from its actual realization and the vivid and circumstantial accounts of transformation by magic are those in which Apuleius (Met. iii. 21 ff.) and Lucian (Asimis [the common source of both was the lost romance of Lucius of Patra]) tell how the witch, Pamphile, made an owl of herself, and how, immediately afterwards, Fetis, her maid, made an ass of Lucius. But, as a rule, magic as such is not prominent in metamorphosis as a literary theme. The transformation was cliche, and the focus was on the power for in this particular feat the dramatic point is the transformation scene, and all else is likely to be subordinate, even in those cases where the transformation is the primary motive. Vergil’s sorceress, e.g., says that she has seen the werewolf transformation with her own eyes and that it was done by magic:

1Ipsa sedict Moeris (nascuor piuma Ponte);
Ipsa sepe lupam fieri et ac condere silvis
Sororia ('Alv. viii. 28 f.').

In all the famous werewolf stories of antiquity, as in most of the stories told by Ovid, the magic element is either absent, ignored, or referred to as so slight that it calls for no special notice here. Magic command of the wind and weather is often mentioned, and nothing in the way of magic was more common in everyday life, but the one famous passage is that in which is given the wind’s bag of winds to Odysseus (Od. x. 10 ff.). Also unique—and terrible—is the spell of the evil eye cast by Medea upon the giant Talus (Apoll. Rhod. iv. 1602 ff.; Ovid Metv. vii. 262 ff.;). As we have seen, the full and dramatic description of her charm for renewing the youth of Jason’s father, Jason. More famous was her presence of doing the same favour for the aged Pelias, but the instant it was given (Apollod. i. ix. 27; Hygin. Fab. 24; Macrobi. v. xix. 9 f.). This was the theme of the lost 'ταῦτα Πέτρουδας'.

of Sophocles. Indeed, the lost plays of the Greek tragic poets would have been a wonderful field for the study of the use of magic for literary purposes. 1

Creusa's role was a famous theme. Euripides (Medea, 1205 ff.) merely described the awful effect of it upon the wearer; Seneca (Medea, 740 ff.), the preparation of it. Which is the more artistic and effective may easily be seen by comparison.

On this last there are types of magic in which it is precisely the preliminaries, the things which witches do because they have something terrible in prospect, that are full of dramatic possibilities.

As we have seen, the necromancers are always eager to get mortal remains in order to be better able to call up their late owners. Striking examples are Trimalchio's story in Petron. 63, and the dramatic experience of Thelyphron as told by him after dinner in Apuleius, Met. ii. 21 ff. So, speaking in terms of magic theory, the dreadful scene of Horace, Bod., was only a means to an end; the object of the witches was to secure the strongest possible love-charm. The liver is the seat of desire (Hor. Odes, iv. i. 12); therefore the liver is sovereign in a charm to produce desire. When it first hits the liver for the arrows, he irritates the snake for some time before he kills it, so that it may secrete more poison and that the poison may be more virulent. So, in that case, the harder the liver the more the desire, so much the more it actually accumulates desire, as it were, and stores it up within. If, therefore, we can secure a liver still containing a maximum of desire so accumulated, we have a charm of maximum power for arousing desire in others. Hence, in this scene, the poor child who has been kidnapped by the witches for that purpose must look as if it had died. A prolonged agonizingly intense desire for food and drink, which is deliberately aggravated as much as possible by always keeping food and drink before his eyes. After the child was dead, his liver was removed, and, upon being prepared with the appropriate ceremonial, became a love-charm of superhuman power, a φιλίτρον secured in a special way for a special purpose.

The gathering of herbs is another preliminary of φάμακατα, which was fully appreciated for its dramatic possibilities. In literature the process is regularly associated with Medea (Apoll. Rhod. iii. 87 ff.; Plut. Meroe, 224 ff.; special emphasis was probably laid on this by Sophocles in his Περίκτερον). She went out at night and by the light of the full moon cut her hand and behind her back, ἐλατρεύοντες (see HECATHE'S SUPPERS).

So far as philtres are concerned, the most notable contribution to literature is what might be called the case of Beauty v. Magic in the court of Love. 2 Its first appearance is in the scene between Hermione and Andromache (Eur. Androm. 265 ff.), to which attention has already been called. The subsequent transformation of the question at issue is a striking and characteristic illustration of the methods and development of ancient literary art. The topic was announced from the start, clanged through, argued in the schools of philosophy, enlarged upon in the schools of rhetoric (Menander, ἱσεύ 646 K.; Aen. 375 R.; Lucret. iv. 1278 ff.; Tib. i. 43, viii. 23; Ovid. Fasti, 35 ff., don't mind this, S. 506 ff.). Some time in the unrecorded past it was given a new turn and made the basis of a properly illustrative and sprightly anecdote in which the appropri-

1 [Note on Satyr, Life of Euripides, Oxon., Pop. H. 165-6, A.J.P. xxxiv. (1913) 62-73.}

2 [Abit, op. cit. p. 173 ff.]
all seemed like a nightmare to the prisoner at the bar, and his impressions are fully shared by the reader. What surprised him— and it surprises us too—was that the trial was held in the ample hall of the house yet, every seat was taken, and people had even climbed up on the pillars to get a better view. After the trial, the law of the goddess was passed: one must be prepared to refuse to the tormented and make them to peace. At this point the poor old mother, who had been so wasteful of her kindness, and who had been so much in the habit of being lectured on, mastered herself and insisted that the unfolding assassin be compelled to look upon his imageless. But she said not a word and even with the corpse, cried by fists, and decently covered with a cloth. Lucina was forced, much against his will, to raise the cloth, and discovered two stiletto wounds in her back, but two minor wounds in her head and neck. A little more force was needed to get the wretched man out of the house. But, instead of being expelled, he was received into the house. Mystified, but relieved, Lucina was escorted home in triumph.

The day was cold, and a regular festival of Reus, the goddess of love. Lucina's own contribution to this particular occasion had been so original and successful that the city had triumphantly voted her a bronze equestrian statue. Lucina was still mistified and, indeed, somewhat resentful. As soon, however, as Podis had the opportunity, she let him into the secret.

At Pamphila was passing the barber's shop the day before the murder, she had caught sight of a blond youth from Bascul who was in the chair having his hair cut. She fell in love with him then and there, and went straight home and began preparing a charm to draw him to her. The necessary preliminary, of course, was the possession of something belonging to the man. So Podis says in substance, 'I was sent out to steal a lock of his hair. But the barber caught me before I could succeed, and he made no doubt that he would make me give him the hair, which I had in my dress. I was in despair. But on the way home I passed a shop in which a woman was cutting the hair off some wine. So, to save the barber, I picked up some of the yellow locks I could find, and managed to get them on my dress for the rest of the night. She took them, and began her charm about the time you started for the dinner-party. The charm worked only too well, and she was given the hair of the original owners of those locks—two passionate wine-skills struggling really to get at their love and melt at her feet. And so it comes that "non homlicium mun, sed utricium amєcte-te" ("the lover now in my arms is after all not a non-personal"").

But nothing, perhaps, is a clearer proof of the premonition of magic in everyday life than the fact that, as H. Reich has abundantly shown, 7 the favorite method of most (but not all) of that magic as a literary asset is the most popular type of drama in the ancient world. This is the minstone (see DRAMA [Roman], vol. iv. p. 904). Transformations of men and animals were frequent; all kinds of charms were performed; the effects of all kinds of powerful magic were represented. Witches, warlocks, magicians, prophets, ghosts, demons, popular divinities, Empusa, Mormo, Incubo, Anna Perenna, Mefesto, Eudora, Eudora, etc., were all typical characters. The play went on in fairyland quite as often as on the Imperial streets or in the Imperial country-side. And sometimes, no doubt, it was hard for the audience to see in which of these it was realistic—the very name insists upon it. But the investigation of Graeco-Roman magic emphasizes the undeniable fact that, after all, the real- istic picture of the magic was more likely to be, or to seem, realistic. The native gifts of imagination and fancy were too enduring, the native inheritance of mythology and folklore was too rich and interesting, to allow it. Magic was one of those vices of the intellectual youth which the Graeco-Roman world never quite outgrew. But intellectual youth also has its virtues; and these two great Aryan races of the Mediterranean basin, in some other respects as in theirs, have the unique and priceless gift of never really growing old.

KIRBY FLOWER SMITH.

MAGIC (Indian).—I. HINDU.—Indian magic is essentially the profession of certain castes, though magical rites may be practised by laymen and magical properties are attributed to countless objects. The caste which is peculiarly devoted to magic as a vocation is that of the Brahmins, and is primarily Hindu but has Muhammadan elements affiliated to it. The Yogi claims to hold the material world in fee by the magical powers which he has acquired through the study of the Brahmans. But this claim is not supported by the authorities, and this Yogi's power is disconnected from superstition of the worst type, and the Yogi in reality is better known as a common swindler, posing as a yogi. This is the tale of the magic boat, the gift of it comes from a Hindu and is a matter of public and private life. The Brahmins are said to have secret books on the subject which contain over 50 jottas, or figures, consisting of numbers and partly of mystic symbols, etc., and geometric figures that are not known to free-masonry; these are used for all kinds of purposes, including the causing of abortion, success in gambling, etc., as well as to ensure easy parturition. The Yogi in particular claim power to transmute base metals into silver and gold—a claim which enables them (and those who partake of them) to reap a great harvest from the credulous.

2. OCCASIONS.—Magical rites are practised at weddings, during pregnancy, at birth to procure offspring and ensure its safety and to determine and predict its sex, and to resuscitate the dead.

1. Marriage.—The magic practised at a wedding is often symbolical. For example, just as naked women plough the soil in times of scarcity to ensure a crop, so the vrata of the Brahman bride of the Balija caste performs a mimic ploughing ceremony, stirring up earth in a basket with a stick or miniature plough. Similar rites are in vogue among the Palli, Kannama, Sambaludayan, and Todiyamy. The Kannama bride carries seedlings in her lap, apparently to be planted by the groom. Among the Kaju a milk-post of Odina Wedler is set up, and, if it takes root and flourishes, it is a happy omen. A Unni bride plants a jasmine shoot, whose flowers she should present to the deity. The parting of the bride's hair with a thorn is probably an imitation of the ploughing rites.

The Indian conceptions that all life is one, and that life is something tangible or material, come out in several rites. Thus, at the beginning of a wedding, the cedar scatterance and graha (wicked)
seed on some white-ant earth near five pots filled with water. By the time the wedding is concluded, these seeds have sprouted and are culled by the pair, taken to the village well, and cast into it—obviously to ensure their fertility. An Iliayan couple sow nine kinds of grain in seven trays, and the Mala groom digs with his knife a few furrows, which his bride fills with grain and water after he has covered it up. Apparently the wide-spread custom of grinding grain at weddings has a similar origin. This is done by five women, e.g., in Bombay.

The grindstone is also used among the Bhondari in Madras; the bridegroom stands on it, while women bring a mill-stone and powder three kinds of grain with it; then he sits on the dais, and a number of married women each touch seven times with a grinding-stone an area not placed on his head. A Bedar couple are invited by the Brahman priest to stand on a grinding-mill placed beneath the pandal.

Among the Aongamaalayan a grinding-stone and a heka, representing the god Siva and the goddess Sakti, are placed in the north-east corner at the actual wedding, and at their side pans containing nine kinds of seedlings are set. Seven pots are arranged in a row between the stone and a branched lamp, and married women bring water from seven streams and pour it into a pot in front of the lamp. The grinding-stone is also used in Bhopal.

The future offspring of the union is symbolized among the Komati by a doll which is rocked in a cradle, but both the prospective parents profess lack of leisure to look after it. The Parivarun union is a stone鼎 representing the child, which the husband hands over to the wife, who accepts it as 'the milk is ready.' The Konga Vellâda bridegroom takes some fruit and a pestle to a stone, which his worships. It is supposed to represent the Konga king whose sanction to every marriage used to be necessary, and the pestle represents the villagers; but the fruit is not explained, and the milk is probably ophthalmologic. A newly married Bedar or Boya couple sit on a pestle, and are anointed after rice has been showered over them. In Bombay the rice-powder is used to personeate the baby.

Fertility can also be communicated to a bride by placing a child in her lap, and fruit is an effective substitute for one. On the same principle women whose husbands are alive are admitted to take part in the wedding rites, more especially if they have sons living; whereas widows and those whose children have died should be excluded, at least from the more significant rites. Similarly, widowers are excluded from certain functions. Unmarried girls may, however, take the place of married women, e.g., among the Badaga, married women or virgins, preferably the bridegroom's sisters, go to a stream in procession to bring water for cooking purposes in decorated new pots.

Water as a source of fertility also plays a great part in wedding rites. Thus bathing is an essential part of old and modern weddings, and visits to a well or stream are very common. The use of pots full of water is to be explained in the same way. Thus among the Aikitar of Bombay a couple already married bring pots from a potter's house to that of each party to the marriage, and after an elaborate rite the boy pours water from a jar. A jar also plays a prominent part in other rites, including a widow's re-marriage.

Fish being an emblem of fertility, they are often caught by the bridal pair—e.g., among the Gudigara of Madras; the Holeya let the fish go after kissing them. But the Kustriyas, in Madras, only pretend to catch them, as do the Nambuthiri Brahmanas.

The potter's wheel, symbolical of the creative power which furnishes food in both of its forms, is clay, is also in evidence at weddings. The clay is formed into a revolving lump, like a linga, and wheel and clay together bear a strong resemblance to the confection of linga and yoni.

The Pola-star (Dhruva in northern India) is called Arunachâ on Madras, and, as the wife of the Sâ Vasiśṭha, is pointed out to the bride as the model of conjugal fidelity.

(2) Birth.—Magical rites to procure children are very usual. A typical rite, often resorted to by barren women, consists in burning down seven houses. In Madras a Koyil woman sometimes throws a coco-nut down in front of the cloth on which portraits of ancestors are sewn, and vowkes obeisance to it, and this cures her sterility. Bathing is also a cure for this misfortune, especially bathing over a corpse.

In the Andamans a pregnant woman sows seed. Pregnancy, moreover, involves peculiar risks necessitating the protection of magic and the avoidance of various evil omen, such as stepping on the heelrope of a horse, which might apparently cause protracted labour, or crossing a running stream, which would result in miscarriage—a common belief in the Panjab. In Travancore tamarind juice is dropped into a pregnant woman's mouth to cast out devils.

When his wife's first pregnancy is announced, a Keta husband in Madras lets his hair grow long and leaves a coc-nut in a pot, and on the child's birth he is under pollution till he sees the next crescent moon. A Makkuvan husband also lets his hair grow until the third day after the birth. A coco-nut, cocked as leaves, and areca nuts are laid at the place where he sits to be shaved, and the coco-nut is smashed to pieces by one of his own septs. A Nambuthiri Brahman also remains unshorn while any of his wives are pregnant. Pre-natal divination to ascertain as to magic to determine the child's sex are also common. Thus the Cherumans in Madras employ devil-drivers, who seat the woman in front of a tent-like structure with a coco-nut in her lap. When open, the fruits predict the child's sex, the birth of twins, and the child's expectation of life or death. The goddess Kâli is supposed to be present in the tent, and prayer is offered to her to cast out the devil from the woman's body.

Another rite which is believed to influence the child's sex is the so-called simanta of the Sudras in Madras. In a first pregnancy, water or human milk is poured over the woman's back by her husband's sister. To ensure that the child shall be a male the pradakshina is performed on the third month of pregnancy, the wife fasting that day until she is fed by her husband with a grain of corn and two beans symbolizing the male organ. Sometimes curd is poured over them before she swallows them, and she also pours juice of a grass into her right nostril.

Quite distinct from this Brahmanical rite is one of the Kammalans in Annam, who endues the spirit with magical properties: a man who conveys himself in servitude to the spirit of this tree will get all that he wants, but only at the risk of his life. For twenty-one days he must take a pot full of water daily to the jungle, and on his way back cast half of it upon a particular tree; on the twenty-first night he will be irresistibly drawn towards it; the devil will appear to him, and, if he escapes death, he will get all that he wants as the price of his condition.  The tree called <i>belkass</i> (<i>Callicarpa coracana</i>) has magical properties; any one cutting it down or tampering with it loses all his hair and becomes very ill. It yields a milk which mires blisters, and even to sink in its shade, while it is exuding it, has that effect. Indeed it is dangerous to sit in its shade at any time. This belief is current in the Murree Hills, in the Panjab, but in that very part the Gijars use amulets of <i>baker</i> (<i>its usual Indian name</i>) to ward off the evil eye (<i>sagar</i>) from both men and cattle, and its fruit is also much relished.

To cure scorpion bite the insect should at once be caught and burnt, and the smoke allowed to touch the bite. To cure <i>saya</i>, or consumption, in a child (said to be due to enchantment caused by ashes taken from a burning place and thrown over or near the child) the parents should give away salt equal to the child's weight. Toothache is cured by a magical rite which consists in spreading sand on a clean piece of board and writing on it the first six letters of the Arabic alphabet. The patient then holds his aching tooth between his thumb and index finger, and touches each letter in turn with a pointed instrument. When he reaches the sixth letter, if not before, the pain is cured. At each he should be asked if he is cured, and, when he says that he is, he should be asked how long he wishes for relief. He should reply 'two years,' as that is the limit of the charm's efficacy.

After a bad dream, a Gârâ, in Assam, collects a reed-like grass and is beaten with it by a priest, who repeats certain exorcisms. Then they carry a cock to the nearest stream, kill it, and let its blood fall into a toy boat; the boat is launched, and as it starts the dreamer bathes in the water. The prayers, the chastisement, and the sacrifice appease the spirits, and the boat is allowed to carry off the ill-luck.

On the first day of sowing sugar-cane, sweetened rice is brought to the field, and women smear the outside of the vessel with it, after which it is given to the labourers. Next morning a woman puts on a necklace and walks round the field, winding thread on a spindle. This custom is falling into disuse.

Magic squares are in vogue among Hindustans. Thus one which totals 90 lengthways cures quartan ague; one totalling 100 every way causes excess of milk in cows and women and of <i>ghâ</i> in a <i>chum</i>; one totalling 150 every way will, if worn round one's neck or in one's <i>poyyr</i> (turban), bring any person under one's power; and one totalling 15 each way brings luck and is commonly found on shops. Squares totalling 55 and 20 each way should be placed under one's seat to ensure success at play.

2 NINQ lv. (1894) § 722, and Selection Calcutta Review, viii. (1899) 124 (Calcutta Review, CXXV. (1899) 280). In the latter R. C. Temple identifies the <i>baker</i> with the <i>Skr. vata</i>, or <i>bahuvar</i> tree, but describes the <i>baker</i> as a low thorny shrub of the <i>jzizyphus</i>, or <i>jub</i>, family, the fruit of which is the 'fruit of paradise' in Arabic poesy—on which account the tree is much prized in Tripoli and Mina.
3 NINQ lv. (1894) § 693.
4 PB. ii. 376.
7 NINQ lv. (1894) § 402.
8 PB. i. 357.
The power of magic is so great that by mere assertion of its potency a bîr, or demon, may be brought to life.

Let the whole of a ninth lunar day falling on a Friday, and in the evening eat sweet rice milk. At 8 p.m. dress red clothes provided with a circle of red thread around the ground. Sit in its centre with four cardamoms, some catechu, betel-nuts, and some firewood to be burnt in a leather hunter and an alms bag. ‘Incantation can break down the stars’ 8000 times—and a demon will be at your service.

II. ISLAM.—Muhammadans classify magic as being: ḍalāl (legerdemain), low sīfī, and sātānic (shaitānī). In divine magic perfection consists in knowledge of the greatest of God’s names—the ʾānāʾ, which is imparted only to the elect, and by which the dead can be raised. But God’s other names, and those of Muhammad and of the good jīn, are also efficacious, and written charms are composed of them or of passages from the Qur’ân, as well as of mysterious combinations of numbers, diagrams, and figures. Satanic magic is condemned by all good Muslims. It depends on Satan’s aid and that of the evil jīn, who ascend to the lowest heaven and hear the angels so that they can assist magicians. Enchantment (al-sīr) is a branch of this magic; but, as it has been studied with good intent and with the aid of good jīn, there is a science of enchantment which may be taught by lawful means. If enchantment results in death, paralysis, afflication with irresistible passion, possession, or metamorphosis. Metamorphosis is effected by spells or invocations to the jīn accompanied by sprinkling of perfume, or water on the object to be transformed. Against enchantment and other evils a talisman (tīlīm), i.e., magical characters, astrological or otherwise magical, or a seal or image on which they are engraved, is effective. When rubbed, it calls up its servants.

Divination (al-khānā), which is also practised by the aid of Shaitān, is obtained by magic, by invoked names, and by burning perfumes.

Forms are: darb al-mandāl, inscribed into the enchanter’s circle, darb al-rāmāl, the moving of sand, al-najāt, astrology, and al-sīr, or angry from beast and bird.

The Imām Zaflān rupee is said to be dedicated to that imān, and is worn by Muhammadans on the right arm when starting on a journey.

The names of All and the imānā are used in magic formulas according to the aljāb, or letter-value system of computation. Notices of the custom are not uncommon in Indo-Persian histories as having been practised on the Maghāl court of India.

Islamic medicine is acquainted with the olive of Bani-Iṣrā‘īl, a stone found on the banks of the Indus. It is black with a little red and yellow, and olive-coloured with small white lines, and is used only for sprinkling over wounds and stings by Muslims. Hindus are said to worship it as a god, and to the Persians it is known as the sanq-i-Tahk, or ‘stone of Jahveh,’ or the ḥaṣar al-Husain, or ‘stone of the Hindus,’ in Arabia. Jasper (in Pers. yasam, Arab. ḥaṣar al-bushaf, or ‘hard stone,’ when olive, green-yellow, or opaque green, is used in charms; and, when white, in medicine.

The hair of the child will never lose its lustre, with a respect of it to be tied on his neck at birth. If a piece is tied on the right wrist, he will be immune to witchcraft and the evil eye. Tied to a woman’s thigh, it ensures valiant labour, and, if by the light of a crescent ʿal-qaḥair (the night when Muhammad spake with God) a man be sketched over it and the picture worn over the head, the wearer will be safe from wounds by the weapons of the age.

III. MAGIC AND RELIGION.—It has been held by many scholars that in ancient India the confusion of magic and religion was rife, just as it survived among other peoples that had risen to higher levels of culture. H. Oldenberg regards the sacrificial ritual of the earliest known period as pervaded with primitive magic, and he tells us that the rites celebrated at marriage, initiation, and the anointment of a king are complete models of magic of every kind, and that the forms employed are of the highest antiquity. Sylvain Lévi observes of the sacrifices prescribed in the Brâhmaṇas that they have all the characteristics of a magical operation, effective by its own energy, independent of the divinities, and capable of producing evil as well as good; it is only distinguishable from the results of enchantment by the fact that both matters are treated in the same works. Thus the Śatavātikatva Brâhmaṇa is a hand-book of incantations and sores, as is the Abhuta Veda and the Brâhmaṇa, ascribed to the writing of M. Bloomfield also holds that witchcraft became intimately blended with the holiest Vedic rites, the broad current of popular superstitions having penetrated into the higher religion of the Brahman priests who were unable and possibly unwilling to cleanse it from the mass of folk-belief which surrounded it. W. Culand, in his introduction to the Kautilya Sūtras, enlarges on the agreement between the magic ritual of the old Vedas and the shamansim of the so-called savage. Indeed, some authorities would derive Brâhmaṇa from brahman, ‘a magic spell,’ so that, if they are right, the Brâhmaṇ would seem to have been a magician before he was a priest.

On the other hand, J. G. Frazer points out that he was a tree, or as it is called in English, a sacred tree, and that the sacrifice of the goat, which is always to be given at the sacrifice, is a magic sacrifice, e.g., spirits have to be appeased, and the very stake to which a willing victim is tethered for the sacrifice must be cut, shaped, and erected

2 With the yellow to the Gr. ράθανος, and not connected with Skt. rathap, a circuit or group of villages. The ṁndān was a kind of drum used to conjure up deities; hence an enchantment.

3 It was taught by the two fallen angels Hārāt and Mārīt, who, having lusted in the songs of the songsperson, were ascended to the sky and snubbed her splendid with the star Žuhar (Venus).

4 H. Williboros Clarke, *Divinum-Hariya*, Calcutta, 1891, ii. 610, citing the Māsīkh-i-Masāikh, ii. 264, 266, 268, and Mārīt-i-māznān, l. 1. For a charm to divine which of two rivals should win the contest of Rāma and Arjuna, see Mārīt-i-māznān, l. 1. Mārīt-i-māznān, l. 1. For a charm to divine which of two rivals should win the contest of Rāma and Arjuna, see Mārīt-i-māznān, l. 1.

5 This consists in writing the two names, and laying them in a bush or nanāt. Then, if both quotients be odd or even, the lesser in number will conquer; if both be odd, the lesser in age, sex, or be odd, the other, the greater in number will prevail.

6 *Nihāya* § 211.

with the most minute precautions against their sinister influences. Every point in sacrificial ritual is symbolical, but the guiding principle in it is not magic, but religion. 2 Each person of the sacrifice, which is dug in the sacrificer gains the lower world of the fathers, by its middle part that of men, and by its top the world of the gods. But this is a result conditional on his success in averting the onslaughts of evil spirits. In the whole ritual of animal-sacrifice at the stake (šīpā), as prescribed by the Sutapatha Brāhmanāya, there is no trace of magic or of magical practices.

A question of minor interest is whether Indian magic was derived from or has influenced that of Arabia and the Neearer East. The Skr. word šīpā, 'black magic,' may be the original form of sīf or, conversely, the Arab word sīf may have been Sanskritized as šīpā. A typical rite in šīpā illustrates the spiritual basis of belief in magic. When performed with the object of destroying an enemy, it is known as cheł, or ghât, in the United Provinces. A vessel is filled with iron nails, knives, etc., and sent by certain incant-ances of the steady until it descends on the victim's hands and kills him. But, if a river intervenes, a sacrifice to the spirit called ghâtbad (lit. 'ferryman'), which is supposed to guard the river, must be made to induce him to let the vessel cross. By the way, these rites are perhaps connected with the Zoroastrian creation of evil spirits, however it works and whatever its origin.

Literature.—I. The Hindu literature is vast, but mostly unpublished. It comprises many treatises on special topics—e.g., the Kaṭapāt (1) and Sutapatha, that is, a treatise on the sacrifice, contains only magical squares for all kinds of alements. It commences with the Ṭhānavaraṇa, upon which and other texts is based Alfred Hillebrandt, Ritual-Litteratur: Vedische Opfer und Zauber (1876). Strassburg, 1897.

2. The Sinhalese, who are prone to asceticism, have six books on magic: the 1 Jaferan, 2 Sufat al-niljat, 3 Tuhfat al-qawm, 4 Maṣḥat al-deq, 5 Makhrūn al-dalq, and Ama’am-i-Na’m. The Sinhalese also have books on magic: such as the Mrjvarābšt-i-Dirābšt and the Neqššt-Sulzhšt. 5 A. Rose, MAGIC (Iranian).—1. Religion and magic.—Although religion and magic are two essentially different things, the interpenetration of the two is fairly common, but nowhere are they so intricately commingled as in Zoroastrianism.

First of all, a clear line of demarcation has to be traced between the real doctrine of Zoroaster, as it is expounded in the Gāthas, and the Later Avesta. In the Gāthic hymns we find a religion of a highly moral character. It admits of no deity besides Ahura Mazda except personified moral entities, and is expressly undertaken against the lower beings and the magical practices of the people of the time. The cult of the daēvas in general and the nocturnal orgiastic sacrifices in which haoma (q.v.) was drunk by the worshippers were specially condemned.

The Later Avesta also anathematizes the sorcerers (yāstu) and witches (pairīka), but many of the beliefs and practices which Zoroaster had associated with them have found their way back into religion. The whole subject is rendered all the more intricate by the fact that a coherent system has been formed from a combination of the superior elements of the Zoroastrian creed (sophisticated to a great extent by adaptation to a lower standard of religious thought) and the popular and inferior beliefs of the Iranian people, including much that is in origin magical. As is well known, this is the system called dualism (q.v.). It is based on the assumption that there are two cosmic elements, the one created by Ahura Mazda, the real god, and the other by his adversary, Angra Mainyu. Every creature of the wise lord is good, but all that has been created by his adversary is evil. Each has all the power communicated to his creatures his own specific nature and power. His creatures both share in their lord's natural and supernatural power and must assist him in the contest which is going on between the good and the evil spirit—a contest which will not be settled before the end of this world.

It follows that good creatures have a power over evil ones and evil over good. Of course, we may imagine that a good being, when he neutralizes the evil deeds of his opponent, acts after all, as a depository of his creator's power; but in practice it is as though he had a real and effective power of his own against demons.

A good work is an act of war, capable of helping effectively towards the triumph of good over evil and having, therefore, an efficacy of its own to conjure and oppose the noxious activity of evil creatures such as evil spirits; and this is very much like the efficacy ascribed to magical rites. The only difference is that an activity and magic is that, with the latter, material interests are generally at stake, whereas, in the majority of Zoroastrian religious acts, the concern is mostly supra-temporal, being the religious purity of the faithful (adâν) as a preparation for the sublimate happiness of the best. The contrary state, the impurity of the imps of the druğ (dreguants), has to be destroyed.

2. Purification.—For the Zoroastrian the normal means of getting rid of an impurity acquired by sin is to outweigh it by merit—a process which, of course, is far from being magical. Sin, however, being in Iranian thought only a breach of order which has to be repaired by repentance and good works, but a positive product of the evil spirits, of the evil creation, produces a substantial, though invisible, pollution—a moral disease like a bodily illness—and death like results from some mysterious contrivance of the originators of all evil. A material means of removing that pollution is therefore requisitioned, just as a remedy by its beneficial properties, as a piece of good creation, cures an ordinary disease. The power of purifying man from impurity belongs in the highest degree to water—an eminently good element of Mazdean creation. Besides water, other substances—e.g., gaumāta (urine of cattle)—are supposed to have great power to purify. The rites of purification by means of these substances are strictly fixed, as in a magical proceeding: the priest has to sprinkle every part of the body in a definite order, beginning with the head, till the druğ is expelled from the left toes, which are the last refuge of the evil spirit. Dogs have a specially powerful wholesome influence. More intricate ceremonies tending to the same result existed besides this relatively simple one—e.g., the great purification of the nine nights (Pahl. barsem in dâğ) expended in Vend., ix.; the ground is prepared, holes are dug, and furrows are drawn, according to a strict ritual; gaumāta is put into the holes, the patient rubs the ground, and is sprinkled with water and perfumes by means of a spoon and a stick of a fixed size, etc. The proceeding cannot, however, be completely identified with magic, because, however material the concept of purity may have been in the thought of the Iranian people, at that time, its materiality not confined to human interests in this world, because the activity of the purifying substances and acts derives from an essentially beneficent power, whereas the counter-spells, although tending to
neutralize noxious influences, are regarded as possessing a power of the same kind as the one which they oppose, and, lastly, because the rites, in spite of their magical tendencies, are devoid of all mystery. They are methods and receptacles of a procedure, assumed—wrongly, of course—to date back to the Prophet's teaching, and forming part of the sacred struggle of good against evil. Man is supposed to make use of the weapons against which Mazda has put into his hands for a contest in which he is serving the lord's interests. Nevertheless, it is clear that a real degeneration towards magic has taken place in these ceremonies, and also that many an ancient magical prescription for averting evils may have been introduced. This process is analogous to that which we observe in Mazdaism from Zoroaster to the Later Avesta period.

Moral beings, like the amesha spenta (q.v.) justice, good spirit, piety, etc., have been turned into rovers, rather, identified with—the gent of fire, cattle, earth, etc., and Sraoeha, obloquy, has become a good spirit protecting men during the night against demons and sorcerers, having the cock and the dog as his assistants in this task (cf. above).

3. Sacrifice.—Of sacrifice we may say much the same as of purifications. Neither to the Iranians nor to the Iranians was the sacrifice properly a mystery. Oldenberg (I) is quite right when he says that sacrifice is in Vedic times a gift to the god, which, in the mind of the sacrificer, is to influence the intentions of the deity, not by way of compulsion, but by securing his powerful goodwill. This conception, however, was likely to degenerate, and did. Indra and Agni are sometimes described as being mastered by the sacrificer.攻关, the sun, is regarded as a miniature of the sun, the great fire, and, by kindling fire, one gets the sun to rise. Indeed, the Sataypatha Brhatana (2) says that the sun would not rise if the fire-sacrifice did not take place. A similar process can be traced in Iran, where the sacrifice is given its place in the general cosmic conflict, so that it is more than an act of worship; it is an act of assistance to the gods. Gods, like men, need food and drink to be strong; like men, they need praise and encouragement to be of good cheer. When they sacrifice, they fly helpers before their foes. (3)

Sacrifice is thus a value of its own independently of the will of the gods. It is an act of war, helping God in his struggle against the evil creation, so much so that gods also have to practise evil.

Abraham performed the spiritual Yazi ceremony with the archangels (amesha spents) in the Gathas, and in the Yazna be supplied every means for overcoming the adversary. (4)

The value of sacrifice in itself is also to be discerned in the fact that it produces merits independently of the piety and attention of the sacrificer. If he does not obtain them for himself, they are not lost, but are collected in a store (ganj) of merits. The sacrifice of the haoma (= Ind. soma), although itself not really magical in principle, was specially prone to develop in that direction. The haoma = soma, in the thought of the proto-

Aryans, was a plant wherein resided an extraordinary strength of life capable of giving immortality to the gods, who were supposed to live on it like the Homeric gods on ambrosia, and of giving a superexaltation of life to man, in whom it caused intoxication. As was said above, the haoma orgiastic sacrifice had been banished from Gathic religion in company with the magical procedure of the dosha-worshippers. In the post-Gathic period we see it appear, but it has been deprived of its savage character and turned into a mystical drink. (5)

Not only was it supposed to confer a greater intensity of human life, but it was regarded as a spiritually beneficial form of worship. It is, therefore, and gift of spiritual life and a title to the suprar-terrestrial reward. (6) It led to a division into two haomas. (7) The one, the actual plant, was the yellow haoma, the other, supra-terrestrial, called the white haoma (Pahl. gokār), 'stands in the middle of the sea' (Pars. Rast ... that is called the 'All-healer' and on which rest the seeds of all plants. (8)

It is by drinking the gokār that men on the day of the resurrection will become immortal. For that reason it was customary to put a drop of haoma, the lips of a dying Zoroastrian. Haoma, having been made the principle of all life and fecundity, was supposed to receive its healing power from Vohu Manah, and to be the son of Ahura Mazda. This mysterious power of the drink of haoma is an approach to reality: it is extended to domains to which healing and vivifying power cannot normally attain—e.g., the gift of swiftness to horses, races of healthy children to birds, etc. It is, therefore, not only a gift to gods. Moreover, it is, in the traditions of the Indo-Iranians, closely connected with a mystical bird which took the soma=haoma from the place where it was consumed by the god, to give it to women and men. (9) The Avesta speaks of the bird Sēna, which is the Simurgh of the Persians, who make him play the same part as the bird Vâregnâna in Yt. xiv. 354—a part which is completely magical.

Get thee a feather of the white-feathered bird Vâregnâna, oh Spîthane Zârashînâ. With that feather thou shalt rub thy body, with that feather thou shalt cure back thine enemy. He who hath a bone of the mighty bird or a feather of the mighty bird galēth (divine) favour. No one, (however) magnificent, stilleth him or turneth him to flight; he first gaineth homage, he first (galaeth) glory; the feather of the bird of birds becometh help.

Thus we have here to do with a real amulet.

4. Spells.—If the sacrifice is apt to degenerate into a magical rite, prayer may become a spell. The message of Zoroaster to man is a mantra, a noble word which properly means "utterance", "word," "ordination," but has in the later Avesta the meaning of 'spell' and, indeed, the sermons of the Prophet, instead of being a subject for meditation, are converted into a dialect only in a few cases, and have degenerated into mere spells, the exact pronunciation of their words achieving what their author sought by pure life and diligence in a noble calling. (10) The finest Mazdaean prayers, such as the Akhva Vairya (q.v.) Pârsî, however—a kind of profession of faith—have stiffened into a mechanical repetition of formulae, and have acquired an infinite power of their own, so much so that they become a weapon for the Creator Himself. Ob de Bundahîn (1, 21) narrates how Ausharmazd, having recited the Ahunvar and uttered its twenty-one words, confounded the evil spirit and secured the victory over him, in the thirty days of creation. The power of the same prayer and of some others is also expanded in Vend. xix. (cf. also Yt. xvii. 20). Recited as many times as is prescribed on every occasion, they help as a spell the purification of man, which is 3 Monlout, 174.

7 Monlout, p. 153.
primarily attained by the marvellous power of the substances and ceremonies mentioned above.

No wonder, therefore, if the manthra is mentioned as a "sacred word" in Vend. xxvi — a matter which is taken from the ancient historians who were originally priests of fire. The Iranian myth of Atar's victory over the serpent Azi Dahaka (Yt. xix. 45 ff.) belongs to the same order of thought. Indeed, the conception that the Persian athishvaran, keeps closer to the original part, inasmuch as it does not become, as in India, the agent which conveys to the gods the substances of sacrifice. It remains the great averter of everything impure and must on no account come in contact with anything that is not pure, least of all with corpses or with anything coming from the body. It has become an earthly form of the eternal, infinite, godlike light, the purest offspring of the good spirit, the purest part of his pure creation, the weapon of Ahura (Ys. li. 9). It is the principle of all life, in men as well as in plants, the son of Ahura Mazda. We can distinguish several forms of it, among which the behrdom fire is the most sacred. It is supposed to be an emanation on earth from the fire above and the most powerful protective element of all the demons. It took its name from Verotraghna (Skr. vratram), in Indian myth the genius of victory and the slayer of the demon Vytra.

6. Influence of stars. — Astrology, as is well known, was the chief concern of the Magi, as the ancients describe them to us; but there is abundant evidence that this element of activity was not of Iranian origin. The proto-Aryan element of astrology was extremely small, in contrast with the Babylonian religion. We have, however, the cult of Tistrya, the star (Sircus) which was regarded as a good genius that brought rain after having slain the demon Amasa (Yt. vii. 20 ff.). It is a very good genius which, at the dawn of creation and before man was created, destroyed the noxious creatures by an effusion of beneficent waters. It would be an exaggeration to treat as real magic such beliefs concerning the part of Tistrya as we find in the Avesta. There is reason to believe, however, that in some parts of Persia rain spells were in use. The Great Bundahish says:

'My plague created against Zalistan is abundance of witchcraft; and that character appears from this, that all people from that place practice astrology; those wizards produce . . . snow, hail, spiders, and locusta.'

On the other hand, it was a current belief among Iranians that certain stars had a malevolent influence; but this does not oblige us to admit that they had any belief in the influences of stars upon men's fate (cf. art. Farz [Iranian]).

7. Recent superstitions. — Among the superstitions prevalent among the Persians and the Muslim Persian customs many customs, no doubt, go back to old Mazdaean practices or, more probably, to popular beliefs which persisted beside the official creed.

The great power assigned, among the old Mazdaeans, to plants in general, and in particular to some specially marvellous ones, as well as the extensive practice, among the Babylonian Magi, of natural or magical treatment of diseases by herbs, probably explains the important part played by plants in the superstitious customs attached to the ancient Persian festivals as described by Persian writers 2 — e.g., rubbing with olive oil on the day of Mahrz as a riddance from sorrows during the new year, eating a pomegranate on the feast of Mahr (Miltha) to avert dangers, hitting

17 V., Henry, Maed, Erlangen, 1904, pp. 4, 150, 239.
20 Darmesteter, p. liv.
22 Monouk, p. 209.
24 Desclouza, R.T.P xxii. 390.
an eating animal with an orange on the day of Adar in November as a way of securing happiness, giving garlic to one's friends on the Gôô rûz (14th Dec.), and boiling herbs on the same day, in order to get rid of sorceries, and stimulating the spirits of garlic on the day of Di-mih-rûz in order to avoid starvation or misfortune, eating apples and daffodils on the same day in order to secure success in one's enterprise, placing a watch on a pregnant woman's bosom, to make her fertile, etc.

The power of fire against evil beings is illustrated by the lighting of a fire on the night of the Brahman (Vohu Manah) festival (10th Jan.). This fire, on which perfumes were thrown, was lit under the image of the genius in order to repel wild beasts. During the whole night it was guarded by standing Persians. Anquetil du Perron reports that on 15 Spendarmast the Parisis used to hold a spell, written on a sheet of paper, in the smoke of a fire, in which they had put pieces of horn from an animal killed on the festival of Mihr, cumin seed, resin, and garlic, in order to remove the dêvê (daïces) from their houses. The magic for rain has survived in the custom of pouring out water on 30th Jan. in order to obtain rain during the year.

In the last days of the Persian year the souls of the departed are said to come and pay a visit to their relatives, who prepare a sumptuous meal for them—or, rather, they record the favas (p.m.)—are supposed to gaze at the food and smell it. This also, no doubt, is a survival of the beliefs concerning the fravashis.

The use of the Gâthâ hymns and of the chief Zoroastrian prayers as spells against diseases or against the evil eye is current to this day among the representatives of the Mazdaean faith.

1 In order to avert the influence of the evil eye or to cure a child of some disease, a parent will occasionally hire the medokhôr . . . to read from the Yasna, the Yashîn, or the Khordâh Avesta; and when women are childless, they will sometimes pay to have the Vendidad Safah recited by the priests, in order that the curse of sterility may be removed. 2 J. J. Modi knows of charms for diseases of the eye 3 or for avoiding pollution from contact with all that comes from the human body—e.g., hair or nails. 4 Amulets are also used for the same purpose.

Avesta.-There is no special book on Iranian magic.

MAGIC (Japanese).—Japanese magic is such a vast subject that, if we were to treat it systematically, with all its logical divisions and subdivisions, it would be almost impossible to give even a bare index to the volume that would have to be written to describe it. We shall, therefore, dismiss everything that springs from foreign influences, and even in Japanese magic proper we shall ignore the general classifications under which the innumerable details supplied by the rich literature of the country might be arranged. We shall confine our attention to emphasizing the essential possession of magic in the very heart of the national religion, in the most authentic documents of pure Shinto.

For this purpose we must apply chiefly to the ancient rites (norito) collected in the Kongôshiki in the 10th cent., although several of these—and precisely those that contain most of the magical element—were certainly composed at a much earlier date, even before the most remote zoological or historical works, such as the Kojiki and the Nihonshô, which were written in the 8th century. By glancing over the most typical of these norito, and explaining them with the help of certain related passages in the Kojiki and the Nihonshô in other equally ancient sources, rather than by abstract classifications, we shall gain a vivid idea of what Japanese magic was in its most ancient and most original form.

The old rituals seem to have been not so much prayers as magical formulae, solemn incantations, and we shall see that at the same time they were developed in powerful rites by which the magician priests of primitive Japan conquered their gods.

This magical spirit appears at the very beginning of the collection, in the 1st ritual, Toshôgû no Matsuri, which was said every year at set-times to obtain a good harvest. The chief priest (nakatsunomi) who recited it in the name of the emperor, addressed the gods in these words:

'1 believe in the presence of the sovereign gods of the Harvest. If the sovereign gods were to send out the evil, then those who are the most distinguished and in luxuriant ears the late-ripening harvest which they will bestow the late-ripening harvest which will be produced by the dripping of dew from the arms and by drawing the most together between the opposing thigas, then I will build their palaces by setting up the friaments in a thousand ears and many hundred ears, raising high the sake-jars, filling and raising in rows the barrows of sake-jars, in July and in ear.'

Other offerings are then enumerated, among which we note a white horse, a white pig, and a white cock. Now, a 9th cent. document, the Kogosha, gives the legendary origin of this detail; Mi-toshi no Kari, 'the god of the august harvest,' had cast his curse on the rice fields; but the diviners obtained from him, by the gift of these same white animals, the secret of a magical process which enabled them to save the imperilled crop. The ritual is, therefore, based on a history of magic. The main point to remember from this first text, however, is the conditional character of the offerings which are to obtain the desired result. The same precaution is found and repeated in other rituals, and it is quite clear that the 'gods' are not so much a prayer as a contract, a matter-of-fact agreement, by which the gods receive in advance the remuneration promised in exchange for the services expected from them, and thus find themselves morally compelled to render them. We accordingly see at the very beginning the familiar nature of the relations between these very human gods and the priestly magicians who exploit their power.

In the 2nd ritual, Kasuga Matsuri, we again find this idea of the bond which must unite the offerings with the services rendered; for it is 'in consequence of these offerings that the gods are able to protect the sovereign, and his court. We may also observe that, of the four gods worshipped in the temple of Kasuga, the first two, Take-mika-dzuchi and Futsu-nushi, were represented by norito (norito means 'sacred words') (eds. Kiyono, Japanese Chamberlain, 2nd ed., Tokyo, 1906, p. 36), and that the other two, Koyan and his wife, are connected with the famous eclipse in which that god, by his powerful ritual words, helped to bring back the sun (Kôjiki, 22, 3; Toshôgû no Matsuri, 1, 2).

There is the same spirit in the 3rd ritual, Hirose Oho-imi no Matsuri, devoted to the goddess of food.
Her worshippers make a bargain with her; while
bringing her various offerings, they promise her
others if the harvest is very abundant.

The 4th ritual, Tatara no Kaze no Kumi no Matsu, is in some degree similar; moreover, it
recalls Satow, we the Festival of the Pillar's augustness and
recollects. That, the Phoenix, is, moreover, the 'god's
of the winds who maintain the order of the world. They
require certain sacrifices, the rebuilding of a temple at
Tatara, and a liturgy, by means of which they will bless and
ramp the trees produced by the great
of the people of the region under heaven, firstly
five sorts of grain, down to the least leaf of
the herbs.' Here it is the gods who state their conditions.
The people hasten to fulfill them without omission, 'but evidently the recollection of past calamities has left some mistrust, for, when mak-
ing the present offerings, they announce future gifts for the autumn: if, between now and then, the gods have deigned not to send 'bad winds and
rough waters, they will bless them and grant them the firstfruits of this. It will be their small commission.

We shall pass over the 5th, 6th, and 7th rituals, which are not so interesting, and come to the 8th, Otsu-nakatomi-goto, the great magical protective words. It is a formula the recitation of which wards off all calamity from the palace, as an
amulet would do; this is shown by the importance accorded to the recitation of the words pronounced; for, in another passage, certain corrector 'gods (mato) are begged to rectify all the omissions that they may have seen or heard in the rites or the words of the ceremony. This ceremony itself throws abundant light on the magical character of the ritual of which it was a part. We have a description of it in the Go-shiki of the 9th cent. (see E. Satow, in TASJ, vol. ix. pt. ii. [1881] pp. 192 f.). In the priestly continuity in which is
enforced chiefly the nakatomi, the imibe ('abstaining priests'), and the vestals, goes through the palace in every direction; and in different places, from the throne-room to the bath-room, even to the emperor's privy, the vestals sprinkle rice and sake, while the imibe hang precious stones on the four corners of the rooms visited by them. We observe here an application of the custom, called
samumi, which consisted in scattering rice to ward off evil spirits. Whatever is the reason of this custom — whether it is simply a bait thrown to the demons or perhaps a symbolical use of grains whose shape represents one of the aspects of the generative power, of the vital force which combats illness and death — the rite in question was very frequently practiced in Japanese magic. Rice was scattered inside the hut in which a woman was about to be confined; in the divination at cross-roads (tsungi-ura; see art. DIVINATION [Japanese]), a boundary was sometimes marked on the road, where rice was thrown, in order to consult the oracle of the words spoken by the first passer-by who crossed this bewitched line; and an old legend tells how, when the son of the gods descended from heaven to Mount Takachiho, grains of rice were thrown to obtain the knowledge of the darkness from the sky. Just the same is the magical use of jewels to combat evil influences. Through
the whole of Japanese mythology there is the sparkle of jewels, some of which are talismans —

jewels which, at the time of an eclipse, the gods suspended to the highest branches of the sacred
eviera, and whose brilliance recalled the sun (Kojiki, 64); jewels which, in another famous story, enabled Elet to stand the magnetic influence, which, paraded in the imperial apartments, caused the dark threats of the invisible everywhere to retire before their brightness. Still another point to be remarked is that, according to the description cited, the imibe recite the ritual 'in a low voice.' Polynesian sorcerers also said their prayers in a low singing, perhaps even hissing, tune, similar to the hissing, whispering voice which they attributed to their gods; and even in Japan, in the divination by the harp (koto-ura), one of the practices of the officiant was a complicated whistle. All this
magical atmosphere which surrounds the ritual suits its text very well. It points out, first of all, the
propitiatory rites which the imibe have accomplished in hewing down the trees intended for the construction of the palace. Then it recalls the mythical relation which underlay the
ellicy of the formula recited. Then the protector-gods of the palace are entreated to ward off certain calamities, several of which — e.g., serpent-bites, or the droppings of birds falling through the sacred trees of the Great Palace.' This title itself indicates the magical character of the document, and, in fact, we find the ritual defined in its own text in the words, ama
ari kuwami shihiki-goto, 'the celestial magical protective words.' It is a formula the recitation of which wards off all calamity from the palace, as an
amulet would do; this is shown by the importance accorded to the recitation of the words pronounced; for, in another passage, certain corrector 'gods (mato) are begged to rectify all the omissions that they may have seen or heard in the rites or the words of the ceremony. This ceremony itself throws abundant light on the magical character of the ritual of which it was a part. We have a description of it in the Go-shiki of the 9th cent. (see E. Satow, in TASJ, vol. ix. pt. ii. [1881] pp. 192 f.). In the priestly continuity in which is
enforced chiefly the nakatomi, the imibe ('abstaining priests'), and the vestals, goes through the palace in every direction; and in different places, from the throne-room to the bath-room, even to the emperor's privy, the vestals sprinkle rice and sake, while the imibe hang precious stones on the four corners of the rooms visited by them. We observe here an application of the custom, called
samumi, which consisted in scattering rice to ward off evil spirits. Whatever is the reason of this custom — whether it is simply a bait thrown to the demons or perhaps a symbolical use of grains whose shape represents one of the aspects of the generative power, of the vital force which combats illness and death — the rite in question was very frequently practiced in Japanese magic. Rice was scattered inside the hut in which a woman was about to be confined; in the divination at cross-roads (tsungi-ura; see art. DIVINATION [Japanese]), a boundary was sometimes marked on the road, where rice was thrown, in order to consult the oracle of the words spoken by the first passer-by who crossed this bewitched line; and an old legend tells how, when the son of the gods descended from heaven to Mount Takachiho, grains of rice were thrown to obtain the knowledge of the darkness from the sky. Just the same is the magical use of jewels to combat evil influences. Through
the whole of Japanese mythology there is the sparkle of jewels, some of which are talismans —
The one is the 'planting of wands' (kisshō-washi) in rice-fields, probably with incantations—a process which an ancient native interpretation explains as the erecting of magic boundaries on the field of one whom one wishes to make propitious, though perhaps it is an example of painted wands secretly stuck into the mud to hurt the bare feet of a neighbour, just as, among the Malays, a person in flight retaliated the parasite by driving his feet into the mud. This meaning of the other offence (mai-mono seru tsuru) is the 'performing of witchcraft,' either in a general way (cf. Kojiki, 320 L) or in particular against a neighbour's animals (Nihongi, i. 106), a heaven in heaven in heaven the sake of which is taken by the priest (kemono-ta-fuski, 'to kill animals,' which precedes it). In any case the Chinese character employed shows that it is a question of black magic; and that is why the nortō, although it is itself a magical text, does not hesitate to condemn it.

The ritual afterwards shows that, when these faults are committed, the great nakatōni has to prepare some twigs in a certain way, doubtless intended to form a sort of purificatory broom, then to recite the 'powerful ritual words of the celestial ritual' (ama ten norito no futo nortō-gō). The character is derived from the necessity of finding for a long time to find out to what mysterious incantation this passage could possibly allude, without seeing that it simply referred to the nortō itself. This is the 'celestial' ritual which the gods referred to in high regard to the ancestor of the emperors, and whose 'powerful words' his descendant ceases to be repeated—an expression intended to recall the intrinsic virtue of this formula. When the high paraphrase of this, according to the text of the ritual itself, the gods of heaven and earth will approach to listen, and all offences will disappear, being swept off, carried away to the ocean by the god of the currents, driven to the nether regions by the god whose breath stirs before it all impurities, and there they will be seized at last by a spirit of the sea, who will banish them for ever. Clearly these deities are only the four wheels of the machine which the emperor sets in motion by the hand of the great nakatōni, the magician who knows the sacred words which even the gods obey. As for the rest, to make more certain, they bring a horse whose erect ears will incite these gods to listen attentively, just as the crowing cocks, the lightning fire—all these magical processes of the myth of the gods (Kojiki, n. 55, 56, 60) to recall the same, or as, in another account of the old Shinto annals (Nihongi, tr. W. G. Aston, London, 1896, i. 106), one had only to whistle to raise the wind. Then an order is given to the wade (diviners) to throw into the river the expiatory offerings, to which a mysterious sympathy unites the sins themselves, which will disappear along with the objects to which they have been attached. The ritual finishes, therefore, with a last example of the magic which has inspired the whole of it.

We may mention the 11th ritual also with this oracle, an invocation which the hereditary scholars of Yotó-kō have sometimes offered at the ceremony of the Great Purification, and in which they presented the emperor with a silver-gilt human effigy, which would play the part of scapegoat by removing calamities from him, and a gilded sword on which he breathed before it was taken from him, with the same intention of driving away, after this magical transfer, both the sins removed and the god's protection.

Another ritual which is plainly magical is the 12th, the title of which, Ho-shidzume, 'Appearing of the Fire,' shows that its purpose was not to worship the god of fire, but to banish him from the palace. As in the 10th ritual, the text first recalls the celestial revelation which has confided to the emperor the 'powerful words' by means of which he is superior to this god. Then it recounts the atrocity of the crime of this 'child with the wicked heart,' who had attempted to give birth to her son in the temple. This is the other offence (mai-mono seru tsuru) of which the text is a version; and tells how Izanami herself, cursing this son who had caused her death, came up from the nether regions to give birth to him in the gourd, the river-plant, and the princess of the clay mountains, four divine things whose magical use against fire she immediately taught. Then, in order that this wicked god 'may desist not to be terribly given up in service of the august sovereign,' he is loaded with offerings, which have the effect of captivating and subduing him. This ritual was accompanied by rites which consisted mainly in the lighting of a fire by the wade in the four outside corners of the precints of the palace, with the primitive apparatus (hi-kiri-uzu) of which a specimen may be seen in the University Museum, Oxford.

The 13th ritual, Michi-une, also aimed at employing certain gods to combat others. Those who were invoked on this occasion were three gods of roads and mountains who, because of their fault, were entered upon as 'preventive gods' (tsuko no kami) against the epidemics sent by the demons. The ritual begins by reminding these protective gods, without further ado, that their duties were inaugurated in heaven itself, where they already served the son of the gods. It then dictates to them what they must do: when the new rice of the year appears, the ancient Japanese performed a ceremony called Nikki-name, 'new tasting,' which had a propitiatory purpose towards the spirit of the rice (Uga no Mi-tama). The Oho-uni was a more solemn Nikki-name, celebrated some time after the accession of the emperors, and constituting a sort of religious coronation for them. This ceremony is described in Kojiki. In the first place, there is nothing very curious in itself; but it is interesting to find that the very complicated ceremony with which it was connected included a long series of preparations, in which magic occupied a large place, just as in the essential part of the festival, when the emperor in person, surrounded by ladies of honour who repeated a mysterious formula, shared in the repast which he had just offered to the gods.

The 15th ritual is another document whose magical value appears as soon as it is placed in its psychological surroundings. It is entitled Mi-tama shidzuru, which shows that its purpose was 'to appease the august spirit,' i.e. the spirit of the emperor. It was a case of keeping the imperial soul in his body, of recalling it if it seemed to wish to escape—in a word, of renewing magically the vital force of the sovereign for the coming year and thus prolonging his life. This is the meaning of the ceremony called Chinkonsai, which was celebrated at the end of the plastic character of the priests of the court (see Nihongi, ii. 372). Now, the gloss identifies this festival with an ancient ceremony called Mi-tama furushiki, 'shaking of the august jewels,' which again plunges us into deep magic. The Kojiki (ii 2) says, in fact,
that, when the sun-goddess gave the investiture to the ancestor of the emperors, she bestowed upon him ten precious treasures:

- One mirror of the office, one mirror of the shore, one eight- 
  hands-breath sword, one jewel of birth, one jewel of return 
  from the Under-World, one jewel returning with [things 
  by the road they cause], one serpent-scarf, one horse-scarf, 
  and scarf of various things. She added: 'In case of illness, 
  shake these seven scarves in your hand to repeat the words; [Hi, fu, 
  ni, go, teu, mu, nana, pu, kakekono, tari, and shake them yerma-
  part, to all the gods]. If they do not the dead will certainly return to life.'

The objects enumerated by the sun-goddess are talismans, several of which occur in the most ancient Japanese mythology (see Kojiki, 88, 160, 169, 234, etc.). As for the investiture, it represents simply the series of numbers from one to ten, which demonstrates its intrinsic power, independent of the meaning of the words. We know, besides, that the same investiture was recited at this festival by young ascetical virgins (mi-kanmu-ko), who performed the sacred kagura, in imitation of the dance of Inume in the eclipse myth (Kojiki, 64-65), while a nakatomi knotted threads, which were clearly meant to retain the imperial soul, and which he shut up in a closed vessel.

We shall confine Rituals 16 to 27, which refer exclusively to the offices of the temples of Ise; it will be sufficient to mention in this group the formula of the 23rd ritual, for the installing of a prince as sovereign.

The offering of a sacred princess of the blood imperial to serve as the 'dolls' staff, having first, according to custom, observed the rules of purification strictly for three years, is to the end that she may cause the Sovereign Grandchild to live peace-

fuiy and firmly as long as Heaven and Earth, and the Son and the Moon may be serene, the Great Nekotomi, holding the thread special by the middle, with deepest awe pronounces this dedication of her by the Mikado to the end that she may serve as an august staff.'

We have here evidently a survival of the ' ab-

stinent' sacrifice of the primitive Japanese, whose asceticism 

was based on the death of the good fortune and 

health of the village, in the same way as here the 

sacrifice of the imperial virgin is to guarantee the 

happiness and long life of the sovereign (cf. art. 

ASCETICISM [Japanese]).

The 25th ritual, of a more general interest, 

is entitled: Tottari-gami no uta-tatsunoumaro, 'Ritual for the Riteful Removal of the Gods who send Plagues.' In the 25th ritual the gods of roads were made to intervene against these wicked gods; now they themselves are directly 

addressed. It is, therefore, a real formula of exorcism. Letting how the supreme council of the celestial gods, wishing to 

'pacify' the country before the descent of the future emperor, sent Futsu-nushi and Take-mikad-, 

nachi, who triumphed over the terrestrial gods and 

'silenced the rocks, trees, and the least leaf of 

herb likewise that had spoken.' After this warn-

ing, undisguised and all the more plain because, 

according to the ritual, the wicked gods know well,

by virtue of their divinity, the things which were 

begun in the Plain of high heaven,' numerous gifts 

are made to them win over—and not only 

the usual offerings of cloths, fish, game, vegetables, 
rice, and sake, but also, in a native fashion; 

as a thing to see plain in, a mirror; as things to play with, 

birds; as things to pull out, a bird, a bow and arrows; as a thing 

to strike and cut with, a sword; as a thing that 

galleys out, a horse.

Lastly, after having thus loaded them with 

numerous toys and abundant dainties, which they 

beg them to accept 'with clear hearts, as peaceful 

offering and sufficient offerings, they earnestly 

ask these 'sovereign gods' to be good enough, 

without deigning to be turbulent, deigning to be fierce, 

and deigning to hurt, to remove evil to the wide and clean places of the mountains and streams, and by virtue of their divinity to be tranquil.'

Passing in silence a less interesting ritual (the 

26th) of the office of the last to the last document 

of the collection, the 27th ritual, which is called

Idzumo no kuni no miyakko no kuni yotogyo, 'The 

Divine Words of Good Fortune of the Chiefs of the 

Country of Idzumo.' These local chiefs, after 

having lost their ability to sway the religious power. It is they who (to this day in this 

old province hand down the primitive fire-kindeh which their legendary ancestor, the god Ame-no-

hohi, had received from the sun-goddess herself, and which one of his priest of Jera hohi bequeathed to his successor by the ceremony called Hi-tsun,

'perpetuation of fire.' In this ritual the miyakko 

first announces that he will recite the formula, 

after many ritual preparations, to bring happiness 

to the reign of the 'visible god,' i.e. the sovereign.

He then relates how Ame-no-hohi and, later, other 

celestial ambassadors were sent to earth to prepare 

for the descent of the son of the gods; how Ochino-

mochi, the divine king of Idzumo, who achieved 

the 'making of the country' with the help of a 

stranger magician, and who was the first to 

found a government in this important region of 

the archipelago, was persuaded by the celestial 

envoys to abandon his temporal rule to the son 

of the gods; how he then divided his souls, by a 

curious application of the Japanese idea which allows the possible separation of the soul from the body, 

attaching his 'gentle spirit' (miy-tenos) to a fetish-

mirror which he caused to be placed in a temple of 

Yamato, while his 'rough spirit' (ara-tenos) went 

to rest in the present temple of Idzumo; how 

a length Ame-no-hohi received from above the 

command to bless the sovereign henceforth, that 

his life might be long, healthy, and happy (cf. Kojiki, 

54, 58, 113-134). It is while carrying out this 

command that the descendant of Ame-no-hohi 

intervenes, as he himself declares. He brings to 

the emperor 'divine treasures,' whose magical rôle 

—fortunately for us—he clearly defines. There are, 

first of all, sixty jewels, white, red, and green.

'These white jewels are the great august white hairs (to your Majesty will reach); the red jewels are the august, 

beautiful, ruddy countenance; and the green ones are the harmonious fitness with which your Majesty will establish 

far and wide, as with a broad sword-blade, his great 

august reign over the Great-eight-island-country which he governs.'

We have here, therefore, a typical case of the 

action of like upon like, which is one of the essen-

tial doctrines of primitive man, and which, in 

the present case, attaches to the different jewels a 

power corresponding to their colour. The formula 

continues by other applications of this principle of 

imitative magic:

'As this white horse plants firmly his fore-hoofs and his hind-

hoofs, so will the horses of the Great Palace step firmly on the 

upper rocks and frozen firmly on the lower rocks; the pricking 

up of his ears is a sign that your Majesty will, with ears ever 

more erect, rule the Under-Haven,' etc.

It is possible that at some time these rites may 

have become symbols; but it is impossible not to 

recognize in them, even at the beginning, practices inspired by that primitive logic which has always and everywhere constructed magic on 

the same universal principles.

Ancient Shinto, therefore, as it appears to us in 

its most authentic liturgies, is a religion in which 

the magical element still prevails over the religious sentiment. The rituals are essentially magical 

formulæ, addressed to magician gods (as is demon-

strated by all the mythical explanations of the 

priests (the nakatomi, the inume, and the urabo), 

and encircled in magical rites. Magic is, there-

fore, at the base of the national cult of the 

Japanese, and it appears there with all the charac-

teristics familiar to the student of comparative 

religion.

To finish with a vivid illustration, which, after 

the necessarily short descriptions given above, will 

show this magical principle in many cases, let us take an exact case, we shall choose as an example sorecery,
as it was practised in the most ancient times. The following is the curious account of the subject given in the Köjiki (326 f.):

“The Deity of Idzushi [the country of the ‘sacred stones’] had a daughter, who was named Majinahi. So eighty Deities wished to obtain this Maiden of Idzushi in marriage, but none of them could do so. Hereupon there were two Deities, both of whom the older was called the Youth-of-the-Flowers-on-the-Autumn-Mountains, and the younger was named the Youth-of-the-River-and-Mountains. So the elder brother said to the younger brother: ‘Though I beg for the Maiden of Idzushi, I cannot obtain her in marriage, will thou do so for me?’ He asked the Deity, saying: ‘I will easily obtain her.’ Then the elder brother said: ‘If thou shalt obtain this maiden, I will take off my upper and lower garments, and distil liquor in a jar of my own making, and prepare all the things of the mountains and of the river, in payment of the wager.’ Then the younger brother told his mother everything that the elder brother had said. Forthwith the mother, having taken wataribi-flakes, was seized in the course of a single night an upper garment and trousers, and also a sword and boots, and likewise made a bow and arrows, and clothed him in this upper garment, trousers, etc., made him take the bow and arrows, and sent him to the maiden’s house, where both his apparel and the bow and arrows all turned into wataribi-flakes. Thereupon the Youth-of-the-Flowers-on-the-Spring-Mountains hung up the bow and arrows in the maiden’s private room. Then, when the Maiden of Idzushi, thinking the blossoms strange, brought them, he followed behind the maiden into the house, and followed her. So she gave birth to one child. Then he spoke to his elder brother, saying: ‘I have obtained these things. If the elder brother, vexed that the younger brother should have warded her, did not pay the things he had wagered. When the younger brother knew that his parent had been wronged, he sent his father’s younger son to his mother, and his parent replied, saying; ‘During my ancient life the Deities indeed are to be well named, but in the latter part of my years, in the life of a mortal man that he does not pay those things.’ Forthwith, in her anger with her elder child, she took a one-jointed bamboo from an island in the River and made a coarse bamboo, and cut stones from the river, and mixing them with brine (shio, in the sense of ‘hard salt’), wrapped them in the leaves of the bamboo and caused this curse (tokohi) to be spoken (by her younger son): “Like unto the becoming green of these bamboo-leaves, do these become green and wither again, like unto the flowing and ebbing of this brine (again the word shio), but here are the withering of ‘sea-water’, the river flowing and ebb, and once more the saking of these stones, do thou sink and be prostrate.” Having caused this curse to be spoken, she placed the basket over the smoke (apparently on the hearth of the elder son). Therefore the elder brother dried up, withered, and sank, and lay prostrate for the space of eight years. So on the elder brother entreats his august parent with lamentations and tears, she forthwith caused the curse to be reversed. Thereupon his body was pacified. This is the origin of the term “a divine wager-payment.”

In this text we have a case of original sorcery, founded on sympathetic magic, in a manner of conceptions so well expressed by the Japanese word for ‘magic,’ majinahi, which conveys the idea of ‘to mix,’ but before the time when the progress of the arts and foreign influences could have given the idea of the making of medicines to charm off an enemy. (For this later development see, e.g., the popular ballad of Shuntoku Marn, in Tasi, vol. xxii. pt. iii. [1894] pp. 294–308.) We are therefore, in literal exactitude speaking, in that early stage only of ancient character is shown by its very obscurity, and which cannot be understood unless it is replaced in the midst of the primitive beliefs from which it came. First of all, the mother provokes herself with the mysterious bamboo on which the life of her elder son is to depend. Purposely she does not gather it in any chance place; she takes it from an island—which already connects that object with the aquatic element. With this bamboo she weaves a basket, in which she takes care to leave eight holes, which will be the eight openings in this basket she places river-pebbles, which, even more than the bamboo, come from the water. But it is from fresh water that they have come; and the nature of the rite determines the way in which mediaeval character. They are, therefore, put among brine by this union the assimilation is made, and the sorcery can be accomplished. The only thing that remains to be done is to care for the formula whose powerful words will act on all these things.

The victim will wither like the leaves of bamboo, in the same way as, in another legend (Kojiki, 231), the magical impression (tokohi) of a chief had made a great oak-tree suddenly decay; or, better still, in the same way as, by the effect of a general malediction, man, formerly immortal, was condemned to die as the flowers of the cherry-tree fade (Kojiki, 140–142). Then, as in the high water bamboo trees are supposed to be abused. Lastly, he will be seen founding as a stone sinks when disappearing under the waves. This curse pronounced, the basket of perdition is placed in the smoke of the hearth; the green leaves become black; the threat is executed, he turns black. In the end the mother’s heart hears the repentance of her son. She reverses the curse, i.e., the terrible magical formula is this time pronounced backwards (cf. Kojiki, 232), and immediately the body of the young man is pacified; he returns to health, to life.

In this sorcery the most curious point is that which is connected with the sea element. The fate of the young man is, in fact, connected with the ebbing of the tide. We have here an interesting illustration, among the insular Japanese, of the belief so wide-spread among primitive races, according to which the greatest difference between the life of man and the flowing and ebbing of the sea. In this belief, it is when the sea is flowing in that one is born, becomes strong, prosperous; it is when the sea is retreating, that one will suffer. As his energy, falls ill, and dies. The Japanese sorceress, the depository of primitive traditions, is well aware of this secret agreement. She knows that, even far from the seashore, the artificial connexion can be formed between these two manifestations of a single force. Consequently she brings into connexion with the salt element these river-pebbles, into which the consecrated words will bring the very existence itself, and which, as the energy, is immediately delivered up to the enchantment of the waters; he becomes like a pebble on the beach, the tide carries him away, drags him towards the brightness of life, then lets him fall back and roll in darkness and death. This story of witchcraft, has, therefore, given us at one and the same time a typical case of Japanese magic and a new proof of the stubbornness of observation in the most curious beliefs of humanity in general.

LITERATURE.—This has been cited in the article. M. REYMOND.

MAGIC (Jewish).—The attitude of Judaism towards everything not sanctioned by its own monotheistic teaching has also affected the practice which may be called ‘magic,’ and it thus becomes necessary, first of all, to obtain as clear a definition as possible of the OT and Jewish tradition allow as to what is to be understood by the term.

It must at once be pointed out that divination and charms (see DIVINATION [Jewish] and CHARM and AMULETS [Jewish]) are not part of Jewish magic, which, properly speaking, corresponds most closely to ‘witchcraft.’ The difference between witchcraft and other forms of magic is that the magician has nothing whatsoever to do with forecasting the future or with preventing any occurrence that is sure to happen in the ordinary course of nature. He has nothing to do with spells or incantations, nor is the writing of any formula an indispensable condition for magic. Magic can only be ‘performed’: no magic is effective unless it is the result of some ‘operation’; the magician thus has a more personal nature and another in order to accomplish his purpose; and herein lies the profound difference between magic and any other form of superstition—preventing and altering the regular operations of nature. The magician is not helping things to fruition; on the contrary, he
seeks to subvert the regular course of events. He is existable, if it is the sun and noon, to bring the dead to life, to change human beings into animal shapes or vice versa; he is to produce fruit in winter, and, in fact, to do everything that is contrary to the regular laws of nature.

The magician will kill, he will create strieth—this activity will always be an evil one. He is not expected to do good; he will be the agent for vengeance, hatred, and everything that makes for strife, death, and destruction. But he cannot carry out his intention without an ‘operation’; he must ‘do’ something in order to bring about the desired result.

Unlike the diviner, who is guided by certain signs and omens, which he is able to understand and combine, so that he can read the future in the events of the present, and unlike the charmer, who can only undo the magician’s evil work by certain spells, songs, formulae, and written amulets, the magician must perform a whole set of ceremonies quite independent of signs, omens, and spells. It is a new definition that is here offered, which, by circumcising much more narrowly the field of superstition, is an endeavour to give to magic its real meaning. The magician’s work, again, is not expected to be of a permanent character; it is temporary, conditioned by other means, or by other magicians who know the secret of the action and the means by which it has been achieved. In order, then, to disturb the laws of nature, to transform existing things, to create new creatures, the magician requires the help of superhuman powers. This is the very root and basis of magical art; the magician must be able to command the services of spiritual powers—demons, gods, or ghosts—malicious in their disposition and willing to do mischief.

Jewish magic presupposes the existence of such spirits, and occupies the borderline between orthodoxy and heresy, between Judaism and paganism. It is an art that lives in the twilight between truth and falsehood; and the life of demarcation shifts according to the change of theological views in the course of centuries and transitions. It depends also upon the nature of those spirits and upon the theological attitude towards them—whether they are considered as forces opposed to God or as mere negative forces that are also creatures of God and yet exist apart from Him, and against whom one must do good. The conception of a rebellious angel who has been cast down from the heavenly heights because of his arrogance and insubordination does not enter into the sphere of Jewish magic, nor, with rare exceptions, have the gods of other nations become evil spirits subservient to the wish of the magician and willing to do his behest.

The Hebrew term for ‘magic’ is kashafa, which, like all technical expressions connected with superstition, is of obscure origin; though many attempts have been made to elucidate its primitive meaning, not one has yet proved satisfactory. The primitive meaning of kashafa, in the view of the present writer, is apparently ‘hidden’, ‘obscure’, ‘a thing done in a secret manner’, which is the very essence of magic. The performance is a secret one, and even those who are allowed to witness it are slow to understand its meaning. The word kashafa, with its various derivatives, occurs twelve times in the Bible. It is to be noted that all the references in the Prophetic writings some are to Assyria as well as to Palestine itself. In 2 Ch 33:18 Manasses is described as having practised witchcraft, and in 2 K 17:24; 2 K 21:12 and in the Targums Mal 3:8; the wizards of Egypt are mentioned in Ex 7:11, 22; in Babylon there is only one allusion to them, in Dn 2:5.

The LXX translates keshaf by γραμματία, which does not mean ‘poison’, but, in later Greek, a ‘spell’, cast by a magician. Keshaf has remained the technical term in Hebrew literature. Witchcraft is called kishaf in the Mishna and Talmud, and no words have been more widely used, and yet with a very slight meaning attached to them, than kishaf and mkhashaf, nor is there anywhere in the whole range of the rabbis’ ideas any real doubt that the real meaning of this ‘magic’ is exactly witchcraft. It is clearly stated (Sanh. vii. 1, 2) that only the Egyptian or Babylonian makes a real act, but not the man who produces an optical illusion, a kind of jugglery.

The fact that witchcraft is mentioned in connection with Egypt (exclusively, in the Pentateuch, and occasionally, in other passages in the Bible) shows the probable source of the magical art known and practised in Bible times. The Egyptian mkhashaf in Ex 7:7, 22 perform precisely the acts defined above as the work of the magicians: they endeavour to change the order of nature. No details are given regarding the operation of the magician in the Bible; but from Is 47:14, Miq 5:27, Mal 2, Nah 3, Jer 27, and Zec 7:12 it is clear that, in the eyes of the prophets, the work of sorcery was tantamount to idolatry and to lawlessness, possibly through the performance of some action by the magician. It is supposed that such acts in a state of absolute nakedness is an attested fact throughout the history of magic, and it is possible that the prophets had this in view when in speaking of an evil spirit (Isa 7:17) would make new nations, and all to keep the same plane as harlots. It is noteworthy that the witch, and not the wizard, is mentioned in Ex 22:15, Dt 18. The sin of the mkhashaf had to must have been so heinous that the law punished it with death. Witchcraft must, therefore, have been connected with idolatry (Miq 5:27); it was characterized as an ‘abomination’ (Dt 18), and was also described as zivvef, ‘lawlessness’ (Nah 3, 2 K 24).

The scanty references in the OT, which show that the practice could not have been widespread in Bible times, become clear in the light of the tradition of Rabbinical literature. We learn to know through various sources the magicians were able to carry on their operations; the spirits become, as it were, more materialized. The existence of demons is not denied; on the contrary, they are universally acknowledged, possibly through the influence of evil spirits, and the Jewish belief of the period endeavours to account for them in a world created by God (see DEMONS AND SPIRITS [Hebrew] and DEMONS AND SPIRITS [Jewish]).

According to the Pirke Abodah, v. 9 (cf. C. Taylor, Sayings of the Jewish Fathers, Cambridge, 1897, ad loc.) and Gen. Rab. 1, moszafi were created by God Himself at the close of the sixth day; but, as the Sabbath supervened before their creation had been completed, they remained half human, half spirit. They are not fallen angels, nor are they ancient heathen gods, but intermediate between angel and man, and mostly of an evil inclination.

How are they to be used—i.e. the art of witchcraft—has been taught to man by two angels who have forfeited all rights to the bliss of heaven. According to the Book of Enoch (tr. M. Caster, London, 1889), and other Jewish Haggadic collections, the two angels Uzza and Azael, who showed their dis- content at the creation of Adam, and afterwards were sent by God, at their own request, to see whether they could withstand temptation, both fell in love with a woman and were punished by God.

One of them, Uzza, has his head in the sun and the other is chained behind the dark mountains; it was the latter who taught women the arts of witchcraft and cosmetics (Jerabhneil, ch.
MAGIC (Jewish)

25, and notes, p. lxxxiii). 1 The Kenites, the
descendants of Cain, were the pupils of these angels,
and, according to the Book of Jubilees, were the
descendants of Seth and brought about the Flood.
According to another tradition, the maga-
zhim and shołówim were the children of Adam and
Lilith, the shołów which leads the procession of
shołówim, who are (see below). The demons
are both male and female, and they are also
endeavor to consort with human beings—a con-
ception from which arises the belief in succubus and succubus—and it is through these
demons that the magician is believed to be able
to carry on his work.

In apocalyptic and legendary literature we get
a clearer glimpse of the beliefs prevalent among
the Jews concerning magic and magical operations.

1 For an Egyptian parallel to this legend ascribing the origin
of magical arts to the tombs of couples who had fallen in
love with a woman see M. Berthelot, Collection des anciens
Égyptiens, etc., p. 129, and Guido, ibid., 5, 66.

2 Later the host of shołówim had other rulers and princes
besides Asmodeus (cf. Ex 25, 9), ibid., Gen. Rab. 20, Levit.
25, 5, etc., more or less ahistorical complications.

3 Guido, iii. 56.

magic with idolatrty, noted above), In addition
there was the lighting of candles and the use of a
knife with a black handle, which is mentioned in
Rashi to Sanh. 10a, and which can be understood
only as a symbolical sacrificial knife. Philistia
must be served in glass bowls (Biblia meṣūl, 2a).
Fasting and other ceremonies are all intended to
prophylactically purify the initiated youth, and
that Adam before
magical and magical operations objectionable to
Jews and an ‘abomination’ to Judaism. Yet
Rabbis made allowance for weaknesses of human
nature and, when present on rank, in the absence
of rigorous measures against witchcraft. But when
necessary they did not shrink from them. During
the first centuries of the Christian era, the whole
of what might be termed the civilized world—
Egypt, Babylon, Greece, and Rome—stood under
the absolute sway of belief in evil spirits. It was
partly Babylonian tradition that ascribed every
form of evil and harm to the action of the shołówim
and magazhim and produced a large literature
of invocations and magical formulae for harm and
protection, and partly the Egyptian tradition of
magic operations and ceremonies of a mystical
and magical character. During Talmudic times
it seems to have been believed that some shołówim
were harmless, and, though they were looked upon
as evilly inclined and malignant, a friendly inter-
course with them was considered not contrary to Jewish
law. Thus a Rabbi once assisted in a dispute between two shołówim, in which one who had taken unlawful possession of
a place belonging to the other was slain. A few
drops of blood were found floating on the well
where they dwelt (Levit. Rab. 24); but, on the
other hand, Abaya saw a seven-headed monster
coming out of a well and killed it. The attitude
of the Rabbis was justifiable so long as it did not
lead to real idolatry.

The belief in the power of the Ineffable Name (see
CHARMS AND AMULETS [Jewish], NAMES [Jewish])
as old as any belief in witchcraft. As soon
as the existence of evil spirits could not be denied,
they also were given mysterious names, and it was
held that, the moment the magician possessed the
secret of their names, he could win their assistance,
provided it was not contrary to the will of God.
Legends say (Pal. Targ. to Gn 25) that among
the first who obtained mastery over these demons
and who did not have to consult with demons of
their own purposes were the children of Abraham
by his wife Keturah, to whom he had imparted
the knowledge of the mystical names of the demons
(the names of the dead). It was through the
names of these evil spirits that ‘the prophet of the
heathen,’ as Balaam is called, was able to perform
his witchcraft and was expected to harm the
Israelites. He was considered to be the greatest
magician of old, and, according to Pal. Targ.
to Nu 25, he taught the daughters of Moab to
practise sorcery and witchcraft and thus enslave
the young men to idolatry and immorality, which
brought the plague upon Israel. It is also said
that Balaam tried to escape by flying in the air,
but Phinehas, through the Holy Name, was able
to fly higher and smite him. The magicians in
Egypt who were inclined to God, i.e., Moshiach in the
sense of Jannes and Jambres (so already in Pal. Targ.
to Ex 1), well known in apocalyptic literature as
the great magicians at the court of Pharaoh (cf.
also 2 T. 30, 1). According to the Samaritan Ap-
ecrypha of Moses, the sorcerer who predicted the
birth of Moses was a certain Palti. The Samari-
tans trace the origin of sorcery and witch-
craft to the period of Sigismund, which is why
he left Paradise; but in Jewish and Christian

1 This is one of the earliest mentions of a seven-headed
dragon, which plays such an important role in apocalyptic
apocryphal literature it is the ‘Book of Adam,' or the ‘Book of Râzéel,' a title afterwards given to a handbook of practical fábôlátá full of such mystical names of angels, rulers, princes, stars, planets, and sublinear worlds.

Still less could the Rabbis of the Middle Ages be able to believe the powers over demons with which they remembered that even the Temple in Jerusalem was said to have been built by Solomon with the assistance of the shâdôthim—a legend which rests on a peculiar interpretation of the word shidâh, occurring in Ec 2. So firm was the later belief in Solomon's power over the shôtîhim—and whatever was allowed to Solomon could not be refused to any other Jew—that Josephus has preserved to us (Ant. viii. 2. 5) the tradition of Eleazar, who came before the Roman emperor Vespasian, and was able to drive away an evil spirit by using the ring of Solomon and certain herbs.

In the Solomonian cycle Assmaeus is mentioned as their king, and Lilith, Mahalath, and Agaron are also described later as leaders of evil spirits, while even a demon Meridianus has been evoked out of Ps 91. Once the grouping of spirits was conceded, names came from various quarters to swell the host. Among these we find references, in the Talmud, to the princes or rulers over evil and spirits. After the fall of the first crown, and over crystal—all shining objects used, no doubt, for crystal-gazing (q.v.). It was a time of syncretism, in which everything that helped either to evil was eagerly sought by the credulous. The work of the magician was wrapped in obscurity; his books were kept secret, and his operations were accessible only to the adept, whence much of the practical operation is almost lost to us. What has survived is, with few exceptions, the accompanying formula by which these various spirits and invisible powers were invoked or subdued either for evil, as in most cases, or for good. In the Greek magical papyri some fragments of the formulae are extant, but very little of the operations. Much more seems to have been preserved in the Hebrew Sword of Moses (ed. and tr. Gaster, J.R.A.S., 1896, pp. 143-149), of extreme antiquity, and in some MSS of practical fábôlátá, or practical occultism, mostly in the possession of the present writer (one of the prescriptions in these is given below). A large number of bowls, magic vessels, and other objects of the first centuries of the Christian era, have been found in Babylonia with Hebrew and Syriac inscriptions, these vessels being used by the ancient magicians for the purpose of fixing the demon ascribed to them, and of forming the magical incantation or conjuration written on them effective. The inscriptions in question contain whole lists of demons and spirits who are in the service of the magician or whose power he is expected to check. A large number of them have been published by J. A. Montgomery (Aramaic Incantation Texts from Nippur, Philadelphia, 1913, and one (no. 32) may here be reproduced as showing the state of mind and the beliefs of the people. The translation is independent and differs somewhat from that given by Montgomery.

*This bowl is prepared for the sealing of the house and the witch-house, for demonology. Brightly burn thy lamps, and let the stars of the sky be in the same. Rabbâ, let him be in the house of Dînâ, son of Ispinardum. Again, let him be against them—a ban against all Demons and Devils and Satans and against all the wicked persons who are in the house of Dînâ, son of Ispinardum. Again, let him be against them a ban which shall annul the righteous and the wicked and the earth and the mountains, and through which no curse on the one who is barren (gifted) shall come, and through which no cursing shall fall upon the magician, Demons and Devils and Satans and Liliths and curses; and through which he passed over from this world and climbed above you to the height (of heaven) and learned all counter-charms for hurt and for healing to bring you forth from the house of Dînâ, son of Ispinardum, and from everything that belongs to him. I have power over all the ban, and it is bound and sealed and countersealed, even as ancient lines of writing which do not fall and men of old who were not surmounted (i.e.,... Again, bound and sealed and countersealed in this ban in the name of Yâruvirâr, Yarâr, Yarâr (Ame,'o), Amen, Selah, Lilith and the bowl. Sealed and protected are the house and dwelling of Dînâ, son of Ispinardum, from the Terâlitis (terâlit) and evil dreams and the Curse. And sealed and protected be this (his wife and son) from the Terâlitis and evil dreams and curses and vows and curses and vows and curses and vows and curses and vows and curses and vows.

This inscription has been selected because it contains the name of the famous Joshua (Jesus) b. Perahyah, who was so important a figure in the time of John Hyrcanus at the end of the 2nd cent. B.C. He was the teacher and friend of R. Simeon b. Shetah, whose dealings with the witches of Ashkelon are mentioned below. In the apocryphal stories about Jesus a noteworthy item is assigned to this Joshua b. Perahyah, who had fled to Egypt, where he was believed to have learned the art both of working and of combating magic.

The Jews, Talm. (Sanh. viii. 15, fol. 252) tells a curious legend concerning this same R. Joshua, who is made the contemporary of Eleazar and R. Simeon. It seems that he came to a place where they found a young man whose manhood had been taken away by a witch. R. Joshua sowed flux on his bed, he was never seen at all after that. Out of the midst a woman with dishevelled hair suddenly appeared—the witch. R. Joshua addressed her, desired her to loosen the spell, but she refused, whereupon he threatened to divulge her name. She then answered that she could not undo the spell, because the things had been done by the sea. R. Joshua then ordered the angel of the sea to throw them up, and thus the man was restored to health, and later became the father of R. Judah b. Bettars.

In the light of the Babylonian bowl, it is not improbable that this is a story of Joshua b. Perahyah, but, as no name was known of his magical powers, it was transferred later to another Rabbi also named Joshua.

The Rabbis had no doubt as to the origin of witchcraft: it came from Egypt. According to Kadissâh, 446, ten measures of witchcraft have come down into the world, nine of which have gone to Egypt, while one has spread throughout the rest of the world. The Talmud names one of two witches who are said to have practised in Jerusalem, among them being Yôkhânân, the daughter of Ittîbah (Sotâh, 22a), famous as a witch affecting childbirth.

One day, whilst she was assisting a woman in travail, a neighbour came into her house. Hearing a noise in a vessel, she said to that of a child was born, who, little by little, died, and the woman was easily delivered. Hence it was recognized that Yôkhânân was a witch.

Evidence of the Babylonian origin of witchcraft and of its purely temporary character—as is shown by the fact that, if put to the proper test, it vanishes—is seen in the Talmudic story of Ze'dâl. He bought an ass in Alexandria, but, when he attempted to cross the river on it, it turned into a plant that immediately touched the stream, for no witchcraft can withstand running water. All who saw him laughed at his disappointment, but he recovered the money which he had paid for the ass. Another Rabbâ, Rabbi, being offered a drink of water, poured some of the liquid on the ground, whereupon the rest turned into scorpions. He then compelled the witch to drink and she was transformed into an ass on which she rode into the market. There another witch, recognizing her, broke the spell, and the ass was cured. Rabbâ then said: "Witchcraft is like the egg of a bird—when the sun or moon has been injured, the little will be injured also."

As soon as magical operations came to be regarded as idolatry, stern measures were taken, one of the foremost opponents of magic being R. Simeon b. Shetah (Sanh. 446, and Rashi, ad loc.), who lived in the time of King Janneus and Queen Alexandra (1st cent. B.C.). He went to Ashkelon, where, with the assistance of eighty pupils, he caught eighty witches actually practising their magic arts, and had them executed on the spot.

1 This idea of a witch who holds the soul, or the eyes, or the heart in close imprisonment in certain vessels which, when broken (the controversy is over them) they become free, is the result of Egyptian tradition.
The details are of much interest, for they show a complete continuity of practice from that day onward. The women procured food and drink in a miraculous manner, and in the midst of the feast did not disdain to invite the Rabbis' pupils to share in their banquet. Each of the young men then took one of the witches in his arms and lifted her from the ground, whereupon the latter made a sign with her right hand, and the procedure being that no harm could befall a witch as long as she wore black garments.

It was, however, found necessary to bring some order into the chaos of magic, for the Rabbis could not transgress a clear prescription of the Bible, and a sin which was punished with death could not be passed over lightly. On the other hand, what was a deadly sin for the followers of one creed might be tolerated by those following another; a heathen might be allowed to be a magician and not held under the ban of the Law, while a Jew was strictly forbidden to follow such practices, and, vice versa, a Jew might be considered a magician by the followers of another creed. To a Jew all heathen practices and even religious ceremonies might be magic, and the Rabbis, therefore, divided magic into three categories. First, the death penalty by stoning (Lv 20:27) was inflicted only on those who practised magic, and performed meretricious operations. The second class consisted of those who merely acted as jugglers or produced optical illusions, and who were warned not to indulge in such practices, but who did them. A third type of magic was that by which operations and identical results obtained by the Holy Name were not only tolerated, but actually sanctioned. A difference was thus made between the use of the names of the unclean spirits (magic) and the names of the clean ones (gabbālā). By the former are meant demons and spirits, by the latter angelic powers. At the same time masters of demonology, semi-demonologists being, might be obtained through the mediation of heavenly powers.

Thus, when R. Simeon b. Yohai and other sages went to Rome, they caused a demon, Ben Tuamaiti, to enter the amulets and tokens which, when they were at the city of Tzur, were able to cure her by expelling the spirit (briefly told in M. Git. fol. 17, a-b; enlarged form in A. Jellinek, Beit ha-Midrash, Vienna, 1882-83, vi. 129-130; also Rashi, ad loc.); Gaster, Examples of the Rabbis, London, 1895, no. 19; J. S. Schofield, in J. E. xii. 301.

Thus was established a compromise which was facilitated by the manifold meanings attached to the word rāhā, 'spirit,' used even in the Bible for both a good and an evil spirit coming forth from the Lord, possessing man and departing from him. So strong was the belief in the harm which such evil spirits could produce that, as far back as the time of the Mishnah of light might be extinguished on the Sabbaths if an evil spirit were feared (Mishn. Shab. ii. 5); and in the Bible rāhā is already occasionally applied to evil spirits, demons, and devils (Js 9:6, 1 S 10:14-16, 19b, I K 21:22, Zec 13:1).

Despite the stern attitude taken by the Rabbis, magic flourished among the Jews, for the adaptability of this science often deluded themselves as to the true character of their art. Not only did they continue their forbidden practices and their operations for evoking spirits and subduing demons, but in their formulæ they introduced names of spirits and demons gathered from every form of warlike creed and ancient tradition, and gods and spirits long dead and forgotten were retained in magical practices and invocations. Gnostic, Babylonian, Egyptian, and Greek, and even such appellations as Scyth, Alpha, Omega, and Evangelion are found side by side with Shabathai and Shaddai. Actual specimens of these conjurations are very rare, for the magician would never disclose his practices. An example of the following type (taken from the present writer's Cod. no. 443, fol. 13b) is characteristic of the peculiar mixture of names and powers used by the magician.

'And they are called the "princes of hell." Take hellulim in his hand and write his name and make him print (literally: put his name in the tooth) into his hand and he shall stěk upon a three-legged stool and put the boy between you, and you shall agree your month and you shall turn your face towards the sun and say in his name "Am'at adjure thee in the name of Truth, God, Keeper of the Hosts, Alpha, Omega, 2 that thou shall send from thee three angels. Then the boy will see (a figure) twice of a woman (the charm) twice more, and he will see two (figures); and the boy shall say unto them: Your country is in peace?? And the owner of them that which you wish. And if they will not answer him, the boy shall adjure them, and say: "Kavev, Kolev, Emaq, Kameq, Kameq, Kameq, Kameq, Kameq, Kameq, Kameq," and with a second adjuration that you tell me that thing or who has committed that theft." And know that he who wishes to do this must do it on a clear, cloudless day, and is winter time at mid-day.

"The most remarkable product of this type of syncretism is the Sefīr Mattah (1864) (Key of Solomon), a complete facsimile of which has been edited by H. Gollancz (Oxford, 1914).

No legal command could eradicate so deep-seated a belief as that in magic and magician; and, though it is true that it was forbidden, almost on pain of death, to become a pupil of a magician (amgīshi) (Shab. 73b), yet his help might be invoked to break a spell, and a case of murder had become seriously ill through witchcraft. The laws were almost to modern times, (T. Y. de Dea, § 179, and the commentary of R. Joseph Karo [see Qaro, Joseph], ad loc.).

Belief in magic received an additional impetus through the mysterious teachings of the Zōbar, which, from the 14th cent., held almost unbroken sway over the mind of the majority of the Jews. In it the Talmudic legends concerning the existence and activity of the sheḥiṭhun are repeated and amplified, and a hierarchy of demons was established corresponding to the heavenly hierarchy. Halis of the other world and the demons are fully described in the Zōbar (Ex. 246b-255a) and exorcism of the sheḥiṭhun or any evil spirit was recognized as within the power of every man fully versed in mystical lore and in the mystical names of God. Many a tale is told of such expulsion of demons by holy and pious men, such as Hildorons in Catania in the 8th cent. (L. Zunz, Zur Gesch. und Lit., Berlin, 1845, p. 486); and others are mentioned by Manasseh in his Nidqat Hayyun (Amsterdam, 1632), bk. iii., which is full of information concerning belief in demons and the power of the pious to master them and use them for their own purposes. But the scholarly and popular notions of the 17th cent. clung to the belief, while in the legendary lore of the Middle Ages such men as Maimonides (p.e.), Ibn Ezra (p.e.), R. Judah the Pious, Rabba, and Nahmanides p. 203, were credited with magical powers, and many a legend is told of their operations. Rabbi Jehiel of Paris has even found a place in Victor Hugo's Notre Dame de Paris as a Wonder-working Rabbi, and no less famous was R. Loeb of Prague (17th cent.), who was regarded as a great magician and was credited with having a clay famulus that was able to perform wonderful deeds, since it had under its tongue a plate on which a mysterious name had been engraven. The Ba'al Shem (1750), who founded the sect of the Hasidim, had many encounters with the sheḥiṭhun, as described in his biography (Shabb. Bein Sheni). In England, 1815, p. 3, a collection of miraculous deeds performed by him and after him by wonder-working Rabbis of the Hasidim as detailed in the Kohl Hasidim (Lemberg, 1864); nor should we forget the legend of the so-called "Gly" at S. Dalches, Dir. Oil Magic in the Talmud and in the Later Jewish Literature, London, 1912. 3 Derya (‡).

(2) Exaγγελίων των θεών (Greek: lit. Proclamation of the Gods). The term signifies the name of a certain section of the Talmudic legends. The copyist, however, who copied the text, may not have understood what he was writing.
scribed in an anonymous chapbook, between a bishop magician and a red Jew, who had come from beyond the waters of the mysterious river Sanhatyon, for upon the life of the Jewish communities in Germany. To this very day the Jews in Syria perform such magical operations as incantations, invocations, and offerings of oil, bread, and lighted candles, which are placed at four corners of an empty house to propitiate the shekelthim before the people venture to enter the dwelling and make the proper dedication. Gradually, however, the belief in the shekelthim is slowly but steadily being discarded. Indeed, much of Jewish magic to-day is, in reality, little more than a concession to ignorance. When a Rabbi was asked why the aid of a magician may be invoked in case of serious illness, he replied, according to Joseph Káro (commentary on Tá'r, Yároch Déch, ch. 179), that, although there was no basis of fact for the procedure, such an appeal might soothe and comfort the patient, and therefore he saw no objection to it. This is practically the answer which is given in modern times when the people are asked why they continue to believe in the harminy demons, and in magical operations intended to propitiate them and to obtain relief and safety. It is merely a temporary comfort to those who are both to give up old beliefs which are not reasonable or even imaginary.

On the vast uplands of the northern steppe man's relations to nature were characteristic. The Greeks, in their country, developed a corresponding mythology, varied and beautiful; the modern Western European, a city-dweller, turns to nature in a romantic manner, semi-religiously idolizing what is to him unworship and fresh. But to the Slav peasant nature was business, his everyday surrounding, beside which nothing else existed. He was rather unimaginative and quite ignorant. Whilst the Northern and Central Slavs, with a more acute outlook on natural phenomena, the Slav, in the drear monotony of his plains, fell into neither the deep religious fatalism of the Scandinavians nor the bright imagery of the Greeks; he simply saw that the sun ripened and the sun scorched; that the earth was moist and fertile or parched and frozen; that he was enviroved by unknown powers to be obeyed or to be subdued; he addressed prayers and invocations to them in a prosaic, almost rationalist, attitude of mind, without adoration, with merely a recognition of inevitable dependence. His spells and invocations (the bastard descendants of heathen rites) were unsound sciences, but good rationalism. A. N. Rammbau 1 says that the primitive Slavs adored matter and never felt the incentive to personify, idealize, or philosophize it; perhaps it was a mere acceptance of necessity. The Pomeranian Slav, the only Slav who had access to the sea, had a very elaborate ritual, and worshipped many-headed images in temples, not in groves, like the other Slavs. Their greatest oracles and pilgrimages were in the isle of Rügen; these pagan shrines were destroyed by Valdemar I. of Denmark in 1168.

The recollection of this sacred island has strongly influenced Slav myth and magic. The word Rügen is derived from the same root as the English 'rough,' and is called in Early Russian Rivaz. Now the word may derive from the Teutonic name Rügen; and it is thus a safe and probable theory to identify the fabulous island of Byway with the historic shrine of Rügen—all the more so as the mysterious stone Altây is thought perhaps to mean amber, which was an article of Baltic commerce.

When Christianinity had effaced the old Slavic nature-gods, the need for which they stood still remained—that of dealing with nature, coaxing and dominating her, and mastering her secrets. Fragments of the old ritual, degenerating into incomprehensible pattern, continued to be used at the old sacred haunts, but these incantations were clandestine; though the beings invoked were believed in, they were considered illicit or hellish; heathendom had changed into magic.

Every village had its magician or witch-doctor. These practitioners certainly possessed great knowledge of healing, as herbalists and masons; but, where all nature consists of discontinuous miracles, such cures had to be accompanied with the ritual that was calculated to conciliate the powers and convince the patient.

The Russian freecrier lived alone; he had learnt the magic formulae, and had been instructed by the woodsprites (lódít), the goblin of the hearth (domorev), 2 the fairies of the fields and the water (poleváy, vol Lyons). Such practitioners are known by many names—e.g., znákhár, kóllam, znákhkar, cédín, vorotóy, etc.; the women-witches are called cédinéva; and to them more extraordinary powers are attributed. These magicians hand down their wisdom to their youngest children—a custom signifying that this magical knowledge was derived from non-Aryan peoples, and taken over by the Aryan conquerors.

It is said that the znákhár has physical marks—a troubled eye, a grey complexion—that he mutters, has a hoarse voice, and so on. Unless he communicates once a year, earth will not receive his body, and then he wanders after death as a vampire, sucking others' blood. Witches are credited with the power of flying, and are supposed to have marvellous muscular strength and a spotted skin. They are said to forgather in the groves and woods, and to cavort with the mythical beast that man should cross himself when he comes upon such whirling columns, for in them the witches dance. If a knife be thrust into such a column, it will drop to the ground blood-stained; and it then becomes an implement for sorcery—e.g., a man crossed in love may use its broad blade to wipe out the track of his maiden in the snow.

The wizard is believed to have terrible powers; among the Galician Rusines, e.g., if the znákhár inserts a knife under the threshold of his intended victim's dwelling, the victim is snatched away by a whirlwind, and detained until the knife is removed.

The magical formulae are very curious. They are framed for every occasion of need; and, to be efficacious, they must be spoken in one breath without any departure from the text—only thus can the powers of nature be quelled, and the wizard be the lord of creation. The following is the text of a charm against lead, copper, and iron bullets:

θ In the lofty chamber, at the river mouth, beyond the river Vågan, a fair maiden stands, stands and decks herself, commands herself to valorous folk, glories in deeds of war. In her right hand she has irons bullets of lead, holding her copper, on her feet bullets of iron. Do thou, fair maiden, ward off the guns of the Turks, the Tartars, the Germans, the Circassians, the Russians, the Moravians, of all tribes and seas.

1 La Russe d'époque. Paris, 1876, p. 315.

Vol. VIII.—20
MAGIC (Slavic)

Again, in another formula, the Holy Virgin is depicted, like Svantovit, one of the principal gods worshipped at Rügen by the Pomeranian Slavs, or St. George, as riding across the golden bridge on her horse — an unmistakable reminiscence of the chariot of the sun on the rainbow.

There are charms to hurl a child to sleep, and these somewhat involve mysterious symbols, such as Plaks, and Sockotina — as well as the dawn, coupled with the names of Christian saints.

To save a man from drunkenness a worm is taken out of an empty wine-cask, dried, and then steeped anew in wine, whilst this formula is recited:

Lord of the sea-deaths! Carry the mutilated heart of thy servant out of the shifting sands, the burning stones; breed in him a winged brood.

The following examples illustrate the lyrical quality occasionally found in these strange compositions, especially in some of the spring incantations:

Thou, Heaven, hearest, thou, Heaven, sentest what I wish to accomplish on the body of the servant X. (There follow four words unintelligible. An unintelligible patten is sometimes found, which looks very like a tradition of a lost language.) Thou Moon, turn away the servant of God from wine; then little Sun, bring peace to the servant of God from wine. Ye bright stars, do ye assemble in the window? My cup be there water from the mountain-well! Ye stars, do ye want X, the servant of God, from wine?

Thou bright Moon, come into my net! But in my net there is neither bottom nor cover! Thou generous Sun, approach my deep, my courtyard, but in my courtyard there are neither men nor beasts.

The field of Slav magic is too vast and intricate for adequate treatment in these few words. The varied superstitions have been voluminously compiled by Sakharov and his generation; but it should be particularly noted that there are extant songs of witches in a meaningless gibberish, which some philologist might very possibly interpret and so assign definitely some origin to part of the magic ritual, at any rate, of Russia.

In the 18th century, Russian magic became specifically demonological. An infernal hierarchy was foisted upon it with anti-ecclesiastical ritual. These late charms impress the reader as being identically artificial, like the imitative ballads of the same period; in form they copy the mediaval spells.

Summary.—The history and decline of Russian magic, it would appear, traced the following course. The primitive old magic of the Slav Aryans was profoundly influenced and deflected by the subject races of the Finns, Cuds, and other Turanian races, who became typical magicians and had mystic powers ascribed to them. The elaborate ritual of the Pomeranian Slavs originated in a greater intermixture of race, and, when suppressed, was soon forgotten; but it lingered on in tradition and folk-lore, in the incomprehensible patter of the spells, and especially in the legend of the island of Buyan and the stone Alatyr.

As Christianity spread, the ancient gods of thunder, spring, and prophecy, the sun and moon, etc., were duly canonized, whilst the pagan soul and the pagan adoration of nature remained the same, and the festivals were held, often on the same day in the same place, and with similar ceremonies.

In the second mediaval stage, merged in and with the incantation is village science and medicine, village nature-poetry, and primitive religio loci. The specialization of the medicine-man, the healer, the priest, and the minstrel came with advancing civilization, the herbalist degenerating into the drug-man and enchantan and enchantress, into the mediavally, a formal demonology arose, a positive anti-Christianity, artificial, sporadic, and short-lived.
MAGIC (Teutonic).—In all the Teutonic and in all localities the belief in magic is found to have sprung from the same roots: panvitalism, i.e. the conception of nature as alive in every part; the incapacity of primitive man to distinguish persons or things from their names or representations; the belief in the transferability of the powers of nature and of human souls; and the dread of soul-spirits and demons, as also of such like personages as were believed to be in league with these supernatural existences. We need not wonder, therefore, if the means by which the various peoples of the earth have sought to defend themselves from an evil or to augment their strength, and likewise to show a degree of uniformity. Naturally the most effective mode of securing immunity from the machinations of magic was to counteract them, if possible, by magic. From the earliest times the amulet and the spell have been specially resorted to as protective expedients. While the former, however, was employed exclusively as a prophylactic, the magic formula was used in the practice of other kinds of the occult art, whether its design was beneficent or the reverse.

With reference to the ideas and customs associated with the belief in magic, the Teutons formed no exception to the general rule. Among them, as among other races, are found the belief in the soul and the various forms of superstition developed from and dependent upon it. The souls of the departed were believed to pervade and animate all nature; they could assume at will human or animal forms, and bring good or evil fortune to men. From the soul of the sorceress came the powers of the witch whose devices could work injury upon other human beings. Many of the nature-demons, whose origin was the physical environment, were regarded as beings endowed with magic. Among the Germans, likewise, the practices of soothing and magic were intimately connected with the belief in soul-spirits. The prophetic faculty was attributed to women as well as men. In the north of Europe the \textit{Völken} had a great reputation as prophetesses and sorceresses. The practice of magic was on the whole more fully developed among the Northern Teutons than in Germany, being fostered in the former case by the shamanism of the neighbouring Finns, a people famous over the whole North for their magic. The most powerful and formidable sorceresses mentioned by the Norse sagas belong, for the most part, to the Finnish race, which, again, in its religion, its demonology, and its magic, is very closely allied to the ancient Sumerian peoples. It is possible that many elements in the magic and demonology of the Northern Teutons were borrowed from the Finns. At all events, the practice of resorting to the latter people in order to acquire their magic arts became so prevalent that at a very early time the Christian Church found it necessary to enact laws prohibiting it. But this was not the only channel by which the Teutons became acquainted with the magical ideas and usages of foreign, and especially of the Roman, Greek, and Oriental peoples. The Northern Teutons visited the Mediterranean Sea both as Vikings and as peaceful merchants, while the Southern Teutons were the near neighbours of the Romans, and were sometimes in their pay as mercenaries. In point of fact, the arts and crafts of the northern and southern art and its adorments are found among the Teutons from the outset. Here, just as on Greek and Roman soil, the idea prevailed that it was possible to work changes in the natural objects simply by the magical virtues of the spoken and written word or of the symbol. The magic utterance and the magic rune—the engraved talismanic symbol—were used for the most varied purposes, according to the \\textit{Ynglinga Saga}, runes and spells vowed their origin to Odin, while the rune-master of the \\textit{Havamál} knows the right method of engraving the characters, as well as the songs which effect cures, restrain enemies, render weapons harmless, quench fires, subdue winds and waves, call up the dead, and awaken a maiden's love, though the words of the songs are not given. Other magic songs are referred to in the \\textit{Sigrdrífsáld}. That a similar profession of magic songs was to be found among the Southern Teutons is shown by the \textit{Hombilia de ancilis}, which came into existence in the 10th century under the influence of the Teutonic and Slavic elements in the \\textit{Ordsal}, the \textit{Ynglinga Saga}, and the \textit{Völva}. The Teutonic peoples, however, were regarded as due to demons and malefic magic. Magic alone, in fact, could undo the work of magic.

Now, the articles exclusively employed for the purpose of influencing the magical properties of things were amulets and ligatures. There was no the slightest misgiving as to the efficacy of the appropriate amulet. Discoveries in tombs furnish ample information regarding the objects specially in request as amulets among the Teutons. Thus, for the protection of the dead, belenmites, amber rings, stone arrow-heads, and hook crosses were laid in the grave along with the body. Amulets were also fashioned out of all kinds of objects bearing figures and drawings, while a special vogue was enjoyed by the so-called \textit{bracteates}, which were imitated from Roman coins, and brought to the North in the early centuries of our era. These were mostly of gold. The images of the gods which served as amulets likewise date from the period of Roman influence.

When the missionaries of the Roman Church introduced the Christian religion among the Teutonic tribes, they found ideas and practices quite similar to what had prevailed in pagan Rome and its provinces. Accordingly, they sought to apply the same procedure as had been previously resorted to, i.e., they incorporated the deities of the pagan Teutons into the system of demons whose existence the Church recognized, while they forbade all worship of them, as also the practice of magic in general, and inflicted severe penalties upon the disobedient. From the early centuries of the Church's history, synods and councils had found it necessary to forbid even the priest to pander to the people's craving for amulets, written spells, adjurations, and magic potions; and, as late as the 8th cent., clergy in Thuringia, the missionary district of St. Boniface, were making amulets of small cards inscribed with Biblical verses of supposed protective or remedial powers, and hung from the neck by a cord, just as if they had been pieces of amber or agate. Other forms of incantations were also vigorously denounced from the pulpit, while other ecclesiastical enactments against amulets and spells are found among the rules for penance and in the ecclesiastical or Christian codes. Among the various colonies and settlements of The Northern Teutons visited the Mediterranean Sea which, it is true, prohibit many non-Teutonic
superstitions—a peculiar place is occupied by those of the Anglo-Saxons, as the Frankish regulations are in great measure verbally dependent upon them. They are against 'divisiones,' 'angus Chresti,' 'souini,' 'mathematici,' 'emisseros tempestatum,' and especially against 'incantaciones diabolicas,' 'filastera,' and 'ligateae.' As yet excommunications issued against the practices were not punishable by law, and the laws, most of them introduction and reformation. The Venerable Bede (HE iv. 27) relates that, during a time of pestilence and high mortality, recourse was had to adjurations and spells. The attempts to deal with the disease generated an entire series of the decrees of councils dealing with the subject in his work de Synodalibus Consulis (A.D. 906; PL xxxxi. 157 ff.), and from that work much has been borrowed by Burchard of Worms, who wrote about the beginning of the 11th century (PL exxli. 537 ff.).

That similar ideas and usages were still flourishing in England at this period is shown by Elfric's Passio S. Bartholomaei Apostoli, with its injunction that no one shall seek to regain health by using a ligature of medicinal herbs or praising a herb in a magic song. The ecclesiastical ordinances of Eadgar and the Northumbrian priestly laws contain regulations to the same effect. Among the Northern Teutons likewise canon law directed its mandates against superstition and magic.

In dealing with such offences, the national codes of the various Teutonic peoples do not show the same unanimity as the Church. The Teutonic nations that came into existence on Roman territory found it necessary to base their legislation against magic directly upon the ordinances of Roman law. The earliest Teutonic code, the lex Visigothorum, enacted (bk. vi. iii. 2, 4) that those who 'qui bussumam incantationibus' bring hailstorms upon the fields and the vineyards 'decemens flagellis publice verbetur et decedvat deformiter denarios esse posset pecunia cogantur ad invitant.' In 1098, King of the Longobardi, sternly prohibited the belief in cannibal witches. Among the Germans, as among all other races, the feeling prevailed that one who practised malefic magic must at all costs be got rid of, whether by expulsion from the tribe or by death. But, on the other hand, we have a variety of testimony from Northern Europe which seems to show that the practice of magic was not in all circumstances deemed criminal.

In the civil law of the Anglo-Saxons, from the 7th cent. onwards, we find penal enactments against superstition and magic, and in particular against the employment of spells and amulets. The laws of Alfred the Great dealing with magic are founded mainly on the Biblical denunciations of the practice. Of similar character are the legal ordinances dealing with the occurrence of disease among the Northern Teutons. The elder Icrician canon law of the 12th cent. ordains that those who tamper with incantations or witchcraft shall be punished by being turned out of the tribe.

The evil against which the enactments of the Teutonic codes were mainly directed was malefic magic (malacium). Until the 8th cent. we find no similar enactments against other superstitions which eventually gathered round the belief in witchcraft. But the belief in the existence of cannibal witches and in witches' flights was explicitly forbidden by ecclesiastical and civil legislation, though Ivo of Chartres (c. A.D. 1100) thought it possible that witches exerted some influence upon the sexual functions, 'anger Chresti,' however, notwithstanding all its exertions, was by no means successful in ridding the people of their magic beliefs and practices. Both continued to flourish abundantly well into the 13th century, and were still rampant to the recrudescence of the old neo-Platonic—in reality, the Babylonian—doctrine of demons. At an early period medicine had become the monopoly of the clergy, and it was a frequent practice to exorcize the patient by the priest; and to release, to the rosary, and to the 'Agnis Dei' were ascribed the greatest virtues. Those who in sickness and trouble applied to the priests were treated by means of the anulet and the incantation, so that as late as the 16th cent.—at a time, that is, when a medical profession in the proper sense existed—adoptions were still resorted to by doctors.

The attitude of the Church towards the belief in magic was twofold. On the one hand, it accepted magic as an indisputable reality. On the other hand, it ranged itself with the civil legislation in an uncompromising opposition to certain dangerous popular superstitions. But in the 13th cent. came a momentous change in the Church's standpoint. The doctrine of Satan was now made the basis of the legislation against witchcraft, and the journeys of witches, the transformation of human beings into animals, the sexual intercourse of men with female demons, and the operation of sorcery in the sexual functions—all these things were now accepted as facts not to be gainsaid. Then in the 14th cent., the two currents of heresy and sorcery, which had hitherto run side by side, became amalgamated, the latter other, and merged in the belief in witchcraft. While among the Teutonic tribes the practice of magic had hitherto been penalized—to speak strictly—only because of the mischief which it might work, in the 13th cent. the civil legislatures in Germany likewise resolved upon a new policy. The Old Saxon code (Sachsenspiegel) sent those who practised magic of any kind to the stake, and its example was followed by other municipal and territorial codes. In spite of the rigour of the Inquisition, it is true, the earlier penal law (which threatened with excommunication the users of incantations, amulets, or other magic devices) was universal, especially by certain outstanding men among the clergy. The Inquisition at length silenced every stricture against its competence to deal with magic. By the civil legislation of the 16th cent., those who dealt in magic and soothsaying were punished mainly by fines; the death penalty was scarcely ever mooted. On the other hand, the Hamburg criminal code of 1598 enacts that the punishment of malefic magic shall be death by fire, and this clause was taken over by the Imperial legislation—the 'peinliche Gerichtsordnung Kaiser Karl v.'—while we find that the criminal code of the Electorate of Saxony (1572) sentenced witches to death by fire, and its example was followed by the legislation of the several States. The persecution of witches was gradually introduced into the various territories during the 16th cent. In England the earliest processes of this kind seem to have been trials for real or alleged attacks upon the person of the sovereign, or from the reign of Henry vi. onwards, the laws against witchcraft were in general much more lenient than was commonly the case on the Continent. Witch-persecution in England dates from about the middle of the 16th cent. The Scottish cases are found as early as the beginning of that century. With regard to Sweden, we are not in a position to say whether witches were burned
before or during the Thirty Years' War. These measures, however, were incapable of extirpating the belief in magic—just as the Reformation itself failed to do away with it, though the doctrine certainly received a telling blow from the Reformers. As to the question whether sorcery has a foundation in fact, the Reformers themselves shared the ideas of their Teutonic predecessors. The final deathblow to the belief in witchcraft and sorcery was administered by the reconstituted sciences of modern times.

Even in the earliest ages a clear line of demarcation was drawn between lawful and unlawful magic. The latter was treated by all races with the utmost rigor, and not seldom punished with death. Among the Teutons, as elsewhere, incantations and amulets were utilized as a means of securing protection and profit to the individual and his belongings, and also to work injury upon others, and their possessions. The magic spells of the Teutons may therefore be arranged in two main divisions, according to the purposes that they were intended to serve: (1) magic formule supposed to secure protection and advantage; (2) magic formule intended to injure others. But, as the subject of the following, the spells may be further divided according to the effects which the spells were intended to produce. Their object might be either (a) to drive away an existent evil, to "expel it"; or (b) to avert a possible evil by the means of a "blessing." This dichotomy of the first main group, however, will not be found exhaustive, and it is necessary to mark off another subdivision. Magic formule were used not only for the purpose of dislodging present and averting future evils, but also as a means of inducing spirits to throw light upon the future, and upon hidden things generally. In so far as this (c) prophetic magic (as it may be called) had often to do with things which lay in the future, it comes into close touch with the class of magic formule designed to prevent possible evil. But, while the received spells can for the most part be assigned to one or other of these four genera, many particular species may be differentiated within the larger groups. The number of different varieties will in general correspond to that of the various purposes which the formulae were meant to serve.

Magic can be overcome only by counter-magic; such was at one time the universal postulate of the occult art. In primitive times, however, all sorcery consisted in words and symbols, generally conjoined with the sprinkling of holy water. Tacitus (Germ. x) states that, when the deity was consulted by means of the lot, the priests held aloft the magic wand engraved with symbols, muttering incantations the while. Sundry Anglo-Saxon spells specify the appropriate action to be performed. Thus the incantation for bewitched soil gives precise directions regarding the requisite symbolic actions and sacrificial usages. For the formula against the machinations of witches the instruction runs: "wð friscæ fætercufuge and see reade hale, æ þærn in wyxæ, and wegrade: wyll in buteræ; þen at the end, 'nim þonne þæt sæx, æo on wæstæ.' But word and action had already been frequently employed independently of each other, and it is not surprising that the word came to be used apart from all unnecessary or symbolic actions. The Teutonic conviction that magical effects could be directly produced by the spoken word must doubtless have found expression in the particular form of the spell. But the simplest—indeed the most original—type of directive influence is the express command, and, accordingly, such command must have formed the nucleus of the Teutonic incantation. Two examples of Teutonic spells may be given here. The first is a formula intended to make a person who had been bewitched unable to arise: we bore the title "contra vermes" (C. von Müllerhoff and W. Scherer, Denkmaler deutscher Poesie und Prosa, i. [1892] 17):

"Gang oreuce, mid egnun manum
ot þone mearge æ þat bæn,
þæt eþno bine æ þat þæmeg,
ôf þæm þe þep issne þæm bæn,
ôf þæn þerða ftæ þæm strænæ,
ôf þæm þræfinæ, maerthe æd!"

With this may be associated the Anglo-Saxon "blessing of bees," the 'wyð ymbæ,' from a Cambridge MS of the 11th century. After a direction regarding a magical action, and the performance of the same thereof, it continues (C. W. M. Grein and K. F. Wüucker, Bibliothek der angelsächsis. Poesie, i. [1883] 319.)

"Sitte ge, algewil, swæffæ to eorgam! naerfe þæc wiide æ wudu bygægan! Dege æ gewgæamænige æniæ godes, awa bygæamæ gebelæ mete æpelæ."

It is quite conceivable that spells of this kind should exist independently, and unattached to any preliminary narrative. This has been observed also by Schröder in his article 'Über das Spell' (ZDA xxxvii. 293):

"Probably as it is that at a certain stage of civilization the action of the god, the spell in its postulated form, and the formula of its incantation was in the hands of the divine priest—perhaps as early as the 5th century—was produced in connection with the invocation of a particular genius and was the smallest doubt that in other periods the epic narrative and the magic formula were disjoined, and may each maintain a separate existence.

Besides these adjurations strictly so called, which were complete in themselves, and which may be disregarded as the earliest Teutonic spells, there comes down to us from the same age another species—that in which an epic narrative is prefixed to the formula proper.

The classical examples of this type are the two Merseburg incantations, and the Anglo-Saxon spell against the practices of the devil which is constructed on similar lines. The epigraph of the introductory portion—the narrative—is generally borrowed from mythology. The procedure was to relate some incident traditionally associated with an effect identical with or similar to that which the formula was meant to produce. It was not necessary to say in so many words that the spell should now operate with like efficacy; the bare recitation of the story invested the formula with all the potency required. But this dependence of the formula upon narrative certainly indicates a change of view regarding the power of the formula. The performer has lost his earlier reliance on his own capacity, and this must, accordingly, be reinforced from without.

While this epic type of spell is often referred to as the primitive Teutonic form, the facts would seem to imply its secondary character, though its root may indeed lie in paganism, but in any case the recitation of a short narrative before the actual formula is not peculiar to the Teutons—let alone the Western Teutons. The spell has been traceable among other races and in much more remote times. It was certainly known to the Romans and the Hindus. But, as a matter of fact, there is evidence to show that it is an indigenously Indogermanic usage, since it is found also among the Babylonians and the Egyptians. An Egyptian papyrus of the XXth dynasty (now in Turin), for instance, contains a spell which in its whole design shows a striking resemblance to the Merseburg incantation for fracture of the leg. In the Babylonian and Egyptian spells, too, precisely as in the Teutonic, the scene of the narrative part is always laid in the mythological sphere. In view of the vast influence exercised by the Oriental, and especially the Babylonian and Egyptian, magical ideas upon the nations of the West, it is a tempting conjecture that Oriental models for the spell have been largely instrumental in propagating the narrative spell among the Indogermanic peoples of Europe—first of all in the Greek and Roman area, and then Reserve (loc. cit.), is beside the purpose. The primordial element was certainly the formulae of incantation being added later; and, as we have seen, each could
be used by itself alone. We find, moreover, that in Christian times quite different introductions were combined with the real nucleus of the spell. What we call magic, therefore, thought of each part as distinct in itself, and in no degree the less so because in the recitation ‘saying and singing’ came alternately. In all probability the spells were simply muttered in an undertone; there is a large mass of evidence—Teutonic sources only—pointing to this mode of recital.

Thus the missionaries who came to evangelize the Teutonic tribes found two types of indigenous incantations, viz., the purely imperative and the narrative. As the Church was unable to put an end to heathen customs and practices, or the use of magic formulae, it adopted the policy of assimilating everything that could in any way be reconciled with its own views, hoping that by the device of clothing the objectionable thing in a Christian garb, it might succeed in eradicating the superstitions of the heathen. It likewise endeavoured to transform the ancient formulæ, and here probably its first, as also its most urgent, task was to eliminate the heathen characters from the narrative spells and put Christian ones in their places. New formulæ were composed, and these were generally composed in verse, and were embellished with rhyme. Their narrative portions exhibited Biblical characters, such as Jesus, Mary, the apostles, and others, in pertinent situations; the fact which in itself conclusively shows that the spells in question originated in ecclesiastical circles. Such imitations of heathen formulæ composed by the clergy are relatively numerous, and date for the most part from the 11th and 12th centuries.

From this narrative species of Christian spell, again, was in part evolved a new type. This took the form of composed allegories, and its origin ran thus: ‘As such and such a result was brought about then, so let it be produced now.’ Very few of the surviving spells of this type are in metrical form; the great majority are in prose.

A further form of blessing, for the use and diffusion of which the clergy must again be regarded as mainly responsible, derives its origin from the special Roman Catholic ceremonies known as the sacramentals. New formulæ were formed on the pattern of the ‘exorcisms,’ ‘benedictions,’ and ‘consecrations,’ or these were simply translated into the vernacular. This species is probably not older than the 10th century.

Mention must also be made of a type of magic formulæ in regard to which the monks played merely an intermediate role. This group consists mainly of formulæ handed down in ancient medical writings. The design of most of these is the cure of disease, but adjurations for use in digging up medicinal plants were also transmitted in this way. These formulæ were, of course, mostly in the Latin language. Their potency lay mainly in phrases and letters—magic words and characters largely of Eastern origin, being derived from Babylonian, Egyptian, and Jewish magic. This group, according to occasion, comprises the most ancient type of spell, which is to be observed, always exhibits an unintelligible jumble of words. From the earliest times, indeed, this very unintelligibility was the indispensable condition of the efficacy of the spell. From the 13th cent., however, we must take account also of another contributor source of the superstition which is concerned with words and letters—and it may be added, numbers also. This was the religious philosophy of the Jews, as set forth in the works of the Kabalah (q.v.).

These leading types will suffice to classify the great majority of magic formulæ, and even the hybrid, complex, and derivative varieties which inevitably made their appearance in the course of centuries. But the prime factor in such secondary formations was doubtless oral tradition, to the action of which a large proportion of the spells would remain subject at some stage of their development. The learned formulæ of the Church are usually of considerable length, and in their full form would have relatively little vogue among the common people. From these larger spells, accordingly, certain typical parts were excerpted, and then used independently. The popular mind laid the main emphasis upon the nucleus of the spell—the formulæ proper—and examples of this type become numerous from the 16th century. In these the strict parallelism of the earlier ecclesiastical blessings is to some extent abandoned. It was now considered sufficient to say: ‘As surely as this act has taken place, so surely may this effect ensue.’ Sometimes, in fact, the place of the parallel is taken by the antithesis. It became the practice, further, to draw upon still more remote quarters for the conclusion of the blessing, and to introduce formule which in themselves had formerly done duty as blessings, so that the formulæ of blessing, being supplemented by invocations of God and multipliéd petitions, more closely resembled the character of prayer itself.

When we consider the mass of Teutonic formulæ—even with the 16th cent. as the ulterior limit—in relation to the purposes which they were meant to serve, we find that an explicit mention is made of God in only a small number of cases. Formule were believed to be due to malignant demons and unfriendly magicians, and were therefore combated by the magic formulæ. But the same formule was employed, however, both by friend and foe, about the origin of which there was no uncertainty. The remedies employed in such cases were supposed to acquire peculiar efficacy by having a spell uttered over them.

Nor was it human beings only who in their distresses were benefited by spells. As had been believed from the earliest times, protection was equally indispensable for the lower creatures most closely associated with human life, viz., the domestic animals. In their case also, therefore, magic formulæ were used to ward off disease and other evils. The dog, and especially the shepherd’s dog, was protected in large degree against the dangers to which it was exposed from wild beasts. People were very specially concerned, however, to guard against the bite of mad dogs. A certain blessing, ‘ad pallos de nido,’ was supposed to help the growth of chickens. The purpose of the somewhat numerous ‘bee-blessings’ was to keep the insects from swarming.

There was, besides, a multitude of adjurations for animals other than the domestic. People tried to rid their houses of flies, mice, and rats by appeal to the power of the formula; wolves were adjured not to hurt the cattle in the fields; serpents, to be easily caught. The bite of the serpent was averted by spells, and by means of adjurations the reptiles were induced to yield up the potent opheite stone, and to be obedient to all commands. The tooth and the hinder tooth of a horse was blessed against all kinds of injury, and with the shoulder of a toad a man could win the love of whomsoever he chose.

In the therapeutic arts of ancient and medieval times an important place was assigned to medical herbs. It was of vital moment, however, that these herbs should still retain their supposed virtues after being plagued, and certain magic formulæ were devised to ensure this. The practice was to adjure either the whole world of herbs.
MAGIC (Vedic).—I. Definition. —The sphere of cult and ritual has two aspects in Vedic literature —religion and magic. The former (see art. VEDIC RELIGION) represents the relation of man to the gods and lesser divine beings. Its object is to cultivate their goodwill by means of hymns as well as sacrifice, and thus to induce them to bestow in return the benefits which man desires. The essential character of Vedic religion, therefore, is proprietary and transactional. Magic on the other hand, endeavours to gain its ends by influencing the course of events, without the intervention of divine beings, by means of spells and ritual. Its human character is, therefore, that both aim at the same result, but in different ways. Religion achieves its purpose indirectly by inclining the will of a powerful ally through prayer and gifts, for instance, to destroy an enemy. Magic does so directly by operating with the impersonal (and imaginary) causal connexion between the means which it employs and the effect to be attained, as burning the effigy of an enemy in order to burn the enemy himself. In practice it was in part auspicious and beneficent, as the ritual for the obtaining of offspring or luck, of rain or victory, but it was largely malevolent in the interest of individuals and not of the community, and, therefore, as being dangerous, was condemned by the priesthood, except in so far as it was applied by them.

2. Literary Sources. —The sphere of religion, as considered apart from magic, is chiefly represented by the earliest product of Indian literature, the Rigveda, which consists almost entirely of hymns addressed to various gods, in which their greatness and their deeds are commended. In the Rigveda, therefore, are prayed for, and which are intended to accompany the ritual of the Soma sacrifice (cf. art. HYMNS [Vedic], § 71). Only a dozen of its 1028 hymns are concerned with magic, about one half of them being auspicious, the rest malevolent in character. As to any magical rites connected with the sacrifice, the Rigveda gives us no information. On the other hand, magic is the main and essential subject-matter of the Atharvaveda (art. HYMNS [Vedic], § 11); it is a collection of metrical spells, largely to be accomplished by ceremonies aiming at the welfare of the magician or the injury of his enemies. The Yajurveda (art. HYMNS [Vedic], § 13) occupies an intermediate position between these two Vedas as regards magic. In its part which consists of prose formulae, the gods are only occasionally, though generally by implication, related to the sacrificial ceremonial with which these formulae are associated, and which they follow in its minutest details. Its character is thus of a magical rather than a religious type. The great development, in this period, of an intricate ritual and the concentration of sacrificial thought on its perfect performance had led to the new conception that sacrifice was efficacious without gods, but directly to control the natural course of things.

The prose theological works called Brâhmans,
which represent the next stage of Vedic duty of Hotr priest, familiar with the goodwill of the gods; he then poured down from the sea above to the sea below the heavenly waters of rain (v. v.). Every page of the Brahmanas and of the ritual Sutras shows that the whole sacrificial ceremonial was overgrown with the notion that the sacrifice exercised power over gods and, going beyond them, could directly influence the Brahma and reach the supernatural powers afforded by knowledge and asceticism are charged with magical notions.

Thus the final phase of Vedic literature, which comes described in the so-called sacrificial manuals, is, show how the observances of everyday life were saturated with magical beliefs and practices (cf. also art. LITERATURE [Vedic and Classical Sanskrit], §§ 8-12).
